Solar energy may offer us the least costly source of energy and reduce the dependence of our Nation on shrinking fossil fuel supplies and foreign suppliers. We are dependent on foreign sources of energy which threatens our economic and national security. This current situation is due to our lack of planning in the past. We must begin now to develop sources of energy that will meet our needs in the future. Solar energy may offer us a cost-efficient, clean source of energy. Congress must act now to assure the necessary steps are taken to reach a full understanding of the availability and advisability of entering the solar age through the use of satellite solar power systems.

I am introducing here today the Solar Power Satellite Research, Development, and Demonstration Program Act of 1978. This is a bill to provide for a research, development, and demonstration program to determine the feasibility of collecting in space solar energy to be transmitted to earth and used to generate electricity for domestic purposes.

This legislation would provide the necessary focus to insure that the resource of solar energy is fully explored by the United States. The Congress should declare that it is the policy of the United States to pursue a vigorous research and development program on solar power satellites as a major source of energy to satisfy our national energy needs. This would provide for the development and demonstration of practical means to employ solar power satellites.

This proposal would direct the Department of Energy and the National Aeronautics and Space Administration to initiate the program by carrying out research and development for the purpose of resolving the major technical problems in implementing the solar power satellite concept. The Energy Secretary with the assistance of NASA would be required under the bill to submit a comprehensive plan for the program and for continuing research on solar power satellites by September 30, 1978.

The comprehensive plan would be designed to provide for the conduct of definitive studies and ground-based research leading to a solar power satellite total system definition and the placing of a demonstration satellite unit or units into orbit to determine the economic viability of collecting and transmitting solar energy for commercial purposes.

The Energy Department and NASA would identify the basic elements of the program and the program schedule. They would set a series of decision points at which the advisability and feasibility of continuing the program would be evaluated, so that completion can be determined at each stage. The funding required to carry out each major element of the program in each fiscal year would be subject to congressional review.

The solar power satellite research, development, and demonstration program would be established to provide a clearly defined charter for the agencies to engage in this essential work. There would be established within the Department of Energy an office to manage this program. The bill would authorize $25 million for the first year of the program.

The Department of Energy would contract with NASA to conduct and coordinate all space-related research, development, and demonstration projects. The purpose would be to utilize to the maximum extent possible the existing technology, facilities, and expertise of the space program. The Department of Energy would coordinate with appropriate power distribution agencies to evaluate the ground portion of the program and provide a report on its potential impact on the power network. This element of the program could be extremely beneficial in the integration of the Nation's energy network.

The technology necessary to place solar power satellites in space is available now and was paid for through the development of our space program. The space shuttle and other relevant technology already under development provide a substantial impetus to accomplish

such a program. Extensive solar energy efforts are already being made with ground-based equipment. These results are very encouraging. But many studies now indicate that a satellite-based system would be vastly superior. The construction of a solar power satellite system would provide economic stimulation throughout our Nation. What now must be determined are the economic and ecological effects of developing a solar power satellite system.

The research and development programs would resolve major technical problems. To provide a basis for planning and phasing the research and development program would include systems definition studies, space-related technology, health, safety, and environmental studies, socio-economic studies, and a comparative evaluation of the solar power satellite concept and the terrestrial alternative to this concept. Comparative technology assessments of the solar power satellite concept and the terrestrial alternatives would be made. These would include photovoltaic concepts; solar thermal concepts, such as the Closed Brayton Cycle, thermionic conversion, and cascaded system; and nuclear concepts, such as the Closed Brayton Cycle and thermionic conversion. Engineering developments indicate that the ultimate cost to the consumer of space solar power may be less than other competing systems, including earth-based solar power.

We must provide for the future welfare of our country by taking the initiative now to develop new energy sources. It is in the best interest of our Nation to expedite the long-term development of renewable and non-polluting energy resources. Our economic system and the continuation of industrialized society for both developed and developing nations will require new energy.

We are not facing the world's first energy crisis. The first crisis came in the 16th century when it was realized that wood no longer sufficed as an energy supplier. In England, the solution was first sought in imports and then in indigenous resourcefulness provided by technological application. The transition to coal was made and existence on a coal economy lasted for 300 years. In the wake of the industrial revolution, the world transitioned to an oil economy. Shocking as it may seem, oil sufficiency has lasted less than a century.

The fact is that while consumption of energy is increasing at an unsustainable pace, the fossil fuels upon which we depend are depleting at the same rate. Fossil fuels cannot satisfy the needs of the world indefinitely. The stark economic realities of energy-induced inflation contribute to our deteriorating balance of payments and increase our vulnerability as a free nation.

The United States is faced with an unparalleled increase in energy consumption as well as the manifold increase in the cost of energy. The imbalance in domestic supply and domestic demand seems to persist in spite of conservation measures. This is likely to continue, especially if the economy is able to expand.

The depletion of fossil fuels is adversely affecting the quality of life enjoyed by the average American citizen, both economically and ecologically. We must therefore take action now to utilize one of the most abundant and environmentally safe sources of energy available to us. Future generations depend on the action we take now. Through the use of the tools of our vast technology I believe we can responsibly face and master the problems presented by the energy crisis.

The concern of Congress is not only to resolve the energy crisis but to insure that our route to this solution is as efficient as is possible. The solar power satellite program shows the promise to warrant our attention and action. It should be established clearly, just as our authority to monitor and terminate the program on its merits is also clear. This is not a visionary program, but a practical proposal which will be evaluated on results.

We must find the best means to use the almost infinite energy potential of the Sun. Solar power satellites may prove to be the most practical, efficient, least costly means. The solar power satellite method of gathering the energy resources of the Sun must be fully investigated. This is the intent of the Solar Power Satellite Research, Development, and Demonstration Program Act of 1978.

IS THIS NEW "CREATURE" NECESSARY?

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. VANDER JAGT. Mr. Speaker, in recent days as all our colleagues are well aware, we have experienced a considerable "upheat" on activity concerning the probable upcoming vote within the next 2 or 3 weeks on H.R. 9718, legislation creating a Consumer Protection Agency. I say "probable" vote because, as we know, the legislation may be withdrawn from our House calendar at any time as in the past. Also, I am not certain precisely if this is the Consumer Protection Agency as called by the Washington Post, the Office of Consumer representation, or something else. But these really are not of vital concern.

What is really important as far as I am concerned is whether proponents of this legislation finally are able to answer two very critical and key questions that were raised by two distinguished individuals in the article entitled "Consumer 'Protection' Consumers Don't Need" which appears in the February 1978, edition of the Reader's Digest.

I ask each of you to give thoughtful consideration to these two questions raised by Richard O. Simpson, former Chairman of the Consumer Product Safety Commission, and Senator ROBERT DOLE of Kansas, the latter who once backed a consumer agency.

Mr. Simpson commented:

If we accept the premise that federal agencies are not responsive to the interests of consumers, by what logic should we create another federal agency and expect thereby to correct the deficiency?

Senator DOLE questioned:

If reorganization to make government more responsive and efficient is a sincere concept, why then do we need a super-agency to police that government?

He concluded:

We should follow the President's lead in putting our governmental house in order before we create an independent agency to do it for us.

I would personally hope, now that the White House is planning to call in more than 60 national voluntary organizations to a conference this week designed to promote passage of this legislation, that placed on the agenda for appropriate response would be the comments by Senator DOLE and Mr. Simpson, as well as this excellent commentary in the Reader's Digest article, which follows:

CONSUMER "PROTECTION" CONSUMERS DON'T NEED

(By Ralph Kinney Bennett)

The issues are clearly drawn. Supporters like Sen. Abraham Ribicoff (D., Conn.) say the legislation would "ensure that regulatory agencies take into consideration the views of consumers before making important decisions which have significant impact." Opponents echo the argument of Rep. Samuel Stratton (D., N.Y.) that this is no time "to create a whole new layer of bureaucracy to do essentially what existing federal agencies ought to be doing now."

After more than eight years of debate on Capitol Hill, a showdown is near on what many consumerists believe is the single most important piece of domestic legislation—creation of a tax-funded Office of Consumer Representation (OCR). They envision it as a grand watchdog that would intervene on behalf of consumers in the regulatory rulings and decisions of the federal government. It would serve as a countervailing force to regulatory agencies which, they contend, are captives of business and unresponsive to the consumer.

OCR's chief backer, Ralph Nader, originally envisioned the proposed agency as a "consumer strike agency" that would move throughout the federal regulatory system and "revolutionize" government. Over the years, efforts to make the concept more palatable for Congressional passage have perhaps made it less of a "strike agency." But they have not changed the basic thrust of the legislation, which would enable OCR to intervene in federal court against those agencies it felt were contravening the consumer interest. It could request those agencies to use their subpoena powers to extract sensitive, competitive information from businesses. Nader says this power is needed "to defend against corporate crime, against rapacious business practices." Moreover, supporters claim that the agency would have no greater power than any private party involved in regulatory matters.

To equate OCR with a private party is misleading. In a detailed analysis prepared for the Chamber of Commerce of the United States, regulatory-affairs attorney Mark Schultz notes: "OCR would have greater rights of judicial review of other federal decisions than any business entity. OCR has statutory authority to review any decision or action of government. No other public, private or governmental entity enjoys this same right."

In fact, it is precisely this power—unchanged through each form the bill has taken—that caused former Special Prosecutor Leon Jaworski to warn in April 1977 that a consumer agency "would be vested with authority so broad it could easily be turned

to the political advantage of those who control it. There are no checks sufficient to harness that authority."

OCR's potential to disrupt normal dealings of various businesses and industries is awesome. An air-fare increase, duly deliberated and approved by the Civil Aeronautics Board, could be blocked by OCR and involved in litigation. Approval of a drug after lengthy study by the Food and Drug Administration might nonetheless be halted indefinitely by OCR. Banks, businesses, industries could be left in a state of apprehension and confusion by a single administering agency acting in the name of an undefined "interest."

Former Sen. Sam Ervin (D., N.C.), one of the nation's most respected authorities on constitutional law, warns that an OCR "would have all the rights of a regulatory agency, yet none of the responsibilities. It would have more power than real consumers ever dreamed of exercising."

OCR backers like Nader and Presidential consumer-affairs adviser Esther Peterson nevertheless continue to press for the agency's creation. Back in 1971, the 92nd Congress was just seizing consumerism as a solid voter issue when the House of Representatives passed a consumer-agency bill by an overwhelming vote of 344 to 44. In the 93rd Congress, the vote for an OCR was 293 to 94. When the 94th Congress voted on the measure in 1975, opposition in the House had grown to the point that it was barely approved, 208 to 199. Although the Senate had also passed the bill, certainty of a Presidential veto torpedoed it.

Last year, despite President Carter's strong support, the consumer-agency bill failed to reach the floor of either chamber for a vote. Clearly, many Congressmen who had previously voted for the measure had changed their minds. Rep. Patricia Schroeder (D., Colo.), one of the most ardent consumerists on Capitol Hill, questioned the need for an agency which, she says, "may satisfy the desires of a few consumer-advocate lawyers, but not necessarily the consumer." More than 400 newspapers across the country, including The Wall Street Journal, Chicago Daily News, Washington Star, Houston Chronicle and Boston Herald American, have editorialized against a consumer agency.

Late last year, the White House and consumerists amended the bill (changing the name from Agency for Consumer Protection to Office of Consumer Representation, but not changing the essential thrust of the agency as a powerful instrument for intervention). House leadership counted noses and found that this bill, too, could not pass. Rather than risk defeat in the waning days of the Congress, supporters promised to drive for passage early this session.

Why the dramatic legislative turnaround?

Polls have shown the public to be concerned over a broad range of consumer problems, but they also reflect a disillusionment with government as the potential solution, a disillusionment that seems to have been nourished by many consumer-oriented laws passed by Congress in the past decade. Enacted into law were dozens of new statutes from the Hazardous Substances Act to the Fair Labeling and Packaging Act, from the National Traffic and Motor Vehicle Safety Act to the Consumer Goods Pricing Act. A White House office of consumer affairs was enlarged, and a Consumer Product Safety Commission was created to eliminate unsafe products from the marketplace. The country seemed to be embarking on a new era of assured quality and safety.

But the public quickly discovered that federal involvement on behalf of the consumer too often meant exasperating and expensive intrusion. One of the first ways this hit the public was through a piece of bureaucratic intervention called the ignition interlock. In the name of consumer safety, Americans could not start their new cars unless they fastened themselves into a harness of seat- and shoulder-belts. Congress was hit with a blizzard of angry mail and finally rescinded the law—but not before it had cost consumers $2.4 billion extra for their new cars.

But soon there was another well-meaning, ill-conceived rush to protect everybody from everything.

For example, when the Employe Retirement Income Security Act (ERISA) was passed to protect employe pensions, companies faced immense additional clerical work loads. A few companies estimated that costs of ERISA paperwork would exceed the amount of their annual contribution to their annual contribution to their retirement plans. In 1975, the first full year under the law, ERISA regulations were a factor in 23 percent of the 4000 defined-benefit pension plans dropped. In 1976, 7300 plans were dropped and ERISA rules were a factor in 35 percent of them.

Well-meant regulations have often tended to disconcert consumers. Many people (those with arthritis, for instance) have found themselves frustrated by government-decreed child-proof caps on medicine bottles.* It is likely that many others would be frustrated by a new proposal that power lawnmowers be fitted with a device that would shut down the engine every time the machine came to a halt. Such a device could increase power-mower prices by as much as $100.

The cost of all this "protection" has been staggering. Washington University's Center for the Study of American Business estimates that federal regulation cost $65.5 billion in 1976; that's about $300 per citizen.

At the root of consumerism lies an elitist notion, say the opponents of the proposed OCR, that a *third* party knows better than either producer or consumer. Writing in the New York *Times*, Robert T. Quittmeyer, president of the Amstar Corporation, calls this "the arrogant desire to substitute some personal vision of order for the apparent disorder of the marketplace."

Consumerists insist that Office of Consumer Representation officials will have no difficulty in determining just what is in the consumer's interest. That interest, says Ralph Nader's organization, Public Citizen, is usually "apparent and uniform." But is it? Here are a few vexing policy areas in which OCR would have to decide, Solomon-like, the consumer interest.

The Food and Drug Administration wants saccharin banned on the ground it causes cancer in rats who ingest it in massive quantities. But what of the tens of millions of Americans, who, *knowing this*, want saccharin to control their weight or because they suffer from diabetes?

Consumerists tend to favor continued federal controls of natural gas which keep prices low. Some consumers benefit—at least in the short run. But what about those consumers who may get sharply limited amounts of gas because of price-induced shortages?

Dubious light is cast on OCR when one considers the important aspects of consumer interest that would not be covered, under the bill, because of political expediency.

As the price for organized labor's backing of the bill, OCR legislation exempts any intervention in matters regarding union agreements or labor disputes. Yet such agreements and disputes affect consumers through the higher product prices caused in part by wage hikes or long work stoppages, or through the sheer unavailability of, say, certain makes of cars during an auto strike.

Also exempted from OCR scrutiny would be a great many activities of the Department of Agriculture, virtually removing one of the prime consumer interests—food and food prices—from any consideration. License-renewal proceedings of radio and television broadcasting stations have also been exempted. In fact, at least 37 different exemptions were "sold" for support of a consumer agency. Says Sen. James Allen (D., Ala.): "This is evidence to me that those advocating further federal involvement want an official slot in government at any price. They are prepared to trade scope so they can get power."

Richard O. Simpson, former chairman of the Consumer Product Safety Commission, raises an interesting question: "If we accept the premise that federal agencies are not responsive to the interests of consumers, by what logic should we create another federal agency and expect thereby to correct the deficiency?"

If the votes to create an OCR, Congress will be going on record as unable to control the many agencies which it has set up over the years, unable to make them respond to the needs of the people—who are, after all, the consumers. And President Carter, who has proclaimed himself the nation's "top consumer advocate" has pledged his Administration to *reducing* the bureaucracy while making it more efficient and responsive.

Sen. Robert Dole (R., Kan.), one of those who once backed a consumer agency but now strongly opposes such legislation, says: "If reorganization to make government more responsive and efficient is a sincere concept, why then do we need a super-agency to police that government? I find the two concepts utterly inconsistent. We should follow the President's lead in putting our governmental house in order before we create an independent agency to do it for us."

* Bottles with ordinary caps can be obtained, on request, at pharmacies.

GOV. MILTON SHAPP SPEAKS ON THE NATION'S RAILROAD POLICY

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. MURTHA. Mr. Speaker, Gov. Milton Shapp of Pennsylvania has spent many years in study of the Nation's railroads, their problems, and the policies needed for their revitalization. His comments have always been provocative. His suggestions have always been creative.

For the information of the Members, I insert into the RECORD remarks made recently by the Governor on recent railroad problems:

GOVERNOR SHAPP URGES FEDERAL INVESTIGATION FOR DECLINING RAILROADS

I appreciate the opportunity to be here today at this public meeting on the Midwest Railroad problem that has been spurred by the December bankruptcy declaration by the Milwaukee Road.

Railroads have been a special interest of mine for years—long before I became Governor of the Commonwealth of Pennsylvania. I consider railroads crucial to the economy of this nation. I consider the demise of our railroads since World War II to be inseparably linked with the economic upheavals and a substantial part of the inflation we have experienced.

I believe too that the rebuilding of our railroads will be the key to resolving our energy problems, much of our steel industry problem and some of the other economic ills that have beset us in recent years . . . particularly the high rate of unemployment, for throughout history it has been axiomatic that no nation or region of the world has enjoyed prosperity without possessing an efficient method of transporting the goods then in demand.

As Governor of Pennsylvania I have grave concern for the problems of the Midwest

railroads because, although they do not serve Pennsylvania directly, our economy is highly dependent upon them. Pennsylvania's economy has not yet recovered from damage caused by the bankruptcy of the Penn Central in 1970. Many of the major economic dislocations in Pennsylvania and throughout the Northeast-Midwest Region were worsened by the creation of Conrail in 1976, with its emphasis upon contraction rather than improvement of service in the area served.

Now I fear that the mistakes of the Penn Central merger, many of which were repeated when Conrail was created, will be repeated again in the case of the Midwest railroads and the entire American economy will feel these new shock waves.

Merger, consolidation and abandonment of so-called "excess lines" will not solve the problems of the Midwest railroads any more than they solved the problems of the eastern carriers. Today in Pennsylvania, after the merger of the bankrupt Penn Central, Reading, Erie Lackawanna and Lehigh Valley railroads to form Conrail and after the abandonment of many hundreds of miles of rail line in the past three years, our state's economy continues to be held captive to costly, inefficient rail service.

The merger of these so-called "duplicate" rail lines has cut competition and cut service to the point where transportation costs are actually driving industry out of our state and out of our region. When VW was planning to locate its American plant in Pennsylvania, we were fortunate that we had two competitive carriers in the Western Pennsylvania area—the Chessie and the N. & W. Conrail wasn't interested in taking any steps to help us attract this company to Pennsylvania by even building a few miles of inter connecting track.

In the last several weeks a major shipper of auto parts decided against locating a new facility in Pennsylvania largely because of the poor, high-cost rail service. This facility which would have created 500 new jobs, would have cost a great deal more to operate and would have been solely dependent on Conrail in our state. The shipper located elsewhere.

What an irony it is that in this case, the attitude and policies of a railroad actually caused an industry not to locate in its territory when, throughout the history of industrialization in this and other countries, railroads have played just the opposite role.

We had similar problems of non-cooperation from Conrail after the recent floods in Johnstown, and even despite pressure from the White House, Conrail refused to rebuild a few miles of damaged track and this has forced the closing of a major coal mine with several hundreds of jobs lost.

As a private citizen I opposed the merger of the New York Central and Pennsylvania railroads in the mid-1960's, taking my fight all the way to the U.S. Supreme Court. In fact, you will find that the only case against the merger was Shapp vs. the United States. I argued then that merger and abandonment would not produce profits—and I submit that history has borne out my predictions.

Following the bankruptcy of the Penn Central in 1970, I testified on numerous occasions before Congressional committees and the Interstate Commerce Commission—and again I opposed the merger-and-abandonment approach to railroad revitalization. Based on the poor service and enormous losses of Conrail to date, despite the infusion of more than $1 billion in Federal funds since its creation less than two years ago, I would say that it is likely that I will again be proven correct by history.

I don't enjoy playing the prophet of doom. In fact, from the beginning I have advocated positive and practical solutions to our railroad problems . . . solutions which are still valid today.

Back in 1974, I called for a federally established Rail Trust Fund, similar in nature to the existing Highway Trust Fund. This highway fund has been immensely successful in building our network of interstate highways, and has been completely paid for by the users of those roads through the collection of gasoline and excise taxes.

The rebuilding of our railroads in the Midwest and East calls for an investment of about $20 to $22 billion. This investment could be repaid by adding a small surcharge on the rail freight bills. As I mentioned, this concept is not new. The four cent per gallon federal gasoline tax and the excise taxes on tires and auto accessories has already brought many billions more dollars back to the United States Treasury than the total amount invested in building the interstate highway system.

Actually, Congress adopted the principles of the Rail Trust Fund program in the 1976 Rail Act, setting aside $600 million for purchase of preference shares in railroads and $1 billion in loan guarantees, all to be used for rail improvements, including electrification. Under these programs money is to be advanced to the railroads and repaid to the federal treasury over a period of years.

The money authorized is not nearly enough money to do the job, but to date neither the U.S. Transportation Department, nor the railroads has fully implemented even this program. I see no way to stop the spreading cancer of railroad bankruptcy and service cut-backs without a realistic program to provide reasonable cost financing for rehabilitation and modernization of the entire rail transportation system.

The rail financing components of the 1976 Rail Act should be revised and expanded to do this, along the lines of the Rail Trust Fund I proposed previously. Among the principles which should be included in such a plan:

Rehabilitation and modernization funding should be available to all carriers an off-balance-sheet transaction.

Funding should be increased from the $1.6 billion in the Rail Act to a level that more accurately approximates real needs.

Funding for improvements to vital rail segments should be made available on a expedited schedule, without years of delay.

Joint use of facilities and consolidation of main line service should be encouraged but abandonment of vital rail service must be avoided, and no large scale abandonments should be permitted until after mainlines are thoroughly modernized and railroads are running efficiently once again. Then, and only then will it be possible to judge whether these lines produce profits or losses.

I think it is time to re-examine the Rail Trust Fund plan, for it attacks the triple problem of our energy shortage, deteriorating railroads and the steel crisis.

The energy crisis ties into the railroad situation because there is no way we can possibly fulfill President Carter's national energy objective to increase coal production to a billion tons a year without modern, high-speed rail service in the Appalachian, Mid-West, Mid-Atlantic and New England states.

Further, rebuilding our railroads should include their electrification and improvement that would greatly ease this nation's dependence on oil.

The Pennsylvania Energy Council has estimated a 34% savings in energy could be achieved utilizing electric power. Electrification of just 10% of the present rail mileage (in the densely populated, heavy industrialized areas) could result in a 40% reduction of rail diesel fuel consumption.

In addition to freight benefits, electrification of rail lines in and around our big cities greatly relieve present traffic jams by reducing the number of automobiles on the road.

Safety is one factor. Statistics indicate that a rail passenger will travel 20 times further than a motorist before befalling a serious accident.

A few judiciously selected commuter lines near our major cities could readily replace a quarter million automobile passenger trips a day saving almost 40 million gallons of gasoline a year without government "coercion" or the imposition of heavy penalties. Thus, with rail modernization, the potential for oil saving is substantial. It's surprising how readily people are willing to leave their cars home if comfortable, high speed commuter service is available. I live along the main line of the old Pennsy and see this happening every day.

To illustrate the unfilled potential for oil savings, it is important to emphasize that rail passenger service today attracts only 1% of the nation's passenger trips. With electrification, this would rise dramatically. Electrification would make possible short, fast and frequent train service near and in our cities.

Importantly, electrifying railroads offers the best chance to turn present red ink operations into profitable operations, for electrification offers the greatest hope for our railroads to obtain high rateable commercial and industrial products for haul.

Rebuilding our railroads would contribute significantly to the recovery of our steel industry. To rebuild rail roadbeds throughout the nation will require more than five million tons of steel. New locomotives and freight cars and electrification of rail lines will demand many additional millions of tons of steel.

What America does with its railroads, therefore, is critical to every other phase of our economy. Further mergers and consolidations, as I have pointed out many times for many years, only leads to a shrinkage of service and further deterioration of our rail system.

The establishment of a federal Rail Trust Fund is the financial answer to the current plight of our railroads. And electrification is the cornerstone upon which we can build a modern, efficient and profitable railroad system.

I do not wish to take much more of your time, so let me leave you with these points:

Its time to rebuild and modernize the railroads of America. A program to finance modernization makes a great deal of engineering and economic sense.

It will increase rail efficiency and lower the cost of transporting goods.

Modernization of our railroads will increase employment in America by creating many hundreds of thousands of useful jobs in the plants manufacturing the equipment for construction crews—and most importantly, by making rail service more competitive and thus creating thousands of permanent new rail jobs.

We can help start a new industrial revolution in America if we utilize logical programs to conserve on fuel and improve transportation facilities.

Modernization of our railroads is a major step needed to achieve this goal.

The economies are all favorable. It's time to move forward. Certainly it is time for new thinking in order to stop repeating the mistakes of the past.

Thank you.

IN OPPOSITION TO H.R. 6362

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. BRECKINRIDGE. Mr. Speaker, I would like to join with my colleague from California, JOHN KREBS, in his continuing

opposition to H.R. 6362, a bill which contains provision for the repeal of the sealed bidding section of the National Forest Management Act of 1976 (Public Law 94–588).

The House Agriculture Committee, of which I am a member, ordered H.R. 6362 reported May 23, by a vote of 22 to 20, at which time I supported Mr. KREBS' opposition to the bill. Fourteen members of the Agriculture Committee filed dissenting views to the committee report on the bill and pointed out that it was a matter of record that those "regions of the country where sealed bidding has been the exclusive method used in the sale of timber, there has been no evidence of collusive or preclusive activities." On the other hand, in the Western and Pacific Northwestern States where oral auction has been the predominant method of bidding there have been strong indications of collusive practices. I understand that the Justice Department is conducting several major investigations of possible collusive bidding practices on timber sales and that, according to Justice sources, each of these investigations concern an area where oral bidding was the predominant method of selling timber.

As the chairman of the Antitrust, Consumers and Employment Subcommittee of the Small Business Committee, I should like to join with the distinguished Senator from Massachusetts, EDWARD KENNEDY, chairman of the Senate Antitrust and Monopoly Subcommittee of the Senate Judiciary Committee, in opposing H.R. 6362 and its Senate counterpart, S. 1360. Senator KENNEDY has declared that there is "no adequate justification * * * for altering the bidding procedures of section 14(e) of the National Forest Management Act of 1976." I was impressed with the Senator's remarks in the September 14, 1977, CONGRESSIONAL RECORD (pp. S14835–14837) wherein he indicated that the sealed bidding process was the preferred method for conducting sales of Federal property unless special circumstances dictate otherwise. Sealed bidding is the method used in the South, the East, and the lake States for the sale of Government-owned timber. I also join with the distinguished Senator in his opposition to any action which would jeopardize these ongoing Justice Department investigations. I concur with his remarks, and direct the attention of my colleagues and the American people to his thoughtful statement.

In addition to making collusion more difficult, sealed bidding produces more revenue for the Federal Government. In support of this statement I would like to quote the Forest Service figures for the first 6 months of 1977 for timber sales in Washington and Oregon. Sealed bid sales in the western Cascades produced $274.7 million, or $115.9 million more than the Forest Service appraised price. Sales under the oral auction bidding method in the western Cascades produced $51.1 million, only $19.2 million above the approved prices. The Forest Service further estimates that the Government would have lost between $20 and $35 million if all sales in this area for the 6-month period had been conducted under the oral auction bidding procedure.

Opponents of sealed bidding claim that this method allows larger buyers to outbid smaller buyers, thereby depriving dependent communities of a constant supply of timber. However the Forest Service has been unable to find a dependent community that failed because it could not obtain timber under the sealed bidding process.

I also oppose passage of H.R. 6362 on the grounds that the repeal of sealed bidding is premature. Section 14(e) of the National Forest Management Act of 1976 has not been in effect long enough to prove its effectiveness. I would also like to point out that the U.S. Department of Agriculture, the Department of Justice, and the Office of Management and Budget oppose the passage of H.R. 6362.

Mr. Speaker, for the varied reasons expounded by the good Senator from Massachusetts, EDWARD KENNEDY, by my fellow colleagues on the House Agriculture Committee, including the Honorable JOHN KREBS of California, I shall oppose H.R. 6362 and urge my colleagues to work for its defeat on the floor of Congress.

HUBERT H. HUMPHREY INSTITUTE LEGISLATION

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. QUIE. Mr. Speaker, as the senior Member of the Minnesota congressional delegation and ranking minority member of the Committee on Education and Labor, it is a pleasure to cosponsor this bill to authorize a $5 million grant for the Hubert H. Humphrey Institute of Public Affairs at the University of Minnesota in Minneapolis-St. Paul. These funds will give a much-needed boost to the estimated $20 million necessary to open doors of the institute to students by July 1, 1978. Already nearly $7 million has been raised for the institute.

We in Minnesota are especially proud of the accomplishments, energy, and enthusiasm of the man, Hubert H. Humphrey. We are also proud of the fact that an institute such as this one, dedicated to improving public service and promoting greater participation in Government by an informed public, exists in Minnesota. The institute, an expansion of the University of Minnesota School of Public Affairs on the Twin Cities campus, offers a unique and extensive program in public administration for students who are interested in becoming legislators and administrators. It also offers programs of continuing education and training to professionals already in the private or public sector and to the general public.

The institute is unique in that it is structured to meet the needs of changing times and changing policies much like Mr. Humphrey himself was eager and open to face changes and new ideas and to deal with new problems. New programs at the institute will focus on such things as technology planning which will include issues dealing with environmental quality. It will also focus on human services and include an examination of the problems of aging in our society. Curriculum will incorporate the social sciences, political philosophy, economics, computer science, mathematics, and the natural biological and environmental sciences.

The institute, like the current school of public affairs at the university, will offer two degree programs, the master of arts in public affairs and the master of arts in planning to its expected beginning enrollment of 100 students. It will also offer joint degree programs with the university's Institute of Technology and College of Business Administration.

On the $20 million necessary to open doors, only about $3 million will be earmarked for construction. The remainder will be reserved for students and programs. Fund raising efforts began last March and since that time $6.8 million has been raised including a $1 million pledge from our international friend, Japan. Former Secretary of State Henry Kissinger and Iranian Ambassador Ardeshir Zahedi are heading international fundraising efforts.

Students at the institute are particularly fortunate to have as a model a man like Hubert H. Humphrey. His papers will be accumulated and cataloged in the Humphrey Archives, a part of the institute. I only hope that the institute can instill in its students half of the boundless energy and enthusiasm for their work possessed by Hubert Humphrey.

Enthusiasm for Government is often in short supply. But it is essential in a democracy for the public to be informed and to actively and effectively express their wishes and needs. Government, in turn, must be responsive to those needs. The institute has an important role in advancing American democracy through the training of competent public servants and an informed and active public. We in Congress also have a role and a responsibility to aid in this pursuit and to celebrate the memory of a man who spent 30 years of his life serving the people. That is why I am cosponsoring, along with Mr. FORD of Michigan, the authorization of funds for the institute in the sum of $5 million with the hope that it will be supported by you, the Members of Congress, in response to our role and responsibility.

EQUAL JUSTICE FOR ALL

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. YOUNG of Florida. Mr. Speaker, today I have introduced legislation that would amend the Social Security Act to require a fair hearing by an impartial person—other than the carrier—on disputed medicare claims.

Under present law, the carrier for medicare has the total authority to make

final determinations on disputed part B medicare claims. This gives the individual no opportunity to have his case reviewed by any one completely disassociated with the carrier. In many cases, these people are living on small, fixed incomes and the difference in the figure that the carrier has allowed and the amount of money actually paid out for medical services can be very important. Therefore, I feel it is vital that these people receive every possible opportunity for a fair hearing and a thorough review of their claims.

Medicare claims under part A—the hospital insurance program—allow an individual the right to appeal disputed claims over $100 to the Social Security Bureau of Hearings and Appeals thereby allowing consideration of claims by someone other than the carrier.

Considering the fixed incomes of many of these individuals, and in view of the fact that under part A of medicare, appeals can be heard by the Bureau of Hearings and Appeals, I think serious consideration must be given to this legislation.

UKRAINIAN INDEPENDENCE DAY

HON. MATTHEW F. McHUGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1978

Mr. McHUGH. Mr. Speaker, it is with pride that I salute the bravery and determination of the Ukrainian people during the 60th anniversary of the Ukraine's declared independence.

In my congressional district, there live large numbers of people of Ukrainian descent, and many more Ukrainian Americans travel sizeable distances each year to various parts of my district to take advantage of excellent vacation facilities managed by Ukrainian organizations.

The members and leaders of these organizations are to be commended for the perseverance and dignity with which they preserve the Ukrainian heritage for their children's children through their societal activities, their cultural programs and youth organizations. At the same time that we are inspired by the energy and dedication of these efforts, however, we are reminded that they occur from one generation to another in order to compensate for the tragic fact of the Ukraine's continuing subjugation by the Soviet Union.

For so many years now, the efforts of the Ukraine's Soviet captors have been directed to the physical and spiritual extinction of an entire people and their identity—a continuing form of genocide that should serve as a warning to all those who take freedom for granted.

As we salute the Ukrainian people during this commemoration, Mr. Speaker, it is incumbent on us to renew our resolve that the blessings of liberty on this planet should not be apportioned by international power struggles, from which no victors emerge. Rather, the history of untold human suffering throughout the world in our lifetime should convince us that it is in the deepest self-interest of every nation that basic human rights and national self-determination become both the birthright and the precious inheritance of all peoples.

UNITED STATES-SOVIET MILITARY BALANCE

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. HAMIILTON. Mr. Speaker, I would like to insert my Washington Report for January 18, 1978, into the CONGRESSIONAL RECORD:

UNITED STATES-SOVIET MILITARY BALANCE

Most of the experts are confident that a military balance now exists between the United States and the Soviet Union. They do not believe that the Soviet Union has achieved military superiority over the United States, but they are less sure about the future.

Since the mid-1960's the Soviet defense budget has grown steadily, averaging about 3% annually when expressed in constant U.S. prices. One fact stands out to all observers: the Soviet Union is in the process of acquiring military power comparable to that of the United States. The build up of Soviet armed forces, both in the size of the forces and in new generations of equipment, continues without apparent let up. Although the risk of a U.S.-Soviet armed confrontation may appear low at the present time, it is not negligible. Conflicts could develop in several "hot spots" around the world.

The main defense objective of the United States must be to maintain the overall military balance with the Soviet Union, a balance at least as favorable as that which now exists. The maintenance of a stable and visible balance of military power is essential to prevent adverse political developments. The concern here is that the Soviet Union is increasing the quality and the quantity of military power that it can bring to bear in support of its political objectives around the world. Although there is no reason for panic (an overreaction by the United States could lead to a dangerous and expensive leap in the arms race) Soviet military superiority is not something that the United States can or need accept.

In assessing the military balance, strategic and conventional forces must be considered. In the view of experts a strategic nuclear attack from the Soviet Union is the least likely contingency that the United States faces. But Soviet leaders have placed a high priority on their strategic nuclear capability, increasing it roughly five-fold since 1964, and they have underway a number of impressive strategic programs to strengthen that capability. Strategic nuclear balance between the United States and the Soviet Union exists today and one of our most vital tasks is to maintain it. In these matters what really counts is what the Soviet leaders believe about strategic balance. They must not see their strategic nuclear forces as instruments to be used for military conquest or political leverage. Thus, an essential equivalence with Soviet forces must be maintained. The United States would prefer to maintain a strategic deterrence through equitable and verifiable agreements on nuclear arms limitations and reductions, but the United States must maintain the strategic balance by whatever means are necessary. U.S. performance must not be, and must not be seen to be, inferior to the performance of the Soviet Union. With the three components of its strategic offensive forces—land-based intercontinental ballistic missiles (ICBMs), sea-based nuclear submarines with sea-launched ballistic missiles (SLBMs) and strategic bombers—the United States must be able to inflict unacceptable damage on the Soviet Union after an all-out Soviet strike against the United States.

The United States must also be concerned about the balance of conventional or "general purpose" forces. As the strategic nuclear balance between the Soviet Union and the United States becomes one of rough equivalence, the balance of conventional forces becomes more important as a deterrent against an attack. Since 1970 both U.S. and Soviet forces have been expanding and modernizing at comparable rates. The current balance of forces is such that neither side could be guaranteed a favorable outcome should war break out. The best judgment of the experts is that deterrence on the level of conventional arms still exists. Nonetheless there is room to worry about the West's ability to defend itself, especially if all Warsaw Pact forces were committed on short warning or if NATO were slow to mobilize.

Since the Soviet Union continues to improve its capability to launch a major attack on Western Europe, NATO must be prepared to make a flexible response with conventional or nuclear weapons and to maintain a defense posture that permits the U.S. and its allies to respond effectively to any assault.

The strength of two countries must be measured not only in military terms, but by all the elements of national power: political stability at home, geographic strengths and weaknesses, the economy and natural resources, industrial capacity, finances, leadership, technology, and, most important of all, the character, mood and number of people. Using this overall concept of strategic power, the United States is substantially ahead of the Soviet Union.

But the military relationship remains important. No antagonist should be permitted to believe that it can bully or coerce the United States and its allies by threat or use of force. My observation is that the President and the Congress are determined that we will maintain our military options and that we will continue to build and improve our military forces.

REMEMBERING A GREAT PRESIDENT, A GREAT NATION

HON. L. A. (SKIP) BAFALIS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1978

Mr. BAFALIS. Mr. Speaker, a quarter of a century ago, Dwight D. Eisenhower took the oath of office as President of the United States. A man from the heartland of the United States, he had served his nation honorably and well as a soldier, then was prevailed upon to serve as President.

A leader in the truest and best sense of the word, President Eisenhower presided over a country much different than the United States today.

The United States, in the 8 years of the Eisenhower administration, was a nation of confident men and women—individuals aware of our country's problems and shortcomings, yet convinced the problems could be solved and the shortcomings corrected.

It was then a nation which looked to individuals to solve problems, not to Washington.

It was that kind of a nation because

of President Eisenhower's leadership. He believed in human rights and in the free enterprise system. He believed the Federal Government's role in business, education and all other spheres of our every day life was an extremely limited one.

Like most Americans who remember the Eisenhower years, I do so fondly. I remember them fondly because I much prefer a nation responding to his confidence, his integrity and his determination to keep the government the servant of the people.

THE 20TH ANNIVERSARY OF EXPLORER I

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. TEAGUE. Mr. Speaker, 20 years age today, the United States entered the space age with its successful orbiting of the free world's first satellite, Explorer I.

That satellite was the beginning of the events in the field of space exploration that saw our country catch up to and forge ahead of the space capabilities of the Soviet Union to become the first nation to land men on the Moon and return them safely to Earth.

To appreciate the importance of Explorer I, it must be remembered that it was orbited as the American response to the challenge faced by the free world as a result of the Russian satellite achievement, Sputnik I. That satellite, orbited on October 4, 1957, led the world into the space age.

And, it must also be remembered that plans were yet to be formulated for a space program for the United States when, on November 3, 1957, the Russians announced yet another outstanding satellite achievement. On that date, it had launched Sputnik II, the first satellite to carry a living organism into orbit, a dog named Laika.

Mr. Speaker, the political benefits gained by the Russian people were of tremendous value as their achievements made banner headlines around the world. And, too, the U.S.S.R. had demonstrated through its satellite program its capacity for launching international ballistic missiles, and its intention of exploring a new environment whose control could affect methods of maintaining peace and waging war.

From its beginning, numerous and difficult technical problems were posed for the U.S. ballistic missile development program. In 1957, five systems accounted for most of the U.S. ballistics missile activities and were carried out by the three military services and their respective industrial contractors. And, the United States had joined in the preparations, as a participating nation, of the International Geophysical Year.

The IGY was a scientific undertaking sponsored by an international organization of scientists and designed to promote a worldwide investigation of the Earth and its environment. The U.S. IGY program was to develop and procure a satellite-launching vehicle, to place at least one satellite into orbit around the Earth during the International Geophysical Year, to accomplish one scientific experiment and to track the flight to demonstrate that the satellite actually attained orbit.

Although this satellite program was mainly a civilian-scientific effort, military participation was necessary because most of the national competence to the all-important launch field was centered in the military services and their ballistic missile programs.

From proposals submitted to the IGY program by the three military branches in an intense interservice rivalry, it was decided to use most of the elements of the one submitted by the Naval Research Laboratory known as Project Vanguard. The Army's proposal was known as Project Orbiter and had been developed by the Wernher von Braun team of the Redstone Arsenal in Huntsville, Ala.

As a result of Sputniks I and II, the U.S. efforts to launch a satellite intensified. The Vanguard failed to perform during its initial launch attempt on December 6, 1957. Success came, however, on January 31, 1958, when the Nation's first artificial satellite, Explorer I, reached orbital velocity of just over 18,000 miles per hour 7½ minutes after lift-off. It was launched with a Redstone missile modified by the Wernher von Braun team and was built, managed, and tracked by the Jet Propulsion Laboratory in Pasadena, Calif. And, on-board instruments built by the James A. Van Allen discovered the radiation belt which surrounds the Earth.

Mr. Speaker, from the beginning of our Nation's entry into the space age with the orbiting Explorer I, we have seen many spectacular and amazing accomplishments not only in the history of space developments but in all areas of science and technology. We have gained much basic knowledge in those ensuing years and that knowledge, in keeping with the peaceful purposes and the encouragement of international cooperation of our space program, has been freely shared with the other countries of the world.

The knowledge gained from the vast investment of our country made in our space program is now one of our greatest national assets. It is, therefore, only fitting that we recognize today as the 20th anniversary of Explorer I, the symbol of our country's successful entry into the space age.

HOMEMAKING IS FOR EVERYONE—FUTURE HOMEMAKERS OF AMERICA, 1978

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. NATCHER. Mr. Speaker, homemaking is for everyone. Young people across the country will be observing Future Homemakers of America National Week during February 12–18. I am proud to note that the Future Homemakers of America is the largest organization for our youth in the secondary schools. FHA is cosponsored by the U.S. Office of Education and the American Homemakers Economic Association.

While placing an emphasis on consumer education, homemaking, family life, job preparation, and career goals with a recognition that today's workers also fill multiple roles as homemakers and community leaders, FHA/HERO chapters, across our Nation, are indeed responsive to the needs of our students. FHA recognizes that conditions and circumstances do change, and likewise, the leaders and members are receptive to new approaches, methods, and ideas.

The role of the homemaker is changing and Future Homemakers of America is part of that change. Mindy Wigginton, a national FHA officer from Kentucky states:

> To become successful leaders in tomorrow's society, we . . . need to become involved and concerned today. As members of Future Homemakers of America we have the chance to test our abilities, set our own goals, practice decision-making, chart our own course . . . experience leadership.

Today homemaking is a vital role, not separate, but rather an integral part of every citizen. More and more men and women in today's society are sharing the rewards and responsibilities of homemaking. A homemaker builds more than just a home environment. A homemaker builds families and creates solid foundations in order that every member of that family can explore and pursue their own individual ambitions and skills. It takes special talent, Mr. Speaker, to create that environment. Every man, woman, and child involved in the family becomes a homemaker. They care. They share.

We hear today, Mr. Speaker, that our families are in collapse. Although formal structures are changing, families are indeed permanent and are adapting to the economic demands of our country. Future Homemakers of America fosters and strengthens the function of the families as the basic unit of our society. All FHA members learn of their responsibilities as homemakers and wage earners. Tomorrow's family structures, whatever form, depend on the vision of our youth today and their perception of life. Future Homemakers of America finds exciting tools and methods to help our youth in this essential educational endeavor.

Contrary to the "Susie Homemaker" stereotype, Future Homemakers of America is comprised of men and women, boys and girls who are looking for ways to help themselves assume their future roles in society through personal growth, developing leadership skills, and community involvement. Today's Future Homemakers are much more likely to be comparing résumés than recipes.

FHA members are individuals who appreciate the heritage of our great land and grasp the needs of their home communities and seek positive action to meet these needs. Under the theme, "Leadership '78—Explore Roles, Set Goals," Future Homemakers will be demonstrating projects that have real value for our youth in preparation for present and future responsibilities.

For the past 2 years Future Homemakers of America has been working in conjunction with the National Foundation March of Dimes on a national project entitled "Healthy Babies—Chance or Choice." The Kentucky Association of Future Homemakers of America has chosen to become involved with this peer education effort as its statewide impact project. For the next 2 years FHA and HERO chapters will be working cooperatively throughout the State on individual projects, classroom programs, and community outreach projects to teach teenagers about the prevention of birth defects and the rights and responsibilities of parenthood.

Future Homemakers of America encourages democracy and cooperative action in the home and the community. It encourages individual and group involvement in helping achieve worldwide brotherhood; it encourages a greater understanding between our youth and adults; it encourages decisionmaking and responsibility. All of these goals are put into action when we consider the many projects that FHA members have carried out in your community and mine. They work with children, peers, adults, and the elderly of all ages, races, and status. They work in day care centers, schools, and hospitals. They supervise playgrounds and tutor the hard of hearing. They assist in immunization programs, vocational home economics education, antilitter campaigns, elderly visitation and care programs. They give their time and service in love of their fellow man. This, Mr. Speaker, is homemaking.

Kentucky State president, Dorothy Hardesty, said that through her FHA/HERO activities she had grown, as a leader by "striving for my best, giving credit where it is due, sharing the limelight, and being a responsible guide for others."

As an honorary member of the Future Homemakers of America, Mr. Speaker, I have seen leaders and members alike put action behind their concerns. I wish and can foresee nothing but continued success for the Future Homemakers of America. Their past years have been fine ones—the years ahead can only be better.

SERIOUS NUCLEAR QUESTIONS POSED

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. SIMON. Mr. Speaker, Stephen Rosenfeld, an editorial writer and columnist for the Washington Post, recently had a very disturbing column about the new Chairman of the Nuclear Regulatory Commission.

I hope what he has to say is wrong, but I have found that Steve Rosenfeld's columns have balance and good sense and I hope that some people high in the administration and some of our colleagues on the appropriate committees in the House and Senate take a good hard look at what he has to say.

There should be no pussyfooting leadership in an area as vital as the Nuclear Regulatory Commission. I want leadership that understands full well the dangers of a nuclear explosion anywhere in our world. And that is what the American people want too.

I hope my colleagues will read Steve Rosenfeld's column:

[From the Washington Post, Jan. 13, 1978]

A NUCLEAR GUARDIAN'S UNALARMED VIEW

(By Stephen S. Rosenfeld)

Does President Carter know that the man he appointed as the final guard at the gate to ensure that peaceful nuclear exports won't be diverted into bombs is a cold-blooded engineer inclined to rate the risks of nuclear proliferation as somewhat less alarming than the chance of being hit by a car when you step off a curb?

I learned this about Joseph M. Hendrie, chairman of the independent Nuclear Regulatory Commission, when he dropped by the paper the other day and agreeably answered questions on the record for an hour and a half. A physicist from the Brookhaven Nuclear Laboratory, Hendrie, 52, came to the five-member NRC as chairman last August.

He has, in the eyes of his peers, substantial technical and scientific credentials. What came through at our lunch, however, was a sense of the particular ideological or emotional framework in which he weighs, as the law instructs the NRC to weigh, whether a proposed export of nuclear fuel or equipment is "inimical to the common defense and security of the United States." That is, of course, not a scientific question but a political one.

Hendrie identified three levels of nuclear anxiety. The first is a Soviet-American nuclear war—a "donnybrook"—which he regards as a greater than 1 in 100 probability. To avert this calamity, he said, it would be worth doing anything and everything by way of limiting nuclear power, if that would help. So far so good.

On the second level of his concern lies a nuclear exchange between two small countries. Hendrie offered two illustrations, a "mythical" war in which Switzerland delivered, say, 17 bombs on Spain and Spain hit Switzerland with 7, and a conflict between Israel (which is thought to possess at least a nuclear capability) and Libya (whose current leader publicly pines for a bomb). Hendrie explained his relative equanimity toward outbreaks like these by saying that he did not think they would affect his children, as a Soviet-American holocaust surely would.

As for the manufacture or theft of a nuclear bomb by terrorists, this prospect was on the third level. If, for example, terrorists took out Washington and Chicago, Hendrie said, it would be bad for those who happen to live there but not necessarily for their children.

Someone at lunch suggested that it would be a disaster "beyond history," Hiroshima and Nagasaki aside. Hendrie replied that the threat of a major earthquake in California actually was greater. He went on to note that it was dangerous to cross the street, too.

Now, I am trying hard to be fair. Hendrie, talks engineer talk: He approaches in a tone of familiarity and routine, matters that others address differently. No question has so far been publicly raised about the nuclear-export decisions in which he has participated. He was offering what he called his "personal views," and he provided no grounds for us to suspect he was not doing his duty as he sees it at the NRC.

Nonetheless, I found it appalling that someone who tends a crucial valve in the nuclear-export pipeline has such a mechanical and seemingly indifferent attitude toward the proliferation threat, which the NRC is charged with helping to diminish. On close calls, where a conscientious person would find it difficult to determine if a given export were "inimicial," what would one expect from someone who is relatively at peace with the notion the Israelis and Libyans might have a nuclear go or that terrorists might obliterate Washington and Chicago? Rationality unleavened by a measure of alarm appropriate to the nuclear peril is scary.

Should Hendrie be running the Nuclear Regulatory Commission? We didn't discuss that at lunch but Hendrie had a relevant proposal, and that is to remove from the NRC the statutory responsibility to pass upon peaceful nuclear exports. His argument is that the NRC is essentially an agency to regulate the safety of the domestic nuclear-power industry and that it has neither the broad expertise nor the "nose to steel" access to information to judge exports to foreign countries.

Whether it's wise to dispense altogether with the NRC's capability of providing independent technical advice, I'm not sure. But certainly it's so that the export question touches considerations of international relations, diplomacy, intelligence and weaponry that the NRC is not competent to deal with. It is not beyond the wit of Congress to confine the NRC to the task it performs best. Hendrie proves the point.

REMARKS COMMEMORATING THE 25TH ANNIVERSARY OF THE INAUGURATION OF DWIGHT DAVID EISENHOWER

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1978

Mr. QUILLEN. Mr. Speaker, I am pleased to join my colleages in commemoration of the silver anniversary of the inauguration of one of this century's greatest Americans to the Presidency of the United States.

Dwight David Eisenhower's years in the White House were indeed silver ones, leaving many of us with the hope that what once was can be again.

Ike recognized the true heart of America, for he was its son. He loved the land, guarded it, protected it, fought for it, and sought to leave it better for his having been here.

He carried into the White House with him the same philosophy he carried into battle—that a leader who can inspire a unity of purpose among his countrymen can inspire victory in any situation.

By uniting forces, he said:

The result you get is not the sum of their separate powers. You multiply their power, rather than add.

This philosophy touched his every effort in behalf of his country. Militarily he won battles by uniting the land, sea, and air efforts of Allied soldiers. As President, he united the country by inspiring its citizens' confidence, and leading them into an era of prosperity and serenity that has since gone unequaled.

I recall attending the 1952 and 1956 national conventions that nominated this gentle man to the high office of the Presidency. I remember, with the same nostalgia, the "I like Ike" buttons, and the warmth of spirit that existed in America then.

Dwight Eisenhower brought out the best in us, because he gave to us the best of himself—in strength, in diplomacy, and in leadership. He will be forever remembered, and forever admired.

ADVANCEMENTS IN SOLAR ENERGY

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. STEERS. Mr. Speaker, in the Washington Post of January 28, 1978, there was a story of the continuing struggle to make solar energy price competitive with other forms of energy. The Solarex Corp. of Rockville, Md., has developed technology that reduces the cost of energy generated by solar cells to $6 per watt. This is just more evidence of the fact that solar energy is now competitive for small applications and will be competitive for other applications before the close of the 1980's.

I have had the pleasure of touring the Solarex facilities that are located in Montgomery County. I am impressed with the dedication of the people at Solarex and their continued growth as leaders in the solar energy field. I believe that it will only be through these "partnerships' between Government and private industry that we will be able to find alternative sources of energy that will, in the long run, provide the answers to our energy problems.

I am submitting the article from the Washington Post of January 28 for the RECORD for all of my colleagues to read:

AT SOLAREX INSTALLATION—SOLAR POWER EQUIPMENT COSTS CUT

(By Jerry Knight)

The cost of equipment to generate electricity with solar energy will be cut in half by a new installation to be built this summer by Solarex Corp. of Rockville.

The 250-kilowatt solar electrical generator will be part of the largest solar power project ever, a community college complex in Mississippi County, Ark.

In bidding on the Department of Energy demonstration project, Solarex said it could supply concentrating solar cells that would cost less than $6 for every watt of electricity they produce.

Previous solar electricity generating gear has cost at least twice that much, although Solarex's $6-a-watt cost is still several times the cost of conventional power plants, which cost around a dollar a watt to build.

But Solarex officials say the technical innovations that allowed them to cut costs in half in one jump are another milestone en route to the Energy Department's goal of bringing the cost of solar electricity down to $2 a watt by 1982 and to 50 cents by 1986.

Solar cells cost $500 a watt when Solarex was founded in 1973 by Dr. Joseph Lindmayer and Dr. Peter Varadi, who are still its top executives.

"All the government studies said it would be impossible to bring costs down to 1/1000th," admits Lindmayer.

He and Varadi worked on solar cells for Comsat, which uses them to power its communications satellites. Because Comsat's charter prohibits down-to-earth projects, the two scientists started their own firm to pursue photovoltaic research and development.

Barely five years later, Solarex is the bigbest manufacturer in the tiny solar electricity business. In a plant off I-270, its 150 workers produced $3 million worth of solar cells last year, out of an industry output estimated at $10 million.

Besides making the biggest solar generating unit ever, Solarex also makes some of the smallest—the solar cells that power watches, calculators and flashlights.

"The thing that makes us unique is that we make competitively-priced cells and are very good at research and development," said Anthony Clifford, assistant to the president.

Solar cells are thin wafers of silicon crystals that emit a tiny electrical current when the sun shines on them.

Although the phenomenon—called the photo-voltaic effect—has been known for a century, it was not until 1955 that Bell Laboratories demonstrated workable solar cells and not until the space program that solar cells found a use.

With sky's-the-limit budgets, space scientists powered their mechanical moons with solar rays that cost $500 a watt—generating enough power to light a 100-watt bulb required a $50,000 investment.

Research has brought the cost down and raised the efficiency of solar cells so they now can turn about 14 or 15 percent of the solar energy they receive into electricity.

Solarex's state-of-the-art system is the first full-scale use of concentrating solar cells. Since the silicon cells are the most costly part of solar electricity generating gear. Solarex reduced the number of cells needed by concentrating the sunlight on the cell surface.

It's done with mirrors, curved reflectors with a mechanical system that tracks the sun across the sky, focusing bright rays on the cells. The reflectors and tracking gear—built by Honeywell, Inc.—will amount to about half the cost of the system.

With concentrators the cells receive up to 40 times normal sunlight—"40 suns" as solar scientists put it.

Solarex began making concentrator cells 2½ years ago, getting a head start on competitors which enabled it to win DOE's contract for the $1.1 million solar generating project at the Arkansas community college.

The college will be completely solar powered, using various kinds of solar collectors to make electricity, heat buildings and water and run air conditioners. It will also test new batteries for storing solar-generated power and computerized controls for the solar systems.

"Nobody has ever merged all these elements," explained Lindmayer, who said there is a backlog of technology that has never been fully utilized. "Now we will learn how to put the pieces together."

Solarex will start producing the cells this spring for the system, which will use 300 concentrator units, each 16 feet long. The federal contract calls for an output of 250 kilowatts, but Clifford said the Solarex system will put out about 360 kilowatts on clear days.

Lindmayer said concentrating cells appears to be the best method of producing immediate reductions in solar generating costs and opening up the market.

When costs get into the $2 range "all sorts of markets appear," he said. Now solar cells are used only in situations where no cheaper source of power is available.

They power navigation lights on buoys—ending the need for replacing batteries—and run remote weather stations on mountain tops—saving the cost of stringing cables for miles.

Lindmayer forsees highway lights powered by solar cells, irrigation pumps run by the sun, and extensive use of solar electricity in developing countries which lack interconnected electrical systems.

Solarex, he noted, has doubled in size every year since it was started and probably can maintain that pace as the industry expands with encouragement from federal subsidies.

Owned by about two dozen local investors, the company ideally ought to go public someday, but that isn't possible in the current stock market, the founder said.

Solarex is working on more advanced concentrator systems under a $287,000 contract with the Department of Energy's Sandia Laboratories. Contract research brings in about $1 million of its current annual sales.

The Sandia contract includes developing a high-technology manufacturing process capable of turning out large quantities of solar cells.

Even though it is the biggest manufacturer in the business, Solarex's production basically is a hand assembly operation.

Solar cell technology is changing too fast for automation, Lindmayer explained. By the time engineers could design and build an automated assembly line, the product it would produce would be obsolete.

TAX RELIEF ACT OF 1978

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. ARMSTRONG. Mr. Speaker, today, never as before, the American taxpayer needs a meaningful tax cut. So I am pleased to join my colleague JACK KEMP and other House Republicans in the introduction of the Tax Relief Act of 1978.

In a moment, I will explain the details of this tax relief proposal. But first, I would like to point out exactly why this legislation is so urgently needed.

During the last 10 years, taxes have risen dramatically. For example, taxes have tripled for a typical family of four earning the median income. Direct Federal, State, and local taxes have gone up from $2,276 to an estimated $6,333 for 1978. And this does not include the social security tax increases already written into law for 1979 and subsequent years. Nor do these figures take into account the oil and gas tax increases recommended by President Carter which would cost each American family an additional $300 to $1,600 per year.

Let me put these figures in a slightly different perspective. Although family income has risen steadily in recent years, taxes have gone up even faster. As a consequence, a median income family will pay an estimated 37.3 percent in taxes in 1978 compared with 28.9 percent a decade ago.

But even so, are not median income families better off in dollars? Even after paying higher taxes, do we not really have more spendable income? Unfortunately, the answer is no. Families today are earning more but keeping less. After deducting higher taxes and taking into account effects of inflation, the median income family ends up with less money to live on than 10 years ago; aftertax income is down from $5,607 to an estimated $5,228 this year measured in constant (inflation adjusted) dollars.

What it comes down to is this—an average taxpayer works nearly 3 hours out of a typical 8-hour day just to pay taxes, longer than for any other household budget item, nearly twice as long as for food or shelter. I think most taxpayers will agree—it is time for a substantial tax reduction.

The kind of tax cut which I propose will not only give a break to families, it is the essential medicine needed to cure the Nation's economic illness—stagflation. During recent years we have been experimenting with various kinds of Federal employment programs, pump-priming and subsidies while taxes have gone

higher and higher. The results have been a new form of economic illness in our State and Nation—stagflation, chronic inflation, and chronic unemployment. Here in Colorado we have been more fortunate than other parts of the Nation, but even so the rate of unemployment has risen from 3.6 to 5.6 percent with 69,400 Coloradans out of work. Based on past experience, the surest and most appropriate way of coping with this economic problem is through a substantial tax cut.

The Tax Relief Act of 1978 will reduce all individual tax rates by an average of 33 percent, reducing the present tax rates of between 14 and 70 percent to a range of 8 to 50 percent. This tax rate reduction would provide substantial tax relief to all taxpayers, but will help in particular lower- and middle-income taxpayers. The rates on lower income taxpayers would be reduced by as much as 42.8 percent, while the highest rates would be reduced by approximately 28 percent.

These rate reductions would be phased in over a 3-year period. After the full 3-year period, implementation of the proposal would have reduced the tax burden of a family of four earning $8,000 by 90 percent. A family of four earning $10,000 annually would have their taxes lowered 50 percent; while one earning $15,000 would save 38 percent. Families earning more than $20,000 would have their tax bills reduced by approximately 33 percent.

Income	Present tax	Proposed tax	Tax cut	Percent cut
$8,000	$120	$12	$108	90.0
$10,000	446	226	220	49.3
$12,500	917	547	370	40.3
$15,000	1,380	852	528	38.2
$17,500	1,926	1,223	703	36.5
$20,000	2,480	1,600	880	35.4
825,000	3,570	2,341	1,230	34.4

Our proposal also will reduce the corporate tax rate by 1 percentage point a year for 3 years, from the current 48 to 45 percent, and increase the small business surtax exemption from $50,000 to $100.000.

During the last 3 or 4 years there has been much discussion of tax reform. I believe that the time is now right for permanent and substantial tax reductions of the kind which I am recommending; that is, the kind of reform our economy needs, the kind of reform the Nation's wage earners need. This legislation is an idea whose time has come.

FAMILY TAX RATES—THEY NEED REDUCTION

[In percent]

Income after deductions	Present rates	Rates under the Tax Relief Act of 1978		
		1978	1979	1980 (and after)
$1,000	14.0	12.0	10.0	8.0
$4,000	15.5	13.5	11.5	10.0
$8,000	17.3	15.9	13.3	11.4
$12,000	18.8	16.5	14.5	12.6
$16,000	20.4	17.9	15.7	13.7
$20,000	21.9	19.3	16.9	14.7
$30,000	26.3	23.2	20.3	17.6
$50,000	34.1	30.3	26.7	23.3
$100,000	45.2	40.3	35.5	31.4
$200,000	55.5	49.8	44.2	39.0
$400,000	62.8	56.4	50.1	44.4
Highest possible rate	70.0	63.0	56.0	50.0

DIPLOMACY OR GUNS

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. BAUMAN. Mr. Speaker, every passing day brings new expressions of concern regarding the declining military security of this Nation. The latest of these numerous expressions comes from the Banner, a daily newspaper published on the Eastern Shore of Maryland in my district. Noting the Carter administration's poor record in the field of foreign relations, particularly with reference to our military strength and that of the Soviet Union, the Banner's editorialist concludes that the President seems incapable of applying either diplomacy or unquestionable strength to this crucial field. I commend the following editorial to the attention of my colleagues:

DIPLOMACY OR GUNS

While proclaiming the desire for agreements with the Soviet Union on the limitations of strategic weapons, on banning chemical weapons, on measures to prevent the dangerous proliferation of nuclear weapons and on limiting export of weapons, the president at the same time sidestepped the recent decisions of the present administration on the manufacture and deployment of cruise missiles, the neutron bombs and other new systems of weapons of mass annihilation which seriously complicate the attainment of the aims proclaimed by the president of the United States.

The above is the reaction by "Pravda," the Moscow newspaper that is more or less the official voice of the Soviet leadership, to the speech President Jimmy Carter made in Charleston, S.C., July 21.

While Americans, many of them, are deeply concerned by what they view as this country's worsening defense posture, it is clear that many Russians are also concerned by the status of their own armed forces vis-a-vis the United States.

These fears inevitably lead to new pressures for arms escalation that no government can long resist. The SALT I agreement is about to expire with little hope that a new one will be negotiated any time soon.

The Carter administration has had remarkably little success in the foreign policy field, if you discount still-to-be-ratified Panama Canal treaties, and in the crucial area of this country's relations with the Soviet Union the situation is obviously a declining one.

Two of the administration's foreign policy "initiatives" have been particularly galling to the Soviet Union—Mr. Carter's "human rights" campaign and his overt wooing of the People's Republic of China.

This country can afford foreign policy mistakes in many parts of the world; it cannot afford them in its relations with the Soviet Union. The impression given thus far by the Carter team is not an encouraging one.

If the Soviets cannot be finessed with diplomacy, then Mr. Carter had better be prepared to face them down with unquestioned strength. Thus far, there are few signs that he is doing either.

RECOGNITION OF DAVIS BROTHERS OPENS BLACK HISTORY CELEBRATION IN CLEVELAND

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. STOKES. Mr. Speaker, in accordance with Black History Month, I would like to take this opportunity to honor two outstanding men of Cleveland, Ohio, who have made immeasurable contributions in the areas of education, history, and public service. Brothers Harry E. and Russell H. Davis spent their entire careers enriching the lives of their fellow man. It is particularly proper that these gentlemen be acknowledged on the occasion of Black History Month, for in addition to their own notable careers, they have done much to reveal the many historical contributions of Blacks in the Cleveland area and nationwide. Mr. Speaker, both of these gentlemen are now deceased, and with their passing have become a part of history. So that you and my colleagues in the House can become familiar with the notable contributions of the Davis brothers, I would like to take this opportunity to relate to you some of the highlights of their careers.

Harry E. Davis, the elder brother, was born in 1882 in Cleveland and spent the next 73 years of his life in public service.

After graduation from the law school of Western Reserve University in 1908, he became a careful, thoughtful counselor and attorney, a member of Masonic bodies, and an organizer and supporter of the NAACP. In 1920 Davis was elected to the State legislature. His four terms were so successful that many journalists characterized him as the most able member in a quarter century. From 1928–1934, the Cleveland City Council chose him to be civil service commissioner. In 1947, he was elected to the State senate and again in 1953. Davis was the second black man to be elected to this high office. While in the senate, Davis' work led to the passage of legislation improving

statewide fair employment practices. Harry Davis' induction into the Prince Hall Masons in 1910, marked the beginning of an intense and scholarly interest in black history. In 1946, after years of research, his "Freemasonry Among Negroes in America" was published. Davis collaborated on several other books and studies with his brother, Russell, which I shall comment on later.

Mr. Speaker, Harry E. Davis died in 1955, leaving behind a legacy of his extraordinary accomplishments. In 1962, the Cleveland Board of Education named the Harry E. Davis Junior High School in his honor.

The younger brother, Russell H. Davis, was born in 1897, and like his older brother, spent his entire life in service to the citizens of Cleveland. Russell graduated from Western Reserve University in 1920, received a degree in chemical engineering from Case School of Applied Sciences in 1922, and in 1933, a masters degree from Western Reserve. Early in his career, he was a chemical engineer at Grasseli Chemical Co. before embarking on a career as an educator.

Mr. Davis became the first black secondary school principal in Cleveland's history when he was named head of Central Junior High School in 1940 after having taught science and math for more than a decade. He later held principalships at Rawlings Junior High and the Harry E. Davis Junior High which was named after his brother.

Mr. Speaker, after 37 years of service in education, he retired from the Cleveland Board of Education in 1965. During his life, he sat on many local boards. He was a trustee and treasurer of Karamu House and a trustee of Family Service Association, Garden Valley Neighborhood, and the Maternal Health Association. He also helped organize the Glenville Area Council and was its first president.

Russell Davis shared his brother's avid interest in history. Together they collaborated on two important documents, "Memorable Negroes in Cleveland's Past" and "Black Americans in Cleveland."

On February 12, Mr. Speaker, the Black History Archives of the Western Reserve Historical Society will present a program and opening of a special exhibit in honor of Harry E. and Russell H. Davis. I am particularly pleased that the society has chosen to honor these two distinguished sons of Cleveland. Just as they revealed the lives and deeds of Cleveland's notable historical blacks, it is fitting that the historical society continue this process by illuminating the contributions of the Davises.

In recognition of Black History Month, Mr. Speaker, I would like to ask that you and my colleagues in the U.S. House of Representatives join me in recognition of Harry E. and Russell H. Davis. They have taken their place among the great men and women of history and will stand as a shining example to all of us of the courage, commitment, and determination of the black citizens of Cleveland and the Nation.

OIL FLUSHING ON THE HORIZON

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mrs. SCHROEDER. Mr. Speaker, remarkable as it may sound, around 70 percent of the oil in our country's oil reservoirs has never been touched.

The following article tells the full story:

[From the New York Times, April 28, 1977]

PHYSICISTS HEAR PLAN TO PRODUCE MORE OIL—SPECIALISTS SAY FLUSHING METHODS COULD YIELD BILLIONS OF BARRELS FROM DEPLETED U.S. FIELDS

(By Walter Sullivan)

WASHINGTON, April 27.—Physicists were told today that, by using enhanced recovery methods, it might be possible to extract from currently depleted oilfields more oil than they originally produced.

The proposal was made at the American Physical Society's annual meeting as government and industry specialists discussed current efforts at such recovery. They said that 70 percent of the oil that originally filled the depleted reservoirs was still there, but was unavailable by conventional extraction methods.

The chairman of the meeting, Dr. Arnold Goldburg, senior engineer for the enhanced recovery programs of the Gary Operating Company in Colorado, said that, from experiments conducted so far, between 15 and 60 percent of the remaining oil in such fields could be recovered. Extraction of 30 percent would equal all of the oil production in the United States to date.

In a $5 million project whose costs are being equally divided between owners of the field and the Energy Research and Development Administration, an effort will be initiated next year to see how much oil can be extracted from Unit A of the Bell Creek field in southeastern Montana, using one of two methods based on flushing with detergents. The Bell Creek field is operated by Gary on behalf of more than 50 owners.

In one method, developed by the Union Oil Company of California, the injected detergent is mixed with oil. In the other, offered by the Atlantic Richfield Company, water is mixed with the detergent plus chemicals (polymers) to make the mixture more "oil-like" in behavior.

The energy research agency has contracted for more than $50 million of developmental work in enhanced oil recovery in at least a dozen projects. Dr. Goldburg said that, in contrast to other and more exotic energy sources, all of the required "infrastructure" already existed—pipelines, refineries and a national distribution system. The environmental impact, he added, is virtually nil.

NEVER IN A PURE FORM

The reason that only about 30 percent of the oil in any reservoir is extracted by ordinary methods is either that the oil is too viscous—that is, it flows poorly—or that it is held within the pores of reservoir rock (typically sandstone) by surface tension. This prevents the oil from forming droplets small enough to escape the pores or from mixing with the salty water usually present in the reservoir. Sometimes, both viscosity and surface tension are limiting factors.

The participants said at the meeting, at a news conference and in interviews that, contrary to popular belief, oil never accumulated in pure form as though in a giant tank. It is dispersed in porous rock often mixed with high pressure gas and brine—a relic of its marine origin.

Where viscosity is the problem, hot steam or hot air is sometimes injected with a view—in the case of hot air—to setting fire to some of the oil, creating enough heat and pressure to drive the rest of it out.

Detergents reduce surface tension and allow water to flush out the oil much as they do in a laundry. The problem is cost, and the challenge is to find ways to minimize the amount of detergent needed to extract a barrel of oil.

Industry participants predicted that enhanced oil recovery would cost at least $10 a barrel, and therefore would not be attractive unless they were allowed to sell it at world market prices rather than the lower price permitted for domestic production.

President Carter's recently announced energy program would allow the world price for oil recovered from "stripper" wells—those wells that each produce less than 10 barrels a day. The industry participants said it was not clear to what extent this would also apply to less fully depleted fields, where enhanced oil recovery would probably be more productive.

MANY FACTORS AT WORK

The world market price is about $14.50 a barrel, as against $9 a barrel for domestic production.

Harvey S. Price of Intercomp Resource Development and Engineering Inc. told of its efforts at mathematical representation of all the factors affecting success of a recovery effort. Whereas 80 to 100 percent of the oil in rock samples can be extracted in the laboratory, he said, the rate in field experiments has ranged from 15 to 65 percent, indicating that many factors—some still unknown—are at work.

There are wide variations as well from oilfield to oilfield. Industry specialists hope that the mathematical attack will bring into play the many factors affecting these variables, such as the role of certain types of rock in annulling the effectiveness of a detergent, aiding the oil companies in choosing the most effective method for a particular situation.

The mathematical modeling was initiated in 1973 with support from 13 major oil companies, Mr. Price said.

One of the more conventional extraction methods discussed today is the injection of high pressure carbon dioxide gas. This acts somewhat like a detergent and ejects the oil similar to the way fluid spurts out when a bottle of carbonated beverage is opened. It is applicable, however, only in limited situations.

Dr. Goldburg said the United States once had about 440 billion barrels of oil, of which 100 billion has been extracted and another 40 billion is accessible by conventional means. He believes that about one-third of the remaining 300-billion barrels can be obtained by flushing and other techniques.

15.2-BILLION-BARREL GOAL

According to Jerry D. Ham, assistant director for oil and natural gas in the Energy Research and Development Administration, that agency's goal for added recovery from existing reservoirs by the end of this century is 15.2 billion barrels. It is also hoped that the rate of extraction from all reservoirs can be increased from a current average of 32 percent of the original amount to between 34.5 and 38.4 percent.

Mr. Ham added, however, that industry enthusiasm is dampened not only by technological uncertainties, but also by such factors as price regulations, tax requirements and fear of antitrust action.

[From the New York Times, Dec. 11, 1977]

OIL RECOVERY

TO THE FINANCIAL EDITOR:

The article "Billions of Barrels of Oil, Waiting" (Nov. 27) correctly points out the unbelievable reality that we now leave about

70 percent of the oil in the ground. Thermal and chemical enhanced-recovery techniques are aimed at this 300-billion-barrel petroleum resource.

Not mentioned in the article, but equally important, are two facts:

In-situ thermal and chemical techniques have essentially zero environmental impact.

All of their infrastructure—pipelines, refineries and the like—is already in place.

It is apparent that these two tremendous advantages of enhanced oil recovery as an alternate energy source are not enjoyed by the other, more publicized technologies of shale and coal synfuel. And, in the case of enhanced recovery, no additional exploration is required.

Thus, it is our belief (at the Gary Operating Company, an independent oil producer) that full-scale exploitation of in-situ thermal and chemical flooding techniques should receive the same Federal economic incentives—such as guaranteed loans—as are now in existence or being planned for shale and synfuels.

ARNOLD GOLDBURG,
Manager, Enhanced Recovery,
Gary Operating Co.

ENGLEWOOD, COLO., *November 29, 1977.*

CHARLES J. WARTMAN: A VOICE FOR PROGRESS

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. CONYERS. Mr. Speaker, I was saddened to learn of the recent death of Charles J. Wartman. "Duke" Wartman was a major black voice in Michigan affairs during the 1940's, 1950's, and 1960's, and his outstanding reputation for wisdom, reliability, and objectivity continues to be an inspiration for those of us who knew him.

As an editor of the Michigan Chronicle for 16 years after World War II, he was largely responsible for the paper's role as the only consistent public articulator of black issues. Under his editorial direction, the Chronicle fought problems like police brutality and provided needed communication between Detroit's many black communities and churches: A role the paper pursues to this day.

Mr. Wartman was influential in Michigan's Democratic Party, and as a key adviser to former Gov. G. Mennen Williams, was responsible for statewide black appointments and forward-looking programs. A close friend to labor leaders, he helped forge an ongoing coalition between the black community and the United Auto Workers.

He served on Detroit public school's Equal Educational Opportunity Study Commission and received two coveted writing awards: The National Negro Newspaper Publishing Award for editorial writing in 1955, and the National Newspaper Publishing Association Award for outstanding columnist in 1957.

A historian, writer, community leader, and scholar, Duke Wartman left us a legacy of leadership and progressive policies. He will be sorely missed.

A COMMONSENSE APPROACH TO THE FARMERS' PROBLEM

HON. CLIFFORD ALLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. ALLEN. Mr. Speaker, "The only way you are going to solve your city problems is to solve your rural problems."

This profound truth was given expression in the first sentence of a white paper on rural migration, emceed by newscasters Edwin Newman and Garrick Utley, back in 1971.—"The only way you are going to solve your city problems is to solve your rural problems."

Seven and one-half years have since passed, and we are no nearer solving either the city problems or our rural problems than we were then.

It is unfortunate that so many people who live in the cities do not realize that farming and agricultural production constitute the very backbone of America and its economy.

More than 71 percent of all new wealth, including food, fiber, and raw materials produced in the world today, comes from the land and farms. And in America, our farmers have developed the most efficient and productive agriculture in the world.

We who live in the cities and towns must come to recognize that almost everything we consume—not just the food we eat—but virtually all of the material possessions and comforts we enjoy are fabricated from what is extracted from the soil and the good Earth.

And it is time for us to realize and appreciate the fact that those who have invested their money, and who toil on the farms from sunup to sundown, are entitled to share fairly in the wealth which they have produced.

They are not sharing in that wealth today.

And mere expressions of sympathy by high officials, from the President of the United States, the Secretary of Agriculture, and the Members of Congress—no matter how sincere or well intended—will not put 1 penny in the pockets of a single farmer until they are prepared to say what they are willing to do about it—and do it.

We must have affirmative action—and that affirmative action must come from the President and the Congress of the United States.

The Tennessean in Nashvile ran a lead editorial, January 4, in which the editor correctly stated in the headline: "The Farmers' Problems Are the Nation's Problems." This editorial concluded with this statement:

> What the farmers demand, however, calls for action by Congress * * *. It will require political efforts on the part of the farmers in concert with others who see the danger of permitting the Nation's food production to fall into the hands of monopoly interests.

And that is exactly what is at stake in this fight.

If individual family farmers are driven to the wall of bankruptcy, because of the low and inadequate prices they are getting for what they produce, and cannot pay their bills, they will be forced to sell their land or to rent it out to big corporations, which are buying up more and more of the productive farmland in this Nation.

If the giant corporations gain a monopoly in the agribusiness—if that happens—the consumers, the housewives, and others should be made aware of what else will happen.

The prices of farm produce, groceries, clothing, and all the other things fabricated from products of the soil, will skyrocket just like the price of gas and oil and electricity, and all the other things where the market is controlled by monopolies, whose primary interest is profit and how much they can extract from the consumer.

If we do not want this to happen, therefore, we need to pass certain legislation that will at least protect and guarantee the farmers—and I mean bona fide, independent, family farmers and farm operators, who derive at least two-thirds of their annual income from farming and farm operations—that henceforth they can count on a fair and just price for what they produce.

And this can be done—contrary to the conventional wisdom in Washington, believe it or not—without raising the prices of food in the grocery stores, if we avoid the administrative blunders and mistakes which have characterized this Nation's agricultural programs of the past.

But however the problem is to be met, what is generally agreed by almost every thoughtful and informed person on this subject is that the Federal Government must do something for the farmers, the same as it has done for factory workers and other employees, through minimum wage laws, and what it has done, and is preparing to do still more, for big business and the giant utilities. That is, simply to assure the independent, family farmers of a fair price—but only a fair price—for what they produce, and to which they are justly entitled, if they are to avoid going broke and being driven from the land.

An example of the general recognition of this fact was ably expressed, the evening of January 6, on WTVF-TV in Nashville in an editorial by Mr. Harold Crump of that station. Mr. Crump said, speaking for channel 5:

> We believe Congress should take a serious look at the farmers' complaints. Farmers blame high food prices on the middle man . . . the middle man says it is due to the increased costs of doing business. If the trend continues, the individually owned family farm will be replaced by large corporate farms. The family farm system has served this country well and we strongly believe it should be preserved. As the congressional debate over farm policies begins, we also feel the farmers themselves should take a hard critical look at their present marketing practices to see if that can be reorganized in a way to make the farmer more competitive in today's free enterprise system. WTVF strongly urges the public to support the farmers in their efforts to get a fair profit for their labors.

Notice again the recognition that channel 5 gave to the very real hazard, the same as the Tennessean did in its

editorial, that "if the trend continues, the individually owned family farm will be replaced by large corporate farms."

If the farmers and the consumer groups can drive this truth home to the housewives and those who buy food for the family table, and clothes fabricated from cotton and wool produced now by the independent, family farmers—if the general public is made to realize the real danger to their way of life, and the increased drain that will be on their pocketbooks, if the independent farmers are driven into bankruptcy, and we must depend on large monopolistic corporations to take over most of the productive farmland and thereby gain control of agricultural production in this country—if we can get this one thought across to the people, the task of persuading Congress to act will be made much easier. Perhaps we can then come up with an agricultural bill that will be fair to both the farmers and the consumers, so that all share equally in the wealth produced by this, the greatest and most blessed Nation on Earth.

The question is, "How can this be accomplished?"

Unlike members of organized labor working in many businesses and industries across this Nation, the farmers cannot effectively go on strike for a few weeks or a month or two, pending negotiations, with the expectation of then going back to work.

If the farmers fail to plant a crop during the planting season, they know that in effect they will be striking, not for weeks or a month or two, but for a full year, until the next planting season. And how can dairy farmers go on strike? Can they stop milking their cows, or simply pour their milk on the ground? Or should they dispose of their herds—and, if so, to whom?

And with household and family expenses going on, and the payments and interest that must be met on their mortgages and on the many thousands of dollars they have had to invest in farm machinery and equipment, where will many of them be if they do not produce and do not have an income for a full year—or, like the dairy farmers, find themselves out of business entirely.

Those who are calling for a strike are surely aware of these harsh realities and intolerable consequences to themselves and their families, in seeking to engage in a truly effective strike. Nevertheless, I must compliment those who have had the courage and determination so dramatically to call to the attention of public officials, and to the people of the entire Nation, the dire and unfair financial circumstances in which farmers find themselves, because of the low and unprofitable prices at which they are compelled to sell what they produce at the grain elevators, stockyards, and to the other processors and middlemen, on whom they must rely to sell their produce.

The newly organized American Agricultural Movement, which is now attracting thousands and thousands of new recruits throughout the Nation, is calling for 100 percent of parity for farm products. Just what years would be used in determining what constitutes parity, and actual prices which farmers would get for the different grades and quality of each of the various items they have to sell, have not been spelled out in actual dollars and cents. But that the farmers are entitled to a fair price to assure them of at least a reasonable profit on their investments and labor, cannot be denied by those of us who believe in fairness and equity.

The problem is how the Federal Government can do this without an additional, tremendous drain on the National Treasury, and without fanning the flames of inflation by raising the prices of food at the grocery stores and the prices of so much else on which we must depend from what the farmers produce.

The Secretary of Agriculture, Mr. Bob Bergland, recently indicated on national television that to guarantee prices to the farmers at 100 percent of parity would cost the Treasury $15 billion a year. To this he said would be added $20 billion a year to the prices housewives would have to pay for food at the grocery stores. I do not quarrel with Mr. Bergland's first figure. The Federal Treasury is already spending approximately $7½ billion to the farmers under the present program. So $15 billion a year seems to me to be a very conservative estimate of what it would cost the Government to support farm prices at 100 percent of parity. Indeed, I think it would probably be substantially more than that.

In projecting how much it would raise the price of food at the grocery stores, however, I would respectfully suggest that the distinguished Secretary of Agriculture was probably thinking about how price supports were guaranteed in past years, when the Government support prices were charged and added to the amount paid out not only by the U.S. Treasury, but also to the prices that were charged and paid by the grain elevators, cotton gins, stockyards, meat packers, and by the other processors and middlemen. So the taxpayers and consumers were having to pay twice—first in increased taxes, and second in increased retail prices at the stores. And there is no question, if price supports in the future are to be handled in the same way they were supported in years gone by, the increased prices which the middlemen and processors would have to pay for farm produce would be passed on in increased prices on the grocery shelves, at the clothing stores, and everywhere else where goods are made from the produce of the soil. So once again the public would be paying double.

But does it really need to be handled in this way?

Certainly there is a better way for the Government to support the prices which farmers get for their goods than by guaranteeing to lend to the farmers the amount of money their produce would command at the prices supported by the Government. Obviously, if the farmers can take their wheat and secure a loan from a Federal agency, without recourse, at $4.50 a bushel—and this is just an example—they are not going to sell it to the grain elevator at a lower price. Thus, the price the grain elevator and the miller must pay for wheat is pegged at this price, and is added to the price of flour and bread on the grocery shelves.

But let us consider a different approach similar to the target price program. Why would it not be feasible, using this same example and target price approach, for the Government to fix the price which a farmer should get for his top quality wheat at $4.50 a bushel, but actually let the farmer sell the wheat for whatever it will bring on the open market, as dictated by the law of supply and demand? Under target price programs, it is demonstrably possible for the Government to pay directly to the farmer the amount by which he falls short of getting the fixed price for his wheat or other produce, so that the prices to the processors and middlemen would not be affected. They could then buy on the market, in free and open competition, what the farmer has to sell, and that price would not be affected or increased by any later payment which may be made to the farmer by the Government—it would not in any way increase the prices of food on the grocery shelves.

I recognize that certain safeguards and protections would have to be written into any such program to prevent fraud and the other problems which I can clearly foresee.

Nevertheless, it does seem to me that any support prices the farmers can persuade the Congress to establish for what the farmers produce should be handled in this way. If the Government simply pays to the farmers directly the difference between the guaranteed support prices for what they produce, and what the farmer actually gets from the middlemen and processors for their goods, the farmers would be assured of a certain price on which they could depend for their produce, while the processors and middlemen would still be buying agricultural products at whatever the open market dictates. The prices of the processed and manufactured goods on the shelves at the stores would not be affected.

Indeed, it is entirely possible, if not probable, that the retail prices of food on the grocery shelves would go down, under a program such as this. I am thinking particularly of the prices of those products of the soil which are presently supported under the current agricultural program, whereby farmers are permitted to borrow money from Federal agencies at prices about the market. This forces the processors and middlemen to pay these higher loan prices, which in turn must be added to the price which they get for their products and finished goods.

What I am suggesting here is a way, already demonstrated under target price programs, of guaranteeing to the farmers a fair and resonable price for what they produce, so they can share fairly in the wealth produced by this Nation, without increasing or skyrocketing the prices of groceries and other goods made from products of the soil.

How much this would cost the Government would depend, of course, on what prices or percent of parity Congress may decide to use to peg farm products, and what crops and other produce may be included in this price support program.

To help defray this cost, the Economic Council to the President says every dollar the farmers receive and spend adds $7 to the national economy—in increased goods manufactured and sold, increased employment in the factories, stores, and service establishments, and increased wages, salaries, and profits on which the Government collects increased taxes. So such a program could prove to be self-supporting—or almost so—depending on how much it stimulates the economy and business activities.

But the program should be limited, in my judgment, to genuine, independent and family farmers, two-thirds of whose income is derived from farming and agricultural production.

Great care and consideration must be given in the formulation of this plan. In this way we can profit from the mistakes and misguided agricultural programs of the past which turned out to be counterproductive, and in some cases an outright catastrophe.

Consider, for example, the program which the Federal Government followed for years of pegging the prices of agricultural products at substantially higher prices than the market would support, and in which various agencies of the Agriculture Department loaned billions of dollars to farmers at these prices. What happened? It wound up by having to take millions of tons of wheat, corn, and potatoes, and other farm products off farmers' hand and transport and store them in warehouses that did not even exist, but had to be built. In some cases, wheat and corn had to be stored outside until warehouses and bins could be constructed to store and take them out of the weather, causing untold loss of spoiled foods of various kinds. At the same time people were going hungry because they could not pay the artificially inflated prices for food at the grocery stores, because processors could not buy the farmers' products at less than the loan price guaranteed by the Government.

None of us wants this to happen again, nor do we want to contemplate a revival of the ill-fated, disastrous, and costly land bank program instituted by President Eisenhower's Secretary of Agriculture, Mr. Benson, which not only wound up by costing the Federal Government untold billions of dollars in direct payment to landowners, but created and compounded the unemployment and social problems of the big cities, for which we are still paying to this date billions and billions of dollars a year in welfare and relief programs to take care of the untold millions who were driven from the land.

As you will recall, under the Benson land bank program, billions and billions of dollars of the taxpayers' money was paid out by the Treasury, over a period of 20 years, to large corporations and other big landowners who were willing to agree to keep their land out of cultivation and production and to let it lie fallow.

I have in my Nashville office a Government document of 2,012 pages of fine type, listing farmowners, State by State, who were paid $5,000 or more in 1969, 8 years after Dwight D. Eisenhower ceased to be President, which shows a drain on the Treasury for that 1 year of $3,794,350,000 paid to corporations and other farmowners, many for keeping their land out of production when they had no intention of cultivating it in the first place.

Here are a few examples of how the money was spent:

In the State of California, County of Kings, J. G. Boswell Co., a corporation of Corcoran, Calif., was paid $4,370,657,000 for this 1 year alone, supposedly for not cultivating certain parts of its land.

In the State of Kentucky, Union County, the Aluminum Co. of America was paid $48,414. Think about it. The Aluminum Co. of America, $48,414.

In Mississippi, Bolivar County, Delta & Pine Land Co., of Scott, another corporation, was paid $731,772. And in the same State, the Eastland Plantation Co., of Doddsville, owned and controlled by one of Mississippi's most prominent citizens, was paid $146,792.

In Tennessee, Fayette County, Jerry Skelton, of Collierville, was paid $82,779, that year, and the Cowan Bros., of LaGrange, were paid $79,392.

And on and on and on—costing the taxpayers $3.8 billion for just this 1 year.

But what happened to all of the tenant farmers and sharecroppers and their families who were driven off the farms by these billions and billions of dollars spent by the Federal Government to entice landowners, many of them large corporations, to take their land out of cultivation? Millions of innocent victims of this misguided program wound up in the hard core of the big cities, living in rundown, miserable slums, with their children playing on rooftops or on the streets and sidewalks—many driven by despair to crime, dope, and muggings on the street—and the Government spending, and still spending, literally billions and billions of dollars more each year to take care of them on welfare and other forms of aid—surely the most wasteful and costly blunder ever made by the Government in Washington.

Compare that with what the farmers are now asking. That is, simply a fair price and equitable share of the wealth of America for producing the food and fiber to help feed and clothe and house the people of this Nation and around the world.

Given a fair price for what they produce, many farmers would have the money to hire help they cannot now afford, and bring a number of these tenant farmers and sharecroppers and their families, who were driven from the land into the squalor and jungle of the hard core of the big cities across the Nation, back to the farms and be given employment.

And instead of manufacturing, selling, and giving away more and more arms and weapons of death around the world, how much better it would be if we could be using our surplus farm produce of both food and fiber as an instrument of peace in our relations with many of the underdeveloped nations around the world.

And so I say the farmers are at long last on the right track in dramatizing this problem and what needs to be met; and if the best brains in the administration and the Congress will simply put their minds to work in developing and perfecting a program along the lines here suggested, it will be not only a great blessing to our Nation and its people, but to the millions and millions of hungry and underprivileged people around the world.

The Bible speaks of hammering our swords into plowshares. This is a part of the basic teachings of almost every religion around the world. Let us at least make a start, bearing in mind what Ed Newman and Garrick Utley said on NBC in 1971, that—

> The only way you are going to solve your city problems is to solve your rural problems.

Farming is, indeed, the business of America, and the bedrock of our economy. Let us nurture and prize it as America's most precious asset.

AMERICAN BENEVOLENCE IN PANAMA

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. BAUMAN. Mr. Speaker, amid cries of "Yankee, Go Home" from Latin American political agitators and self-righteous accusations regarding American "imperialism" from domestic politicians, this Nation has provided the Republic of Panama the highest per capita income in Central America. The economic and humanitarian benefits we have showered upon Panama far exceed that we have provided any other country in the world.

Far from being the hapless and helpless victim of rapacious exploitation by the United States, the Republic of Panama's well-being has been vastly enhanced by this Nation's generosity. For this reason, I find the portrayal by many supporters of the Panama Canal treaties proposed by the Carter administration of American sins in this regard particularly offensive. An excellent refutation of the America the gringo colonialist myth was published January 29 in the Baltimore Sun. Written by Mr. Martin D. Tullai of Brooklandville, Md., the article precisely dissects the myth and provides some excellent food for thought for every Member of this Congress. Having just traveled to Panama and seen first-hand the positive impact of the American canal at Panama, I commend Mr. Tullai's words to my colleagues:

AMERICAN BENEVOLENCE IN PANAMA

SIR: As the U.S. Senate prepares to face its moment of truth regarding the Panama Canal Treaties, there seems to be a revival of the absurd contention that the U.S. has been the aggressive exploiter of Panama. Myths like this, repeated often enough, die

hard. And one would be remiss to allow them to stand without refutation, for a dispassionate appraisal of the facts reveals otherwise.

Although no more than a pestilential swamp in 1903, Panama is today a fairly prosperous nation almost entirely due to our generosity and monies that poured into the region because of the canal. Panama has been and still is the greatest single beneficiary of the canal enterprise. Harold R. Parfitt, governor, Panama Canal Zone, has testified that, "the presence of the Panama Canal has infused much money into the Panamanian economy and is responsible for the high standard of living in that part of Central America." This claim is not difficult to substantiate. Consider some facts:

(1) There is an inflow to the economy of Panama of between $240 million and $250 million annually. In addition, it receives an *annuity* of $2,328,000. The initial annuity was set at $250,000. In 1936, this was increased to $430,000; it was raised again in 1955 to $1,930,000. Today it stands at the aforementioned $2,328,000.

This is not a rental fee as some have mistakenly construed. It was an annuity designed to assume the annual franchise payment which the Panama Railroad formerly paid to Colombia. It did not affect the status of the Canal Zone, but was the obligation of the railroad to Colombia. This obligation was now assumed by the United States which paid Panama the annuity or "compensation." This was not a rental or lease—these words do not appear in the treaty, but significantly, the term "grants" appears 19 times.

(2) The canal is larger than any other single source of employment in Panama. About 10,000 people—72 percent of the total work force of the Panama Canal Company and the Canal Zone Government—are Panamanian nationals; thousands more work for the U.S. military.

(3) Panama has the highest per capita income in all of Central America ($1,375) and stands fourth of 19 nations in all of Latin America. It has twice the per capita wealth of Colombia, the nation from whom she declared her independence.

(4) The U.S. has favored Panama with more per capita foreign aid than any other country in the world. Between 1947 and 1973, this amounted to $342 million.

(5) American businessmen have contributed to Panama's economy with investments approximating $250 million.

(6) Until 1975, Panama had one of the lowest inflation rates in Latin America.

(7) In addition to direct economic boosts, Panama has gained much from a variety of beneficent projects. These include a bridge and highway across the Canal, built at U.S. expense to link the two parts of Panama; the country's deep water ports are U.S. built and operated; its principal international airfield was U.S. built; the U.S. constructed its transisthmian road and railroad; Panama's water supply comes largely from reservoirs and purification systems constructed by the U.S.: its sanitation system was primarily the result of U.S. efforts; and U.S.-owned merchant ships flying Panama's flag of convenience add to her economic well-being, just as tourism, attracted by the Canal, adds many dollars to the merchants' coffers.

(7) The picture of health and social statistics is also quite striking. After the French failure, due largely to tropical fevers, U.S. physicians and scientists conquered the endemic, devastating diseases. They sanitized Panamanian swamps and established an extremely effective health system. Some results of these programs point up their successes:

Panama's infant mortality per 1,000 live births in 1970 was 3.0—lowest in all of Latin America, Argentina's being 60.1, Brazil's 84 to 95, Bolivia's 159.0 and Haiti's 149.1; Panamanians have the fourth best life expectancy in Latin America—66.5 years; at 5.3 per thousand, its mortality rate in 1974 was the second lowest in Latin America; Panama's literacy rate of 84.0 stands fifth in all of Latin America—well above fourteen other nations of that region.

These obvious benefits have made Panama, despite its unstable and dictatorial government, one of the most favored nations in all of Latin America. It is evident that Panama's well-being has been greatly enhanced by the American presence in the Canal Zone. The canal is Panama's greatest single revenue source.

Hanson Baldwin, noted military expert and writer for the New York *Times*, has declared: "The exploitation myth is just that: a propaganda ploy fostered by Panama's politicians, by Castro's Cuba and by the Soviet bloc to help force the United States out of the zone. It has no basis in fact."

MARTIN D. TULLAI.

BROOKLANDVILLE.

FLEXTIME AND PART-TIME BILLS REPORTED

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mrs. SCHROEDER. Mr. Speaker, on January 25 the Committee on Post Office and Civil Service reported two bills to expand alternative work scheduling in the Federal Government.

H.R. 7814 calls for a 3-year experiment within the Federal work force with expanded use of flexible work hours and the compressed workweek, which would be monitored and evaluated by the Civil Service Commission.

The use of flextime by the Federal Government began in 1974 with a small program involving 400 employees of the Social Security Administration aimed at reducing loss of worktime due to high rates of tardiness. While flextime has frequently been introduced to solve personnel problems, it has also been successful with employees, since it gives them greater control over their work schedules. On September 27, 1977, the General Accounting Office made its second report on flextime (FPCD–77–62) recommending changes in title 5 and the Fair Labor Standards Act which impede experimentation with flexible work scheduling.

H.R. 10126 establishes a uniform policy on part-time career employment, authorizing the Civil Service Commission to provide technical assistance and the agencies to establish part-time hiring programs, setting their own goals and timetables. In addition, the bill provides that for purposes of the OMB agency personnel ceilings, part-time employees be counted by the number of hours worked. Currently, an employee is counted as one personnel slot, whether the employee works 20 hours or 40 hours, which penalizes managers who hire part-time workers.

My Subcommittee on Employee Ethics and Utilization held extensive hearings (serial No. 95–28) on the growing use of alternative work scheduling because of the needs of employees and the benefits for employers. The GAO reported that 10,000 private sector organizations with 1.2 million employees are using compressed schedules and from 300,000 to 1 million private sector employees are on flexible work schedules.

I attach for the interest of my colleagues a recent series of articles from the Washington Post by Kathy Sawyer citing part-time hiring experience in D.C. schools and at the Control Data bindery plant in Minneapolis:

[From the Washington Post, Dec. 26, 1977]

JOB SHARING: GROWING TREND

(By Kathy Sawyer)

At the Fillmore School in Georgetown, when a student gets sent to the principal's office, he can't be sure which "half" of the principal it will be because two women are sharing the job.

In California, a young man was offered the job of comptroller of a large school but wanted more time with his family than the high-pressure position would allow. Since his wife had skills similar to his own, they offered themselves as a team, and got the job.

At the admissions office of Goucher College in Towson, Md., a job cut reduced three positions to one. The three women who held the jobs decided to offer themselves for the one job, and they got it.

Such examples of job sharing are increasing, although they are still rare. Getting an employer to agree to such an arrangement and then making it work well takes a special combination of skills, personalities, work environment and luck, according to those who are in the thick of the movement.

Many employers and supervisors have resisted job-sharing and other kinds of reduced-hours arrangements in most higher-paying occupations because of concern about extra costs and administrative inconveniences, and because of the ingrained belief that employees who want to work part-time are not as committed or skilled as full-time workers.

For the three working mothers at Goucher College, the arrangement works "because we're compatible, we think alike," says Janet Kantor, one of the three. "Each of us knows what the others are doing and is familiar with the people the others deal with."

Their job involves setting up a program in which college alumnae speak to prospective students and generally serve as liaison between the alumnae and the admissions staff.

"One of us is almost always available. Sometimes we work at home at night, or very early in the morning. But if one of us has a sick child or something like that, the other two will cover for her."

Sharing a job can be "tricky," according to Maureen McCarthy, of the Committee on Alternative Work Patterns in Washington. "You either have to define pretty well what each person's responsibilities are, or they have to be very compatible, or you can get into trouble."

"You have to guard against the staff playing one of you against the other, things like that," said another Washington professional.

One of the few settings in which the mechanics and the effects of such work arrangements can be observed in a variety of professional and paraprofessional jobs is Wisconsin. An experimental, federally funded program called Project Join (Job Opportunities and Innovations) has taken 30 full-time state government positions and transformed them into 60 part-time or shared positions. There is one year left in a two-year grant. Its initial intention was to include women and other categories of workers who couldn't work full-time.

The first surprise, according to program chief Carol Lobes, was in the breadth of em-

ployee interest. "We had in essence excluded men, unless they were older workers with special needs. But we found some young, career men interested, too, because of family interests or for various other reasons."

Supervisors, on the other hand, have resisted the plan. "That has been an uphill struggle," Lobes said, "We found an interim step necessary. Supervisors are more willing to first allow an existing employee to reduce hours and then hire a second, rather than taking one vacant position and hiring two new people."

Not every job is adaptable to part-time or job sharing, but, according to Lobes and others, in jobs where an alternative schedule could be worked out, supervisors' reactions have been generally favorable.

"It doesn't make management's job any easier, but I think it's a good thing overall," says supervisor Michael Lovejoy, of the state's Office of Policy and Program Analysis. He oversees a staff of 46 business administration professionals, which now includes one who works half-time.

There is some "subconscious screening," he adds. "One management technique is to load people up with too much work, and then let them—if they've good—sort out what's important. But you look at the part-time person and think, 'I can't load them up with that.' I think you tend to give the part-time persons the more structured projects. The full-timers tend to get the flaky, and often enjoyable and creative projects."

Carol Gannon, a medical technician for the the state of Wisconsin, said the biggest problem in her job-sharing situation is "communication. My 'other half' and I leave a lot of little notes for each other about what we've done."

"Job sharing allows the employer to get two different people who, taken together, make one person who's perfect for the job" says Jor Jan Brolin, a community services technician who gathers data on the state's community action programs. "I'm better at some things and the other person has strengths in other areas."

She wanted to work part-time because she needs time for weekly therapy for a paralysis in her legs caused by an accident six years ago.

The most strenuous objections by employers concern the added costs of fringe benefits for part-time workers, which can be several hundred dollars a year or more extra per worker.

Public agencies do not pay the same penalty as private employers in unemployment compensation or Social Security. But many public agencies are required to pay all employees full health benefits.

Many collective bargaining agreements require a full day's pay for a worker called in for any part of the day. Or they require full fringe benefits to be paid to all workers. These too, raise the cost of part-time employment.

In a preliminary cost study of the Wisconsin program, according to codirector Mary Cirilli, "the state seems to be saving money based on the salaries and benefits overall." She said the extra costs in benefits are offset by lower salaries being paid to some half-job holders.

Carol Gannon, for instance, had been the full-time head of a state medical project. When she asked to share her job, the other half was assigned only research work at lower pay.

Some employee benefits, such as paid vacation time, can be prorated in job-sharing arrangements. But other employee benefits that are mandated by law for workers can raise an employers' cost if there is job sharing.

It is in the category of "fixed cost" benefits mandated by law for each worker that costs increase for part time workers, though this varies. For private employers, for instance, unemployment insurance contributions cost more for two part timers than for one full timer. And yet many part timers don't work enough hours to collect a share of unemployment compensation. (If payments are required on the first $6,000 of annual salary, the employer pays one amount for one $12,000 salary and twice that amount for two $6,000 salaries. Social security costs present a similar disadvantage in certain pay brackets.

"Employers do have a gripe right now" about the cost of part-time arrangements, said Wisconsin state Rep. Midge Miller, who has been active in pushing for more flexible work arrangements.

"Well, men made these rules. They can change them."

[From the Washington Post, Dec. 26, 1977]

AT FILLMORE, PRINCIPAL IS ACTUALLY TWO WOMEN

Working 10 days a week is not only possible, but common, for the principal of Georgetown's Fillmore School, according to Andrea Adler and Pat Mitchell.

Together, the two women are the principal, or director, of the school and they figure their bosses in the Washington school system are getting more than full value for their one GS–9 salary of $15,502.

"They were aware when they hired us that they would get more than two-halves," Adler said. "We aren't each taking half. We are each taking all of this job."

Dr. Dorothy Johnson, school superintendent for that region of the city, agrees. "They say two heads are better than one and in this case it's true."

Johnson said she has seen other such job sharing attempts fail. This one is successful, she feels, "because these two women have a very good relationship, both personal and professional, besides being highly competent and motivated."

The women wanted to share the job for the usual reasons. Adler has two children, including a preschooler, and Mitchell has four children in three different public schools.

Adler wanted to be able to help out at her child's nursery school one day a week. Mitchell wanted to be able to go home "at the critical times of day" when her own children are coming home from school." If either has a sick child, the other can come in "at a moment's notice."

Surrounded by art done by the students, their routine punctuated by the clanging class bells, they each work three day's a week, overlapping each other on Wednesdays. "We're in close communication on the days when only one of us is here. And we keep a log of our decisions," Pat said. "When Andrea speaks, she speaks for me, and vice versa."

The only disadvantage, they agree, is the economic one. Besides sharing the wages they lose their benefits completely. "The bureaucracy apparently doesn't know how to split a GS–9 salary, so they converted us to hourly wages, which don't carry benefits," Andrea said. "We need this income, but we both have other benefits through our husbands, we weren't willing to jeopardize this opportunity over benefits."

[From the Washington Post, Dec. 27, 1977]

TAILORING SCHEDULES TO SUIT WORKERS

(By Kathy Sawyer)

In a little bindery plant in an inner city neighborhood of St. Paul, Minn., a large computer firm has tailored its work schedule to suit the needs of mothers like Mamie Curtis, who wanted jobs there.

Until she was hired at the Control Data Corporation's bindery plant there five years ago, Curtis who is 32 and the mother of three small children, was out of work and on welfare. Now she is one of about 140 employees at the plant, all of whom work only part-time. Curtis, for example, works only the five hours when her children are in school.

"I hadn't felt I could work full time while I had small children," she said. Her only previous work experience had been as a kitchen aide and a cannery worker years earlier.

Now she can see her children off to school, walk to the plant three blocks from her home and "get home the same time the kids do," she said.

Each day, Curtis punches holes in thousands of pages that are then bound into technical manuals. Under the supervision of a black manager, she and the other women, most of whom are also black, work at long rows of tables to the accompaniment of the constant drone of the "joggers," machines that vibrate a platform to help the women align the tens of thousands of pages they assemble into technical manuals and brochures. Some women spend their hours at the tedious task of taking pages off stacks and collating them, watching a seemingly infinite procession of the mysterious symbols of the computer age—4,000 pages an hour if they're good.

When the "mothers' shift" of about 70 women ends at 2:30 p.m., a three- or four-hour shift for students begins.

Control Data, a computer and financial service conglomerate with 41,000 employees in 33 countries, initiated the bindery operation in a converted bowling alley seven years ago, following the urban riots of the late 1960's.

"It was our plan to provide the kind of employment most needed, in the place it was most needed" said James Bowe, vice president of Control Data.

On the other hand, he emphasized, the plant is "not a charitable operation . . . We may have a jump on a lot of companies in thinking you can make money by solving social problems."

Last year, the bindery plant turned a profit of $20,000 and picked up 75 new customers for work ranging from biblical posters to promotional material for the St. Paul Chamber of Commerce. The operation did so well that the company built a new plant, using black contractors.

Like other Control Data operation in depressed neighborhoods, this one has had its difficulties. Most of the employees had been out of work, and many were strangers to the requirements of a job, according to senior vice president Norbert Berg.

The company had to contend with such problems as absenteeism and tardiness. "We got into providing legal counselling, financial loans, we've bailed people out of jail, provided day care, nutritional help," Berg said. "We had to learn how to do these things."

Berg believes the plant has given the whole neighborhood a lift. In an area of boarded-up store fronts and sporadic vandalism, he pointed out that the building is free of paint or graffiti. "You'll notice we've got a basketball hoop in the parking lot, where the kids play. We make it a point to keep a net on that hoop and one kid told us that net is as important as anything else we do here."

The bindery workers' hourly pay ranges from $2.71 to $3.12 (after a year) to $5, according to plant manager Richard Mangram. Employees earn on the average $80 a week for 25 hours.

In addition to her wages, a mother employed at the plant might get an additional $270 monthly welfare grant (compared with $400 a month if she were unemployed), so that the job plus the welfare check means a boost in her income of perhaps $190 a month.

The company estimates that its payroll has saved almost $600,000 in local welfare costs over the past seven years.

Though the bindery jobs require little skill, the plant offers training and a chance to move into full-time work for women who want to do so. Mangrum said about 150 employees so far have done that.

Mamie Curtis said she hopes to do the same, "as soon as my kids are old enough."

The workers' benefits include paid vacations, holidays, legal aid, retirement eligibility and access to a government health plan that the company administers but does not pay for.

The printing trade unions in the St. Paul area, however, take a dim view of the nonunion bindery operation. Some of the members "have figured out that these part-time workers are less efficient than union workers by about half," according to one union spokesman. "And also the wage rates are just about half what they would pay professionals. So, it's not exactly philanthropic."

He said a union book binder in the Twin Cities area earns about $5.49 for the same work that earns a Control Data worker $2.71.

Plant manager Mangrum maintains that the plant is competitive because of its low overhead, low absenteeism and turnover, and its high productivity per worker.

"This is no plaything," says plant manager Mangram. "I look at the production records daily. We have sophisticated cost accounting methods. We know who is slack."

While the workers tend to be hired on the basis of need, he said, "if there's a slough off, we deal with it."

The workers praised the plant's efforts to accommodate them in other ways.

"If a child gets sick, I can call in and say I won't be in. And yesterday they let me go over to the school for my grandson's conference," said Mabel Burch, 51, who works the shrink wrapping machine, sealing a clear plastic wrap over posters, books and the like. She is mother of seven children, with custody of a grandchild as well, she said. Her husband has been working two jobs so she could stay home with the children when they were all smaller.

"This job helped us a lot. I don't need special training for it. Anybody could do it, really. I'm not a fast worker," she added, "but I'm constant."

Like most of the other workers, she is able to walk to work, or on bad days, take a bus.

The Control Data executives are not sure why more firms have not followed their example. "The problems are solved, we're making money and yet we're still the only ones around (the inner city)," Bowe said.

"This could be such a big part of that big Carter problem—the unemployment that everybody's scratching his head about. Think of the corporate power to do something about it. All you need is a modest government incentive for business to go in and do it."

The bindery program is no panacea, he added. "It's just a nice combination of things that's working well."

UNPAID TIME OFF STUDIED

(By Kathy Sawyer)

Last year when Santa Clara County, Calif., faced a budget crisis and the threat of employee layoffs, county officials discovered that many of the county's employees were willing to reduce their work hours and take pay cuts to save their jobs.

Seventeen per cent of the county's work force of 10,000 voluntarily applied to reduce their hours. The budget crisis was averted just before schedules were changed but the majority of those who had applied wanted reduced hours anyway and the county granted their wishes.

"Unpaid time off is now viewed as an employee benefit," California State Sen. James R. Mills notes.

In view of such signals from the work force and the persistence of high rates of unemployment, a number of thinkers and planners are now urging programs for voluntary reduction of work hours as an added weapon in the arsenal to combat unemployment.

These proposals would transform work schedules in a variety of ways: shorter work weeks, months, years, or even shorter work lives.

One million jobs would be created if just 20 per cent of the work force volunteered to work 7 per cent fewer hours—that is, three hours less a week, for instance, or 20 days less a year, according to one manpower study group.

Around the country, not just in Santa Clara County, there are increasing signs that because of dramatic changes occurring in the lives they lead and the values they hold, a number of American workers would indeed be willing to make such a trade.

Mills is working up a proposal for work sharing in his state. "The worker who trades income for leisure," he says, "is simply buying that extra leisure from someone who has too much, such as a welfare recipient."

Wisconsin Sen. Gaylord Nelson (D) who conducted hearings last year into a range of alternatives to traditional work, is arguing for more part-time job opportunities as part of the government's welfare reform package.

Jules Sugarman, vice chairman of the Civil Service Commission, has proposed an especially offbeat approach for redistributing work: a sabbatical plan in which most American workers would put aside 6 per cent of their salaries in order to withdraw from their jobs one year out of every 10.

Faced with an army of 14 million unemployed, the government last turned to reduced hours and work sharing measures in the early 1930s, during the Depression. Then legislation that had a major impact on establishing the size and shape of jobs today was enacted.

With unemployment now at around 7 per cent, thinkers and planners disagree over the need for such measures and over their probable impact. The arguments have not changed much in recent years, according to Janice Hedges of the Bureau of Labor Statistics.

The work week has always been reduced only as a dividend of greater productivity. "The theory is that you can reduce the week from 48 to 40 or below and get increases in productivity (because of less worker fatigue, better morale, less absenteeism, and the like), and the cost of goods and services won't go up," she said. "But in a reduction from 40 to, say, 32, there's not as likely to be an increase in the output per hour."

Some unions, such as the 1,500,000 member United Auto Workers, recently have settled for more time off instead of more pay. "More time off is one of the most salient demands of workers now," said a UAW spokesman.

Other unions have fought for a cut in the work week without a reduction in pay. This would be inflationary, economists say, and also would quicken employers' efforts to replace expensive workers with more economical machinery.

"On the other hand, if you reduce hours as an alternative to laying people off," said the BLS' Hedges, "you are not increasing or decreasing efficiency. You're just redistributing earnings."

Proponents of work sharing to replace layoffs argue that it could ease the hardships especially on last-hired, first-fired minorities and women, and on blue collar workers who normally suffer more in a recession than managers and professionals.

The attitude of organized labor generally toward such variations from tradition has been one of suspicion, if not always outright opposition.

"Work sharing is not just work sharing," says John Zalusky, of the AFL–CIO, "It is also unemployment sharing."

He said that reducing the hours of all workers in order to avoid laying some off unless it is very short-term, merely "spreads the misery" and may also be a ploy by the employer to avoid the extra unemployment compensation costs connected with layoffs.

"It's better to pay the unemployment compensation to people who are laid off, and let them look for full-time work."

The AFL–CIO opposes the growing movement to create part-time work in place of full-time jobs because, Zalusky says, it is likely to lure more people into the job market at a time when jobs are scarce, and because it is likely to depress the wages of full-time workers.

Ron Wackett, of the retail clerks international, describes his organization as "torn between two lovers—the need for jobs for the army of the unemployed versus the need for more flexible work arrangements."

Members of that union are among those who traditionally have worked part-time, not for the benefit of the workers but to suit the employers' need to take advantage of peaks and valleys in business. Wackett called that situation "an albatross about the neck of those who want to make careers in the retail trades—full-time careers."

The union has proposed a plan for reducing hours for older workers who want to "phase out," Wackett said, but it is planned "to suit the workers' needs and not the employers."

Some unions appear to be taking a closer look at some of the alternatives to traditional work. Patsy Fryman, of the 600,000 member Communication Workers of America, says the union already has taken steps in its collective bargaining to promote more flexible working hours in the form of flexitime, which allows employees to vary their starting and quiting times but does not reduce working hours. (CWA's membership includes telephone operators, repairmen, cashiers and other crafts.)

In order to study the effects of reduced hours, part-time work and "the full range of alternatives," Fryman said, CWA is sponsoring a trip by 14 trade union officials from six different unions next spring, to European countries such as England, Germany and Switzerland where such measures are in wide use.

"Labor is not oblivious," Fryman said. "But there are plenty of questions still to be answered. What happens to benefits, seniority, premium pay for overtime, all those things? These are the kinds of questions that cause labor to hesitate. We need more study."

Undeniably, innovations in the way jobs are packaged will involve certain costs. "But these costs may be preferable," notes George Washington University economist Sar Levitan, "when you compare them with the alternative costs of continued widespread forced idleness."

Interest in work sharing programs is "gradually accumulating a critical mass," according to Fred Best, of the National Commission for Manpower Policy. "I sense that the issue will get on the political agenda in the next year or so, and that there will be some moves in that direction in the next two years."

[From the Washington Post, Dec. 28, 1977]

PART-TIME JOBS APPEAL TO GROWING NUMBER OF WORKERS

The desire of the American worker for jobs packaged in nontraditional sizes is demonstrated most dramatically by the growth of the country's "permanent part-time" work force.

Virtually nonexistent at the turn of the century, it now is the fastest growing segment of the work force and includes 16 million people.

Most part-timers are women, especially married women with children, and most of them (80 per cent) are working part-time because they prefer it to full time—not because they prefer it to full-time jobs.

The bulk of part-time jobs is in the lower-paying "women's occupations"—retail sales and services, and clerical work.

It is in these fields that the number of part-time workers—who usually are on the job 18 to 20 hours each week—has increased the most, according to Stanley D. Dollen of Georgetown University. In the last 15 years, the number of part-time workers in these jobs has risen by 40 per cent to 50 per cent.

This rise has been accompanied by an increase in the temporary help industry which also includes mostly clerical and service jobs. Temporary workers are sent out by agencies, established for that purpose, to fill short term vacancies and may work an 8-hour day when employed. Part-time workers are employed on a permanent basis but for less than a standard work day or work week.

In 1946, there were only a few thousand temporary workers, according to Martin Gannon of the University of Maryland. Though data in this area are less reliable than most employment statistics, he says, estimates are that are now between 1.6 million and 3 million temporaries employed in the nation.

Some temporary workers simply lack the skills to get full-time jobs, many others prefer to have less income and in some cases receive no fringe benefits at all rather than work full-time.

"The attitude toward temporaries is that they are people who can't keep a permanent job. But we're not all turkeys," said Judy Lynn Lawson, 23, of Greenbelt, who is proud of her 104-word-per-minute typing speed. "A lot of us do it because it suits our life style best."

Gannon said a study of workers who did not work full-time showed that working mothers often had tried full-time work but then "reverted to regular part-time positions" as the best way to reconcile the conflicting demands of work and home.

There is growing pressure now to alter negative attitudes toward temporary and part-time workers so that they are considered for promotion and given a fair share of benefits. There also is pressure to expand part-time job opportunities into professional and managerial level jobs.

The Carter administration has taken some steps to expand part-time job opportunities in the U.S. government. One of the main deterrents, according to officials, is the federal personnel ceiling imposed by the Office of Management and Budget. Currently, employees are counted the same way whether they work two hours a week or 39, critics say.

OMB counters that the ceilings are necessary to check the growth of agencies, and that in many cases the ceilings allow for some part-time hiring but that many managers do not understand that.

Currently there are about 40,000 part-time federal employees (not including the Postal Service) or about 2 per cent of the total federal work force.

An advantageous combination of circumstances made it possible for economist Betty Barker, a GS–15 supervisory level professional at the Commerce Department to get the part-time schedule she wanted after she became a mother. These circumstances include the type of work she does, and the agency for which she does it.

Barker helps supervise 50 people in the Bureau of Economic Analysis and, she says, "My work involves not so much the day-to-day fire fighting, but is generally research analysis, writing and editing papers, designing a survey . . . Other people in the office have been able to plan things around the days I'm in the office."

Supporters of expanded part-time and other flexible job opportunities argue that employers will find enough advantages to outweigh any extra costs in greater management flexibility, and improved morale and productivity among the employees.

For example, supervisors' ratings on women working part-time in professional and technical positions at the Department of Health, Education, and Welfare show that 55 per cent of them are more productive on a work-per-hour basis than full-time workers.

In Boston, half-time public welfare caseworkers handled higher caseloads per hour than their full-time coworkers. They actually averaged 20 per cent more phone contacts with clients than the full-time workers. School administrators in several cities have maintained that their half-time teachers gave them two-thirds as much work for one-half as much pay.

While many temporary workers are housewives who want to re-enter the full-time job market eventually, increasingly temporary work opportunities are appealing to members of the mobile, freedom-loving generation of younger workers, according to Barry Wright, of Temporaries, Inc.

"Washington is a typical example of a transient glamorous place to come and make your mark," he said. "In a situation like this, these young people use temporary employment as a way to get familiar with the local labor market. Some turn it in a life style and travel from city to city."

TAX CUTS, INFLATION, AND UNEMPLOYMENT—PART II

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. CONYERS. Mr. Speaker, on Thursday last I inserted in the RECORD the first part of a major analysis of the 1964 general tax cut written by the noted economist at Michigan State University, Dr. Charles Killingsworth. The 1964 tax cut was the model for all subsequent ones and the claim that it stimulated the economy and created a great many new jobs in the late 1960's has been used by subsequent administrations to justify all future tax cuts.

In the first part of the article, "Tax Cuts and Employment Policy," Dr. Killingsworth effectively refutes the notion that the 1964 tax cut was chiefly responsible for the 2 percent drop in unemployment between 1963 and 1968. This development was, in fact, attributable to the Vietnam war, a diminished labor force participation rate, and technical changes in the way unemployment was measured.

In the second half of the article, which follows, Dr. Killingsworth offers a cost-benefit analysis of tax cuts and public service employment in relation to unemployment and inflation. On every major ground—the savings/consumer spending ratio; targetability; multiplier effect; inflation impact—he concludes that direct jobs spending is far more cost-efficient than tax cutting in creating jobs for the long-term unemployment and in targeting stimulus to the places and people where and for whom it is most appropriate.

The economic history of the past two decades amply demonstrates that traditional policies, in particular tax cutting, cannot promote employment opportunity for millions of young people in the central cities, or eliminate structural barriers to employment that minority groups suffer or, for that matter, have much impact on efforts to revitalize depressed local economies. A series of tax cuts during the past decade have had little effect in lessening the economic disparities between cities and suburbs, the old industrial centers of the Northeast and the new ones in the Southwest and, espeically, among different ethnic and age groups. For example, in 1969, the best employment year in the past 25 years, an overall jobless rate of 3.5 percent meant twice that rate for black Americans and a 25 percent jobless rate among black teenagers. These disparities have only deepened and worsened in the last several years.

I urge my colleague to consider carefully Dr. Killingsworth's analysis, and the alternative to tax cutting that he recommends.

The material follows:

PART II. TAX CUTS AND EMPLOYMENT POLICY

(By Charles C. Killingsworth and Christopher T. King)

STRENGTHS AND WEAKNESS OF TAX CUTS FOR JOB CREATION

Tax cuts are presumed, no doubt correctly, to have strong political appeal. That was the stated basis for the preference of the Council of Economic Advisors in 1961 and 1962 for tax cuts over government expenditure programs. (The more purely economic arguments for the most part were not elaborated until after 1964.) The sources of appeal should be examined and evaluated briefly. If two economic policy instruments are equally effective, but one has greater political appeal, it may make good sense to support the latter. But if the political appeal is based on myth rather than reality, or expectations that are unrealistic, the reliance on political appeal may backfire.

THE APPEAL OF TAX CUTS

So let us analyze the sources of the political popularity of tax cuts. Many more individuals are likely to benefit from tax cuts than from direct job creation programs reserved for the unemployed. Business firms can usually argue successfully, on alleged equity grounds, for a business tax cut whenever a personal tax cut is enacted. Political conservatives may welcome tax cuts as a way to reduce the size of government. Obviously, if the tax cut results in a larger deficit rather than a cutback in government expenditure (as it must if it is to have any net effect on the economy), the conservative expectation is disappointed. But the larger deficit may become a talking point to use against any new programs.

There is another, related kind of ideological appeal of tax cuts. The provide an increase in purchasing power for the individual that may be spent as the recipient sees fit—that is, through the market system. Economists are trained to regard market as the all-round most effective instrument for optimizing and maximizing. Tax cuts operate through and strengthen the private sector of the economy. Perhaps a first cousin to this view is the faddish generalization that "government programs never work." Generally speaking, tax cuts do not require the creation of any new government bureaucracy, with its red tape and maze of regulations. When you create a bureaucracy, its natural tendency is to perpetuate itself and its program. A tax cut can be worded so that it expires automatically at a previously-designated time. Finally, tax cuts can be designed to have an immediate effect on the job market, while government programs are notoriously slow in getting started.

THE WEAKNESS OF TAX CUTS

We begin with some practical, general objections to tax cuts. Some of them are the mirror image of some of the appeals stated

above. From the political standpoint, present tax cuts may render unavailable the funds for some future projects or programs. There is some doubt that business tax cuts result in reductions in unemployment; the Congressional Budget Office estimating procedure assumes that they do not.

Whether or not a tax cut can be made effective much more rapidly than, say, a direct job creation program is by no means clear, and the answer may differ depending on several factors. One major policy question that must be faced when a tax cut is under consideration is whether it should be temporary or permanent. Another closely-related question is whether the cut should be disbursed to taxpayers in a single lump sum or spread over a year. How should the cut be allocated as between low-income, middle-income and high-income taxpayers? Should some kind of payment be made to persons who are too poor to pay income taxes? It is not always easy for Congress and the Administration to reach agreement on these points. In 1977, President Carter formally presented his proposals to Congress a few days after his inauguration in January; by mid-April, when he withdrew the rebate proposal, many points of disagreement remained between the Administration and the Congressional Committees considering the matter.

In our judgment, this listing of pros and cons in the abstract does not carry us very far. More alleged strengths and weaknesses could be set forth, and the discussion would still be inconclusive in the sense that some people would judge that the pros would outweigh the cons and some would reach the opposite judgment. Instead of pursuing this abstract and perhaps sterile approach, we turn to what we regard as a more realistic basis for evaluation.

TAX CUTS AND PSE COMPARED

In this kind of policy analysis, we believe that it is much more useful to compare one kind of policy instrument with one or more alternative instruments, if such alternatives are available. In current discussion, a program of direct job creation such as the Public Service Employment (PSE) program is often compared with tax cutting as an instrument of employment policy. We believe that useful conclusions can be reached on the basis of such a comparison, and we turn to that kind of analysis now.

COST EFFECTIVENESS

One obvious criterion of ecectiveness is the number of jobs created by equal dollar expenditures. Some might question the appropriateness of the term "expenditure," when applied to a tax cut; but we think that when government transfers dollars to individuals, or forgives tax payments that would otherwise be due, then that transaction is as appropriately regarded as an expenditure as is the payment of wages for services performed. Until recently, little attention had been given to the "cost" of tax reduction compared with the "cost" of PSE. In 1975, however, Senator Edmund S. Muskie requested the Congressional Budget Office (CBO) to prepare estimates of the costs and effectiveness of certain "Temporary Measures to Stimulate Employment," and a study with that title was released in September, 1975. The CBO study implies that the gross cost per job created by a tax cut is about $25,000, and the gross cost for a PSE job is about $8,000. Part of this rather large cost difference is explained by the CBO assumption that one-third of the tax cut goes to corporations rather than individuals, and the further assumption that the corporate tax reductions create few if any new jobs. We believe that the underlying reasons for this large difference in cost effectiveness deserves closer attention than they have previously received.

Slippages. When the government provides a tax refund to a household or an individual, or reduces withholding rates, the recipient usually saves at least part of this money. Some economists argue that the proportion saved will be much higher if the money gain is regarded as temporary than if it is regarded as the first installment of a permanent addition to the recipient's income. The debate on this point continues. There is general agreement, however, that some part of the tax cut will be saved for some period of time by the recipients. That portion which is saved does not create jobs. Most of the proceeds of the tax cut will be spent. However, not all of the spending will create new jobs. To some extent, business firms can produce additional goods and services without hiring additional workers. They can increase the hours of work of those already on the payroll; during a recession, in some industries, the hours lost from part-time work may be as many as the hours lost from layoffs. In retail stores, sales personnel may be more fully utilized without any formal increase in hours of duty. Some firms will have accumulated unwanted inventories of goods during slack times and will fulfill increased demand by drawing down the excessive inventories. There are other forms of slippage, of course, but the nature of the phenomenon is illustrated by the examples given.

With a PSE program, on the other hand, virtually all of the funds expended go directly to payrolls and job creation. With a gross cost of $8,000 per job, close to 1,000,000 new jobs will be created by an expenditure of $8 billion. Thus, on the first round, virtually all of the slippage that is inherent in the tax cut is avoided. To put the matter in simple terms, a tax rebate is a transfer of money to a large number of individuals whose labor market status is not directly affected by the transaction. Employment and unemployment are affected only by what the recipient does with the money that he or she gets. A PSE program is a transfer of money to a smaller number of individuals who must agree to perform services in return for the money; thus, the creation of new jobs is an integral part of the process. The PSE program is usually designed so that the labor market status of the recipient is changed, and the national statistics on employment and unemployment are also affected, by the first-round transaction.

Recently much attention has been given to a particular kind of slippage in the PSE program. This has been called "substitution" or "displacement." In the current PSE program, the federal government provides funds to state and local units of government and instructs them to use the money for job creation. Some of the jobs that are "created" are jobs that the governmental units would have financed with their own funds if federal money has not been given to them; and some of the jobs that are financed are previously-existing jobs that have been vacated by layoffs or attrition. In other words, the state and local units simply substitute some of the federal dollars for their own dollars, and there is no real increase in employment. Or so some analysts have seemed to suggest.

We believe that the magnitude of the problem has been considerably exaggerated. Various analysts have presented "estimates" of substitution that have ranged from 40 to 90 percent, over varying time periods. We have several comments on the alleged problem. The estimates are not based on direct observation or nose-counting, but are derived by piling inference on assumption. The fact is that no one has discovered a reasonably defensible estimating technique. To the extent that there is substitution, it can be minimized if not eliminated by partial or complete federal administration of the PSE program; and there are indications that the present administration does plan to place a substantial part of the PSE funds under direct federal control, in addition to providing more careful checking on substitution by state and local units (the federal statute and regulations require "maintenance of effort" by recipient units).

But the real significance of "substitution" appears to have escaped some analysts. Some studies seem to imply—or have been interpreted to imply—that money which the local units use to employ people whom they would otherwise have paid from their own funds is money that is somehow lost from the system. The CBO has taken a more realistic view of the matter. CBO analysts assume a substitution rate of 40 percent, but they treat the funds "saved" as the equivalent of general revenue sharing grants. Such grants have three to four times the job-creating potential of federal tax cuts, according to the analysts of the CBO. In any event, the basic point is that substitution does not destroy the job-creating capacity of PSE funds, although that capacity is somewhat diminished. In simpler terms, money which the local units "save" by substitution is not burned or buried; it is most commonly spent for goods and services, or, to a lesser extent, it substitutes for higher local tax rates (and thus has effects comparable to a federal tax cut).

Targeting. We have already discussed the fact that most of the jobs created by the 1964 tax cut appear to have gone to the better-educated members of the labor force, and that there is no evidence that the labor market prospects of the least-educated and least-skilled workers were improved by that tax cut. Analytically, there appears to be no reasonable basis for thinking that an acceleration of economic growth by cutting taxes would change the previously existing patterns of demand for labor. In the current vernacular, the targetability of a federal tax is close to zero.

The potential targetability of a PSE program is quite high. Far less than the full potential has been realized under the 1971 Emergency Employment Act and under the Comprehensive Employment and Training Act (CETA) embodiments of the PSE. For example, data from the Department of Labor shows that about 75 percent of the participants in Title VI programs under CETA in the final quarter of 1976 had 12 or more years of education, and only half were classified as "economically disadvantaged." However, late in 1976 Congress substantially tightened the eligibility requirements under Title VI, and the new requirements may be expected to target the program more precisely. In any event, it is clear that the program can be directed to the labor force groups and the geographical areas with the highest unemployment rates.

MULTIPLIER EFFECTS

Too little attention has been given, up to now, to the large differences between PSE programs and tax cuts with regard to their multiplier effects. Let us visualize two parallel columns, one tracing the job-creating effects of an $8 billion tax cut and the other showing the effects of an $8 billion PSE program. In the tax cut column, we see the federal government mailing checks to perhaps 75 or 100 million taxpayers. As already explained, the checks do not affect the labor market status of any of them; in other words, the first step in the chain or transactions has no job-creating effect. The taxpayers save part of the money received and spend part of it. That which they spend does create jobs, subject to the slippages discussed above. Those who are hired to fill the newly-created jobs themselves in turn save part of their earnings and spend part, thus creating more jobs, and so on. The CBO estimates imply that approximately 320,000 jobs will ultimately be created by a tax cut of $8 billion. For the reasons discussed in an earlier section, we believe that the CBO estimates may be biased upward. But for the analysis of this point, this quibble is irrelevant.

Now let us turn our eyes to the parallel PSE column. And let us ignore some complications the first time through. The federal government sets up a PSE program with an appropriation of $8 billion. With an average salary of $8,000, a total of 1,000,000 workers can be hired. Obviously, this transaction changes their labor market status; 1,000,000 new jobs have been created, and unemployment has been reduced by some amount close to 1,000,000. But the process does not end there. The newly-hired PSE workers now have salaries to dispose of. Let us assume that they save part and spend part, in the same proportions as the taxpayers in the parallel tax cut column. If this spending assumption is made, then it follows that the second and successive rounds of expenditure will create as many *additional* jobs as the spending of the tax cut money. If the tax cut ultimately creates 320,000 new jobs, then the spending of their salaries (or the portion not saved) by the PSE workers must have the same quantitative effect—provided that they do not save a larger percentage of their incomes than the taxpayers. In this oversimplified illustration, the *total* new employment from the $8 billion PSE program is 1,320,000, or about four times as many jobs as we get from the same expenditures on tax cuts.

We must now consider some of the complications. Suppose—despite the best efforts of the federal authorities—there is a 40 percent substitution rate. This means that only 600,000 new jobs are created in the initial transaction, and the annual payroll is $4.8 billion. If, as before, we assume the same multiplier as for the tax cut, the spending of the unsaved portion of this payroll will ultimately create another 192,000 jobs. But the "substitution" will also give us what we may call the "revenue-sharing effect." To be ultra-conservative, let us assume that these funds, in the hands of these spending units, have no greater job-creating power than the tax cut funds in the hands of the taxpayer-recipients. (As already noted, the CBO assumes a much larger job-creating potential in the revenue-sharing funds.) The $3.2 billion saved by the local units by substitution is spent mainly on goods and services and creates another 128,000 jobs; or a grand total of 920,000 (600,000 on PSE; 192,000 from multiplier on PSE payroll; 128,000 from revenue-sharing effect).

Perhaps it is unrealistic to assume that the saving rate of the new PSE hires would be as high as that of taxpayer-recipients. On the other hand, some of the PSE funds would go for supervision and materials; and some of the PSE hires would have been receiving unemployment compensation and welfare payments. We think that the saving rate assumption for PSE hires is more than sufficient to offset the administrative costs and the savings on welfare and unemployment payments.

PRIVATE SECTOR VERSUS PUBLIC SECTOR JOBS

Many economists have a surprisingly negative attitude toward PSE programs, and the apparent cause is their belief that a PSE program means simply jobs in the public sector. Many economists view public sector jobs with deep suspicion, if not outright disapproval. Some even go so far as to suggest that only market-created jobs are "real" jobs. And, as discussed in a preceding section, that is one of the major reasons for favoring tax cuts over other instruments of employment policy, especially PSE. We believe that the analysis just presented reveals that this alleged advantage of the tax-cut instrument is simply an illusion.

A PSE program almost certainly creates as many jobs *in the private sector* as a tax cut involving an equal number of dollars. This holds true even if we assume a fairly high rate of substitution. These private sector jobs will be market-created jobs in precisely the same sense as the jobs resulting from the tax cut. In a real sense, then, the public sector jobs might be viewed as a cost-free bonus! Semantics aside, our analysis suggests that, with equal magnitudes, the PSE instrument creates many more jobs than the tax cut instrument; and although a large proportion of those new PSE jobs will indeed be in the public sector, the PSE multiplier will create about as many private sector jobs as the tax cut.

CONCLUSION

At the regular monthly hearing before the Joint Economic Committee on the latest employment and unemployment survey on May 6, 1977, BLS Commissioner Julius Shiskin said that it was hard to find anything but "good news" in the April employment report. The overall rate of unemployment was down to 7.0 percent, the lowest rate in more than two years, and employment had risen by 2.3 million over the past six months. However, amidst all the good news, Commissioner Shiskin did find two less cheering items. He remarked about the emergence of what he called a "two-tier pattern of unemployment," with certain labor force groups—especially teenagers and women—showing little or no improvement despite substantial declines in the average unemployment rate. Second, his report showed a further decline in the labor force participation rate for adult males despite substantial employment gains from this group.

We read this report with a sense of *deja vu*—we are seeing a replay of the early 1960s. The "two-tier pattern of unemployment" and the declining participation rates for some groups of adult males were clearly in evidence then. Manpower programs, changes in the definition of unemployment, and the Vietnam War temporarily masked these patterns in the late 1960s. For the last two years, the worst of the postwar recessions also masked the patterns. Now, the laggard recovery has finally brought these underlying problems to the surface again.

If past experience is a valid guide to the future, economic recovery will not solve the chronic problems of imbalance in the labor market. Indeed, a case can be made that the tasks of employment policy become more urgent as hardship becomes more concentrated. And it also becomes more urgent to examine as realistically as possible the strengths and the weaknesses of the instruments of employment policy. Up to now, the conventional wisdom of most economists has been that the most powerful and generally satisfactory instrument of employment policy is tax cuts. With all deference to the good faith of those who have expressed that view so consistently and so frequently in the past two decades, we conclude that it is supported mainly by nostalgia, private sector bias, and simplistic analysis. Most of the employment and unemployment effects attributed to the tax cut of 1964 were actually produced by other factors, and beneath the surface appearance, the currents of the labor market were running strongly against the least-educated and the least-skilled males. In the Kennedy days, some economists were fond of saying that a rising tide lifts all boats. They forgot the exception: the shipwrecks that are already on the bottom.

We do not question the claim that a tax cut can create jobs. We can agree that some of the newly-created jobs may be filled by people who have been classified as "hard-core unemployed." But economists particularly are supposed to be concerned with costs compared with benefits, and with the optimum use of scarce resources. Our analysis leads us to the conclusion that for equal expenditures of public funds, a program of direct job creation can yield three to four times as many jobs as the tax cut approach. Private sector employment will be expanded at least as much by the direct job creation approach as by tax cuts. And the direct job creation program can provide jobs for the groups and areas that are the least likely to succeed in the regular labor market.

Part of the American ethic is that every individual who is willing and able to work should have a chance to work. Public policy up to now has provided only feeble support for that ethic, partly because of excess reliance on an inadequate policy instrument. We believe that Congress has become convinced of that fact, and that this helped to kill the administration proposal for a multi-billion-dollar tax rebate. We may be seeing the beginning of a fundamental redirection of the employment policy of this country—toward much greater effectiveness.

RALPH K. BENNETT SHOWS HOW THE "CONSUMER PROTECTION AGENCY" WOULD BE "ANTICONSUMER"

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. KEMP. Mr. Speaker, the current issue of Reader's Digest carries an important article by the very respected journalist Ralph Bennett which thoroughly dissects the plan to create an Office of Consumer Representation.

As the article makes clear, such an office would simply result in one more layer of bureaucracy on top of all the others already here in Washington. And it would increase the cost of living for both consumer and producer without providing any discernable benefits.

I urge my colleagues to read this article and to speak out against passage of this "anticonsumer" legislation.

[From the Reader's Digest]

CONSUMER "PROTECTION" CONSUMERS DON'T NEED

(By Ralph Kinney Bennett)

The issues are clearly drawn. Supporters like Sen. Abraham Ribicoff (D., Conn.) say the legislation would "ensure that regulatory agencies take into consideration the views of consumers before making important decisions which have significant impact." Opponents echo the argument of Rep. Samuel Stratton (D., N.Y.) that this is no time "to create a whole new layer of bureaucracy to do essentially what existing federal agencies ought to be doing now."

After more than eight years of debate on Capitol Hill, a showdown is near on what many consumerists believe is the single most important piece of domestic legislation—creation of a tax-funded Office of Consumer Representation (OCR). They envision it as a grand watchdog that would intervene on behalf of consumers in the regulatory rulings and decisions of the federal government. It would serve as a countervailing force to regulatory agencies which, they contend, are captives of business and unresponsive to the consumer.

OCR's chief backer, Ralph Nader, originally envisioned the proposed agency as a "consumer strike agency" that would move throughout the federal regulatory system and "revolutionize" government. Over the years, efforts to make the concept more palatable for Congressional passage have perhaps made it less of a "strike agency." But they have not changed the basic thrust of the legislation, which would enable OCR to intervene in federal court against those agencies it felt were contravening the consumer interest. It could request those agen-

cies to use their subpoena powers to extract sensitive, competitive information from businesses. Nader says this power is needed "to defend against corporate crime, against rapacious business practices." Moreover, supporters claim that the agency would have no greater power than any private party involved in regulatory matters.

To equate OCR with a private party is misleading. In a detailed analysis prepared for the Chamber of Commerce of the United States, regulatory-affairs attorney Mark Schultz notes: "OCR would have greater rights of judicial review of other federal decisions than any business entity. OCR has statutory authority to review any decision or action of the government. No other public, private or governmental entity enjoys this same right."

In fact, it is precisely this power—unchanged through each form the bill has taken—that caused former Special Prosecutor Leon Jaworski to warn in April 1977 that a consumer agency "would be vested with authority so broad it could easily be turned to the political advantage of those who control it. There are no checks sufficient to harness that authority."

OCR's potential to disrupt normal dealings of various businesses and industries is awesome. An air-fare increase, duly deliberated and approved by the Civil Aeronautics Board, could be blocked by OCR and involved in litigation. Approval of a drug after lengthy study by the Food and Drug Administration might nonetheless be halted indefinitely by OCR. Banks, businesses, industries could be left in a state of apprehension and confusion by a single administering agency acting in the name of an undefined "interest."

Former Sen. Sam Ervin (D., N.C.), one of the nation's most respected authorities on constitutional law, warns that an OCR "would have all the rights of a regulatory agency, yet none of the responsibilities. It would have more power than real consumers ever dreamed of exercising."

OCR backers like Nader and Presidential consumer-affairs adviser Esther Peterson nevertheless continue to press for the agency's creation. Back in 1971, the 92nd Congress was just seizing consumerism as a solid voter issue when the House of Representatives passed a consumer-agency bill by an overwhelming vote of 344 to 44. In the 93rd Congress, the vote for an OCR was 293 to 94. When the 94th Congress voted on the measure in 1975, opposition in the House had grown to the point that it was barely approved, 208 to 199. Although the Senate had also passed the bill, certainty of a Presidential veto torpedoed it.

Last year, despite President Carter's strong support, the consumer-agency bill failed to reach the floor of either chamber for a vote. Clearly, many Congressmen who had previously vtoed for the measure had changed their minds. Rep. Patricia Schroeder (D., Colo.), one of the most ardent consumerists on Capitol Hill, questioned the need for an agency which, she says, "may satisfy the desires of a few consumer-advocate lawyers, but not necessarily the consumer." More than 400 newspapers across the country, including *The Wall Street Journal*, Chicago *Daily News*, Washington *Star*, Houston *Chronicle* and Boston *Herald American*, have editorialized against a consumer agency.

Late last year, the White House and consumerists amended the bill (changing the name from Agency for Consumer Protection to Office of Consumer Representation, but not changing the essential thrust of the agency as a powerful instrument for intervention). House leadership counted noses and found that this bill, too, could not pass. Rather than risk defeat in the waning days of the Congress, supporters promised to drive for passage early this session.

Why the dramatic legislative turn-around?

Polls have shown the public to be concerned over a broad range of consumer problems, but they also reflect a disillusionment with government as the potential solution, a disillusionment that seems to have been nourished by many consumer-oriented laws passed by Congress in the past decade. Enacted into law were dozens of new statutes from the Hazardous Substances Act to the Fair Labeling and Packaging Act, from the National Traffic and Motor Vehicle Safety Act to the Consumer Goods Pricing Act. A White House office of consumer affairs was enlarged, and a Consumer Product Safety Commission was created to eliminate unsafe products from the marketplace. The country seemed to be embarking on a new era of assured quality and safety.

But the public quickly discovered that federal involvement on behalf of the consumer too often meant exasperating and expensive intrusion. One of the first ways this hit the public was through a piece of bureaucratic intervention called the ignition interlock. In the name of consumer safety, Americans could not start their new cars unless they fastened themselves into a harness of seat- and shoulder-belts. Congress was hit with a blizzard of angry mail and finally rescinded the law—but not before it had cost consumers $2.4 billion extra for their new cars.

But soon there was another well-meaning, ill-conceived rush to protect everybody from everything.

For example, when the Employee Retirement Income Security Act (ERISA) was passed to protect employe pensions, companies faced immense additional clerical work loads. A few companies estimated that costs of ERISA paperwork would exceed the amount of their annual contribution to their retirement plans. In 1975, the first full year under the law, ERISA regulations were a factor in 23 percent of the 4,000 defined-benefit pension plans dropped. In 1976, 7,300 plans were dropped and ERISA rules were a factor in 35 percent of them.

Well-meant regulations have often tended to disconcert consumers. Many people (those with arthritis, for instance) have found themselves frustrated by government-decreed child-proof caps on medicine bottles.[1] It is likely that many others would be frustrated by a new proposal that power lawnmowers be fitted with a device that would shut down the engine every time the machine came to a halt. Such a device could increase power-mower prices by as much as $100.

The cost of all this "protection" has been staggering. Washington University's Center for the Study of American Business estimates that federal regulation cost $65.5 billion in 1976; that's about $300 per citizen.

At the root of consumerism lies an elitist notion, say the opponents of the proposed OCR, that a *third* party knows better than either producer or consumer. Writing in the New York *Times*, Robert T. Quittmeyer, president of the Amstar Corporation, calls this "the arrogant desire to substitute some personal vision of order for the apparent disorder of the marketplace."

Consumerists insist that Office of Consumer Representation officials will have no difficulty in determining just what is in the consumer's interest. That interest, says Ralph Nader's organization, Public Citizen, is usually "apparent and uniform." But is it? Here are a few vexing policy areas in which OCR would have to decide, Solomon-like, the consumer interest.

The Food and Drug Administration wants saccharin banned on the ground it causes cancer in rats who ingest it in massive quantities. But what of the tens of millions of Americans' who, knowing this, want saccharin to control their weight or because they suffer from diabetes?

Consumerists tend to favor continued federal controls of natural gas which keep prices low. Some consumers benefit—at least in the short run. But what about those consumers who may get sharply limited amounts of gas because of price-induced shortage?

Dubious light is cast on OCR when one considers the important aspects of consumer interest that would not be covered, under the bill, because of political expediency.

As the price for organized labor's backing of the bill, OCR legislation exempts any intervention in matters regarding union agreements or labor disputes. Yet such agreements and disputes affect consumers through the higher product prices caused in part by wage hikes or long work stoppages, or through the sheer unavailability of, say, certain makes of cars during an auto strike.

Also exempted from OCR scrutiny would be a great many activities of the Department of Agriculture, virtually removing one of the prime consumer interests—food and food prices—from any consideration. License-renewal proceedings of radio and television broadcasting stations have also been exempted. In fact, at least 37 different exemptions were "sold" for support of a consumer agency. Says Sen. James Allen (D., Ala.): "This is evidence to me that those advocating further federal involvement want an official slot in government at any price. They are prepared to trade scope so they can get power."

Richard O. Simpson, former chairman of the Consumer Product Safety Commission, raises an interesting question: "If we accept the premise that federal agencies are not responsive to the interests of consumers, by what logic should we create another federal agency and expect thereby to correct the deficiency?"

If it votes to create an OCR, Congress will be going on record as unable to control the many agencies which it has set up over the years, unable to make them respond to the needs of the people—who are, after all, the consumers. And President Carter, who has proclaimed himself the nation's "top consumer advocate" has pledged his Administration to reducing the bureaucracy while making it more efficient and responsive.

Sen. Robert Dole (R., Kan.), one of those who once backed a consumer agency but now strongly opposes such legislation, says: "If reorganization to make government more responsive and efficient is a sincere concept, why then do we need a super-agency to police that government? I find the two concepts utterly inconsistent. We should follow the President's lead in putting our governmental house in order before we create an independent agency to do it for us."

1978 PRESIDENTIAL CLASSROOM FOR YOUNG AMERICANS

HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1978

Mr. LOTT. Mr. Speaker, I would like to take this opportunity to recognize four outstanding young people from the Fifth Congressional District of Mississippi, Martha A. Cuellar and Jewel R. Lee of Petal, and Rebecca J. Banks and Thomas J. Wiltz III, of Vancleave, who are here in Washington this week to participate in the 1978 Presidential Classroom for Young Americans.

I always enjoy discussing the operations of our Federal Government with the Presidential Classroom students and commend these young Americans on their interest and attitude toward our Nation's destiny.

SENATE COMMITTEE MEETINGS

Title IV of the Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, January 31, 1978, may be found in Daily Digest of today's RECORD.

MEETINGS SCHEDULED

FEBRUARY 1

9:00 a.m.

Human Resources
Aging Subcommittee
To hold oversight hearings on proposed extension of amendments to the Older Americans Act.
Until noon — 6226 Dirksen Building

9:30 a.m.

Energy and Natural Resources
To hold hearings on proposed authorizations for fiscal year 1979 for the Department of Interior.
3110 Dirksen Building

Environment and Public Works
To continue hearings on proposed authorizations for fiscal year 1979 for the EPA.
4200 Dirksen Building

Human Resources
To hold hearings on legislative proposals concerning reform of labor laws.
4232 Dirksen Building

Joint Economic
To continue hearings to receive testimony on the President's economic report.
345 Cannon Building

10:00 a.m.

Agriculture, Nutrition, and Forestry
To hold a business meeting.
322 Russell Building

Armed Services
To continue hearings on the military aspects of the Panama Canal Treaty and Treaty Concerning the Permanent Neutrality and Operations of the Panama Canal (Exec. N, 95th Cong., 1st sess.).
1114 Dirksen Building

Banking, Housing, and Urban Affairs
To resume markup of bills proposing simplification in the "truth-in-lending" laws (S. 1312, 1501, 1653, and 1846).
5302 Dirksen Building

Budget
To hold hearings in preparation for reporting the first concurrent resolution of the fiscal year 1979 congressional budget.
6202 Dirksen Building

Finance
International Trade Subcommittee
To hold hearings on U.S.-Japanese trade relations and on the status of the multilateral trade negotiations.
2221 Dirksen Building

Select Small Business
Economic Development, Marketing, and the Family Farmer Subcommittee
To continue hearings jointly with Agriculture, Nutrition, and Forestry Subcommittee on Agriculture Credit and Rural Electrification on SBA physical disaster loans for crop loss due to drought.
424 Russell Building

2:00 p.m.

Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1979 for the Department of Labor.
1223 Dirksen Building

3:00 p.m.

Conferees
On H.R. 3816, authorizing funds for fiscal years 1978 through 1981 for the Federal Trade Commission.
Until 5 p.m. — S–207, Capitol

FEBRUARY 2

9:30 a.m.

Appropriations
To hold hearings to determine where Federal policy and funds should be directed in the development of alcohol fuels.
1202 Dirksen Building

Environment and Public Works
To hold hearings on proposed authorizations for fiscal year 1979 for the Department of the Interior.
4200 Dirksen Building

Human Resources
Child and Human Development Subcommittee
To hold hearings on the proposed Carnegie/White House Conference on Families.
Until 12:30 p.m. — 1318 Dirksen Building

Human Resources
Employment, Poverty and Migratory Labor Subcommittee
To hold hearings on S. 50, the Full Employment and Balanced Growth Act.
Until 12:30 p.m. — 1202 Dirksen Building

Human Resources
Health and Scientific Research Subcommittee
To hold hearings on S. 2410, amending certain sections of the Public Health Service Act relative to health planning and health resources development.
5302 Dirksen Building

10:00 a.m.

Budget
To continue hearings in preparation for reporting the first concurrent resolution of the fiscal year 1979 congressional budget.
6202 Dirksen Building

Energy and Natural Resources
To hold hearings on pending nominations.
3110 Dirksen Building

Finance
International Trade Subcommittee
To hold hearings on H.R. 8149, the Customs Procedural Reform Act.
2221 Dirksen Building

10:30 a.m.

Appropriations
Labor-HEW Subcommittee
To continue hearings to receive testimony from Secretary of Labor Marshall on proposed budget estimates for fiscal year 1979 for the Department of Labor.
S–128, Capitol

2:00 p.m.

Appropriations
Labor-HEW Subcommittee
To hold hearings to receive testimony from Secretary of HEW Califano on proposed budget estimates for fiscal year 1979 for the Department of HEW.
S–128, Capitol

FEBRUARY 3

9:00 a.m.

Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To hold joint hearings with Banking, Housing, and Urban Affairs on S. 50, the Full Employment and Balanced Growth Act.
4232 Dirksen Building

9:30 a.m.

Human Resources
Aging Subcommittee
To resume oversight hearings on proposed extension of amendments to the Older Americans Act.
Until noon — 457 Russell Building

Human Resources
Health and Scientific Research Subcommittee
To continue hearings on S. 2410, amending certain sections of the Public Health Service Act relative to health planning and health resources development.
1318 Dirksen Building

Veterans' Affairs
To hold hearings on S. 2384, the proposed Veterans and Survivors Income Security Act.
6202 Dirksen Building

10:00 a.m.

Budget
To continue hearings in preparation for reporting the first concurrent resolution of the fiscal year 1979 congressional budget.
318 Russell Building

Energy and Natural Resources
Parks and Recreation Subcommittee
To hold hearings to receive testimony from the Department of the Interior on S. 1829, to establish the Jean Lafitte National Historic Park, Louisiana.
3110 Dirksen Building

Environment and Public Works
Water Resources Subcommittee
To hold hearings to receive testimony on Federal dam safety requirements.
4200 Dirksen Building

Finance
To hold a business meeting.
2221 Dirksen Building

Governmental Affairs
To hold hearings on the handling of discrimination complaints in the Senate (pursuant to Rule 50 and Section 310 of S. Res. 110).
3302 Dirksen Building

Joint Economic
To resume hearings to receive testimony on the President's economic report.
345 Cannon Building

11:00 a.m.

Foreign Relations
African Affairs Subcommittee
To hold hearings to receive testimony on conditions in South Africa.
4221 Dirksen Building

3:00 p.m.

Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1979 for the Department of Labor.
1223 Dirksen Building

FEBRUARY 6

9:00 a.m.
Judiciary
Citizen and Shareholders Rights and Remedies Subcommittee
To hold hearings on S. 476, 477, 478, and related bills to amend the laws concerning diplomatic immunity.
2228 Dirksen Building

9:30 a.m.
Governmental Affairs
Governmental Efficiency and the District of Columbia Subcommittee
To resume hearings on H.R. 7747, to amend the D.C. Code with regard to pretrial release and detention.
6202 Dirksen Building

10:00 a.m.
Armed Services
Manpower and Personnel Subcommittee
To hold hearings to receive testimony from Comptroller General Staats on the costs of an all volunteer army.
1114 Dirksen Building
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To hold oversight hearings on exchange rate policy.
5302 Dirksen Building
Energy and Natural Resources
To resume hearings on pending nominations.
3110 Dirksen Building
Finance
Taxation and Debt Management Subcommittee
To resume hearings to receive testimony on the public debt and the implications of President Carter's budget upon the debt.
2221 Dirksen Building
Joint Economic
To resume hearings to receive testimony on the President's economic report.
345 Cannon Building

11:00 a.m.
Foreign Relations
To hold hearings on U.S. policy with respect to the exploitation of Antarctic resources.
4221 Dirksen Building

6:00 p.m.
Veterans' Affairs
To hold hearings on a National Academy of Science study of health care for American veterans.
6226 Dirksen Building

FEBRUARY 7

9:00 a.m.
Human Resources
Aging Subcommittee
To resume oversight hearings on proposed extension of amendments to the Older Americans Act.
Until noon 6202 Dirksen Building

9:30 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold hearings on the future of space science and space applications.
235 Russell Building
Environment and Public Works
To hold hearings on proposed authorizations for fiscal year 1979 for the Federal Highway Administration, and to receive testimony from Secretary of Transportation Brock Adams on the Administration's highway legislative proposals.
4200 Dirksen Building

10:00 a.m.
Appropriations
Labor-HEW Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1979 for the Departments of Labor-HEW, and related agencies.
S-128, Capitol
Banking, Housing, and Urban Affairs
To hold oversight hearings on the budgets of bank regulatory agencies.
5302 Dirksen Building
Finance
Public Assistance Subcommittee
To hold hearings to receive testimony from HEW Secretary Joseph A. Califano, Jr., on S. 2084, the proposed "Better Jobs and Income Act."
2221 Dirksen Building
Government Affairs
Federal Spending Practices and Open Government Subcommittee
To resume hearings on alleged irregularities in certain spending practices of the Small Business Administration.
457 Russell Building
Select Small Business
To hold hearings on S. 2259, the Small Business Procurement Expansion and Simplification Act.
EF-100, Capitol
Joint Economic
To continue hearings to receive testimony on the President's economic report from OMB Director McIntyre.
2154 Rayburn Building

FEBRUARY 8

9:00 a.m.
Human Resources
Aging Subcommittee
To continue oversight hearings on proposed extension of amendments to the Older Americans Act.
Until noon 457 Russell Building

9:30 a.m.
Environment and Public Works
To hold hearings on proposed authorizations for fiscal year 1979 for the Nuclear Regulatory Commission.
4200 Dirksen Building
Environment and Public Works
Transportation Subcommittee
To hold hearings to receive testimony on issues relating to the Federal highway program, including the level of Federal support, completion of the Interstate System, and the costs of maintenance on the Federal highway system.
1318 Dirksen Building
Human Resources
Child and Human Development Subcommittee
To hold hearings in review the current programs on child care and child development and the need for additional legislation.
Until 12:30 p.m. 4232 Dirksen Building
Human Resources
Health and Scientific Research Subcommittee
To hold hearings on the extension of NIH research authorities and community mental health centers.
Until 12:30 p.m. S-207, Capitol
Judiciary
Constitution Subcommittee
To hold hearings on S. 35, proposed Civil Rights Improvements Act.
2228 Dirksen Building

10:00 a.m.
Appropriations
Interior Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the Fine Arts Commission, Woodrow Wilson Center, National Capitol Planning Commission, and the National Gallery of Art, Department of the Interior and related agencies.
1114 Dirksen Building
Banking, Housing, and Urban Affairs
To continue oversight hearings on the budgets of bank regulatory agencies.
5302 Dirksen Building
Finance
International Trade Subcommittee
To hold hearings on H.R. 5643, to implement the U.N. Convention on the means of prohibiting and preventing illicit import, export, and transfer of ownership of cultural property.
2221 Dirksen Building
*Select Intelligence
To hold hearings on S. 1566, to establish procedures for electronic surveillance in the area of foreign intelligence information.
6226 Dirksen Building
Joint Economic
To continue hearings to receive testimony on the President's economic report.
2337 Rayburn Building

FEBRUARY 9

7:00 a.m.
Human Resources
Child and Human Development Subcommittee
To hold hearings on the reauthorization of the ACTION agency (P.L. 93-113).
Until 11:00 a.m. 4232 Dirksen Building

9:00 a.m.
Commerce, Science, and Transportation
To hold hearings on the nominations of Edith B. Sloan and Susan B. King, both of the District of Columbia, each to be a Commissioner of the Consumer Product Safety Commission.
235 Russell Building

9:30 a.m.
Environment and Public Works
To hold hearings on proposed fiscal year 1979 authorizations for Title V's Regional Commissions of the Public Works and Economic Development Act of 1965, and the Appalachian Regional Commission.
4200 Dirksen Building
Judiciary
Constitution Subcommittee
To continue hearings on S. 35, proposed Civil Rights Improvements Act.
2228 Dirksen Building

10:00 a.m.
Appropriations
Interior Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the Advisory Council on Historic Preservation, Museum Services, and Pennsylvania Avenue Development Corporation.
1318 Dirksen Building
Finance
Public Assistance Subcommittee
To resume hearings to receive testimony from Secretary of Labor F. Ray Marshall on S. 2084, the proposed "Better Jobs and Income Act".
2221 Dirksen Building
Joint Economic
To continue hearings to receive testimony on the President's economic report from Treasury Secretary Blumenthal.
5110 Dirksen Building

FEBRUARY 10

9:30 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold oversight hearings on the implementation of the National Science and Technology Policy Act (P.L. 94-282).
235 Russell Building
Environment and Public Works
Water Resources Subcommittee
To mark up H.R. 7744, to permit the contract dredging for improvement of rivers and harbors by private industry.
4200 Dirksen Building

10:00 a.m.
Joint Economic
To continue hearings to receive testimony on the President's economic report from Secretary of Commerce Kreps and Secretary of Labor Marshall.
345 Cannon Building

FEBRUARY 15

9:30 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold oversight hearings on the National Bureau of Standards.
235 Russell Building

FEBRUARY 20

9:30 a.m.
Environment and Public Works
To hold hearings on proposed fiscal year 1979 authorizations for programs within the Department of the Interior, including General Services building proposals.
4200 Dirksen Building

10:00 a.m.
Appropriations
Interior Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the Navajo-Hopi Relocation Commission, and Alaska Land Use.
1114 Dirksen Building
Banking, Housing, and Urban Affairs
Housing and Urban Affairs Subcommittee
To hold hearings on proposed fiscal year 1979 authorizations for HUD.
5302 Dirksen Building

6:00 p.m.
Human Resources
Child and Human Development Subcommittee
To resume hearings to review the current programs on child care and child development and the need for additional legislation.
Until 9:00 p.m. 4332 Dirksen Building

FEBRUARY 21

9:00 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold hearings on proposed fiscal year 1979 authorizations for NASA.
235 Russell Building

9:30 a.m.
Environment and Public Works
To hold hearings on proposed fiscal year 1979 authorizations for the Economic Development Administration.
4200 Dirksen Building

10:00 a.m.
Appropriations
Interior Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the Office of the Secretary.
114 Dirksen Building
Appropriations
Labor-HEW Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the Health Services Administration, Department of HEW.
S-128, Capitol
Banking, Housing, and Urban Affairs
Housing, and Urban Affairs Subcommittee
To continue hearings on proposed fiscal year 1979 authorizations for HUD.
5302 Dirksen Building
Foreign Relations
To hold hearings on H.R. 7819, S. 1256, and S. 1257, to guarantee fair and equitable compensation for Americans injured in auto accidents with diplomatic personnel, and to require compulsory auto liability insurance for all diplomats.
4221 Dirksen Building
Human Resources
Education, Arts, and the Humanities Subcommittee
To mark up S. 1753, to extend and amend the Elementary and Secondary Education Act.
Until noon 4232 Dirksen Building

2:00 p.m.
Appropriations
Labor-HEW Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the Center for Disease Control, Department of HEW.
S-128, Capitol

FEBRUARY 22

9:00 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To continue hearings on proposed fiscal year 1979 authorizations for NASA.
235 Russell Building

10:00 a.m.
Appropriations
Interior Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the Office of Water Research and Technology.
1114 Dirksen Building
Appropriation
Labor-HEW Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1979 for the National Institutes of Health, Department of HEW.
S-128, Capitol
Banking, Housing, and Urban Affairs
To hold oversight hearings on HUD crime and riot reinsurance programs.
5302 Dirksen Building
Environment and Public Works
To hold hearings on proposed fiscal year 1979 authorizations for the Army Corps of Engineers.
4200 Dirksen Building
Joint Economic
To resume hearings to receive testimony on the President's economic report.
1202 Dirksen Building

2:00 p.m.
Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1979 for the National Institutes of Health, Department of HEW.
S-128, Capitol

FEBRUARY 23

9:30 a.m.
Environment and Public Works
Resource Protection Subcommittee
To hold hearings on S. 1820, to preserve examples of America's diverse natural ecological resources for classification, identification, and protection.
4200 Dirksen Building

10:00 a.m.
Appropriations
Interior Subcommittee
To hold hearings to receive testimony from Secretary of the Interior Cecil Andrus, on proposed budget estimates for fiscal year 1979 for the Department of the Interior.
1114 Dirksen Building
Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1979 for the National Institutes of Health, Department of HEW.
S-128, Capitol
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To hold oversight hearings on U.S. export policy.
5302 Dirksen Building

2:00 p.m.
Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1979 for the National Institutes of Health, Department of HEW.

SENATE—*Tuesday, January 31, 1978*

(Legislative Day of Monday, January 30, 1978)

The Senate met at 10:45 a.m., on the expiration of the recess, and was called to order by Hon. DICK CLARK, a Senator from the State of Iowa.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

"O God, our help in ages past,
Our hope for years to come,
Our Shelter from the stormy blast
And our eternal home"

—ISAAC WATTS.

Dear Lord and Father of mankind, come graciously near to all who suffer from cold or hunger or disease amid the winter's storms. Strengthen and guide those on missions of mercy that healing and warmth and comfort may be the possession of our common humanity. Bind into one fellowship those who suffer with those who help, that sharing one another's burdens we may fulfill the law of Christ, remembering how He said: "I was an hungered, and Ye gave me meat: I was thirsty and Ye gave me drink: I was a stranger, and Ye took me in: naked and Ye clothed me: I was sick and Ye visited me." Reward Thy servants with hearts at peace with Thee. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter.

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., January 31, 1978.

To the Senate:

Under the provisions of Rule I, Section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable DICK CLARK, a Senator from the State of Iowa, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. CLARK thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Chair recognizes the majority leader.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Monday, January 30, 1978, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I have no requirement for my time. Therefore, I yield it back.

The ACTING PRESIDENT pro tempore. The Chair recognizes the Senate minority leader.

Mr. BAKER. Mr. President, I have no requirement for my time under the standing order and I yield it back.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Missouri (Mr. EAGLETON) is recognized for not to exceed 15 minutes.

S. 2459—INCOME TAX CREDIT FOR SOCIAL SECURITY CONTRIBUTIONS

Mr. EAGLETON. Mr. President, as my colleagues are well aware, President Carter has submitted to Congress a $34 billion tax cut proposal. Aside from the reform aspects of the tax reduction plan, this proposal is designed to stimulate the economy—with about $23.5 billion in individual tax reductions as a compensation for recent and projected tax increases, including, of course, the social security legislation.

Congress recently voted to increase social security taxes to resolve that system's financial difficulties. It was the largest single peacetime tax increase in this country's history. As a result, the wage earner who contributes the maximum amount to the social security trust fund will pay approximately $21,500 in social security taxes during the next 10 years—an increase of about $6,250 over the previous law. Obviously, Congress could not allow the social security system to go bankrupt, but in my opinion, we have raised the social security tax beyond the breaking point for the average American worker and employer. In the process of raising these taxes, we have, in the opinion of the President, caused economic problems which are serious enough to demand a tax cut as a remedy.

While I support the President's proposal to cut taxes, I am concerned about the equity of his particular plan. Specifically, I feel that action is needed to prevent the portion of the tax cut designed to compensate persons paying higher social security taxes from becoming a windfall for individuals who do not participate in the social security system. For example, under the President's proposal, a Government worker earning $20,000 annually with a family of four who is not participating in the social security program would receive a $270 reduction in income taxes in 1979. The same worker in private industry, however, would net only a $9 tax reduction because during 1978 and 1979 he would be paying $261 more in social security taxes.

The latest available IRS figures, which are for the year 1976, indicate that of the approximately 110 million individual income tax payers, only about 90 million contribute to social security. Only these 90 million will be paying the increased payroll tax mandated by the recent social security bill, and I believe equity demands that only these Americans receive the benefits of that portion of the tax cut aimed at relieving this new social security burden. To do otherwise would not only be inequitable, but it would also seriously dilute the tax benefit that otherwise would accrue to social security participants.

In 1979, the social security trust fund will receive approximately $65 billion in employee and self-employed contributions. The legislation that I am introducing today will authorize an income tax credit for each individual taxpayer equivalent to 15 percent of the amount he or she has contributed to social security. Fifteen percent of $65 billion is $9.75 billion, which would be the maximum cost in 1979 of this credit to general revenues. The remainder of the tax cut—whatever its final amount—would be shared equally by all income-tax payers.

The Social Security Administration estimates that the average social security participant contributes about $600 per year. Assuming a 15-percent credit, the average social security taxpayer could expect to receive an income tax credit of approximately $90 in addition to the benefits of the tax cut that all taxpayers will receive. Of course, those who pay more than the $600 average would receive a proportionately greater credit.

As my colleagues know, the railroad retirement system is closely tied to the social security trust fund in that the approximately 500,000 railroad employees pay the same tax, based upon the same wage base that is used in the social security system. In 1978 these employees contributed $0.6 billion to the railroad retirement system. Therefore, since the social security and railroad retirement systems are so closely associated, I propose that these employees also benefit from my tax credit proposal.

Mr. President, I will offer the legislation I have introduced today at the appropriate time as an amendment to the Carter tax cut proposal. In offering this legislation, I do not necessarily suggest that the total dollar amount of the tax cut should be increased in order to allow for my provision, even though I understand many economists would prefer a larger tax cut. I am proposing that whatever the total dollar figure settled on by the Senate Finance Committee and the House Ways and Means Committee be divided fairly. The logic behind my amendment is very simple—the President has recognized that a portion of the tax cut is necessary to partially compensate taxpayers for higher social security taxes, and only those taxpayers who have to pay the higher social security taxes should receive that part of the tax cut. To do otherwise would be unfair.

I send my bill to the desk and ask that it be printed and referred to the appropriate committee.

The ACTING PRESIDENT pro tempore. The bill will be received and printed, and will be appropriately referred.

Mr. EAGLETON. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a brief period for the transaction of routine morning business of not to exceed 30 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER THAT CERTAIN MEASURES BE HELD AT THE DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, and this request has been cleared with the minority side, that at such time as H.R. 5646, H.R. 5798, and H.R. 10532 are received from the other body, they be held at the desk until further order of the Senate.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

At 12:22 p.m., a message from the House of Representatives, delivered by Mr. Hackney, one of its reading clerks, announced that the House has passed the following bills, in which it requests the concurrence of the Senate:

H.R. 5646. An act to amend the Regional Rail Reorganization Act of 1973 to require ConRail to make premium payments under certain medical and life insurance policies, to provide that ConRail shall be entitled to a loan under section 211(h) of such act in an amount required for such premium payments, and to provide that such premium payments shall be deemed to be expenses of administration of the respective railroads in reorganization.

H.R. 5798. An act to amend the Interstate Commerce Act to authorize appropriations for the Office of Rail Public Counsel for fiscal year 1978.

H.R. 10532. An act to amend Public Law 95-18, providing for emergency drought relief measures.

At 3:35 p.m., a message from the House of Representatives, delivered by Mr. Berry, one of its reading clerks, announced that the House agrees to the amendments of the Senate to the joint resolution (H.J. Res. 386) to provide for the striking of a national medal to be issued annually in commemoration of the bicentennials of outstanding historic events and personalities from 1777 to 1789.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. CANNON, from the Committee on Commerce, Science, and Transportation:

R. David Pittle, of Maryland, to be a Commissioner of the Consumer Product Safety Commission.

Ernest Ambler, of Maryland, to be Director of the National Bureau of Standards.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committees of the Senate.)

Mr. CANNON. Mr. President, as in executive session, I report favorably from the Committee on Commerce, Science, and Transportation, sundry nominations in the Coast Guard which have previously appeared in the CONGRESSIONAL RECORD and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of January 20, 1978, at the end of the Senate proceedings.)

By Mr. SPARKMAN, from the Committee on Foreign Relations:

Arthur T. Tienken, of Virginia, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Gabonese Republic.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committees of the Senate.)

STATEMENT OF POLITICAL CONTRIBUTIONS

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Arthur T. Tienken.

Contributions, amount, date, and donee:

1. Self, none.

2. Spouse, none.

3. Children and Spouses: Mrs. Judy T. Nelson (daughter)—none.

Names Lawrence Nelson—none; Mrs. Nancy T. Milburn (daughter)—none, David Milburn—none; Caro Jean Tienken (daughter)—none.

4. Parents names: Mr. Arthur Tienken (father)—none.

5. Grandparents names: not applicable.

6. Brothers and spouses names: Mr. Robert L. Tienken (brother)—none, Mrs. Janet S. Tienken—none.

7. Sisters and spouses names: not applicable.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

William E. Schaufele, Jr., of Ohio, to be Ambassador Extraordinary and Penipotentiary of the United States to Poland.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committees of the Senate.)

STATEMENT OF POLITICAL CONTRIBUTIONS

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: William E. Schaufele, Jr.

Post: Career Minister.

Contributions, amount, date, and donee: (If none, write none).

1. Self, William E. Schaufele, Jr., none.

2. Spouse, Heather Moon Schaufele, none.

3. Children and spouses names: Steven W. Schaufele, none, Peter H. Schaufele, none.

4. Parents names: Mrs. Lillian Schaufele, none, (father deceased).

5. Grandparents names: deceased.

6. Brothers and spouses names:

7. Sisters and spouses names: Mr. and Mrs. Fred O. Sloane, none.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

Richard J. Bloomfield, of Connecticut, to be Ambassador Extraordinary and Plenipotentiary of the United States to Portugal.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committees of the Senate.)

STATEMENT OF POLITICAL CONTRIBUTIONS

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Richard J. Bloomfield.

Contributions, amount, date, and donee:

1. Self, none.

2. Spouse, none.

3. Children and spouses names: Thomas and Mary Bloomfield, Richard Bloomfield II, John Bloomfield, Ann Bloomfield, William Bloomfield, none.

4. Parents names: John J. Bloomfield, Alice M. Bloomfield, deceased.

5. Grandparents names: deceased.

6. Brothers and spouses, names: No brothers or sisters.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

Robert W. Buchheim, of the District of Columbia, for the rank of Ambassador during the tenure of his services as the U.S. Commissioner on the United States-Soviet Standing Consultative Commission.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committees of the Senate.)

STATEMENT OF POLITICAL CONTRIBUTIONS

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Robert William Buchheim.

Post: Ambassador (Rank of).

Contributions, amount, date, and donee.

1. Self, none.

2. Spouse, none.

3. Children and spouses names: Robert K. Buchheim, Linda S. Buchheim, none.

4. Parents names: Irene G. Buchheim, none.

5. Grandparents names:

6. Brothers and spouses names: Thomas J. Buchheim, Mary Buchheim, none.

7. Sisters and spouses names:

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

Thomas John Watson, Jr., of Connecticut, to be a member of the General Advisory Committee of the U.S. Arms Control and Disarmament Agency.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committees of the Senate.)

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. STEVENSON, from the Select Committee on Ethics, without amendment:

S. Res. 373. An original resolution authorizing the Select Committee on Ethics to participate in judicial proceedings to obtain information regarding its Korean inquiry (Rept. No. 95-623).

By Mr. CANNON, from the Committee on Commerce, Science, and Transportation, without amendment:

S. Res. 374. An original resolution authorizing additional expenditures by the Committee on Commerce, Science, and Transportation for inquiries and investigations. Referred to the Committee on Rules and Administration.

By Mr. ABOUREZK, from the Committee

on Energy and Natural Resources, with amendments:

S. 1671. A bill to designate the Absaroka-Beartooth Wilderness, Custer and Gallatin National Forests, in the State of Montana (Rept. No. 95-624).

By Mr. SPARKMAN, from the Committee on Foreign Relations, without amendment:

S. Res. 377. An original resolution authorizing additional expenditures by the Committee on Foreign Relations for a study of matters pertaining to the foreign policy of the United States (Rept. No. 95-625). Referred to the Committee on Rules and Administration.

By Mr. NELSON, from the Select Committee on Small Business, without amendment:

S. Res. 378. An original resolution authorizing additional expenditures by the Select Committee on Small Business for inquiries and investigations. Referred to the Committee on Rules and Administration.

By Mr. RANDOLPH, from the Committee on Environment and Public Works, without amendment:

S. Res. 379. An original resolution authorizing additional expenditures by the Committee on Environment and Public Works, for inquiries and investigations. Referred to the Committee on Rules and Administration.

ENDANGERED AMERICAN WILDERNESS ACT OF 1978—CONFERENCE REPORT

Mr. CHURCH, from the committee on conference, submitted a report on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3454) to designate certain endangered public lands for preservation as wilderness, to provide for the study of additional endangered public lands for such designation, to further the purposes of the Wilderness Act of 1964, and for other purposes (Rept. No. 95-626).

By Mr. PELL, from the Committee on Rules and Administration, without amendment:

S. Res. 380. An original resolution authorizing additional expenditures by the Committee on Rules and Administration for inquiries and investigations (Rept. No. 95-627).

By Mr. CRANSTON, from the Committee on Veterans' Affairs, without amendment:

S. Res. 382. An original resolution authorizing additional expenditures by the Committee on Veterans' Affairs for inquiries and investigations. Referred to the Committee on Rules and Administration.

By Mr. BAYH, from the Select Committee on Intelligence, without amendment:

S. Res. 383. An original resolution authorizing additional expenditures by the Select Committee on Intelligence. Referred to the Committee on Rules and Administration.

By Mr. WILLIAMS, from the Committee on Human Resources, without amendment:

S. 2467. An original bill to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such act (together with minority views) (Rept. No. 95-628).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. EAGLETON:

S. 2459. A bill to amend the Internal Revenue Code of 1954 to allow an individual a credit against tax equal to 15 percent of the social security taxes paid by that individual during the taxable year; to the Committee on Finance.

By Mr. ABOUREZK:

S. 2460. A bill to amend the Indian Self-Determination and Education Assistance Act; to the Select Committee on Indian Affairs.

By Mr. HATHAWAY:

S. 2461. A bill to amend the Internal Revenue Code of 1954 to make certain changes in the carryover basis provisions which were added by the Tax Reform Act of 1976, and for other purposes; to the Committee on Finance.

By Mr. DOLE:

S. 2462. A bill to amend the Internal Revenue Code of 1954 to permit a limited individual retirement deduction to individuals who are participants in retirement plans; to the Committee on Finance.

By Mr. JACKSON (by request):

S. 2463. A bill to amend the Surface Mining Control and Reclamation Act of 1977 (P.L. 95-87) to raise certain authorized funding levels contained therein, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. ALLEN:

S. 2464. A bill for the relief of Han Bae Hyun; to the Committee on the Judiciary.

By Mr. JACKSON (by request):

S. 2465. A bill to designate lands in the State of Alaska as units of the National Park, National Forest, National Wildlife Refuge, Wild and Scenic Rivers, and National Wilderness Preservation Systems, and for other purposes. Referred to the Committee on Energy and Natural Resources.

By Mr. KENNEDY (for himself, Mr. SCHWEIKER, Mr. WILLIAMS, and Mr. JAVITS):

S. 2466. A bill to amend the Public Health Service Act to establish the National Institutes of Health Care Research; to extend and revise the assistance programs for health services research and health statistics; to establish the National Center for the Evaluation of Medical Technology, and for other purposes; to the Committee on Human Resources.

By Mr. WILLIAMS:

S. 2467. A bill to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such Act. Original bill reported from the Committee on Human Resources and placed on the calendar.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. EAGLETON:

S. 2459. A bill to amend the Internal Revenue Code of 1954 to allow an individual a credit against tax equal to 15 percent of the social security taxes paid by that individual during the taxable year; to the Committee on Finance.

(The remarks of Mr. EAGLETON when he introduced the bill appear earlier in today's proceedings.)

By Mr. HATHAWAY:

S. 2461. A bill to amend the Internal Revenue Code of 1954 to make certain changes in the carryover basis provisions which were added by the Tax Reform Act of 1976, and for other purposes; to the Committee on Finance.

ESTATE AND GIFT TAX AMENDMENTS ACT OF 1978

Mr. HATHAWAY. Mr. President, last October 26 I introduced a bill, S. 2238, to offer clarifying, correcting, and technical amendments to the estate and gift tax provisions of the Tax Reform Act of 1976. In large part, these amendments were designed to address a number of administrative and compliance problems created for executors, heirs, and the Internal Revenue Service in connection with the carryover basis provisions adopted by the 1976 Act.

Prior to enactment of the 1976 legislation, property passing from a decedent generally received a stepped-up or stepped-down basis equal to its fair market value on the decedent's death for purposes of determining gain or loss upon a sale or exchange of the property by the decedent's heir or beneficiary. In 1976, the Congress believed that the stepped-up basis rule resulted in inequitable treatment because a greater overall tax burden was imposed on estates and heirs of decedents who had accumulated wealth through taxable earnings as compared with the estates and heirs of decedents who accumulated wealth through unrealized appreciation in assets. In the latter case, the unrealized appreciation accruing before death was never subjected to an income tax since the heirs or beneficiaries bases for determining gain were stepped to estates tax values. Moreover, there was a distinction between deathtime and lifetime transfers because a donor's basis in property transferred by gift was generally carried over to the donee for purposes of determining gain or loss upon a subsequent sale or exchange by the donee.

The carryover basis amendments of S. 2238 were designed to retain the basic reform of the 1976 act but make those provisions simpler and more equitable. As a result of the testimony received on this issue in the October hearings conducted by the Subcommittee on Taxation and Debt Management of the Committee on Finance and other comments and suggestions received by me from Treasury officials and other interested persons, I believe that further improvements can be made to achieve greater simplification and equity. Accordingly, I am introducing another bill to respond to these most helpful comments and suggestions. In particular, I believe this bill will go a great deal further in alleviating the compliance and administrative burdens for small and modest sized estates where the problems are more acute because of the inadequacy of basis records and compliance costs relative to the amount of property involved.

My bill completely eliminates small and moderate sized estates from coverage under the carryover basis rules. It is in these cases where the burden of the rule has the most severe impact because of the absence of adequate basis records and the compliance cost relative to the size of the estate. An outright exception would be provided for an estate consisting of $175,000 or less of carryover basis property. The $175,000 roughly approximates the exemption equivalent of the estate and gift tax unified credit when it is fully phased in by 1981. In these cases, the basis of assets would be stepped up as under prior law and no special reporting by the executor would be required. As a result of this change, it is estimated that only about 2 percent of estates would have to comply with the carryover basis rules. In those cases where the carryover basis rules would apply, the adjustment would be increased from the $60,000 under present law to $175,000. Unlike S. 2238, the $175,000 amount would not

be phased-in but would be available immediately for estates by decedents dying after 1976. In order to simplify the computations, this adjustment would be made before the adjustment provided for death taxes attributable to appreciation.

The 1976 act contained an exemption for $10,000 in personal and household effects to deal with the serious problems an executor would face in attempting to ascertain the decedent's bases for these assets. Experience with the new law indicates that the exemption level is inadequate in many cases. My bill would increase the exemption to $25,000.

Also, a number of problems have been brought to my attention concerning the basis adjustment for death taxes attributable to appreciation. This adjustment was designed to eliminate the inequity and possibly confiscatory level of taxation which would arise if the full amount of appreciation were subject to an estate tax and then subject to an income tax based on the appreciation without taking into account the estate tax paid. My bill would substantially simplify this adjustment and make it more equitable.

The death tax adjustment would generally be made on the basis of the highest marginal estate tax rate rather than the average rate as under present law. This approach would provide substantially the same treatment for estates and heirs where assets had been retained until death as is the case for estates where assets are sold before death and the income tax liability incurred reduces the estate tax liability at the highest estate tax marginal rates. Under the bill, a simple percentage will be taken from the estate tax rate table and applied to the appreciation. The percentage will be the highest rate to which the estate is subject before credits are taken into account. However, the next highest percentage would be used if less than $50,000 were in the highest bracket. In this way, the need to make recomputations for audit adjustments will be minimized.

Since the death tax adjustment would be based on Federal rates before taking the credit for State death taxes into account, no separate adjustment for State death taxes would be required to be computed. Thus, the three possible death tax adjustments for Federal estate taxes, State death taxes paid by the estate, and State death taxes paid by the heir or beneficiary would be consolidated into a single calculation based on the highest precredit Federal estate tax rate and the Federal inclusion rules.

Unlike S. 2238, the death tax adjustment would be made only for property "subject" to the estate tax. Thus, no adjustment would be made for property passing to a charity or to a surviving spouse to the extent taken into account for the marital deduction.

The bill contains a number of changes to simplify the operation of the carryover basis fresh-start adjustment for appreciation accruing before 1977. The fresh-start adjustment would be permitted for purposes of determining loss as well as gain. However, the liberalized adjustment for values on December 31, 1976, could not be used to increase the heir's basis above the value used for estate tax purposes. Thus, the "split-basis" for gain or loss under present law would be eliminated. In addition, a formula would be provided to determine a minimum basis for fresh-start purposes. It would apply to nonbusiness tangible personal property and to a personal residence. Unlike S. 2238, intangible assets such as stock in a closely held business would not be eligible under the formula since basis records are ordinarily available for these assets. It is in the case of tangible personal property and a residence where it is most likely that a decedent would not have kept adequate basis records before 1977.

In general, the formula assumes that the post-1976 appreciation accrues at approximately 6 percent a year rather than the 8-percent factor which had been proposed in S. 2238. In addition, the requirement under S. 2238 that an eligible residence must have been used by the decedent for 5 out of the 8 years preceding his death as a personal residence would be revised so that a residence would be eligible for the formula method of determining the fresh-start adjustment if it had been used as the decedent's personal residence for 5 years at any time. Finally, the bill would provide that the formula would not reduce the fresh-start basis to less than 25 percent of the value of the property at the time of the decedent's death.

Under the 1976 act, the fresh-start adjustment for nonmarketable securities is determined by assuming that appreciation accrues uniformly over the holding period. Generally, in the case of preferred stock, the proration of appreciation based on the holding period reaches an inequitable result because the value may fluctuate very little, if at all, and yet a portion of the appreciation is considered to accrue after 1976. Of course, the longer the preferred stock is held after 1976, the greater the amount of appreciation which is automatically treated as accruing after 1976.

The bill would resolve this problem by treating preferred stock having a stated redemption price as a marketable security with a market value on December 31, 1976, equal to its stated redemption price. Regulations authority would also be granted to extend this rule to other cases such as nonmarketable stock, notes, or other evidences of indebtedness with a relatively fixed value. For example, the rule could be extended to closely held stock subject to a fixed-price buy-sell arrangement among shareholders.

Regulations authority would also be provided to permit the various basis adjustments to be made for certain classes of similar property rather than having to compute the adjustments for each separate item of property.

The bill would also provide a rule to deal with proof of basis problems arising from various small improvements to a personal residence. For relatively small amounts, records are not usually maintained. My bill would allow an adjustment of $250 per year during the decedent's holding period of his personal residence to cover minor improvements which are not substantiated by documentary evidence or other records. For any year when substantiated improvements are greater than $250, the actual cost of the improvements would be taken into account rather than the fixed dollar amount.

The carryover basis reporting requirements would be revised in several respects. First, it would no longer be necessary for the executor to furnish information to the Internal Revenue Service. Second, information would be required to be furnished to the beneficiaries only when the gross estate, excluding property which is not carryover basis property by definition, exceeds $175,000. Third, the standard for imposing a penalty for failure to furnish this information to a beneficiary would be changed so that it would be imposed only if the failure is due to negligent or intentional disregard of the reporting requirement.

My bill contains a number of other provisions to improve upon existing law. Under the bill, a decedent's estate would succeed to the decedent's unused capital loss carryovers. This treatment is consistent with the theory of carryover basis and would be justified on equitable grounds since unrealized gains would carry over to the estate or heirs.

The bill also limits the amount of depreciation recaptured as ordinary income upon satisfaction of a pecuniary bequest to the gain recognized by the executor which is generally the amount of any post-death appreciation. Any remaining amount to be recaptured would be treated as ordinary income when the beneficiary disposed of the property.

The bill also permits an estate to sell property on the installment method and distribute the installment obligations without triggering the recognition of income at that time. The beneficiaries would report the income as the installments are collected. In effect, this provision would extend the same tax treatment to sales followed by a distribution of the installment obligation as would occur if the property had been distributed and then sold on the installment basis by the distributees. Permitting the estate to make the sale without a difference in tax consequences resulting from the form rather than the substance of the transaction should facilitate the administration of estates.

The bill also contains a provision to facilitate changing a stock redemption plan funded by life insurance to a cross purchase plan among shareholders. This relief is provided because the carryover basis rule resulted in different tax consequences depending upon which type of plan had been chosen in the past. Under prior law, there would have been no significant difference in tax treatment. Accordingly, for plans in existence on December 31, 1976, a stock redemption plan can be changed to a cross purchase plan without adverse tax consequences if it is done before 1981.

As under S. 2238, the bill changes the material participation requirements for purposes of the special estate tax valuation rules for farm or closely held business real property. Under present law, the decedent or a member of his family must have materially participated in the operation of the farm or business for 5 out of the 8 years preceding the decedent's death. In addition, there is a recapture of the estate tax savings if the

qualified heir or member of his family does not materially participate in the farm or business operations. In either case, the activities of an agent are not taken into account. These qualification requirements were intended to distinguish a family owned and operated business from an ordinary investment. However, there are situations where the material participation requirements impose some hardship.

For example, no farmer or businessman could retire without risking loss of eligibility for the special use valuation provision if no member of the family could step in and run the farm or business. In addition, there are situations where the qualified heir may be incapable of running the farm or business and must use the services of an agent. My bill would deal with the retirement problems by providing that eligibility for special use valuation will not be lost because of the material participation requirement if the decedent or the surviving spouse had operated the farm or business for 20 years. The bill would also provide that the activities of an agent will be treated as material participation for an heir if the heir is a minor, a student, a disabled person, or a surviving spouse who has attained age 62.

As under S. 2238, the bill also conforms the definition of a closely held business for purposes of the two special extended payment provisions for estate taxes.

As under S. 2238, the bill also amends the provision which requires the inclusion in a decedent's gross estate of all gift transfers made within 3 years of death. Thus, although these transfers have been subjected to the unified transfer system once as a lifetime transfer, these gifts must be revalued at the time of the decedent's death for inclusion in the gross estate. Since an estate tax credit is allowed for any gift taxes paid, the net effect of the inclusion rule is to tax any appreciation accruing between the time of the gift and the donor's death. This is inconsistent with a unified system and imposes an additional burden upon executors to have new appraisals made for the property. The bill would generally provide that the value used for gift tax purposes would also be used as the value for the estate tax 3-year-within-death transfer rule. This will eliminate the burden imposed on executors to have a second appraisal. However, by continuing the basic inclusion rule, gifts in anticipation of death cannot be made solely to satisfy the percentage requirement for special use valuation, closely held stock redemptions, or the extended payment rules for estate tax attributable to a closely held business.

By Mr. DOLE:

S. 2462. A bill to amend the Internal Revenue Code of 1954 to permit a limited individual retirement deduction to individuals who are participants in retirement plans; to the Committee on Finance.

INCREASED RETIREMENT BENEFITS

Mr. DOLE. Mr. President, I send to the desk a bill to provide increased retirement benefits for millions of Americans.

INDIVIDUAL RETIREMENT ACCOUNTS

Many Americans have availed themselves to the individual retirement account created under the Employee Retirement Income Security Act of 1974. Under the law, a taxpayer who is not an active participant in a qualified pension plan, may establish an individual retirement account. The participant can contribute a maximum of $1,500 per year for himself and, in some instances, $250 for a nonworking spouse. The taxpayer is allowed an immediate tax deduction for the contribution and to defer the tax on interest earned. When the account holder reaches age 59 the fund is available for retirement.

INFLATION

Since the enactment of ERISA, the consumer price index has increased dramatically. Unfortunately, with the policies of the administration, it appears that we will continue to experience a rise in prices probably for the remainder of the decade. Although the taxpayer gets a tax deferred buildup of earnings from an IRA, the principal is constantly being eroded by inflation. To counteract this problem, I have introduced S. 1981 to annually adjust the levels of contributions. This would enable a taxpayer to keep up with inflation and preserve the purchasing power of the fund.

CURRENT LAW INADEQUATE

Mr. President, in many cases, the amount that is contributed to a pension plan on behalf or for a worker is limited to a percentage of the worker's salary or by the plan itself. Thus, many workers do not have an opportunity to have the $1,500 allowed by an IRA to be put aside for retirement. Today, I am introducing legislation to allow active participants in other plans of qualified deferred compensation to establish a limited individual retirement account. This proposal, if enacted, will open up increased retirement benefits for millions of Americans.

LIRA

My bill allows a worker to contribute to the limited IRA the difference between the maximum amount allowable, currently 15 percent and the amount contributed to a qualified pension plan. The rules regarding distribution and plan structures have not been changed.

Mr. President, this proposal is designed to assist low income Americans and workers participating in low benefit pension plans. It is of national importance that Congress assure our citizens, who have spent their careers in useful and productive work, adequate incomes upon retirement. The enactment of this legislation is a step in the right direction.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2462

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. ALLOWANCE OF DEDUCTION.

(a) Deduction Under Section 219.—

(1) Individuals covered by other plans.—Section 219(b)(2) of the Internal Revenue Code of 1954 (relating to limitations and restrictions on the deduction allowable to individuals covered by certain other plans) is amended to read as follows:

"(2) INDIVIDUALS COVERED BY CERTAIN OTHER PLANS.—In the case of an individual who, for any part of the taxable year, was covered by another retirement plan, the amount allowable as a deduction under subsection (a) to that individual for the taxable year after the application of paragraph (1) of this subsection shall be reduced by an amount equal to the sum of the amounts contributed by or on behalf of such individual to such plan for the taxable year.".

(2) COVERAGE DEFINED.—Section 219(c) of such Code (relating to definitions and special rules) is amended by adding at the end thereof the following new paragraph:

"(5) COVERED BY ANOTHER RETIREMENT PLAN.—For purposes of this section an individual is treated as covered by another retirement plan for the taxable year if for any part of such year—

"(A) he was an active participant in—

"(i) a plan described in section 401(a) which includes a trust exempt from tax under section 501(a),

"(ii) an annuity plan described in section 403(a),

"(iii) a qualified bond purchase plan described in section 405(a), or

"(iv) a plan established for its employees by the United States, by a State or political subdivision thereof, or by an agency or instrumentality of any of the foregoing, or

"(B) amounts were contributed by his employer for an annuity contract described in section 403(b) (whether or not his rights in such contract are nonforfeitable).".

(b) Deduction Under Section 220.—

(1) Individuals covered by other plans.—Section 220(b)(3) of the Internal Revenue Code of 1954 (relating to limitations and restrictions on the deduction allowable to individuals covered by certain other plans) is amended to read as follows:

"(3) INDIVIDUALS COVERED BY CERTAIN OTHER PLANS.—In the case of an individual who, for any part of the taxable year, was covered by another retirement plan, the amount allowable as a deduction under subsection (a) to that individual for the taxable year after the application of paragraph (1) of this subsection shall be reduced by an amount equal to the sum of the amounts contributed by or on behalf of such individual or his spouse to such plan for the taxable year.".

(b) Coverage Defined.—Section 220(c) of such Code (relating to definitions and special rules) is amended by adding at the end thereof the following new paragraph:

"(6) COVERED BY ANOTHER RETIREMENT PLAN.—For purposes of this section an individual is treated as covered by another retirement plan for the taxable year if for any part of such year—

"(A) he or his spouse was an active participant in—

"(i) a plan described in section 401(a) which includes a trust exempt from tax under section 501(a),

"(ii) an annuity plan described in section 403(a),

"(iii) a qualified bond purchase plan described in section 405(a), or

"(iv) a plan established for its employees by the United States, by a State or political subdivision thereof, or an agency or instrumentality of any of the foregoing, or

"(B) amounts were contributed by his employer for an annuity contract described in section 403(b) (whether or not rights in such contract are nonforfeitable).".

SEC. 2. REPORTS.—The plan administrator of a plan described herein shall furnish, a report to each active participant of such plan who requests such report. The request and the report shall be made at such times and in such manner as the Secretary shall by

regulation prescribe. The report shall provide such information as is required by such regulations including the amount of contributions made during the taxable year on behalf of and by such active participant."

SEC. 3. EFFECTIVE DATE.—The amendments made by section 1 of this Act shall apply to taxable years beginning after September 30, 1978.

By Mr. JACKSON (by request):

S. 2463. A bill to amend the Surface Mining Control and Reclamation Act of 1977 (Public Law 95–87) to raise certain authorized funding levels contained therein, and for other purposes; to the Committee on Energy and Natural Resources.

Mr. JACKSON. Mr. President, by request, I send to the desk for appropriate reference a bill to amend the Surface Mining Control and Reclamation Act of 1977 (Public Law 95–87) to raise certain authorized funding levels contained therein, and for other purposes.

Mr. President, this draft legislation was submitted and recommended by the Department of the Interior, and I ask unanimous consent that the executive communication accompanying the proposal from the Acting Assistant Secretary of the Interior be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE INTERIOR,
Washington, D.C., January 27, 1978.

HON. WALTER F. MONDALE,
President of the Senate, Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a draft of a bill "To amend the Surface Mining Control and Reclamation Act of 1977 (P.L. 95–87) to raise certain authorized funding levels contained therein, and for other purposes."

We recommend that the bill be introduced and that it be promptly enacted.

In refining the initial plans for implementing the new surface mining law and establishing the new Office of Surface Mining Reclamation and Enforcement, it has become apparent that the authorized funding levels contained in the Surface Mining Control and Reclamation Act of 1977 will not be sufficient. Therefore I recommend that the Act be amended as provided in the attached bill.

The bill would raise the authorization ceiling in Section 712(a) from $10,000,000 in fiscal year 1979 to $19,068,000.

Section 712(a) authorizes $10,000,000 in fiscal years 1979 and 1980 for administration and funding of (1) the initial regulatory program including Federal enforcement and reimbursement grants to the States, (2) the Federal lands program to be in effect within one year of enactment, and (3) the Indian lands program. Our recent best estimate of the cost of such activities during fiscal year 1979 is $19,068,000 excluding annual pay raises. Raising the authorization level is necessary to adequately accommodate the projected need for funds.

We believe the proposed amendment is necessary for effective implementation of the Surface Mining Control and Reclamation Act in a manner consistent with its objectives. Early action on the amendment is necessary to meet the time frames in that Act.

We, therefore, respectfully request that the bill be promptly introduced and enacted.

The Office of Management and Budget advises that presentation of the attached bill would be in accord with the Administration's program.

Sincerely,

CHARLES P. EDDY,
Acting Assistant Secretary.

By Mr. JACKSON (by request).

S. 2465. A bill to designate certain lands in the State of Alaska as units of the National Park, National Forest, National Wildlife Refuge, Wild and Scenic Rivers, and National Wilderness Preservation Systems, and for other purposes. Referred to the Committee on Energy and Natural Resources.

ALASKAN NATIONAL INTEREST LANDS CONSERVATION ACT

Mr. JACKSON. Mr. President, I introduce today a bill which embodies the position of the administration on the Alaska national interest lands legislation. To date the administration has presented its position solely in the form of amendments to a House bill, H.R. 39. In order to permit members of this committee on the public to fully apprise themselves of the administration's position. I asked Secretary of the Interior Cecil Andrus to incorporate that position in the form of clean bill. The measure I introduce today is his response to my request.

The administration's position and the draft bill were presented in testimony before our committee by Secretary Andrus on January 19, 1978. I ask unanimous consent that the text of the bill and of the Secretary's remarks be printed at the conclusion of my statement.

The committee has now completed 4 days of hearings on the Alaska national interest lands legislation during which we have heard from the administration, the conservationists (on S. 1500) and the Governor of Alaska (on S. 1787). In addition, last August three members of the committee visited many of the lands involved in the legislation on a 2-week field trip in Alaska and staff members conducted workshops in seven Alaska Native villages on national interest lands issues of concern to village Alaska. The next step in the committee's deliberations on this legislation will be staff-chaired workshops held in Alaska during the February recess. At the workshops "on-the-ground" experts will be asked to provide the best available information on present and prospective uses and values of each area addressed by the various Alaska national interest lands bills. Following the workshops we will schedule additional public hearings to receive testimony of other bill sponsors and members of the public.

There being no objection, the bill and statement were ordered to be printed in the RECORD, as follows:

S. 2465

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Alaska National Interest Lands Conservation Act."

SEC. 2. (a) In order to preserve for the benefit, use, education, and inspiration of present and future generations certain wildlands and rivers in the State of Alaska that contain nationally significant natural, scenic, historic, archeological, geological, scientific, wilderness, cultural, recreational, and wildlife values, the areas described in title I are, subject to valid existing rights, hereby declared to be units of the National Park System; the areas described in title II are, subject to valid existing rights, hereby declared to be units of the National Wildlife Refuge System; the areas described in title III are, subject to valid existing rights, hereby declared to be units of the National Wild and Scenic Rivers System; lands described in title IV are, subject to valid existing rights, added to units of the National Forest System; and lands designated in title V are, subject to valid existing rights, hereby declared to be units of the National Wilderness Preservation System.

(b) It is the intent of Congress in this Act to preserve unrivaled scenic and geological values associated with natural landscapes; to provide for the maintenance of sound populations of, and habitat for, resident and nonresident wildlife species of inestimable value to the citizens of Alaska and the Nation, including those species dependent on vast relatively undeveloped areas; to preserve in their natural state extensive unaltered aretic tundra, boreal forest, and coastal rainforest ecosystems; to protect the resources related to subsistence needs; to protect and preserve historic and archeological sites, rivers, and lands, and to preserve wilderness resource values and related recreational opportunities within large arctic and subarctic wildlands and on freeflowing rivers; and to maintain opportunities for scenic research and undisturbed ecosystems.

(c)(1) Areas established in titles I and II of this Act shall, subject to valid existing rights, comprise the lands, waters, and interests therein within the boundaries generally depicted on the maps bearing the following designations:

TITLE I—NATIONAL PARK SYSTEM

Aniakchak National Monument/Preserve, numbered ANIA–90,002

Bering Land Bridge National Preserve, numbered BELA–90,002

Togiak, numbered FWS 71–00–1301

Yukon Delta, numbered FWS 71–00–1401

Yukon Flats, numbered FWS 71–00–1501

The boundaries of areas added to the National Park and Wildlife Refuge Systems shall, in coastal areas, not extend seaward beyond the mean high tide line to include

lands owned by the State of Alaska unless the State shall have concurred in such boundary extension and such extension is accomplished under the notice and reporting requirements of this Act.

TITLE IV—NATIONAL FOREST SYSTEM

NFS Alaska, dated , for those lands in Title IV.

(2) The maps described in subsection (c) of this section shall be on file and available for public inspection in the office of the Secretary of the Interior (hereafter referred to as the "Secretary"), or the Secretary of Agriculture with regard to the National Forest System.

(3) As soon as practicable after enactment of this Act, a map and legal description of each change in land management status effected by this Act in the four national conservation systems, including the National Wilderness Preservation System, shall be published in the Federal Register and filed with the Speaker of the House of Representatives and the President of the Senate, and each such description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in each such legal description and map may be made. Each such map and legal description shall be on file and available for public inspection in the office of the Secretary. Whenever possible, boundaries shall follow hydrographic divides or embrace other topographic features in all cases where straight line map boundaries approximate such features. Following reasonable notice in writing to the Congress of his intention to do so, the Secretary of Interior and the Secretary of Agriculture may make minor adjustments in the boundaries of the areas added to or established as units of the National Park, Wildlife Refuge, Wild and Scenic Rivers, and the National Forest Systems by this Act.

TITLE I–NATIONAL PARK SYSTEM

PART A—ESTABLISHMENT OF NEW AREAS

SEC. 101. (a) The following areas are hereby established as units of the National Park System and shall be administered by the Secretary under the laws governing the administration of such lands and under the provisions of this Act:

(1) Gates of the Arctic Wilderness National Park, containing approximately 8.12 million acres of Federal lands, which shall be managed for the following purposes, among others: To maintain the wild and undeveloped character of the area, including opportunities for visitors to experience solitude, and the environmental integrity and scenic beauty of the mountains, forelands, rivers, lakes, and other natural features; to protect habitat for and populations of fish and wildlife, including but not limited to, caribou, grizzly bear, Dall sheep, moose, wolves, and raptorial birds; and in a manner consistent with the foregoing, to provide opportunities for water recreation on wild rivers, hiking, camping, and other outdoor recreation activities.

(2) Yukon-Charley National Rivers, containing approximately 1.69 million acres of Federal lands, which shall be managed for the following purposes, among others: To maintain the environmental integrity of the entire Charley River basin, including streams, lakes, and other natural features, in its undeveloped natural condition for public benefit and scientific study; to protect habitat for, and populations of, fish and wildlife, including but not limited to the peregrine falcon and other raptorial birds, caribou, moose, grizzly bear, and wolves; and in a manner consistent with the foregoing, to interpret historical sites and events associated with the gold rush on the Yukon River and the geological and paleontological history and cultural prehistory of the area, and provide opportunities for water recreation on the Yukon and Charley Rivers, hiking, camping, and other outdoor recreation activities.

(3) Kobuk Valley National Park, containing approximately 1.67 million acres of Federal lands, which shall be managed for the following purposes, among others: To maintain the environmental integrity of the natural features of the Kobuk River Valley, including the Kobuk, Salmon, and other rivers, the boreal forest, and the Great Kobuk Sand Dunes, in its undeveloped state; to protect and interpret, in cooperation with Native Alaskans, archeological sites associated with Native cultures; to protect migration routes for the Arctic caribou herd; to protect habitat for and populations of, fish and wildlife including but not limited to caribou, moose, black and grizzly bear, wolves, and waterfowl; and in a manner consistent with the foregoing, to provide opportunities for continued subsistence uses and hiking, camping, and other outdoor recreation activities.

(4) Cape Krusenstern National Monument, containing approximately 0.36 million acres of Federal lands, which shall be managed for the following purposes, among others: To protect and interpret a series of archeological sites depicting every known cultural period in arctic Alaska; to provide for scientific study of the process of human population of the area from the Asian continent; in cooperation with Native Alaskans, to preserve and interpret evidence of prehistoric and historic Native cultures; to protect seals and other marine mammals, birds, and other wildlife and fish resources; and in a manner consistent with the foregoing, to provide opportunities for continued subsistence uses and outdoor recreation activities.

(5) Wrangell-St. Elias National Park, containing approximately 9.56 million acres of Federal lands, and Wrangell-St. Elias National Preserve, containing approximately 2.49 million acres of Federal lands. The park and preserve shall be managed for the following purposes, among others: To maintain unimpaired the scenic beauty and quality of glacial systems, high mountain peaks, foothills, lakes and streams, and valleys in their natural state; to protect habitat for and populations of fish and wildlife, including but not limited to caribou, grizzly bear, Dall sheep, moose, wolves, trumpeter swans and other waterfowl, and marine mammals; and in a manner consistent with the foregoing, to provide opportunities for camping and hiking, and other outdoor recreation activities.

(6) Lake Clark National Park, containing approximately 2.43 million acres of Federal lands, and Lake Clark National Preserve, containing approximately 0.71 million acres of Federal lands. The park and preserve shall be managed for the following purposes, among others: To protect the watershed necessary for perpetuation of the red salmon fishery in Bristol Bay; to maintain unimpaired the scenic beauty and quality of portions of the Alaska Range and the Aleutian Range, including active volcanoes, glaciers, wild rivers, lakes, waterfalls, and alpine meadows in their natural state; to protect habitat for and populations of fish and wildlife including but not limited to the Mulchatna caribou herd, Dall sheep, grizzly bear, bald eagle, peregrine falcon; and in a manner consistent with the foregoing, to provide opportunities for water recreation, nature study, sightseeing, hiking, camping, and other outdoor recreation activities.

(7) Kenai Fjords National Park, containing approximately 0.41 million acres of Federal lands, which shall be managed for the following purposes, among others: To maintain unimpaired the scenic and environmental integrity of the Harding icefield, its outflowing glaciers, and coastal fjords and islands in their natural state; to protect seals, sea lions, other marine mammals, and marine and other birds and maintain their hauling and breeding areas in their natural state free of human activity which is disruptive to their natural processes; and in a manner consistent with the foregoing, to provide opportunities for sightseeing, nature study, touring, hiking, and other outdoor recreation activities.

(8) Aniakchak National Monument, containing approximately 0.34 million acres of Federal lands, and Aniakchak National Preserve, containing approximately 0.16 million acres of Federal lands. The monument and preserve shall be managed for the following purposes, among others: To maintain the caldera and its associated volcanic features and landscape, including the Aniakchak River and other lakes and streams, in their natural state; to study, interpret, and assure continuation of the natural process of biological succession; to protect habitat for and populations of fish and wildlife, including but not limited to grizzly bears, moose, caribou, sea lions, seals, and other marine mammals, geese, swans, and other waterfowl; and in a manner consistent with the foregoing, to interpret geological and biological processes for visitors and provide opportunities for river running, hiking, and other outdoor recreation activities.

(9) Bering Land Bridge National Preserve, containing approximately 2.34 million acres of Federal land, which shall be managed for the following purposes, among others: To protect and interpret examples of arctic plant communities, volcanic lava flows, ash explosions, and other geologic processes; to protect habitat for internationally significant populations of migratory birds; to provide for archeological and paleontological study, in cooperation with Native Alaskans, of the process of plant and animal migration, including man, to North America from the Asian continent; to protect habitat for, and populations of, fish and wildlife including but not limited to marine mammals, grizzly bear, moose, and wolf; and in a manner consistent with the foregoing, to provide opportunities for continued subsistence uses and outdoor recreation activities.

(10) Noatak National Ecological Preserve, containing approximately 5.96 million acres of Federal lands, which shall be managed for the following purposes, among others: To maintain the environmental integrity of the Noatak River and adjacent uplands within the preserve in such a manner as to assure the continuation of geological and biological processes unimpaired by adverse human activity; to protect habitat for and populations of fish and wildlife, including but not limited to the Arctic caribou herd, grizzly bear, Dall sheep, moose, wolves, and for waterfowl, raptors, and other species of birds; and in a manner consistent with the foregoing, to provide opportunities for scientific research, and for hiking, camping, and other outdoor recreation activities. The Secretary may establish a board consisting of scientists and other experts in the field of arctic research in order to assist him in the encouragement and administration of research efforts within the preserve.

PART B—ADDITIONS TO EXISTING AREAS

SEC. 102. (a) The following units of the National Park System are hereby expanded:

(1) Mount McKinley National Park by the addition of an area containing approximately three million eight hundred fifty thousand acres of Federal land, for the purposes of protecting the entire mountain massif and additional scenic mountain peaks and formations and to protect moose, caribou, and wolves and their habitat; furthermore, (i) the park is hereby redesignated as "Denali National Park," and (ii) that portion of The Alaska Railroad right-of-way within the park shall be subject to such laws and regulations applicable to the protection of fish and wildlife and other park values as the Secretary, with the concurrence of the Secretary of Transportation, may determine;

(2) Katmai National Monument by the addition of an area containing approximately one-million ninety-nine thousand acres of Federal land for the purposes of protecting high concentrations of grizzly (brown) bear and their denning areas and habitat for other wildlife and to maintain unimpaired the water habitat for significant salmon populations; furthermore, the monument is hereby redesignated as "Katmai National Park";

(3) Glacier Bay National Monument by the addition of an area containing approximately five hundred eighty eight thousand acres of Federal land for the purposes of protecting the northwest slope of Mount Fairweather, portions of the Alsek River, and animal habitat and migration routes; furthermore, the monument is hereby redesignated as "Glacier Bay National Park".

PART C—ADMINISTRATIVE PROVISIONS

SEC. 103. The Secretary shall administer the lands, waters, and interests therein added to existing areas or established by the foregoing sections of this title as new areas of the National Park System, pursuant to the provisions of the Act of August 25, 1916 (39 Stat. 535), as amended and supplemented (16 U.S.C. 1 et seq.), and under the provisions of this Act: *Provided, however,* That hunting may be permitted under the provisions of section 701 of this Act. All proclamations and executive orders establishing, reserving lands for, or revising the boundaries of, the former Katmai and Glacier Bay National Monuments shall remain in full force and effect, except to the extent they may be inconsistent with the Alaska Native Claims Settlement Act or the purposes of any unit established or expanded by this Act, and in such case the provisions of this Act shall prevail. Any funds available for the purposes of such monuments are hereby made available for the purposes of Katmai National Park or Glacier Bay National Park, as appropriate. Valid Native selections or nominations of lands within the Gates of the Arctic Wilderness National Park and within the Killik Wild River corridor are hereby recognized and shall be honored and conveyed by the Secretary in accordance with Alaska Native Claims Settlement Act: *Provided,* That within a zone which the Secretary shall designate surrounding Kurupa Lake and within the Killik Wild River corridor, the Secretary shall convey title to the subsurface estate and such conveyance shall provide that the right to extract oil and gas from such subsurface estate may be exercised only by directional drilling from adjacent private lands. Any conveyance of the subsurface estate pursuant to this section shall count against the total surface and subsurface acreage entitlement of the corporation to which such estate is conveyed.

TITLE II—NATIONAL WILDLIFE REFUGE SYSTEM

PART A—ESTABLISHMENT OF NEW AREAS

SEC. 201. (a) The following areas are hereby established as units of the National Wildlife Refuge System and shall be administered by the Secretary pursuant to the provisions of law governing the administration of such lands and under the provisions of this Act:

(1) Selawik National Wildlife Refuge, containing approximately 2.15 million acres of Federal land, which shall be managed for the following purposes, among others: To protect the crossroads of the Asiatic and North American Flyways, with their significant populations of snow geese, ducks and swans, sandhill cranes, and shorebirds; to protect habitat for and populations of fish and wildlife, including but not limited to caribou on the lands and sheefish in the waters; and in a manner consistent with the conservation and protection of these fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities and for continued subsistence uses.

(2) Yukon Flats National Wildlife Refuge, containing approximately 8.45 million acres of Federal land, which shall be managed for the following purposes, among others: To maintain the environmental integrity of the Yukon River within the area; to protect nationally significant fall flights of ducks and geese; to protect habitat for and populations of fish and wildlife, including but not limited to other birds, moose, wolves, bears, furbearers, and salmon; and in a manner consistent with the conservation and protection of these fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to these resources, and for continued subsistence uses.

(3) Koyukuk National Wildlife Refuge, containing approximately 3.33 million acres of Federal lands, which shall be managed for the following purposes, among others: To assure continued high levels of waterfowl production, including ducks, geese, and swans; to protect habitat for and populations of fish and wildlife, including but not limited to the numerous bird species, moose and the Beaver Mountain caribou herd, beaver, and salmon; and in a manner consistent with the conservation and protection of these fish and wildlife and their habitat, to permit hunting, fishing, and other activities with respect to these resources, including continued subsistence uses.

(4) Innoko National Wildlife Refuge, containing approximately 2.84 million acres of Federal land, which shall be managed for the following purposes, among others: To assure continued high level fall flights of ducks and geese; to protect habitat for and populations of fish and wildlife, including but not limited to moose and furbearers; and in a manner consistent with the conservation and protection of these fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to these wildlife resources, including continued subsistence uses.

(5) Togiak National Fish and Wildlife Refuge, containing approximately 3.84 million acres of Federal land, which shall be managed for the following purposes, among others: To protect and maintain the environmental integrity of the watershed of Bristol and Kuskokwim Bays; to perpetuate the significant marine bird and mammal and other migratory bird and fishery resources of the mountain, river and marine habitats of the Togiak area; to protect habitat for and populations of fish and wildlife resources of the area; and in a manner consistent with the conservation and protection of these fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to these fish and wildlife resources, including continued subsistence uses.

(6) Alaska Marine Resources National Wildlife Refuge, containing approximately 430,000 acres of Federal land: (i) which shall be managed for the purposes of protecting internationally significant marine, birds and mammals and the land, water, and other marine resources on which they rely, perpetuating other indigenous fish and wildlife resources of the coastal marine environment, and providing for national and international research on marine resources; and (ii) which shall consist of the following specifically described units together with all other federally owned islands, islets, rocks, reefs, and spires within six miles of the coast of Alaska:

Chukchi Sea unit—including Cape Lisburne, Cape Thompson, and the existing Chamisso National Wildlife Refuge;

Bering Sea unit—including the existing Bering Sea and Pribilof (Walrus and Otter Islands and Sea Lion Rocks) National Wildlife Refuges, Hagemeister Island, Fairway Rock, King Island, Sledge Island, Bluff Unit, Besboro Island, Egg Island, and the Punuk Islands;

Aleutian Islands unit—including the existing Aleutian Islands and Bogoslof National Wildlife Refuges, and all other Federal lands in the Aleutian Islands;

Alaska Peninsula unit—including the existing Simeonof and Semidi National Wildlife Refuges, Puale Bay, Chignigak Bay, and all Federal lands south of Katmai National Park to False Pass; and

Gulf of Alaska unit—including the existing Forester Island, Hazy Islands, St. Lazaria, and Tuxedni National Wildlife Refuges, the Barren Islands, Latax Rocks, Harbor, Pye, and Chiswell Islands, the Capes of the Aialik and Harris Peninsulas, and islands, islets, rocks or spires surrounding Kodiak and Afognak Islands and all other Federal lands in the Gulf of Alaska reserved for purposes of classification under section 17(d)(1) of Alaska Native Claims Settlement Act, excluding lands within the National Forest System.

(7) Kanuti National Wildlife Refuge, containing approximately 1.20 million acres of Federal land, which shall be managed for the following purposes, among others: To perpetuate nationally significant migratory waterfowl and mammal populations utilizing the lands and waters of the Kanuti area; to protect habitat for and populations of fish and wildlife, including but not limited to these waterfowl, other birds, moose and furbearers, and caribou; and in a manner consistent with the conservation and protection of the fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to the wildlife resources, including continued subsistence uses.

(8) Kenai National Moose Refuge, by the addition of an area containing approximately 203,600 acres of Federal land to the existing Kenai National Moose Range (hereby redesignated as part of the refuge), which refuge shall be managed for the following purposes, among others: To perpetuate a nationally significant population of moose; to protect habitat for and populations of fish and wildlife, including but not limited to moose and other mammals and waterfowl; and in a manner consistent with the conservation and protection of these fish and wildlife and their habitat, to provide opportunities for wildlife oriented recreation.

(9) Nowitna National Wildlife Refuge, containing approximately 1.45 million acres of Federal land, which shall be managed for the following purposes, among others: To perpetuate the nationally significant waterfowl utilizing the lands and waters of the Nowitna area; to protect habitat for and populations of fish and wildlife, including but not limited to waterfowl, other migratory birds, mammals, and migrating chum, coho, chinook, and other fish populations; and in a manner consistent with the conservation and protection of the fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to the fish and wildlife resources, including continued subsistence uses.

(10) Becharof National Wildlife Refuge, containing approximately 1.03 million acres of Federal land, which shall be managed for the following purposes, among others: To protect the habitat for and populations of fish and wildlife, including but not limited to the nationally significant population of brown bear, caribou, marine mammals, waterfowl, peregrine falcons, eagles and other birds; and in a manner consistent with the conservation and protection of the fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to the wildlife resources.

(11) Tetlin National Wildlife Refuge, containing approximately 0.765 million acres of Federal land, which shall be managed for the following purposes, among others: To perpetuate the fall flight of ducks; to assure maximum opportunities for successful nesting of canvasback ducks; to protect the habitat for and populations of fish and wildlife, including but not limited to the Forty-

mile and Metastz caribou herds and the calving ground of the Chisana caribou herd, waterfowl, and other birds, large mammals, and furbearers; to provide a variety of opportunities for interpretive, educational, and scientific fish and wildlife oriented recreational uses; and in a manner consistent with the conservation and protection of such fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to fish and wildlife, including continued subsistence uses. The Secretary may, regardless of any requirement that a study be conducted of areas within the Tetlin National Wildlife Refuge in accordance with subsection 3 (c) and (d) of the Wilderness Act, authorize and grant rights-of-way for pipelines and other facilities that may be required pursuant to section 9 of the Alaska Natural Gas Transportation Act of 1976.

PART B—ADDITIONS TO EXISTING AREAS

SEC. 202. (a) The following units of the National Wildlife Refuge System are hereby expanded:

(1) Clarence Rhode National Wildlife Range and Hazen Bay National Wildlife Refuge by the addition of an area containing approximately 10.59 million acres of Federal lands; furthermore, the Clarence Rhode National Wildlife Range and Hazen Bay National Wildlife Refuge are hereby redesignated as the Yukon Delta National Wildlife Refuge, which shall be managed for the following purposes, among others: To perpetuate the significant fall flights of ducks, swans, and geese, including large numbers of emperor geese, cackling geese, and large numbers of black brant; to perpetuate significant numbers of shorebirds and waterbirds, including the bristle-thighed curlew; to protect habitat for and populations of fish and wildlife, including but not limited to the internationally significant migratory bird, fish, and marine mammal resources; to maintain the environmental integrity of the Andreafsky River and other rivers and lakes; and in a manner consistent with the conservation and protection of the fish and wildlife and their habitat, to provide opportunities for hunting, fishing, and other activities with respect to these resources, including continued subsistence uses.

(2) Arctc National Wildlife Range by the addition of an area containing approximately 8.85 million acres of Federal land for the purposes, among others, of protecting internationally significant populations of caribou and migratory birds, perpetuating other migratory and resident fish and wildlife populations, protecting representative Arctic life zones and the wilderness character of these habitats, and in a manner consistent with the foregoing to provide continued opportunity for subsistence uses.

(b) All proclamations, executive orders, public land orders and similar actions reserving any lands, waters, or interests therein for refuge purposes within the boundaries of the areas designated as, or added to, units of the National Wildlife Refuge System by this Act shall remain in full force and effect, except as they may be inconsistent with the purposes of any unit established by this Act, and in such case the provisions of this Act shall prevail. Any funds available on the effective date of this section for the purposes of any reservation shall continue to be available for the purposes of the unit established by this Act.

(c) The Secretary, in consultation with the Governor of Alaska and affected Native corporations, shall conduct a study of the lands and resources on the Alaska Peninsula between the southern boundary of the Becharof National Wildlife Refuge and the northeastern boundary of the Izembek National Wildlife Range, excluding Aniakchak National Monument and Preserve, within the area generally depicted on the map entitled "Alaska Peninsula Study Area" numbered FWS 71-00-0201 and dated September 1977, which shall be on file and available for public inspection in the office of the Director, Fish and Wildlife Service, Department of the Interior. The Secretary shall, not later than June 30, 1983, submit a report of the study, together with recommendations to the Congress for such legislation as may be appropriate to designate additions to or establish new units of the National Wildlife Refuge System within the area. Prior to submitting the report to the Congress, the Secretary shall solicit the written comments of the Governor of Alaska and the affected Native corporations on his recommendations, and shall include these comments as a part of this report. Effective on the date of enactment of this Act and continuing until the expiration of three years following the submission of the report of the Secretary, the Federal lands within the study area are hereby withdrawn from all forms of entry under the public land laws of the United States and from location, entry, and patent under the United States mining laws, and from operation of the Mineral Leasing Act of 1920, as amended, except that the Secretary is authorized in his discretion to provide for access for oil and gas pipelines under the Mineral Leasing Act of 1920 during such period.

SEC. 203. With respect to the area of the Iliamna watershed described as those lands and waters generally depicted on the map numbered FWS 71-00-1601 and dated September 1977, which map shall be on file and available for public inspection in like manner as the boundary maps referred to in section 2 of this Act, it is the express intention of the Congress that the lands and waters be protected and managed for the primary purposes of watershed protection and fishery production. The Secretary is authorized to enter into a cooperative agreement with the State of Alaska in order that the United States and the State shall each manage its lands in this area for such purposes. Within such area, except pursuant to the Act of January 2, 1976 (P. L. 94-204), the Secretary shall permit no selection of lands by, nor shall he make any conveyance of lands to, the State unless and until he determines that the State, by appropriate legislation has authorized, and is ready, willing, and able to implement, a plan for protection and management of the watershed and the fishery resources consistent with the intention expressed above. The Secretary may, if he finds that the management and use of the area is inconsistent with the foregoing express intention, and following notice in writing to the Governor and a 90-day period thereafter in which to correct such management and use, establish by appropriate order one or more units of the National Wildlife Refuge System within the area referred to on such map.

TITLE III—NATIONAL WILD AND SCENIC RIVERS SYSTEM

PART A—WILD AND SCENIC RIVERS WITHIN NATIONAL PARK SYSTEM

SEC. 301. DESIGNATION. Section 3(a) of the Wild and Scenic Rivers Act (82 Stat. 907), as amended (16 U.S.C. 1274(a)), as further amended by adding the following new paragraphs:

—. Alagnak, Alaska—the major tributary to the Alagnak, the Nonvianuk River, within Katmai National Park; to be administered by the Secretary of the Interior.

—. Alatna, Alaska—the main stem within the Gates of the Arctic Wilderness National Park; to be administered by the Secretary of the Interior.

—. Aniakchak, Alaska—that portion of the river, including its major tributaries, Hidden Creek, Mystery Creek, Albert Johnson Creek, and North Fork Aniakchak River, within the Aniakchak National Monument and National Preserve; to be administered by the Secretary of the Interior.

—. Bremner, Alaska—the main stem, and the North, South, and Middle Forks within the Wrangell-St. Elias National Park/Preserve; to be administered by the Secretary of the Interior.

—. Charley, Alaska—the entire river, including its major tributaries, Copper Creek, Bonanza Creek, Hosford Creek, Derwent Creek, Flat-Orthmer Creek, Crescent Creek, and Moraine Creek, within the Yukon-Charley National Rivers; to be administered by the Secretary of the Interior.

—. Chilikadrotna, Alaska—that portion of the river within the Lake Clark National Park/Preserve; to be administered by the Secretary of the Interior.

—. Chitina, Alaska—that portion of the river within the Wrangell-St. Elias National Park/Preserve; to be administered by the Secretary of the Interior.

—. Copper, Alaska—that portion of the river within the Wrangell-St. Elias National Park/Preserve; to be administered by the Secretary of the Interior.

—. John, Alaska—that portion of the river within the Gates of the Arctic Wilderness National Park; to be administered by the Secretary of the Interior.

—. Killik, Alaska—that portion of the river, including its major tributary, Easter Creek, within the Gates of the Arctic Wilderness National Park; to be administered by the Secretary of the Interior.

—. Kobuk, Alaska—that portion within the Gates of the Arctic Wilderness National Park; to be administered by the Secretary of the Interior.

—. Mulchatna, Alaska—that portion within the Lake Clark National Park/Preserve; to be administered by the Secretary of the Interior.

—. Noatak, Alaska—the river from its source in the Gates of the Arctic Wilderness National Park to its confluence with the Kelly River in the Noatak National Ecological Preserve; to be administered by the Secretary of the Interior.

—. North Fork of the Koyukuk, Alaska—that portion within the Gates of the Arctic Wilderness National Park; to be administered by the Secretary of the Interior.

—. Salmon, Alaska—that portion within the Kobuk Valley National Park; to be administered by the Secretary of the Interior.

—. Tinayguk, Alaska—that portion within the Gates of the Arctic Wilderness National Park; to be administered by the Secretary of the Interior.

—. Tlikakila, Alaska—that portion within the Lake Clark National Park; to be administered by the Secretary of the Interior.

SEC. 302. ADMINISTRATIVE PROVISIONS. (a) The river segments designated in section 301 of this title are hereby classified and designated, and shall be administered, as wild river areas pursuant to the Wild and Scenic Rivers Act.

(b) The provisions of subsection 3(b) and section 6 of the Wild and Scenic Rivers Act shall not apply to the river segments listed in section 301. The provisions of sections 701 and 702 of this Act shall supercede those of section 13(a) of the Wild and Scenic Rivers Act, concerning fish and wildlife.

PART B—WILD AND SCENIC RIVERS WITHIN NATIONAL WILDLIFE REFUGE SYSTEM

SEC. 303. DESIGNATION. Section 3(a) of the Wild and Scenic Rivers Act (82 Stat. 907) as amended (16 U.S.C. 1274(a)), is further amended by adding the following new paragraphs:

—. Andreafsky, Alaska—that portion from its source, including all headwaters, and the East Fork, within the boundary of the Yukon Delta National Wildlife Refuge; to be administered by the Secretary of the Interior.

—. Ivishak, Alaska—that portion from its source, including all headwaters and an unnamed tributary to Porcupine Lake within the boundary of the Arctic National Wildlife

Refuge; to be administered by the Secretary of the Interior.

—. Kanektok, Alaska—that portion within the boundary of Togiak National Fish and Wildlife Refuge, from Kagati Lake to a point sixteen miles above the mouth; to be administered by the Secretary of the Interior.

—. Nowitna, Alaska—the segment within the Nowitna National Wildlife Refuge downstream to its confluence with the Yukon River; to be administered by the Secretary of the Interior.

—. Porcupine, Alaska—the segments within the Arctic National Wildlife Refuge and the Yukon Flats National Wildlife Refuge; to be administered by the Secretary of the Interior.

—. Sheenjek, Alaska—the segments within the Yukon Flats National Wildlife Refuge and the Arctic National Wildlife Refuge; to be administered by the Secretary of the Interior.

—. Wind, Alaska—that portion from its source, including all headwaters and one unnamed tributary in Township 13S, within the boundaries of the Arctic National Wildlife Refuge; to be administered by the Secretary of the Interior.

SEC. 304. ADMINISTRATIVE PROVISIONS. (a) The river segments designated in section 303 of this title are hereby classified and designated and shall be administered as wild river areas.

(b) Notwithstanding any provisions to the contrary of the Wild and Scenic Rivers Act (82 Stat. 907; 17 U.S.C. 1271), the boundaries of the river segments referred to in section 303 of this title may include an area extending up to two miles from the mean high water level on either side of the river segments. Notwithstanding the provisions of section 3(b) of such Act, the Secretary shall establish boundaries of the river segments referred to in section 303 of this title within three years after the date of enactment of this title.

(c) The provisions of section 6 of the Wild and Scenic Rivers Act shall not apply to the river segments referred to in section 303 of this title.

PART C—ADDITIONS TO NATIONAL WILD AND SCENIC RIVERS SYSTEM LOCATED OUTSIDE NATIONAL PARK AND NATIONAL WILDLIFE REFUGES

SEC. 305. DESIGNATION. Section 3(a) of the Wild and Scenic Rivers Act (82 Stat. 907) as amended (16 U.S.C. 1274(a)) is further amended by adding the following paragraphs:

—. Alagnak, Alaska—the portion beginning at the source and running to the west boundary of Township 13S, R43W; the segment not to exceed 120,000 acres; to be administered by the Secretary of the Interior.

—. Beaver Creek, Alaska—the segment of the main stem from the vicinity of the confluence of the Bear and Champion Creeks downstream to the southern boundary of the Yukon Flats National Wildlife Refuge, the segment not to exceed 200,000 acres; to be administered by the Secretary of the Interior.

—. Birch Creek, Alaska—the segment of the main stem from the vicinity of the confluence of North Fork downstream to the southern boundary of the Yukon Flats National Wildlife Refuge, the segment not to exceed 200,000 acres; to be administered by the Secretary of the Interior.

—. Colville, Alaska—the segment of the main stem from the headwaters to Umiat, the segment not to exceed 500,000 acres; to be administered by the Secretary of the Interior.

—. Copper, Alaska—the segment from the confluence with the Chitina River to the boundary of the Chugach National Forest addition pursuant to section 401, to be administered by the Secretary of the Interior.

—. Delta, Alaska—the segment from the headwaters to Black Rapids Glacier, the segment not to exceed 66,000 acres; to be administered by the Secretary of the Interior.

—. Fortymile, Alaska—the main stem within the State of Alaska; O'Brien Creek; South Fork; Napoleon Creek; Franklin Creek; Uhler Creek; Walker Fork downstream from the confluence of Liberty Creek; Wade Creek; Mosquito Fork downstream from the vicinity of Kechumstuk; West Fork Dennison Fork downstream from the confluence of Logging Cabin Creek; Dennison Fork downstream from the confluence of West Fork Dennison Fork; Logging Cabin Creek; North Fork; Hutchison Creek; Champion Creek; the Middle Fork downstream from the confluence of Joseph Creek; and Joseph Creek, the segments not to exceed 320,000 acres; to be administered by the Secretary of the Interior.

—. Gulkana, Alaska—the main stem from Paxton Lake to Sourdough and the entire West and Middle Forks; the segments not to exceed 165,000 acres; to be administered by the Secretary of the Interior.

—. Killik, Alaska—from the point where it exits the northern boundaries of the Gates of the Arctic Wilderness National Park to its confluence with the Colville River, the segment not to exceed 152,000 acres; to be administered by the Secretary of the Interior.

—. Kisaralik, Alaska—from the headwaters to where the river leaves Federal lands in T8N, R64W, the segment not to exceed 92,000; to be administered by the Secretary of the Interior.

—. Nowitna, Alaska—the segment from the point where the river crosses the west boundary of section 6, township 17 south, range 22 east, Fairbanks Principal Meridian, downstream to the southern boundary of the Nowitna National Wildlife Refuge, the segment not to exceed 230,000 acres; to be administered by the Secretary of the Interior.

—. Unalakleet, Alaska—the segment of the main stem beginning at 159° 21'06.156'' west longitude approximately six miles from the headwaters extending downstream 60 miles to 160° 19'15.031'' west longitude in the vicinity of the confluence of the Chiroskey River, the segment not to exceed 104,000 acres; to be administered by the Secretary of the Interior.

—. Utukok, Alaska—from the headwaters to where an unnamed tributary flows from the south into the river in T5N, R36W, the segment not to exceed 254,000 acres; to be administered by the Secretary of the Interior.

SEC. 306. DESIGNATION FOR STUDY. Section 5 (a) of the Wild and Scenic Rivers Act (82 Stat. 906; 16 U.S.C. 1271), as amended, is further amended as follows:

(a) After paragraph ( ) insert the following new paragraphs:

( ) Copper (Iliamna), Alaska
( ) Holitna-Hoholitna, Alaska
( ) Koyuk, Alaska
( ) Melozitna, Alaska
( ) Nelchina-Tazlina, Alaska
( ) Nuyakuk, Alaska
( ) Situk, Alaska
( ) Stikine, Alaska
( ) Susitna, Alaska

(b) The studies of the rivers in paragraphs ( )-( ) shall be completed and reports transmitted thereon not later than five full fiscal years from date of enactment of this paragraph.

SEC. 307. ADMINISTRATIVE PROVISIONS. (a) The Alagnak, Beaver Creek, Birch Creek, Colville, Killik, Gulkana, Kisaralik, Nowitna, Utukok, and Unalakleet components as well as the segment of the Delta component from the lower lakes area to a point opposite milepost 212 on the Richardson Highway; the Mosquito Fork downstream from the vicinity of Kechumstuk to Ingle Creek, North Fork, Champion Creek, Middle Fork downstream from the confluence of Joseph Creek, and Joseph Creek segments of the Fortymile component, and the segment of the Copper (Wrangells) component from its source to the north boundary of the Wrangell-St. Elias National Park/Preserve and from the north end of Wood Canyon to the new national forest boundary designated in section 305 of this title, are hereby classified and designated and shall be administered as wild river areas pursuant to the Wild and Scenic Rivers Act. The Wade Creek unit of the Fortymile component is classified and designated and shall be administered as scenic river areas, pursuant to such Act. The classification as wild river areas of certain segments of the Fortymile by this subsection shall not preclude such access across those river segments as the Secretary determines to be necessary to permit commercial development of asbestos deposits in the North Fork drainage. The Secretary shall issue regulations to restrict use of those portions of the Colville under his jurisdiction during the peregrine falcon nesting season.

(b) The Secretary of the Interior shall take such action as is provided for under section 3(b) of the Wild and Scenic Rivers Act to establish detailed boundaries and formulate detailed development and management plans within one year after the date of enactment of this title with respect to the Delta, Fortymile, and Gulkana components; within two years with respect to the Beaver Creek and Birch Creek components; within three years with respect to the Alagnak, Colville, Killik, Nowitna, and Utukok components; and within four years with respect to the Kisaralik, the entire Copper (Wrangells), and Unalakleet components, except that the boundaries for the Copper (Wrangells) component shall not include lands within the Wrangell-St. Elias National Park/Preserve. The detailed plan for each river shall include the identification of a line based essentially on line-of-sight from the river within which mining will be controlled as provided in subsection (e). In no event will the line-of-sight line extend beyond the corridor provided in subsection (c).

(c) Notwithstanding any provisions of the Wild and Scenic Rivers Act (82 Stat. 907; 16 U.S.C. 1271) to the contrary, an area extending two miles from the mean high water level on either side of the river segments referred to in section 305 of this title is hereby withdrawn, subject to valid existing rights, from all forms of appropriation under the mining laws and from operation of the mineral leasing laws, including in both cases amendments thereto, pending establishment of the detailed boundaries provided for in subsection (e).

(d) The provisions of section 305 of this title specifying maximum permissible acreages for individual components shall supercede any provisions to the contrary of the Wild and Scenic Rivers Act.

(e) Notwithstanding the provisions of section 9(a)(iii) of the Wild and Scenic Rivers Act, the minerals in all Federal lands within the line-of-sight line established in subsection (b) included in any component or part of a component designated by this section as a wild river area are hereby withdrawn, subject to valid existing rights, from all forms of appropriation under the mining laws and from operation of the mineral leasing laws including, in both cases, amendments thereto. The Secretary is authorized to open the remainder of the river corridor to mining subject to such regulations as he may prescribe.

(f) The Secretary may seek cooperative agreements with the owners of non-Federal lands adjoining the wild and scenic rivers established by this title to assure that the purpose of such reservations are served to the greatest extent feasible.

(g) Notwithstanding any other provision of law or of this Act to the contrary, with respect to components of rivers herein designated and administered by the Secretary outside the boundaries of units of the National Park and Wildlife Refuge Systems, the Secretary may grant access for oil and gas pipelines in accordance with the Mineral

Leasing Act of 1920, and he may permit, subject to such terms and conditions as he deems necessary, access for roads across, through, or over such river components.

TITLE IV—NATIONAL FOREST SYSTEM

SEC. 401. The following units of the National Forest System are hereby expanded:

(1) Tongass National Forest by the addition of three areas, Kates, Needle, Juneau Icefield and Brabazon Range, containing approximately one million four hundred and forty-four thousand acres depicted on a map entitled "Additions to the Tongass National Forest" dated November 1977, which shall be filed and made available for public inspection in accordance with the provisions of section 2.

(2) Chugach National Forest by the addition of three areas, Nellie Juan, College Fiord and Copper River containing approximately one million five hundred and ninety-one thousand acres as depicted on a map entitled "Additions to the Chugach National Forest" dated November 1977, which shall be filed and made available for public inspection in accordance with the provisions of section 2. The Secretary of Agriculture shall administer the Copper River additions and adjacent lands in the Copper River Delta in accordance with the laws, rules, and regulations applicable to the National Forests, and in accordance with land management plans which provide for adequate protection of significant fish and wildlife values and protection of other resource values which do not substantially interfere with such fish and wildlife values.

TITLE V—NATIONAL PETROLEUM RESERVE IN ALASKA

SEC. 501. Notwithstanding any contrary provision of Public Law 94–258, during the review of land uses pursuant to section 105 (c) of Public Law 94–258 and until Congress has determined otherwise, the Secretary shall manage the National Petroleum Reserve in Alaska in such a manner as to recognize subsistence use, and preserve scenic, historical, archeological, recreational, fish and wildlife, wilderness, and other surface values.

TITLE VI—DESIGNATION OF WILDERNESS AREAS

SEC. 601. (a) In accordance with subsection 3(c) of the Wilderness Act (78 Stat. 892), the lands, waters, and interests therein within the boundaries depicted as "Proposed Wilderness" on the maps referred to in section 2 of this Act are hereby designated as wilderness, with the nomenclature and approximate acreage as indicated below:

NATIONAL PARK SYSTEM

(1) Denali Wilderness of approximately 5.49 million acres;

(2) Gates of the Arctic Wilderness of approximately 8.10 million acres;

(3) Glacier Bay Wilderness of approximately 2.25 million acres;

(4) Katmai Wilderness of approximately 2.69 million acres;

(5) Kenai Fjords Wilderness of approximately 0.33 million acres;

(6) Lake Clark Wilderness of approximately 2.55 million acres; and

(7) Wrangell-St. Elias Wilderness of approximately 8.85 million acres.

NATIONAL WILDLIFE REFUGE SYSTEM

(1) Arctic Wilderness of approximately 8.8 million acres;

(2) Kenai Wilderness of approximately 1.3 million acres; and

(3) Alaska Marine Resources Wilderness of approximately 2.6 million acres.

(b) Lands designated as wilderness by this section shall be administered by the Secretary in accordance with the provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this section, and any reference to the Secretary of Agriculture shall be deemed to be a reference to the Secretary.

(c) Within seven years from the effective date of this section, the Secretary shall report to the President, in accordance with subsections 3(c) and 3( ) of the Wilderness Act (78 Stat. 890); 16 U.S.C. 1132 (c) and (d)), his recommendations as to the suitability or nonsuitability of any area within the units of the National Park System and National Wildlife Refuge System, other than the units referred to in subsection (a) of this section, established or to which lands are added by titles I and II of this Act, for preservation as wilderness, and any designation of any such area as a wilderness shall be in accordance with the Wilderness Act. Pending the designation by the Congress of any such area as wilderness, the Secretary is authorized to develop, on not more than 1,000 acres within each unit, facilities needed for the administration and management of each unit.

DESIGNATION OF WILDERNESS AREAS WITHIN UNITS OF THE NATIONAL FOREST SYSTEM

SEC. 602. In furtherance of the purposes of the Wilderness Act (78 Stat. 890), there are hereby designated as a unit of the National Wilderness Preservation System certain lands in the Tongass National Forest which comprise approximately 1.0 million acres which are depicted on a map entitled "Admiralty Island Wilderness—Proposed (FS/USDA, , 1977)" and on file in the office of the Chief of the Forest Service, Washington, D.C., and which shall be known as the Admiralty Island Wilderness.

ADMINISTRATIVE PROVISIONS

SEC. 603. Wilderness areas designated by section 602 shall be administered in accordance with the applicable provisions of the Wilderness Act governing areas designated by that Act as wilderness areas, except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act.

TITLE VII—GENERAL ADMINISTRATIVE PROVISIONS

SEC. 701. (a) Except as otherwise provided by Federal law, the State of Alaska is authorized to permit subsistence uses of fish, wildlife, and plant resources within designated subsistence management zones by:

(1) Defining "Subsistence uses" to include the taking and use of customary or traditional wild foods and other renewable biological resources from lands and waters for personal or family consumption; provided that such taking is not accomplished in a wasteful manner. Such uses may also involve the customary trade or barter among qualified subsistence users for personal or family consumption, and the sale of traditional Native handicrafts made out of the non-edible by-products of resources taken for personal or family consumption pursuant to this subsection;

(2) Prescribing conditions under which subsistence uses may be permitted, including but not limited to, the establishment of limits on season length, take, and number and type of fish, wildlife, or plant species to be utilized; provided, however, that the level of subsistence uses may not be significantly expanded beyond those in existence prior to December 18, 1971.

(3) Determining, without regard to race or ethnic origins, who is qualified for subsistence uses within subsistence management zones based upon: customary and direct dependency upon the use of subsistence resources as the mainstay of one's livelihood; area of domicile; availability of alternative resources; and cultural needs.

(4) Creating a system of local subsistence advisors to assist in determining who is qualified for subsistence uses within subsistence management zones; and

(5) Giving subsistence uses preference over any other competing consumptive use within subsistence management zones. When actual or anticipated population declines in a specific subsistence resource would be aggravated by continued subsistence uses or other competing consumptive uses, the State shall first curtail the other consumptive uses, and as a last resort, subsistence uses, to the extent necessary to protect the viability and well being of the fish, wildlife, and plant populations affected.

(b) The Secretaries of the Interior and Agriculture shall designate by regulation subsistence management zones within their respective units added to the National Park, Forest, Wildlife Refuge, and Wild and Scenic Rivers Systems by this Act. Such subsistence management zones shall be designated only within those units where subsistence uses were customarily occurring on or before December 18, 1971, and where continued subsistence uses would be consistent with the purposes for which the area was established and is being managed. The appropriate Secretary is authorized to periodically revise the boundaries of subsistence management zones in order to reflect changes in fish, wildlife or plant populations, migration patterns or subsistence needs.

(c) The appropriate Secretary may close any subsistence management zone or portion thereof to subsistence uses for reasons of public safety, fish and wildlife management, administration, or public use and enjoyment of the area; and notwithstanding any other provision of this section, if the appropriate Secretary determines that conditions imposed by the State of Alaska under subsection (a)(2) of this section are inconsistent with the purposes for which any area was established or constitute a danger to the population of any species, he may close the area to subsistence uses.

(d)(1) Except for those subsistence uses authorized in this section all areas of the National Park System in the State of Alaska shall be closed to hunting and trapping, but may be open to fishing in accordance with the applicable laws of the United States and the State of Alaska; provided, however, the Secretary shall permit fishing, trapping, and non-commercial hunting within areas established by this Act as "national preserves" and "national rivers" in accordance with the applicable laws of the United States and the State of Alaska.

(2) The Secretary may designate for all units of the National Park System, the National Wildlife Refuge System and the Wild and Scenic Rivers System in the State of Alaska areas where, and periods when, no hunting, fishing, trapping or entry may be limited or proscribed for reasons of public safety, administration, protection and management of living resources, preservation of subsistence resources, or public use and enjoyment. Except in emergencies, any regulation prescribing such restrictions relating to hunting, fishing, trapping or entry shall be put into effect only after consultation with the appropriate State agency having jurisdiction over such activities.

(e) Any person who violates or fails to comply with any regulation issued pursuant to subsection (c) or (d) of this section shall be fined not more than five hundred dollars or imprisoned for not to exceed six months, or both.

(f) The Secretary, in consultation with the Secretary of Agriculture, shall prepare and submit a report every two years to the President of the Senate and the Speaker of the House of Representatives on subsistence uses within designated subsistence management zones. The report shall include among other things the status of wildlife populations impacted by subsistence uses, the number of persons engaged in subsistence uses,

the status of subsistence in the native cultures, the scope, nature and effectiveness of the State subsistence program, whether the State is in compliance with the standards set forth in this Act on subsistence use, and whether there is a need for new legislation modifying the existing subsistence use system.

(g) Nothing in this section shall be deemed to modify or repeal the provisions of the Fur Seal Act of 1966 (16 U.S.C. Sections 1151 et seq.); the Endangered Species Act of 1973 (16 U.S.C. Sections 1531 et seq.); the Marine Mammal Protection Act (16 U.S.C. Sections 1361 et seq.); or the Migratory Bird Treaty Act (16 U.S.C. Sections 701 et seq.).

(h) Notwithstanding any other provision of law or any other provision of this Act to the contrary, the Secretary may permit the winter use of snowmobiles for subsistence purposes.

SEC. 702. All lands designated by this Act as units of the National Park System and National Wildlife Refuge System, and, notwithstanding the provisions of section (9)(a)(iii) of the Wild and Scenic River Act (82 Stat. 907) as amended (16 U.S.C. 1274 (2)), wild rivers, as provided in section 307 (e) of this Act, are hereby withdrawn, subject to valid existing rights, from all forms of appropriation under the mining laws and from operation of the mineral leasing laws including, in both cases, amendments thereto: *Provided,* That with respect to areas added by this Act to the National Wildlife Refuge System the Secretary may permit, in his discretion, and consistent with the provisions of the National Wildlife Refuge System Administration Act, oil and gas leasing, including construction and operation of pipelines, under the Mineral Leasing Act of 1920, as amended. Any and all withdrawals and reservations for powersite purposes applicable to the Federal lands and interests therein within the boundaries of any unit of the National Park, Wildlife Refuge, or Wild and Scenic Rivers Systems referred to in titles I–III of this Act are hereby rescinded to the extent of such applicability.

SEC. 703. All lands within the areas added to existing units or established by titles I, II, III, and IV of this Act, which are subject to selection or selected by Native Corporations under the terms of the Alaska Native Claims Settlement Act, and which are not selected by or conveyed to those corporations under the terms of that Act are hereby added to and incorporated within the appropriate area, to be administered under the terms of this Act, at such time as the relinquishment of Native rights becomes final.

SEC. 704. Within the boundaries of the units of the national conservation systems established by or pursuant to this Act, the Secretary or the Secretary of Agriculture with respect to national forests may acquire lands and interest in lands within areas placed under their respective jurisdictions by donations, purchase, exchange, or otherwise.

SEC. 705. The Secretary may establish administrative sites or visitor facilities outside of the boundaries of any area established under this Act, or protect any significant archeological sites outside the boundaries of the area described in section 101(a)(2), section 101(a)(3), and section 101(a)(9) of this Act. For these purposes he may establish on Federal lands or acquire other lands not to exceed one thousand acres for administrative and visitor facilities for each area, and no more than seven thousand five hundred acres for archeological or paleontological sites outside the boundaries of each of the areas referred to herein: *Provided,* That no such administrative site, visitor facility, or archeological site may be established on National Forest System lands without the concurrence of the Secretary of Agriculture.

SEC. 706. (a) The Secretary shall, with the concurrence of the Native Corporation involved, attempt to locate administrative sites and visitor facilities for areas established under this Act on adjacent Native-owned lands, wherever possible and desirable.

(b) Notwithstanding any other provision of law, before entering into contract for the provision of revenue-producing visitor services, the Secretary shall grant the village and/or regional corporations most directly affecting the first right of refusal to provide such services within the unit under such terms and conditions as he may by agreement prescribe.

SEC. 707. (a) Each area encompassed within the boundaries on the maps referred to in section 2 and depicted as "Area of Environmental Concern" is hereby declared to be an area of land and waters which contains resources that are a part of the total ecosystem, geological formation, or which reflects a cultural heritage directly related to the areas authorized herein as units of the four land conservation systems. Within units established by this Act and within each area of environmental concern so designated, the Secretary is authorized to cooperate and seek agreements with the heads of other Federal agencies and the owners of lands and waters including, without limitation, the State of Alaska or any political subdivision thereof, any Native corporation, village, or group having traditional cultural or resource-based affinities for such areas, and, with the concurrence of the Secretary of State, the governments of foreign nations. Such agreements shall have as their purpose the assurance that resources will be used, managed, and developed in such a manner as to be consistent with the preservation of the environmental quality of such areas and management of units established by this Act. The agreements may also provide for access by visitors to and across the lands which are the subject of the agreements.

(b) With respect to lands, waters, and interests therein which are subject to a cooperative agreement in accordance with subsection (a), the Secretary may provide technical assistance in planning and resource use, and he may assist, without provision for reimbursement if he determines to do so is in the public interest, the landowner in fire control, trespass control, and law enforcement within the limits of available appropriations.

(c) The head of any Federal agency, other than agencies that are parties to cooperative agreements pursuant to subsection (a) of this section, having direct or indirect jurisdiction over a proposed Federal or federally assisted undertaking in the lands and waters within, adjacent to, or related to areas added to existing units or established by titles I, II, III, IV, and VI of this Act and the head of any Federal department or interdepartmental agency, other than parties to such agreements, having authority to license any undertaking in such lands and waters shall, prior to the approval of the expenditure of any Federal funds on the undertaking or prior to the issuance of any license, as the case may be, afford the Secretary a reasonable opportunity to comment with regard to such undertaking.

SEC. 708. (a) There is hereby established the Alaska Cooperative Planning Commission (hereinafter referred to as the "Commission"). The Commission shall consist of the field directors of all Federal bureaus having administrative jurisdiction over Federal lands in Alaska and, to the extent the State of Alaska shall concur, the heads of all State agencies having administrative jurisdiction over State lands, together with four public members, of whom not less than two shall be representatives of Native corporations. The Secretary shall appoint two of the public members and the Governor of Alaska shall appoint the other two public members.

In addition to the foregoing members, there is hereby established the position of Chairman of the Commission, who shall be appointed by the Secretary, and who shall serve at his pleasure. In the event the State of Alaska shall have designated the heads of State agencies as members of the Commission, the Secretary may appoint the Chairman only with the concurrence of the Governor of Alaska. The Chairman shall be compensated by the Secretary at a rate not in excess of that provided for level V of the Executive Schedule in title 5, United States Code. The Secretary shall, not less than once each year, publish a list of the membership of the Commission in the Federal Register.

(b) The function of the Commission shall be to conduct studies and advise the Secretary, other Federal agencies, the State of Alaska, and Native corporations with respect to ongoing, planned, and proposed land and resource uses in Alaska, including transportation planning, land use designation, fish and wildlife management, tourism, agricultural development, coastal zone management, and such other matters as may be submitted for advice by the members.

(c) Federal members of the Commission shall receive no compensation for service on the Commission as such. Public members shall receive compensation at not to exceed $100 per day and shall be entitled to reimbursement for expenses reasonably incurred by them in carrying out their responsibilities. The agencies represented by Federal members shall contribute such funds, staff, and property to the Commission as are necessary to enable it to carry out its functions. As an express condition of State membership on the Commission, members from the Government of the State shall contribute such funds, staff, and property to the Commission as are appropriate, but not less than 50 per centum of the annual expenses of the Commission. The Commission shall meet at the call of the Chairman, but not less than once each calendar year. A report of each meeting, together with any recommendations as may be appropriate, shall be submitted to the Secretary, the Governor of Alaska, and the head of each Native regional corporation. Commission meetings shall be open to the public.

(d) The Commission shall adopt such internal rules of procedure and organization as it deems necessary. The Commission and its operations shall be subject to the provisions of the Federal Advisory Committee Act.

(e) The Commission may, with the concurrence of the members having administrative jurisdiction over the lands and waters and fish and wildlife resources therein, recommend cooperative planning and management zones, consisting of areas of the State of Alaska in which the management of lands or resources by one member materially affects the management of lands or resources of another member or members. Federal members of the Commission are hereby authorized and encouraged to enter into cooperative agreements with other Federal members and with State and Native members providing for mutual consultation, review, and coordination of resource management plans and programs within such zones.

(f) The Commission shall have no classification authority and will have only an advisory role with respect to cooperative planning and management zones.

SEC. 709. The Secretary shall direct the Fish and Wildlife Service to participate, where appropriate, in fish and wildlife studies and resource planning on units authorized by this Act as components of the National Park and Wild and Scenic Rivers System. The Secretary shall also direct the National Park Service, where appropriate, to participate in recreation planning, interpretation, historic resources protection, and ecological research on areas authorized by this Act as units of the National Wildlife Refuge and Wild and Scenic Rivers Systems.

SEC. 710. PLANNING. Except as otherwise provided, within five years from the effective date of this section, the Secretary shall

formulate (and he may from time to time revise) a detailed resource management and use plan for each unit of the systems established in titles I and II of this Act. Lands within the area of environmental concern may be added to the plan through voluntary cooperative agreements with other Federal agencies, the State of Alaska, or private landowners. Where units of the National Wildlife Refuge System and the National Park System share important biological and physical characteristics which control the natural occurrence and the management of fish and wildlife and their habitat, and scenic, historical, and archeological resources within each unit, a single plan shall be developed for the management and use of such resources. Each plan shall identify management practices, which the Secretary shall adopt and implement, that will accomplish the specific purposes of the areas set forth in titles I and II.

The Secretary shall formulate each plan and any revision thereof only after holding one or more public hearings in the vicinity of the affected unit or units, and only after consultation with the appropriate agencies of the State of Alaska.

SEC. 711. AUTHORITY TO CONSTRUCT CAPITAL IMPROVEMENTS ON NON-FEDERAL LANDS. Notwithstanding any other provision of law, the Secretary is authorized to construct, operate, and maintain, with funds appropriated for the purposes of this Act, such permanent and temporary buildings and facilities as he deems appropriate to provide visitor services and for administrative purposes, on lands within and outside the boundaries of the units established by this Act, without regard as to whether title to the underlying land is in the United States: *Provided*, That in the case of buildings and facilities constructed on non-Federal land, the owner shall have entered into a cooperative agreement with the Secretary, the terms of which shall assure the continued use of such buildings and facilities for the purposes of this section.

SEC. 712. STATE LAND EXCHANGES. In the exercise of his authority to acquire lands, waters, and interests therein for the purposes of this Act, the Secretary may utilize the provisions of subsection 22(f) of the Alaska Native Claims Settlement Act, as amended. Property acquired within the boundaries of the areas added to the four conservation systems by this Act shall become part of the area within which it is located, and subject to the laws and regulations applicable to such area.

SEC. 713. AUTHORITY TO HIRE LOCAL RESIDENTS. The Secretary shall give full consideration to employing qualified persons whom, by reason of their having lived, worked, or studied in or near the units of the national conservation systems established by this Act, the Secretary determines have special knowledge or expertise concerning the resources of such units and the management thereof, in accordance with applicable Civil Service Commission laws and regulations.

SEC. 714. Within areas added to the National Park, Wildlife Refuge, National Forest, and Wild and Scenic Rivers Systems by this Act, access to, and operation and maintenance of, air and water navigation aids, communications sites, and related facilities shall be permitted in accordance with the laws and regulations applicable to the National Park, Wildlife Refuge, National Forest, and Wild and Scenic Rivers Systems, as appropriate. Access to and operation and maintenance of facilities for national defense purposes and related air and water navigation aids within or adjacent to such areas shall continue in accordance with the laws and regulations governing such facilities notwithstanding any other provisions of this Act. Nothing in the Wilderness Act shall be deemed to prohibit such access, operation, and maintenance within wilderness areas designated by this Act.

TITLE VIII—MINERAL MANAGEMENT ZONES

SEC. 801. (a) Within the areas identified as Mineral Management Zones on the map referred to in section 2 designating the boundary of the Wrangell-St. Elias National Preserve, the Secretary is authorized to study, or to grant permits for study of these zones to determine the mineral potential of the areas and to determine whether further mineral exploration and extraction activities may be conducted in the zones in a manner consistent with the purposes for which the area was established. Such studies may be conducted only by means that do not substantially alter surface features of the zones.

(b) If, based upon the information obtained by any study authorized under subsection (a) of this section, the Secretary determines that there is a possibility that surface-disturbing exploration for and extraction of minerals within the zones may be conducted in a manner consistent with the purposes for which the area was established and that any surface disturbed by such activities may be substantially restored to its original condition, he is authorized to issue permits for such exploration and extraction.

(c)(1) If the Secretary determines, based on the information obtained as a result of study permit, that exploration and extraction permits may be granted in accordance with subsection (b) of this section, the study permittee shall be given the right of first refusal to receive the exploration and extraction permit. If the exploration and study permittee refuses the offer, the Secretary may offer the lands for lease on the basis of competitive bidding.

(2) If, as a result of information obtained by any means other than a study permit, the Secretary determines that mineral exploration and extraction should be permitted in accordance with subsection (b) of this section, the Secretary may issue mineral exploration and extraction permits on the basis of competitive bidding.

(d) For the purposes of this section, the term minerals shall include only those minerals that were subject to disposition under the Mining Law of 1872 on January 1, 1977.

(e) The Secretary is authorized to issue regulations to implement this section, which regulations shall include provisions for:

(1) the duration, assignment, and renewal of any permit;

(2) the establishment of a fee and royalty schedule for issuance and maintenance of permits;

(3) the terms by which a permit under subsections (b) and (c) of this section may be issued;

(4) stipulations to ensure that all activities undertaken under any permits shall be consistent with the purposes for which the area was established; and

(5) for removal of associated minerals.

(f) Notwithstanding the provisions of section 5, U.S.C. 552(b)(4) and (b)(9) of the Freedom of Information Act, any information made available to the Secretary by an applicant or permittee under this section shall be available to the public.

TITLE IX—MISCELLANEOUS PROVISIONS

SEC. 901. IDITAROD NATIONAL HISTORIC TRAIL.—(a) Section 5(a) of the National Trails System Act (82 Stat. 919; U.S.C. 1241) is amended by inserting the following new paragraph at the end of said section:

( ) The Iditarod National Historic Trail, including the main route (approximately 1,100 miles) and branch segments (approximately 930 miles), extending from Seward to Nome, Alaska, following the route depicted on the maps, identified as "Seward-Nome Trail" in the Department of the Interior Iditarod Trail study report dated ———, 1977: *Provided*, (i) That while this Act will commemorate the entire route of the Iditarod Trail by designation as the Iditarod National Historic Trail, only those segments which are within the exterior boundaries of federally administered areas and which meet the national historic trail criteria established in this Act, are established initially as components of the Iditarod National Historic Trail, and (ii) that the Secretary of the Interior may designate lands outside of the exterior boundaries of federally administered areas as segments of the Iditarod National Historic Trail upon application from State or local government agencies or private interests involved if such segments meet the national historic trails criteria established in this Act and such criteria supplementary thereto as the Secretary may prescribe, and are administered by such agencies or interests without expense to the United States, and (iii) that notwithstanding the provisions of section 7(c) of the National Trails System Act, the use of motorized vehicles on segments of the Iditarod National Historic Trail will be permitted in accordance with regulations prescribed by the appropriate Secretary.

(b) The responsibility for coordination of Iditarod National Historic Trail matters shall rest with the Secretary in consultation with the heads of other Federal and State agencies where lands administered by them are involved. Such responsibilities shall include:

(1) Selecting the specific trail route, as provided for in section 7(a) of the National Trails System Act, within three years after the date of enactment of this section.

(2) Developing a plan and guidelines for the acquisition, development, management and maintenance of the trail with the advice and assistance of other Federal, State, and local agencies and organizations; such plan and guidelines to include provisions for the acquisition, retention, or dedication of significant historic sites and for a right-of-way or easement along most or all of the route to protect historic values and segments for potential future recreational trail development and to insure continued public travel along the various trail segments.

SEC. 902. KLONDIKE GOLD RUSH NATIONAL HISTORICAL PARK. The Act approved June 30, 1976 (90 Stat. 717), providing for the establishment of the Klondike Gold Rush National Historical Park, is amended by revising the second sentence of subsection (b)(1) of the first section to read as follows:

Lands or interests in lands owned by the State of Alaska or any political subdivision thereof may be acquired only by donation or exchange: *Provided*, That notwithstanding the provisions of subsection 6(i) of the Act of July 7, 1958 (72 Stat. 339, 342), the State may include the minerals in any such transaction.

SEC. 903. The provisions of section 2 and 8 of P.L. 94-429, 16 U.S.C. 1902, 1908, are hereby extended to all units of the National Wildlife Refuge System established by this Act. For the purposes of this section, the term "National Wildlife Refuge System" shall be substituted for the term "National Park System" and the Act of October 15, 1966, as amended (16 U.S.C. 668dd, et. seq.), for the Act of August 25, 1916, as amended (16 U.S.C. 1), wherever those terms appear in sections 2 and 8 of P.L. 94-429.

SEC. 904. COOPERATIVE INFORMATION CENTER. The Secretary is authorized, in consultation with other Federal Agencies, to investigate and plan for an information and education center for visitors to Alaska on not to exceed one thousand acres of Federal land, at a site adjacent to the Alcan Highway. For the purposes of this investigation, the Secretary shall seek participation in the program planning, and/or operation of the center from appropriate agencies of the State of Alaska and representatives of Native groups in Alaska, and he is authorized to accept contributions of funds, personnel, and planning and program assistance from such State

agencies, other Federal agencies, and Native representatives.

TITLE X—APPROPRIATIONS

SEC. 1001. There is authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

STATEMENT OF SECRETARY OF THE INTERIOR CECIL D. ANDRUS

Mr. Chairman, I appreciate your invitation to testify today. It is my privilege to present President Carter's recommendations on your legislative initiative for new National Parks, Wildlife Refuges, Forests, Wild and Scenic Rivers and wilderness areas in Alaska.

Since your hearings and the House Committee's hearings earlier this year, after lengthy study we have developed our views on the pending legislation. These comments were prepared in the form of amendments to H.R. 39, which is nearly identical to S. 1500. For the Committee's convenience, we have now put those amendments in the form of a draft bill which at your request I recently submitted to the Committee. We urge its enactment.

I want to begin my presentation today, Mr. Chairman, by recalling the long and close association between this Committee—and its Chairman—with the State of Alaska and its predecessor territory. At every step along the road to statehood and through the sometimes difficult first years afterward, this Committee has been intimately involved in national decisions affecting Alaska. Members of this Committee recognized the needs of Alaska's Native citizens and addressed them through the Alaska Native Claims Settlement Act. Later, members of this Committee took the lead in making sure that Alaska's Prudhoe Bay oil was available for an energy hungry nation.

Today we come to ask you to complete business begun six years ago when the Native Claims Act put into motion a process for setting land aside for the national interest. Only in Alaska do we still have the opportunity to set aside whole ecosystems, entire watersheds and river basins for future generations to enjoy and learn from. It is only in Alaska—out of all our great Nation—where we can still see land much as the first migrants across the Bering Sea from Asia must have seen it tens of thousands of years ago. The free roaming herds of caribou and the million-bird flocks that still fill the skies are national treasures which until recently thrived as we ignored them. Today, though, we can no longer depend on distance to protect Alaska's wildland resources.

Increasing and conflicting uses of Alaska make it necessary for us to act now to protect its most important scenic wonders and wildland habitats. And the pressure to act gives us an historic opportunity. The creation of 92.5 million acres of new National Parks, Wildlife Refuges, Wild and Scenic Rivers and National Forests is at the top of this Administration's environmental priority list. In his Environmental Message last May, President Carter cited the Alaska lands recommendations, saying "No conservation action the 95th Congress could take would have more lasting value than this."

The recommendations we offer today provide an unusual opportunity to act in everybody's best interest. For seven years the future of Alaskan development has been clouded by uncertainty over the final boundaries of the Alaska National Interest Lands and the delays in conveying the land entitlements. No situation is more likely to discourage investment.

And until the investment climate in Alaska becomes more hospitable, neither the State nor its Native citizens will be able to realize the full potential of their combined 150 million acre land base. By adopting our recommendation, Congress can, in one stroke, clear away this uncertainty. Development will proceed according to demands of the marketplace, rural Alaskans will benefit through protection of lands and waters that support their subsistence lifestyle, and the national interest will be served through protection of the essence of this country's last remaining wild regions. It is only recommendations such as ours, which draw the final boundaries, that can accomplish this goal.

Mr. Chairman, I am confident that this Committee's long association with Alaska gives it the resources and the perspective to forthrightly complete our unfinished business for the national interest in Alaska.

Mr. Chairman, for almost half a millenium man has put ever increasing pressures upon the ecology of the North American continent. The "lower 48" with a population of perhaps one million Native Americans five centuries ago, today supports some 213 million and serves as breadbasket and manufacturer to much of the rest of the world.

Alaska had perhaps 75,000 inhabitants when the Russians arrived. Now it has several times that population—and is growing rapidly. It is looked upon as a potential source of fuels, minerals, timber and fish for the lower 48 and for other nations.

Until recently the essence of our national policy has been the unplanned, rapid development and consumption of the resources of this continent. In establishing the first national parks and wildlife reservations a little more than a century ago, the Congress acted with foresight for the future of America, and of the world. At a time when much of America was still wide open space, it took courage to cut against the grain of "common sense" and protect some of our most spectacular areas. Unfortunately, we were not always able to move resolutely enough to protect all that deserved protection. Recently we have found ourselves forced to expand some parks, including Redwoods and Everglades, at great cost, in order to protect resources we once thought safe.

Now in Alaska—we have an opportunity to look to the future as we learn from the past. Alaska is a rare second chance for us as a people—a chance to preserve a major portion of our national heritage—to strike a balance between extracting important natural resources and protecting our last great region of wildlands.

Through enactment of our proposals, we can be certain that the crown jewels of Alaska—its most spectacular natural environments, recreation areas, and wildlife habitats—will remain intact for the benefit of our Nation's citizens.

Some people seem to fear that we are trying to hoard resources needed by Americans today and in the immediate future. That is not the case. Our proposal has been prepared with sensitivity to the resource needs of Alaska and America both now and for the coming years.

There are conflicts between some of our proposed parks and refuges and potential petroleum and mineral activity. We have not tried to gloss over them, nor have we exaggerated their importance. It would be impossible to make recommendations on this scale without encountering some potential use conflicts.

In the final analysis, though, I had to make some hard decisions based on all available information. Our recommendations for National Parks, Wildlife Refuges, Wild and Scenic Rivers and National Forests in Alaska reflect my best judgment. And they reflect the Interior Department's and this Administration's commitment to protect Alaskan wildlands while remaining sensitive to Alaska's and the Nation's need to own and develop resources.

As we grapple with this legislation in the coming months we should remember there are roughly 375 million acres in Alaska. Our proposal involves approximately 92.5 million acres. The State of Alaska will be receiving over 103 million acres, much of which will be open to development. The Natives are receiving more than 44 million acres, some of which will be developed. And, in addition, there will be up to 100 million acres, some of which will be developed. And, in addition, there will be up to 100 million acres of federal land remaining outside of parks and refuges which will be available for mining, timber harvesting, hunting, fishing, and other multiple uses for the benefit of Alaska and the Nation.

It is worth noting here, too, that enactment of our recommendations is bound to have a beneficial impact on the State's economy through the inevitable increase in tourism—an industry which has already edged ahead of Alaska's $145 million per year fishing industry. Every year thousands of people are drawn to Alaska to experience the feeling of true wilderness. As that resource dwindles in the rest of the Nation, Alaskans, and all Americans, will see the wisdom of the actions we take now to protect our last reservoir of wildlands in Alaska.

The question I ask is why—with all of the lands we are leaving open to potential development—should we also invite development and risk the destruction of those areas which are important for their beauty, their wildlife, or their ecological and cultural significance?

Why shouldn't we protect some of these resources so that through the years—and during our own lifetimes—the untrammeled glory of Alaska may be savored and shared. Vistas, wildlife and free-running rivers can be used over and over, but only if protected now.

Let me suggest this:

If we err in this decision and exclude some precious and delicate areas from the four systems, they could be lost forever. Americans in the future could neither enjoy them nor benefit from production from them. Alaska would be left to salvage these areas rather than treasure them.

But if we err by setting aside too much, that decision can always be changed in the future. Our system of government responds to pressures from the people. In the future the people may decide they so urgently need the resources from one of the protected areas that they will act to redesignate it—or allow development under stringent controls. This can be done. I am sure that future Congresses will not be insensitive to such needs—when they are real and present—just as I am sure this Congress will be sensitive to the real and present need to preserve and protect these natural values.

Deciding today what to do with this enormous landscape to preserve its essence for the future is staggering. It would be natural to fear that we lack the imagination to deal with conflicts of the scope presented by Alaska, but we should not fear failure simply because we cannot see all that is in the future.

Failure will come only if we choose not to act now. Until now inaccessibility and a harsh climate have shielded Alaska from the impacts of "progress" that we have experienced in the lower 48. Now, however, that shield has been penetrated.

Alaska Natives whose lives were once totally dependent upon wildlife are now shareholders in regional and village corporations. As a result of the growth and economic development throughout the State the need to change from a subsistence lifestyle to a cash economy has been sudden and painful for many. Others are accommodating to modern life without abandoning either traditional pursuits or ancient values.

We will not try to stop these changes. But we intend to protect and wisely manage some

of what is unchanged. Without forcing people either to stay on the land or to leave their Native villages, we can see to it that the opportunity to follow a subsistence lifestyle is not lost.

We cannot be, and we have not been, unresponsive to the needs of the people of the State of Alaska. My staff and I have sought the views of Governor Hammond, the State Legislature's Steering Council for Alaska Lands, the Land Use Planning Commission, representatives of the Native groups, conservation organizations, resource users and concerned citizens. I have visited Alaska and discussed this legislation with many of these people personally. Many of the decisions I have reached concerning our proposals have been difficult. I have tried, however, to accommodate as many of the views expressed as possible and still remain true to my responsibilities as Secretary of the Interior.

Governor Hammond has stated eloquently that "it is not easy to be both oil barrel to the Nation and National Park to the world," but to a great extent Alaska can be both. The Governor and Senator Stevens and the Land Use Planning Commission have both made "d-2" proposals which recognize this dilemma and treat it responsibly.

The recommendations which I am presenting for your consideration today draw heavily on those proposals, and, I am pleased to say, are in large measure compatible with them. We are deeply indebted to both for their resource information in dealing with the d-2 questions.

All proposals have identified the same nationally significant areas; the differences are in the type of management and extent of the boundaries.

Our proposal would place approximately 92.5 million acres of Alaska lands into the "Four Systems" management units.

We recommend establishing ten new units and expanding three existing units of the National Park System.

We also recommend establishing nine new units and expanding five units of the National Wildlife Refuge System.

These recommendations would constitute approximately 41.7 million acres in National Parks and Monuments and 45.1 million acres in National Wildlife Refuges.

We recommend adding 33 rivers to the Wild and Scenic River System, comprising about 2.3 million acres.

We recommend adding approximately 3.0 million acres to the existing National Forest System.

Our recommendations cover the full range of Alaska's natural areas, its unique cultural associations and its key fish and wildlife habitat needed to sustain its wild creatures. Let me describe, briefly, these areas to you:

WILDLIFE REFUGE SYSTEM

1. Arctic National Wildlife Refuge additions. The 8.85 million acres include lands that are critical for the 120,000 member Porcupine Caribou herd. This is one of the largest herds of free-roaming animals left in the world. The area also includes nesting, resting and feeding grounds for millions of birds. These additions would complete protection of this country's last remaining essentially untouched total arctic ecosystem stretching from the Arctic Ocean to the southern slope of the Brooks Range.

2. Yukon Flats National Wildlife Refuge. 8.45 million acres, including 40,000 lakes and potholes which are the most productive per acre waterfowl breeding ground in the State, as well as supporting major moose, bear, wolf and salmon populations.

3. Tetlin National Wildlife Refuge. 765,000 acres, where waterfowl including Canvasback and Redhead ducks breed, relying on this area when potholes in Canada are dry.

4. Kanuti National Wildlife Refuge. 1.2 million acres, including high-density nesting areas for White-Fronted Geese that winter along the Gulf of Mexico.

5. Nowitna National Wildlife Refuge. 1.45 million acres, produces nearly a quarter of a million birds for the Central flyway and is home to caribou, bear and moose.

6. Koyukuk National Wildlife Refuge. 3.33 million acres, a basin that produces 75,000 geese and 300,000 ducks every year and is key habitat for furbearers and moose.

7. Innoko National Wildlife Refuge. 2.84 million acres, producing 380,000 ducks which migrate to Washington and California each year. There are large numbers of beaver and other furbearers significant in local economies as well.

8. Yukon Delta National Wildlife Refuge. 10.59 million acres of watery tundra that annually sends south 100 million shore and water birds of many species and three million ducks and geese. The area supports an important salmon run. There is a wide diversity of other animals as well.

9. Selawik National Wildlife Refuge. 2.15 million acres which is the breeding ground for birds from Asia, Australia, New Zealand, Antarctica, South America, and Africa, grizzly bears, caribou and wolves. The sheefish lives in local waters.

10. Togiak National Fish and Wildlife Refuge. 3.84 million acres, with varied habitats supporting 1.7 million salmon, eagles and falcons, millions of seabirds and a wide array of land and marine mammals.

11. Kenai Moose Range additions. 234,000 acres rounding out habitats for the Kenai moose, trumpeter swans, Dall sheep, mountain goats and a diverse list of other fish and wildlife.

12. Becharof National Wildlife Refuge. 1.03 million acres including major denning areas for the giant peninsula brown bear and habitats for caribou, moose, and marine birds and mammals.

13. Alaska Marine Resources National Wildlife Refuge. 430,000 acres comprising the rocks, islands, spires and capes which host millions of breeding seabirds and most of the marine mammal species around the Alaskan coast.

NATIONAL PARK SYSTEM

1. Gates of the Arctic Wilderness National Park. 8.1 million acres of the Central Brooks Range north of the Arctic Circle. This is the heart of the Brooks Range, a vast, beautiful wilderness.

2. Kobuk Valley National Park. 1.67 million acres, including migration routes of the Arctic caribou herd, the Great Kobuk Sand Dunes, and important archeological sites.

3. Cape Krusenstern National Monument. 360,000 acres containing horizontal beach ridges and evidence of human occupation going back 4,000 years.

4. Aniakchak National Monument and Preserve. 495,000 acres, including one of the world's largest dry calderas, the remains of ancient volcanic explosions.

5. Katmai National Monument additions. 1.1 million acres that include critical brown bear denning and feeding habitat.

6. Kenai Fjords National Park. 412,000 acres, including the great Harding Icefield and associated coastal fjords.

7. Lake Clark National Park and Preserve. 3.14 million acres of diverse mountain scenery whose waters form part of the Bristol Bay watershed so important to Alaska's salmon fishing industry.

8. Mount McKinley National Park additions. 3.85 million acres to bring into the park the entire mountain massif and important wildlife habitat.

9. Wrangell-St. Elias National Park Preserve. 12.05 million acres of spectacular mountains, and the greatest assemblage of glaciers on the continent.

10. Yukon-Charley National Rivers. 1.7 million acres including an untouched entire river basin and critical nesting areas for falcons.

11. Bering Land Bridge National Preserve. 2.34 million acres, the remains of the land bridge that once linked Asia and North America, including rich archeological resources.

12. Glacier Bay National Monument additions. 580,000 acres of land important for wildlife habitat and migration routes.

13. Noatak National Ecological Preserve. 5.96 million acres encompassing the largest river system in the country still unaltered by western man.

WILD AND SCENIC RIVERS

Thirty-three beautiful and free-flowing rivers are proposed for designation, assuring for future generations a chance to enjoy recreational rivers use for all time. In addition, we propose nine rivers for study. A complete listing is attached to my testimony.

NATIONAL FORESTS

We are recommending additions of some 3.0 million acres to existing National Forests.

Parcels of isolated public land remain in southeast Alaska. All are in areas where there is dominant management by the Forest Service (and have not been identified as having national significance for Park or Refuge designation). Land management patterns and management efficiencies could be achieved by adding these parcels to the National Forest System (approximately 2.1 million acres).

In September, we recommended to the House Interior Committee that 1.6 million acres of these isolated parcels be transferred to the Forest Service. Since that time, we have reached agreement with the Department of Agriculture for the transfer of an additional 0.5 million acres which include the Nellie Juan and College Fiord areas adjacent to the Chugach National Forest.

Also to be transferred to the Forest Service to consolidate ownership is an area of 0.9 million acres in the Copper River delta. The Forest Service agrees that the millions of migrating birds which funnel through here every year require that this area be managed for protection of the fish and wildlife and their habitats.

The Administration recommends the establishment of Admiralty Island as wilderness under the jurisdiction of the Forest Service. In recommending wilderness designation, the Administration does not propose to take away the selection rights of the Native Corporations of Sitka and Juneau. We are hopeful that voluntary arrangements will be made with those corporations for the exchange of their selections on Admiralty Island for other forest lands in Southeast Alaska.

This million-acre island is home to some of the Nation's largest populations of bald eagles and brown bears. It contains one of the Nation's largest stands of virgin forest. The Tlingit Village of Angoon is one of the last remaining traditional Indian Villages of Southeast Alaska. Wilderness designation for this island would preserve not only the land but also protect the lifestyle of those people whose ancestors moved there hundreds of years ago.

I would like to comment specifically on one area, Iliamna. We considered including it in the National Wildlife Refuge System, but I have decided it is not appropriate for inclusion. Although the fish and wildlife values of the Iliamna area are tremendous, I did not propose a refuge because the Natives have made large selections and the State wishes to make selections in the area.

The State places great importance on State regulation of fishery resources and assures us that it will sensitively manage this area for its fish and wildlife values.

We will depend upon the State to protect the fish and wildlife in the Iliamna area. Our recommended language will provide sufficient authority to protect this important resource if the State has not established a management plan which is consistent with such protection prior to conveyance. After conveyance, if the Secretary determines that State managemnt is inconsistent with protection of this resource he may, by appropriate order, establish one or more units of the National Wildlife Refuge System on remaining Federal lands within the area.

A special study area is being proposed on the Alaska Peninsula, which contains some of the highest wildlife resource values in the State. Because of mixed land ownership patterns on the Peninsula, we did not propose immediate establishment of a refuge there. However, the Federal lands would be protected during the study period to assure that wildlife values are maintained, while efforts are made to consolidate land ownership patterns. Upon completion of the study in June of 1983, a specific proposal would be made to the Congress on how we can best provide long term protection of wildlife resources, possibly including establishment of one or more Refuges.

Mr. Chairman, certain working principles have guided our deliberations in developing these recommendations. For example, wherever possible we have tried to protect whole watersheds; resources rather than acreage have been the guide to the boundaries we have drawn. The preservation of natural and cultural diversity and habitat for fish and wildlife are primary reasons for all of our recommendations.

In order to recognize total ecosystems, our boundaries include some lands selected by the States and the Natives. Land selections so included would be treated as inholdings in existing Parks and Refuges. We are hopeful that the State and the Natives will work with us in the management of these areas to the benefit of all concerned.

My staff and I worked hard to draw boundaries that will adequately protect these truly significant wildlands while excluding wherever possible areas of potential conflict. We had available a computerized resource evaluation and other materials prepared by the State of Alaska to aid the State in making its selections. We studied mineral maps prepared by the Joint Federal-State Land Use Planning Commission, the U.S. Bureau of Mines and the Geological Survey. We used the most varied and up-to-the-minute data base we could compile. Even though we may never have complete mineral resource information for Alaska, we do have substantial data delineating the mineral potential of the State.

Just as important, we have enormous amounts of information on the surface values of the places we recommended for protection. Studies for parks and refuges in Alaska date back to the turn of the century, with an acceleration in research following passage of the Alaska Native Claims Settlement Act in 1971. In 1973 the Interior Department prepared a 28-volume environmental impact statement on the areas covered in Secretary Morton's recommendations, which identified the basic ecosystems contained within our recommendations.

We continue to sponsor scientific investigation by biologists, archeologists, anthropologists and geologists. Every river proposed for Wild and Scenic River status has been viewed or floated by professional planners who compared it favorably with the other rivers in the system. Every area proposed for park status has been explored by men and women with years of experience in identifying lands with park potential. And every proposed wildlife refuge has been selected by biologists and other natural resource scientists based on the number of birds or caribou which are dependent upon these breeding and feeding grounds.

The initial proposals recommended by Assistant Secretary Herbst to the Department were drawn on ecosystem and watershed boundaries and encompassed more than 120 million acres. Though deletions to avoid conflicts we cut those boundaries down to some 92 million acres.

We recognize that some conflicts remain. There are areas within our proposals which have a high mineral potential, such as in the Gates of the Arctic Wilderness National Park. We excluded a large portion of the Killik River basin from our Gates of the Arctic proposal because the Arctic Slope Regional Corporation wishes to develop the oil and gas in the area. It is a dual withdrawal d–2 area. We decided they should have the opportunity to do so and did not include it in our proposal. We also deleted some of the high hardrock mineral areas from our Gates proposal, but we did not exclude the entire mineral zone. To do so would have violated the principle of protecting the park ecosystem, including its wildlife and botanical resources, as well as some of Alaska's best scenic and recreational resources. Where we could not resolve the conflicts, it was our considered judgment that known public values were greater than the known mineral values.

That was the case with our recommendation that the existing Arctic National Wildlife Range be designated as wilderness. Some day perhaps we may elect to tap the oil which may underlie the coastal plain of the Range. But we believe that wilderness status is essential to protect the 120,000 caribou and millions of birds and other wildlife who depend on this ecosystem. Our Nation can afford to let them live undisturbed, at least for now, and we strongly recommend wilderness designation for the Range.

Where conflicts with sport hunting arose that could not be resolved by exclusive boundary designation we have used a "park-preserve" concept. Similar to Big Thicket and Big Cypress, National Preserves may accomodate a variety of uses including sport hunting, under regulation, which do not significantly impair the natural or cultural values for which the preserve is established.

Our recommendations represent the bottom line of what is necessary to protect the unique values that really make Alaska the special place it is. The land management designations are carefully attuned to the values of each area. We feel strongly that it is appropriate and in the national interest to classify these areas according to our recommendations.

Mr. Chairman, I would now like to discuss several important issues which have an overall application to our d–2 proposal.

COOPERATIVE PLANNING AND MANAGEMENT

There is widespread consensus that some sort of cooperative planning and management is needed among Federal, State and private landowners. ANCSA and Alaska Statehood provisions are resulting in divergent landholdings in every area of the State. Decisions on wildlife, transportation, watersheds and various developments of national significance cut across these property boundaries. Several proposals have been advanced by Governor Hammond, members of the Alaska delegation and the Land Use Planning Commission to formalize a means by which Federal and State cooperation can best be obtained.

To facilitate overall planning and management cooperation in the State, we propose the establishment of a statewide Cooperative Planning Commission. This commission would serve as the statewide focus for cooperative planning, doing not only its own work on major issues, but also serving as the catalyst and organization for State/Federal/Native planning, interagency studies and meetings. The Commission would be advisory to land managers and could make such recommendations as land use designations outside of Federal management areas. The Chairman would be appointed by the Secretary with the concurrence of the Governor and would serve on a full-time basis. The Commission would be composed of public members, Native representatives and land managers who represented each of the Federal land management agencies in Alaska and their counterpart State land management agency representatives.

Further, included in many of our d–2 area proposals, we have identified adjacent areas within which resource use and development are critically important to the proper protection, management and interpretation of the natural and wildlife resources within the d–2 area. We urge legislative designation of those areas.

We have designated these as "areas of environmental concern" (AEC). We propose that the Departments be authorized to enter into *voluntary* cooperative agreements with the landowners in these AEC's so that some form of cooperative planning and consultation can be achieved between the d–2 land management agency and the adjacent public and private adjacent landowners on matters related to the purposes of the d–2 lands. I want to emphasize that we are *not* proposing any regulatory authority in these areas other than that already applicable in those areas under existing Federal law, such as the Federal Water Pollution Control Act. Rather, the AEC's would be related to the cooperative planning and management effort to be undertaken by the proposed Advisory Commission.

Additionally, we propose that the Secretary be authorized to enter into cooperative agreements with the State and Native corporations within Cooperative Planning and Management Zones established by the Commission. These Zones could be established by mutual agreement by the Department, the State and the Native corporations whose lands would be included within a zone. We propose this Cooperative Planning and Management Zone mechanism as a means by which cooperative planning and management can be employed to protect a particular resource in whole ecosystem-wide areas, such as the North Slope, the Beaufort Sea, the Bristol Bay salmon fishery watershed or the Arctic caribou herd migration area.

In all instances cooperative arrangements would be advisory only. We are not proposing that any responsibility of the Secretary of the Interior be delegated to any Board or Commission by agreement or otherwise. Nor are we suggesting that Congress delegate its authority over land classification to any other body. We would actively oppose such a proposal.

SUBSISTENCE

Although hunting activities have traditionally been allowed on certain Federal lands, they have generally been prohibited in areas of the National Park System. However, legitimate subsistence uses occur in some of the proposed park system areas, and we recognize them. We also recognize that Park and Refuge lands will aid in maintaining subsistence lifestyles in Alaska by safeguarding important wildlife habitat. We believe that life based on subsistence is an integral and important part of rural Alaska.

In areas added to the National Wildlife Refuge system, we recommend a provision recognizing subsistence uses similar to that for the Parks. Additionally, the refuges would be open to sport hunting within the framework of Federal and State law.

Refuge areas could also be closed in whole or part to hunting, both sport and subsistence, if necessary to protect the resources of the area.

This legislative proposal would authorize the Secretary within areas authorized or added to the Four Systems to designate sub-

sistence use zones, which recognize the traditional subsistence uses prior to the 1971 level. The land manager would be authorized to close all or part of these subsistence zones for various reasons associated with management, administration, and fish and wildlife protection. This closure authority is necessary to assure that the areas are managed for the purposes for which they are established and to preserve the total ecology of the area. To the extent that consumptive uses of the fish and wildlife resources are authorized on a given area, however, a preference would be given to subsistence uses.

This proposal is based upon the concept that the regulation of subsistence hunting, as with the taking of resident wildlife generally, should be managed under State authority consistent with existing Federal law and policy. In addition, we believe that subsistence users should not be racially defined.

WILDERNESS

Studies have now been completed as to the suitability for designation as wilderness on three existing National Park System areas and on thirteen existing national wildlife refuges in Alaska as required by the Wilderness Act. Due to the pending d–2 additions, and due to the Native selections within existing refuges, wilderness recommendations on existing areas, with four exceptions, have not previously been submitted to the Congress. Our wilderness proposals spring from a long process of study and evaluation.

We propose wilderness in three existing units of the National Park System in Alaska, totalling 6.7 million acres, and in four existing refuges totalling 12.5 million acres for a total of 19.2 million acres of wilderness in existing areas.

Our studies indicate that selective immediate wilderness designation is highly desirable for some of the new d–2 areas which we propose. Therefore, we recommend designation of wilderness in four new Park System areas, totalling 23.6 million acres, and designation in two new refuge additions, totalling 0.51 million acres. The total for existing and new areas is 43.31 million acres.

All other new park and refuge system additions and remaining established wildlife refuges will be formally studied under the Wilderness Act and recommendations made in 3 to 7 years as to wilderness suitability. We will attempt to complete some of these studies within 3 years and others will be scheduled for completion within 3 to 7 years. Due to weather and manpower limitations, and the need for surveys of other resources, we could not complete all of these studies within 3 years. Congress would then decide whether to designate these studied areas as wilderness. We recommend no wilderness designation for wild and scenic rivers outside national interest areas.

Aircraft, motorboats and snowmachines are the principal means of motorized access in remote parts of Alaska, and the use of snowmachines is widespread for subsistence purposes. The Wilderness Act permits the established use of motorboats and the landing of aircraft in wilderness areas by regulation. We propose to allow such use in Alaska.

Further, we propose that the use of snowmachines in wilderness areas be allowed but strictly limited to subsistence use, emergencies and management.

Our proposals will, of course, allow for continued use of navigational aids and access to them for administrative purposes in wilderness areas.

MINERALS

Let me discuss briefly the range of permissible mineral activities for those areas included in our proposal.

National parks, monuments, and wild rivers established by this legislation will be withdrawn from all new mineral exploration, entry, and location, or leasing, subject to valid existing rights. In accordance with recent amendments to ANCSA, oil and gas development will take place where the Natives own subsurface rights within the Aniakchak National Preserve. Refuges would also be withdrawn from location and entry for hardrock minerals, but we propose that discretionary oil and gas leasing be permitted in the new refuges where compatible with the purposes for which the lands are established, and following appropriate classification by the Department.

All units of the National Park System in the United States are closed to mineral entry and location under the Mining Law of 1872. In those areas of the National Park System where valid claims existed prior to closure, mining activities may continue subject to strict control under the terms of the Mining in the Parks Act, P.L. 94–429, 16 U.S.C. 1901 *et seq.*

Within the proposed Wrangell-St. Elias National Preserve, we have recognized two areas containing potentially significant mineral resources, primarily copper. The possible importance of these two areas is such that further mineral study and controlled mineral extraction are warranted.

Accordingly, this legislation identifies the land containing the mineral management zones and authorizes the Secretary to conduct mineral studies and mineral extraction under a permit system, with strict environmental controls.

In these zones, we propose that the Department be authorized to undertake exploration studies or issue study and exploration permits to private concerns. The purpose would be to determine the nature of the minerals in these zones, and the feasibility of extraction in a manner consistent with the purposes for which the preserve was established.

After reviewing the information obtained as a result of this study and exploration in the mineral management zones of the Wrangell preserve, we would determine whether minerals could be extracted in a manner consistent with the purposes for which the preserve was established and whether reclamation is possible. If so, we would have discretion to issue a mineral extraction permit. The permit would contain necessary stipulations and conditions to insure the protection of the environmental integrity of the area.

The only minerals available for extraction under this approach are hardrock minerals (those locatable under the Mining Law of 1872). Minerals covered under the Mineral Leasing Act (e.g., oil and gas), and the Materials Act (e.g., sand and gravel), are not included.

We anticipate that there will be a number of valid existing mining claims within the boundaries of new Alaskan units of the National Wildlife Refuge System, and that regulatory control of activities on these claims will be required. Although designation of an area as a wildlife refuge is an implied delegation of regulatory authority, the authority contained in the Mining in the Parks Act is the type of specific language that not only provides a basis for efficient regulation but also provides a standard for the exercise of this authority. This authority will automatically apply to all new units of the National Park System. We propose that this authority be extended to all new Alaskan units of the National Wildlife Refuge System.

The effect of this addition would lead to a consistency in treatment of valid claims in Alaska on parks and refuges, would support environmental regulations, and would require registration of claims within 1 year of passage of this Act, rather than by October 1979 as required by the BLM Organic Act.

Finally, recognizing that we need to continually improve our understanding of the mineral potential of Alaska, the Geological Survey will continue mineral evaluations in all areas under its long-term Alaska Mineral Resource Assessment Program. Maps from these assessments will provide more detail than currently available on mineral potential, and will be periodically available as they are completed over the next 20 to 25 years.

ACCESS AND RIGHTS-OF-WAY ACROSS PARKS AND REFUGES

We strongly believe that the application of existing law and procedures, such as section 4(f) of the Department of Transportation Act and Section 4 of the National Wildlife Refuge Administration Act, as amended, is sufficient to determine need for access through newly proposed d–2 areas. Under existing law, rights-of-way may be granted across parks for electrical transmission lines, and federal-aid highways.

Pipelines and utility rights-of-way may be granted on refuges if they are compatible with the purposes for which these areas were established. We will examine carefully on a case-by-case basis any right-of-way request to assure that it does not adversely affect the natural values sought to be protected and managed in the legislation establishing a particular area. Existing law will be adequate to accomodate most legitimate right-of-way needs.

We reject the thought that transportation corridors be carved out of nationally significant d–2 lands before the need for such access is established, the impact on the resources is known, and all viable alternatives have been considered. We do, however, endorse the need for ongoing planning for future transportation access needs.

WILD AND SCENIC RIVERS

Alaska's wild and scenic rivers represent some of the finest water-related recreation opportunities in the country. We recommend that the bill designate all 33 qualified rivers as units of the Wild and Scenic Rivers System, regardless of whether they occur within or outside of parks and refuges. Those rivers designated outside of parks and refuges should be managed by the federal agency managing the adjacent federal lands. It would be inefficient and confusing to the public if one agency had management authority over the river corridor and another was responsible for adjacent lands and resource uses.

We recognize that designation of several of the rivers we propose as components of the National Wild and Scenic Rivers System will affect their use as potential sites for the development of hydroelectric power. However, with the exception of the Susitna, which we recommend for study designation, we believe that the potential for economic development of hydroelectric power on these rivers is far too speculative to justify withholding wild and scenic river designation at this time.

We are not recommending that wild and scenic rivers be designated as wilderness. The protection afforded designated rivers under the Wild and Scenic Rivers Act is adequate. Moreover, wilderness designation would conflict with future needs for access across these rivers for such facilities as pipelines, for which our language specifically grants authority.

EXPRESS AUTHORITY TO EFFECT LAND EXCHANGES

In general, the State has selected lands based on their known potential for mineral development, other commodity use, or for population growth.

We have drawn our recommended boundaries for the most part to exclude State-selected lands which have high development potential. Our boundaries do, however, include some areas of State selected lands, some of which have been tentatively approved for conveyance to the State. We

have also tried to exclude Native-selected lands in cases where Natives preferred not to be included within our boundaries.

Mr. Chairman, we do not propose to revoke valid State or Native selections. Within the boundaries of the proposed d–2 acres, the Department should be given express authority to acquire lands, waters, and interests therein by donation, purchase, or exchange. This authority should provide, however, that property owned by the State of Alaska or any political subdivision thereof may be acquired only upon the consent of the State. In this same regard, this express acquisition authority in the Secretary should provide that property conveyed under ANCSA and owned by any Native corporation may be acquired only with the consent of the owner.

CONVEYANCE OF LAND TO THE STATE AND NATIVES

The concern of the Native corporations to receive title to lands granted them under the ANCSA is one with which I agree. Unfortunately, to assure that the title they receive is good and "bankable" and to meet other requirements of the ANCSA, there are various steps that the Department must take in processing these conveyances. I assure you that all members of my staff and I are fully committed to seeking ways to resolve existing problems and to expedite the necessary conveyances. An intensive policy level review of ANCSA has been underway for several months, and I expect to be making decisions at the end of this month to resolve the issues which have delayed conveyance. I will inform the Committee on my decisions concerning these issues at that time.

The State's remaining land selection entitlement will come from lands left after Native selections and d–2 areas are completed. The State has made known its specific areas of interest for selections, and these are being analyzed by the Department. Our objective will be to seek conveyance of State selections not in conflict with Native selections, national interest land, or good land planning management principles as agreed with the State at the time the final bill is passed. If we are successful, a substantial percentage of State entitlement can be conveyed on this schedule.

Following passage, work should continue to make further selections and improve the overall land pattern, especially with regard to inholdings, by exchanges and cooperative planning and management.

COASTAL AREAS OF REFUGES AND PARKS

Mr. Chairman, I would like to emphasize to the Committee and to the State the importance with which I view the zones offshore from the proposed refuges and parks. I don't think that anyone will deny that the waters adjacent to a coastal area are an integral part of the coastal ecosystem. There is a vital link between the wildlife values of the shoreline area and the wildlife values of the waters and the offshore islands. We initially considered including these zones within area boundaries, but did not so as to avoid conflict with the State.

However, we are quite concerned about the wildlife which are so abundant within a six-mile area offshore from these refuges and parks. Within a six-mile area offshore, our studies show that the greatest number of marine mammals and the largest number of seabirds are found feeding, rearing their young, staging and resting during migration. Such areas offshore require extremely sensitive management to protect these habitats.

We believe that the Department, the National Oceanic and Atmospheric Administration, and the State can work together to manage cooperatively these adjacent offshore areas to avoid environmentally disturbing conflicts. These areas should be included in one or several cooperative planning zones under our proposed cooperative planning scheme.

Mr. Chairman, since the early beginning of the Alaska Native Claims Settlement Act legislative process, over 10 years ago, the Department and the Congress have been involved in a long, continuous process o growth and innovation in dealing with the unique and challenging problems concerning Alaska. We are now nearing the end of the ANCSA process and the enactment of this d–2 legislation will be the last major legislative initiative in that process.

We have a task before us of historic significance. We have an opportunity to preserve and protect the valuable natural, scenic, and wildlife resources of Alaska.

The President and I are totally committed to early passage of a strong d–2 legislative package. I pledge to you the full support of the department in working on this legislation. We also look forward to working with the State, the Natives, and the existing Federal-State Land Use Planning Commission to arrive at cooperative means to plan for the future of Alaska and the Nation.

Mr. Chairman, with this legislation we have a one-time opportunity to protect important resources in Alaska in a manner that has been lost forever in most of the lower 48 States. When I say "we" have an opportunity, I mean all of us—the American people, the Federal Government, the Government of the State of Alaska, the Natives whose lifestyle is as integral a part of the land as the rivers, the wildlife and the mountains—we have the opportunity now to protect and preserve the future of millions of acres of Federal lands which belong to all the citizens of this Nation.

Mr. Chairman, I will be pleased to answer any questions which the Committee members might have at this time.

By Mr. KENNEDY (for himself, Mr. SCHWEIKER, Mr. WILLIAMS, and Mr. JAVITS):

S. 2466. A bill to amend the Public Health Service Act to establish the National Institutes of Health Care Research; to extend and revise the assistance programs for health services research and health statistics; to establish the National Center for the Evaluation of Medical Technology, and for other purposes; to the Committee on Human Resources.

NATIONAL INSTITUTES OF HEALTH CARE RESEARCH ACT OF 1978

Mr. KENNEDY. Mr. President, I am pleased to introduce on behalf of myself and Senators SCHWEIKER, WILLIAMS and JAVITS, the National Institutes of Health Care Research Act of 1978. This legislation, if enacted, would create a seventh major agency in the Public Health Service. Its function would be to plan and undertake a broad series of research and related activities aimed at improving our health care delivery system. These include the collection and analysis of health statistics, the conduct of epidemiological research in the health area, the support of health services research, and the evaluation of medical technologies.

In the past, the Federal Government has invested meagerly, if at all, in these activities. In my view, this has been a grave mistake. It is my conviction that the enactment of this legislation would be a first step toward reversing that pattern of neglect. It is also my hope that this new institutional structure will give new focus and definition to these related research activities, and give them the prominence they deserve in the Federal Government.

The National Institutes of Health Care Research Act of 1978 would accomplish the following specific reforms:

First. It would create a National Institutes of Health Care Research modeled upon and parallel to the National Institutes of Health. This umbrella organization would provide overall policy guidance and coordination for its component institutions.

Second. It would create a National Center for the Evaluation of Medical Technologies, a new agency within the NIHCR. Its major purpose would be to assess cost and effectiveness of medical practices and procedures.

Third. It would expand, redirect, and rename the National Center for Health Statistics. This agency would become the National Institutes for Health Statistics and Epidemiology, and would become a component agency of the NIHCR.

Fourth. It would expand, redirect, and rename the National Center for Health Services Research, which would become the National Institute for Health Policy Research. This new agency would also become a component part of the NIPH.

Let me take each of these proposed changes and explain the justification for them. The creation of the National Institutes of Health Care Research would, in my view, fill a major gap in the institutional support for health research and development in our Government. The National Institutes of Health has become the major supporter of biomedical research in this country. It currently spends $2.8 billion a year generating new medical knowledge and new clinical applications of that knowledge.

However, biomedical research is not the only form of health-related inquiry which deserves Federal support. There are other research disciplines and pursuits which, while they do not involve laboratories and chemicals, can still yield impressive dividends by improving the quality, efficiency and effectiveness of the Nation's health services. These lines of health inquiry include:

First. Health services research and development: The study of the organizations and functioning of our health delivery system for the purpose of perfecting its performance.

Second. Health statistics: The gathering of information on the health of our population. This data allows us to trace the strengths and weaknesses of our health care system as it impacts on the health of Americans.

Third. Epidemiology: The collection and analysis of health data looking for clues about how to prevent and cure illness.

Fourth. Technology evaluation: The study of the usefulness, cost, economic and social impact of medical practices and procedures.

All these activities are supported in varying degree by the Federal Government, but that funding is not only inadequate, but so scattered through the Federal hierarchy that the dollars are difficult to track. For instance, health

statistics are gathered by 182 separate programs in HEW alone, often with little or no coordination. Health services research is conducted out of the Veterans' Administration, the Center for Disease Control, the National Center for Health Services Research, the Health Care Financing Administration and, to a limited degree, NIH.

We cannot expect research investments to pay off unless we provide the disciplines involved the sustenance they need to flourish. Health services research, health statistics, and their related research activities need better support. But just as much as more money, they need a defined institutional home, and a more hospitable organizational climate.

Since they are related but distinct disciplines, these research activities need to be coordinated but given enough room to follow separate leads. They need policy guidance to keep them accountable. But they also need protection from political interference. Otherwise, they will not be able to pursue excellence in their respective fields.

For the traditional biomedical sciences, the NIH fulfills these institutional requirements. Mr. President, it is my contention that the creation of a National Institutes of Health Care research can do the same for the health services research area and its related fields. It is time we permitted these research disciplines the fertile institutional soil they have always lacked.

Among the proposed activities of the National Institutes of Health Care research, those of its National Center for the Evaluation of Medical Technologies are probably least familiar to my colleagues. This is understandable for the charge to this new agency would be as innovative as it would be important. NCEMT would have the job of supporting evaluations of new and existing medical technologies. No Federal agency currently has clear responsibility to undertake this task. Yet the better evaluation of new medical technologies and existing health practices is absolutely critical to reducing the cost of medical care and improving its quality.

It has been estimated that one-half of the annual increase in the cost of a day of hospital care can be attributed to the use of more technology in medical practice. That means that between 1966 and 1976 expenditures for medical technology added $8 to $12 billion to our national hospital bill, which totaled $55 billion in 1977.

What are we buying with this outlay of funds for additional technology, Mr. President? Are these expenditures improving the health of the American people? The tragic truth is that in many cases we simply do not know

Last summer, Mr. President, in hearings before the Subcommittee on Health and Scientific Research, we heard testimony about the cost and effectiveness of surgery for coronary artery disease. The debate about this procedure has been spreading, and well it should. Each such operation costs from $10,000 to $12,500, and national expenditures for coronary artery surgery alone are approaching $1 billion a year.

Mr. President, this new surgical procedure was in widespread use before any comprehensive studies had been done to establish its efficiency. The result, predictably, is that there is growing consensus that it is being overused, with substantial adverse consequences for the health of some patients and the costs of medical care generally.

Mr. President, I yield to no one in my desire to see the products of biomedical research transferred rapidly and appropriately to the bedside. But recently, I have been impressed with the arguments of thoughtful medical and social scientists who are pointing out that we are seeing more and more instances in which the products of research are being transferred too rapidly in practice. The consequences of such overly rapid application of new technologies can be disastrous. Not just because new practices are costly. Not just because it has become fashionable to talk about controlling medical expenditures in this country. But because unproven treatments can hurt people. They raise hopes only to dash them. They can inflict pain. They can even maim and kill.

The creation of a National Center for the Evaluation of Medical Technology is an essential step toward assuring that the health practices commonly employed in the United States are efficacious and cost effective. The NCEMT will have the task of setting priorities for the study of new and existing health practices, of funding such studies through extramural grants and intramural programs, of training health professionals and other personnel with the needed talents to conduct health practice evaluations, and of establishing three extramural Centers for the Evaluation of Medical Technologies.

The Center will be advised in these tasks by a National Council for the Evaluation of Medical Technologies. The Council would be chaired by the Surgeon General. It would be composed of distinguished physicians, scientists, lawyers, economists, and laypeople. It would also have as members representatives of the agencies in the Federal Government with an interest in the evaluation of medical technologies, including the Food and Drug Administration, the Health Care Financing Alministration, the National Institutes of Health, and the National Professional Standards Review Council.

Aside from advising the NCEMT, the National Council would have the function of issuing, where appropriate, exemplary standards for the use of health technologies. These exemplary or model standards would be widely distributed through the National Library of Medicine.

In order to undertake these activities, the NCEMT would be authorized to expend $25 million in fiscal year 1979, $35 million in fiscal year 1980 and $50 million in fiscal year 1981.

It would not be expected that the NCEMT would be solely responsible for the evaluation of medical technologies in the United States. The Food and Drug Administration would continue to perform its statutory duties in requiring industry studies of the safety and effectiveness of drugs and devices. Also the National Institutes of Health and the Center for Disease Control would continue to perform clinical trials as before.

However, it would be the responsibility of the NCEMT to insure that health practices needing evaluation received them, and to assist other agencies in designing studies to establish the efficacy, cost-effectiveness, economic, and social impact of technologies.

Mr. President, the establishment of NCEMT and its Advisory Council are essential first steps toward permitting rational decisionmaking concerning the use of medical technologies in this country. I think they are structures whose creation has been long overdue.

Another key element of the National Institutes of Health Care Research Act of 1978 is the establishment of the National Institutes of Health Statistics and Epidemiology (NIHSE). This new entity would incorporate the mission of the National Center for Health Statistics, and add some crucial new functions to the Center's activities.

It is difficult to exaggerate the importance of the job the NIHSE will perform. Like the National Center for Health Statistics before it, it will be the Nation's window on its own health. It will continue the excellent and widely acknowledged health surveys and monitoring activities of the NCHS, which have kept us informed about such crucial matters as the relative burdens of various diseases in our country, the Nation's infant mortality rates, the frequency with which we see physicians and use hospital beds, and the levels of our expenditures on these and other health related resources.

In addition, however, the NIHSE will have two functions which the NCHS never fully addressed or implemented:

First. It will become by law the Secretary's instrument for coordinating health data collection in the Department of Health, Education, and Welfare, and for eliminating overlap, duplication and lack of standardization in data gathering.

Second. It will take on major new responsibilities aimed at bolstering the Nation's capacity to perform epidemiological work aimed at improving our health.

The need for improved coordination of the Department's health statistical activities has long been recognized both in the administration and in the Congress. The NCHS, under its mandate to establish the cooperative health statistics system, has made some progress recently in achieving coordination of data gathering activities within the Public Health Service. However, progress has been slow, and there remain substantial problems in assuring cooperation between the Health Care Financing Administration and the Public Health Service.

This is an intolerable situation. There is no excuse for gathering the same data twice, for refusing to share data among

agencies (provided assurances of confidentiality are honored) and for permitting each agency to define unique standards for data collection with the result that statistics are frequently noncomparable from one agency to another.

The National Institute of Health Statistics and Epidemiology should, under its revised authority, have the capacity to eliminate finally these costly and inefficient practices. They would have responsibility for reviewing data collection activities in the health field throughout HEW. The aim of this provision would be to insure that HEW programs have sufficient flexibility to meet their unique program needs but that their data collection not duplicate that of other agencies, and that the statisics they collect be comparable.

Consistent with this expanded mandate, the legislation provides the NIHSE an authorization of $65 million in fiscal year 1979, $70 million in fiscal year 1980, and $75 million in fiscal year 1981. These increased authorizations will permit the NIHSE to expand the cooperative health statistics systems substantially. It will permit the Institute to arrange for three components of the system to be in place in all 50 States by the end of next year. By 1983, if the sums suggested become available, the CHSS should be fully installed throughout the United States.

In addition, the added money should permit the NIHSE to begin undertaking an expanded program of intramural and extramural epidemiology and data analysis. The NIHSE could make a major contribution in environmental health monitoring, in unraveling the causes of trends in health levels in the U.S. population (for instance, the cause of the dramatic recent decline in deaths from heart disease), and in perfecting methodology in statistical work and epidemiology. Currently, the NCHS spends less than $300,000 out of a budget of $36 million on original research.

Finally, Mr. President, the National Institutes of Public Health Act of 1978 will create a National Institute of Health Policy Research whose functions will be to incorporate and expand current activities at the National Center for Health Services Research. The legislation would authorize a modest increase in appropriations for health services research, from $28.6 million in 1978 to $34 million in 1979, $40 million in 1980 and $45 million in 1981. In addition, the NIHPR would acquire a specific mandate to conduct training programs for health services researchers and to fund the development and evaluation of medical information systems. This last directive grows out of a comprehensive Office of Technology Assessment study which illustrated the pressing need for work on medical information systems, particularly as they employ computer technologies.

Mr. President, it is no secret that the National Center for Health Services Research has had problems in recent years. But it is not clear that those problems are exclusively the Center's fault or that they imply that its work has no utility. The need for reform in the National Center's mandate and functioning is clear. So, I feel, is the need to continue in some form the work it is doing. The creation of a National Institute of Health Policy Research would, in my view, lay the institutional groundwork for a revitalized and strengthened health services research facility.

Before proceeding, Mr. President, I would like to comment on the widespread myth that health services research has no relevance to policy problems. This is widely alleged and never proven, for the facts demonstrate the contrary.

The history of the National Center, troubled as it has been, shows repeated instances in which its work has contributed directly to major legislative initiatives. Research and development work at the NCHSR laid the groundwork for the professional standards review organization and the cooperative health statistics system. Research at the NCHSR helped lay the basis for the Rural Health Clinic Services Act and for the Health Professions Assistance Act of 1976. Finally, work funded by the NCHSR was instrumental in justifying the National Consumer Health Information and Health Promotion Act of 1976. This was accomplished despite a budget which fell from $58 million in 1973 to $24 million in 1977. And it was accomplished in the face of continued reorganizations, changes in leadership, and the consequent demoralization of Agency personnel.

If the National Institutes of Health had to work in the face of comparable budget cuts and personnel difficulties, and if it faced the same expectation of dramatic, short-term program relevance, I doubt NIH would be held in high regard. Federal support of health services research has entered a tailspin, and prophecies of poor performance have become self-fulfilling. If we do not reverse this trend, we will find that, as our health care system becomes increasingly expensive and complex, we will lack the trained professionals and the knowledge base to help us with its reform.

The creation of a National Institutes of Health Policy Research will express Congress sense that health services research needs to be preserved and strengthened, but that it needs to be redefined and revitalized as well. The transformation of NCHSR into an institute within the NIPH will convey a series of central messages:

First. Health services research has to be regarded as research discipline, not simply a short-term aid to policy formation.

Second. Health services research must be protected from political interference and harassment so that excellent research can be conducted and so that talented personnel can be recruited.

Third. Health services research must remain relevant to policy needs—thus the Institute for Health Policy Research—but the time frame for its payoff must be reasonable.

Finally, the National Institutes of Health Care Research Act of 1978 will express the Congress sentiment that the excessive fragmentation of health services research must be ended. This would permit quality control and accountability in this important but troubled research field.

Mr. President, the National Institutes of Health Care Research Act of 1978 will, in my view, provide this country for the first time with an integrated research program in the areas of health service delivery, health statistics, and epidemiology. It will initiate a critically needed new program in the evaluation of medical technology. And it will lay the groundwork for revitalizing our flagging efforts in the health services research area. For all these reasons, it deserves the Senate's favorable consideration.

I ask that the National Institutes of Health Care Research Act of 1978 be printed in its entirety in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2466

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE: REFERENCE TO ACT

SECTION 1. (a) This Act may be cited as the "National Institutes of Health Care Research Act of 1978".

(b) Whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Public Health Service Act.

SEC. 101. Section 304 and the heading thereto are amended to read as follows:

"National Institutes of Health Care Research

"SEC. 304. (a) The Secretary shall establish, in the Department of Health, Education, and Welfare, the National Institutes of Health Research (hereinafter in this section referred to as the "Institutes"). The Institutes shall be headed by a Director appointed by the President, by and with the advice and consent of the Senate. The Director, with the approval of the Secretary, may appoint a Deputy Director and may employ and prescribe the functions of such officers and employees as are necessary to administer the activities to be carried out through the Institutes.

"(b) (1) The Secretary, acting through the Institutes, shall conduct and support research, demonstrations, evaluations and statistical and epidemiological activities for the purpose of improving the effectiveness, efficiency, and quality of health services in the United States.

"(2) In carrying out paragraph (1), the Secretary, acting through the Institutes, shall give appropriate emphasis to research, demonstrations, evaluations and statistical and epidemiological activities respecting—

"(A) the accessibility, acceptablity, planning, organization, distribution, utilization, and financing of systems for the delivery of health care,

"(B) alternative methods for measuring and evaluating the quality of systems for the delivery of health care,

"(C) the collection, analysis, and dissemination of health related statistics,

"(D) alternative methods to improve and promote health statistical epidemiological activities,

"(E) the safety, efficacy, effectiveness, cost effectiveness, and social, economic and ethical impacts of medical technologies, and

"(F) alternative methods for disseminating knowledge concerning health and health related activities.

"(3) The Secretary, acting through the Institutes, shall (through National Research Service Awards) undertake and support manpower training programs to provide for an expanded and continuing supply of individuals qualified to perform the research, evaluation, and demonstration projects as set forth in sections 305, 306, and 306A.

"(4) The Secretary, acting through the Institutes, shall supervise the administration and operation of the National Institute for Health Policy Research, the National Institute for Health Statistics and Epidemiology, and the National Center for the Evaluation of Medical Technology in order to assure that (A) the programs carried out through each such Institute and Center receive appropriate and equitable support, and (B) there is cooperation among the Institutes and the Center in the implementation of such programs.

"(c) To implement subsection (b), the Secretary may, in addition to any other authority which under other provisions of this Act or any other law may be used by him to implement such subsection, do the following:

"(1) utilize personnel and equipment, facilities, and other physical resources of the Department of Health, Education, and Welfare, permit appropriate (as determined by the Secretary) entities and individuals to utilize the physical resources of such development, provide technical assistance and advice, make grants to public and nonprofit entities and individuals, and, when appropriate, enter into contracts with public and private entities and individuals;

"(2) secure, from time to time and for such periods as the Secretary deems advisable, the assistance and advice of experts and consultants from the United States or abroad. In addition, the Director of the National Institute for Health Policy Research and the Director of the National Institute for Statistics and Epidemiology, in order to assist each of them in carrying out the functions set forth in sections 305 and 306 respectively, and without regard to any other provision of this Act, are each authorized to obtain the services of not more than fifteen experts or consultants who have appropriate scientific or professional qualifications; and,

"(3) acquire, construct, improve, repair, operate, and maintain laboratory, research, and other necessary facilities and equipment, and such other real or personal property (including patents) as the Secretary deems necessary; and acquire, without regard to the Act of March 3, 1877 (40 U.S.C. 34), by lease or otherwise, through the Administrator of General Services, buildings or parts of buildings in the District of Columbia or communities located adjacent to the District of Columbia.

"(d) The Secretary shall coordinate all research, evaluation, demonstration, and statistical and epidemiological activities referred to in subsection (b) undertaken and supported through units of the Department of Health, Education, and Welfare. Such coordination shall be carried out through the Institutes.

"(e) The Director of the Institutes shall submit a report to the Secretary for simultaneous transmittal, not later than October 30 of each year, to the President and to the Committee on Human Resources of the Senate and the Committee on Interstate and Foreign Commerce of the House of Representatives setting forth the program accomplishments of the Institutes in the preceding fiscal year and the objectives and priorities for the current fiscal year.".

SEC. 102. (a) The heading for section 305 is amended to read as follows: "NATIONAL INSTITUTE FOR HEALTH POLICY RESEARCH."

(b) Section 305(a) is amended to read as follows: "(a) There is established in the National Institutes of Health Care Research the National Institute for Health Policy Research (hereinafter in this section referred to as the "Institute") which shall be under the direction of a Director who shall be appointed by the Secretary and supervised by the Director of the National Institutes of Health Care Research.".

(c) Section 305(b) is amended by—

(1) striking "304(a)" and inserting in lieu thereof "304(b)";

(2) striking "Center" and inserting in lieu thereof "Institute";

(3) striking "may undertake" and inserting in lieu thereof "shall undertake";

(4) striking "and" after "evaluation," and inserting in lieu thereof "and/or";

(5) striking "technology," in paragraph (1);

(6) striking "and" after "manpower;" in paragraph (2);

(7) striking the period in paragraph (3) and inserting in lieu thereof ", and"; and

(8) adding at the end thereof the following new paragraph:

"(4) the uses of computer science in health services delivery and medical information systems.".

(d) Section 305(c) is amended by striking "Center" and inserting in lieu thereof "Institute".

(e) Sections 305(d)(1) and 305(d)(2)(A) are amended by inserting ", acting through the Institute," after "Secretary" each place it occurs.

(f) Subsection (e) of section 305 is redesignated subsection (f) and is amended by (1) striking "304(b)" and inserting in lieu thereof "304(c)" and (2) striking "(b), (c), and (d)" and inserting in lieu thereof "(b), (c), (d), and (e)".

SEC. 103. (a) The heading to section 306 is amended to read as follows:

"NATIONAL INSTITUTE FOR HEALTH STATISTICS AND EPIDEMIOLOGY".

(b) Section 306(a) is amended to read as follows:

"There is established in the National Institutes of Health Care Research the National Institute for Health Statistics and Epidemiology (hereinafter in this section referred to as the "Institute") which shall be under the direction of a Director who shall be appointed by the Secretary and supervised by the Director of the National Institutes of Health Care Research.".

(c) Section 306(b) is amended by—

(1) striking "304(a)" and inserting in lieu thereof "304(b)";

(2) striking "Center" and inserting in lieu thereof "Institute";

(3) striking "may" and inserting in lieu thereof "shall";

(4) striking "and" after "dissolution" in paragraph (1)(H);

(5) inserting "or both" after "contract" in paragraph (2);

(6) striking "and" after "demonstrations," in paragraph (2) and inserting in lieu thereof "and/or"; and

(7) adding at the end thereof the following new paragraph:

"(3) undertake and support (by grant or contract or both) epidemiological research, demonstrations, and evaluations on the matters referred to in paragraph (1).".

(d) Section 306(c) is amended by—

(1) striking "Center" and inserting in lieu thereof "Institute";

(2) by inserting "and epidemiological" after "statistical" each place it occurs; and

(3) striking "Labor and Public Welfare" and inserting in lieu thereof "Human Resources".

(e) Section 306(d) is amended by striking "Center" and inserting in lieu thereof "Institute".

(f) Section 306(e) is amended by—

(1) inserting ", through the Institute," after "Secretary";

(2) inserting "to be known as the Cooperative Health Statistics System" after "levels" in paragraph (1);

(3) striking "such cooperative system" each place it occurs and inserting in lieu thereof "such System";

(4) inserting "or both" after "contract" in paragraph (3);

(5) striking "system" in paragraph (5) and inserting in lieu thereof "System".

(g) The first sentence of section 306(f) is amended by inserting ", through the Institute," after "Secretary".

(h) Section 306(g) is amended by inserting ", through the Institute," after "health data, the Secretary".

(i) Section 306(i)(1) is amended by striking "United States".

(j) Section 306 is amended by adding at the end thereof the following new subsection:

"(j) In carrying out the requirements of sections 304(d) and paragraph (2) of subsection (e), the Secretary, acting through the Institute, shall coordinate health statistical and epidemiological activities of the Department of Health, Education, and Welfare by—

"(1) developing in consultation with the National Committee on Vital and Health Statistics, promulgating by regulation, and maintaining the minimum sets of data needed on a continuing basis to fulfill the collection requirements of subsection (b)(1),

"(2) after consultation with the National Committee on Vital and Health Statistics, establishing, by regulation, standards to assure the quality of health statistical and epidemiological data collection, processing, and analysis,

"(3) reviewing periodically all existing health statistical data collections of the Department that were previously approved pursuant to the Federal Reports Act of 1942 to determine whether such collections conform with the minimum sets of data and the standards promulgated pursuant to paragraphs (1) and (2). If any such collections are found not to be in conformance, the Secretary shall take the necessary action to assure that any future collections (effective ninety days after the review) are in conformance.

"(4) reviewing all proposed health statistical data collections of the Department that require approval pursuant to the Federal Reports Act of 1942 to determine whether such proposed collections conform with the minimum sets of data and the standards promulgated pursuant to paragraphs (1) and (2). If any such proposed collections are found not to be in conformance, the Secretary shall take the necessary action to bring them into conformance before such proposed collections are initiated.".

SEC. 104. Title III is amended by adding after section 306 the following new heading and section:

"NATIONAL CENTER FOR THE EVALUATION OF MEDICAL TECHNOLOGY

"SEC. 306A. (a) There is established in the National Institutes of Health Care Research the National Center for the Evaluation of Medical Technology (hereinafter in this section referred to as the "Center") which shall be under the direction of a Director who shall be appointed by the Secretary and supervised by the Director of the National Institutes of Health Care Research.

"(b) The Secretary, acting through the Center, shall—

"(1) establish, in consultation with the Council for the Evaluation of Medical Technology, priorities for research, demonstrations, and evaluations of medical technologies as prescribed by paragraph (2)(A). In establishing such priorities, particular emphasis should be placed on—

"(A) the actual or potential risks and the actual or potential benefits to patients associated with the use of the medical technology,

"(B) per use and/or aggregate cost of the medical technology,

"(C) the rate of utilization of the medical technology, and

"(D) the stage of development of the medical technology; and

"(2) undertake and support (by grant or contract or both) research, demonstrations, and evaluations concerning—

"(A) the safety, efficacy, effectiveness, cost effectiveness, and social, ethical, and economic impact of particular medical technologies;

"(B) the factors that affect the utilization of medical technologies throughout the United States;

"(C) alternative methods for disseminating information on medical technologies to health professionals;

"(D) alternative methods for measuring the quality of health services; and,

"(E) the effectiveness, administration and enforcement of quality assurance programs.

"(c) To assist in carrying out this section, the Secretary, acting through the Center, shall cooperate and consult with the National Institutes of Health, the Veterans' Administration and any other interested Federal departments or agencies and with State and local health departments and agencies.

"(d)(1) The Secretary, acting through the Center, shall, by grants or contracts, or both, assist public and/or private nonprofit entities in meeting the costs of planning and establishing new centers, and operating existing and new centers for multidisciplinary research, evaluations, and demonstrations respecting the matters referred to in paragraph (2) of subsection (b). To the extent practicable, the Secretary shall take such actions, in accordance with the requirements of this subsection and section 308, to assure that three such centers shall be operational by September 1, 1981.

"(2)(A) No grant or contract may be made under this subsection for planning and establishing a center unless the Secretary, acting through the Center, determines that when it is operational it will meet the requirements listed in subparagraph (B), and no payment shall be made under a grant or contract for operation of a center unless the center meets such requirements.

"(B) Each center shall meet the following requirements:

"(i) there shall be a full-time director of the center who possesses a demonstrated capacity for sustained productivity and leadership in research, demonstrations, and evaluations respecting the matters referred to in paragraph (2) of subsection (b), and there shall be such additional full-time professional staff as may be appropriate;

"(ii) the staff of the center shall have expertise in the various disciplines needed to conduct multidisciplinary research, evaluations and demonstrations respecting the matters referred to in paragraph (2) of subsection (b);

"(iii) the center shall be located within an established academic or research institution with departments and resources appropriate to the programs of the center; and

"(iv) each center shall meet such additional requirements as the Secretary may by regulation prescribe.

"(e)(1) There is established in the Center a National Council for the Evaluation of Medical Technologies (hereinafter in this subsection referred to as the 'Council') to be composed as follows:

"(A) the Surgeon General, the Director of the National Institutes of Health, the chief medical officer of the Veterans' Administration, the Chairman of the National Professional Standards Review Council (or their designees), and three other employees of the Department of Health, Education, and Welfare (or their designees) appointed by the Secretary, shall be ex officio members of the Council.

"(B) Sixteen members appointed by the Secretary. Seven of the appointed members shall be selected from among leading medical or scientific authorities; two of the appointed members shall be selected from members of the general public who are leaders in the field of economics; two of the appointed members shall be selected from members of the general public who are leaders in the field of law; and five of the appointed members shall be selected from outstanding members of the general public who, based on their interests, disciplines, and/or expertise, would be appropriate members of the Council.

"(2)(A) Each appointed member of the Council shall be appointed for a term of four years, except that—

"(i) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; and

"(ii) of the members first appointed after the effective date of this section, five shall be appointed for a term of four years, five shall be appointed for a term of three years, five shall be appointed for a term of two years, and three shall be appointed for a term of one year, as designated by the Secretary at the time of appointment. Appointed members may serve after the expiration of their terms until their successors have taken office.

"(B) A vacancy in the Council shall not affect its activities, and twelve members of the Council shall constitute a quorum.

"(C) Members of the Council who are not officers or employees of the United States shall receive for each day they are engaged in the performance of the functions of the Council compensation at rates not to exceed the daily equivalent of the annual rate in effect for grade GS-18 of the General Schedule, including traveltime; and all members, while so serving away from their homes or regular places of business, may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as such expenses are authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.

"(3) The Council shall annually elect one of its appointed members to serve as Chairman until the next election.

"(4) The Director of the Center shall (1) designate a member of the staff of the Center to act as Executive Secretary of the Council, and (2) make available to the Council such staff, information, and other assistance as it may require to carry out its functions.

"(5) The Council shall meet at the call of the Chairman, but not less often than four times a year.

"(6) The Council is authorized to—

"(A) advise, consult with, and make recommendations to the Secretary, the Director of the National Institutes of Health Care Research, and the Director of the Center with respect to carrying out the provisions of this section;

"(B) after consultation with appropriate public and private entities, advise the Secretary concerning the safety, efficacy, effectiveness, cost effectiveness, and the social and economic impact of particular medical technologies;

"(C) after consultation with appropriate public and private entities, develop, when appropriate and to the extent practicable, exemplary standards, norms, and criteria concerning the utilization of particular medical technologies;

"(D) publish, make available and disseminate, through the National Library of Medicine, promptly in understandable form and as widely as possible, but, at a minimum, to all health systems agencies, to all Professional Standards Review Organizations and to the health facilities of the Veterans' Administration the standards, norms, and criteria developed pursuant to paragraph (C); and

"(E) review and approve any grant that the Center proposes to make and any contract the Center proposes to enter pursuant to this section if such grant or contract is in an amount exceeding $35,000 of direct costs.

"(f) For purposes of this section, medical technology means any discrete and identifiable medical or surgical regimen or modality used to diagnose or treat illness, prevent disease, support life, or maintain patient well-being.

SEC. 105. (a) The heading to section 308 is amended by striking "304, 305, 306, and 307" and inserting in lieu thereof "304, 305, 306, 306A, and 307".

(b) Section 308(a)(1) is repealed.

(c) Section 308(a)(2) is amended by (1) redesignating it as section 308(a)(1) and (2) striking "the National Center for Health Services Research and the National Center for Health Statistics" and inserting in lieu thereof "the National Institutes of Health Care Research".

(d) Section 308(a)(3) is redesignated as section 308(a)(2).

(e) Section 308(b)(1) is amended by inserting "306A," after "306".

(f) Section 308(d) is amended by (1) inserting "306A," before "or 307" and (2) by inserting "or epidemiological" after "statistical" in paragraph (1).

(g) Section 308(e) is amended by inserting "306A," after "306" each place it occurs.

(h) Section 308(f) is amended by striking "or 306" and inserting in lieu thereof "306, or 306A".

(i) Section 308(g)(2) is amended by striking "and 306" and inserting in lieu thereof "306, and 306A".

(j) Section 308(h)(1) is amended by striking "or 306" each place it occurs and inserting in lieu thereof "306, or 306A".

(k) Section 308(i)(1) is amended to read as follows:

"(i)(1) For health services research, evaluation, and demonstration activities undertaken or supported under Section 304 or 305, there are authorized to be appropriated $34 million for the fiscal year ending September 30, 1979; $40 million for the fiscal year ending September 30, 1980; and $45 million for the fiscal year ending September 30, 1981. Of the funds appropriated under this paragraph for any fiscal year, at least 15 per centum of such funds shall be available only for health services research, evaluation, and demonstration activities directly undertaken by the National Institute for Health Policy Research and at least 5 per centum of such funds or $1 million, whichever is less, shall be available only for dissemination activities directly undertaken by the Center."

(l) Section 308(i)(2) is amended to read as follows:

"(i)(2) For health statistical and epidemiological activities undertaken or supported under section 304 or 306, there are authorized to be appropriated $60,000,000 for the fiscal year ending September 30, 1979, $65,000,000 for the fiscal year ending September 30, 1980, and $70,000,000 for the fiscal year ending September 30, 1981. Of the funds appropriated under this paragraph for any fiscal year commencing after September 30, 1978, at least 15 per centum of such funds shall be available only for health statistical and epidemiological activities directly undertaken by the National Institute for Health Statistics and Epidemiology.".

(m) Section 308(1) is amended by adding at the end thereof the following new paragraph:

"(3) For medical technology research, evaluation, and demonstration activities undertaken or supported under section 304 or 306A, there are authorized to be appropriated $25,000,000 for the fiscal year ending September 30, 1979, $35,000,000 for the fiscal year ending September 30, 1980, and $50,000,000 for the fiscal year ending September 30, 1981. Of the funds appropriated under this paragraph for any fiscal year commencing after September 30, 1980, at least 15 per centum of such funds shall be available only for medical technology research, evaluation, and demonstration activities directly undertaken by the National Center for the Evaluation of Medical Technology.".

SEC. 106. (a) Section 472(a)(1)(A) is amended by—

(1) striking "and" after "private institutions," in clause (iii);

(2) redesignating clause (iv) as clause (vii); and (3) inserting after clause (iii) the following:

"(iv) research at the National Institutes of Health Care Research,

(v) training at the National Institutes of Health Care Research to undertake such research,

(vi) research on the matters set forth in section 304(b)(2) at public institutions and at nonprofit private institutions, and".

(b) The last sentence of section 472 (a)(1) is amended by inserting ", National Institutes of Health Care Research," after "National Institutes of Health".

SEC. 107. Part k of Title III is repealed in its entirety.

SEC. 108. Title IV is amended by adding at the end thereof the following new section:

"SEC. 477. The Director of the National Institutes of Health shall make available annually to the National Center for the Evaluation of Medical Technology and the Council for the Evaluation of Medical Technology a list of all technologies (as defined in section 306A(q)) of which he is aware that are under development and that appear likely to be used in medical practice in the near future.".

Mr. SCHWEIKER. Mr. President, I am today joining with Senator KENNEDY in sponsoring a bill which will reorganize health statistics and epidemiological activities within the Department of Health, Education, and Welfare and create a new National Center for the Evaluation of Medical Technologies.

The Subcommittee on Health and Scientific Research, of which I am the ranking Republican member, has been conducting hearings of federally supported research activities over the past year. In the course of these hearings, it has become clear that not enough research in the area of health services delivery is now being done. I have concluded that the current governmental research entities in many cases could not, and in other instances, would not, give this area the priority it deserves.

I do not in any way wish to suggest that the research currently being conducted at NIH, NIMH and other places is undesirable or unnecessary, but I am convinced that greater attention to health services research, epidemiological studies, and the assessment of medical technologies is warranted. In addition, current statistical activities supported by various agencies within HEW have at times proved to be less useful than they could have been, due to problems of coordination and comparability of data. I hope that the bill we introduce today will go a long way toward improving statistical and epidemiological activities by strengthening the mandate of the present National Center for Health Statistics, forming a National Institute of Health Statistics and Epidemiology. This Institute, along with the National Institute for Health Policy Research (which will succeed the present National Center for Health Services Research) and the Center for the Evaluation of Medical Technology, will comprise the National Institutes for Health Care Research, according to the terms of this proposal.

It is not my intention in supporting a new National Center for the Evaluation of Medical Technologies to create a Federal agency which will regulate medical technology or medical practice. Rather, I seek to establish a National Center to serve as a focal point for medical technology assessment activities, to evaluate appropriate technologies for safety and effectiveness and share the results of these evaluations with the appropriate public and private entities.

As the subcommittee conducts its hearings with regard to this proposal, I would hope that public and private members of the research and health care communities will work with us to assure that the result is a strong program whose work will contribute to the body of knowledge and to the governmental decisionmaking process.

Mr. JAVITS. Mr. President, I am pleased to join with Senator KENNEDY today in introducing the National Institutes of Health Care Research Act of 1978. This bill, which establishes a new agency in the Public Health Service, is designed to consolidate and give emphasis to the activities of the National Center for Health Statistics and the National Center for Health Services Research and to establish a new National Center for the Evaluation of Medical Technologies. This new entity would be charged primarily with evaluating the cost and efficacy of new medical technologies.

Although the Federal Government invests heavily in basic and applied biomedical research, the Federal effort has been clearly inadequate in the areas of the collection and analysis of national morbidity, mortality, and disability data. This, of course, impacts on our ability to evaluate biomedical research efforts. Furthermore, I believe we have not placed enough emphasis on research into better methods of organizing and managing the delivery of health care services. Therefore, I support the concept of consolidating the activities of the National Center for Health Statistics and the National Center for Health Services Research into a new agency.

Although I anticipate that the proposed reorganization of the activities of the National Center for Health Statistics and the National Center for Health Services Research will be keenly debated during the hearings on this legislation, I hope also that the recommendation for the establishment of a National Center for the Evaluation of Medical Technologies will get careful analysis by biomedical researchers and health practitioners. This proposal, as I envision it, is not to regulate the practice of medicine or limit the development of medical discoveries. It should not interfere with the Food and Drug Administration mandate to insure the safety and effectiveness of drugs and devices. It should not interfere with clinical trials performed by the National Institutes of Health and the Center for Disease Control.

The new National Center for the Evaluation of Medical Technologies would, however, assure that medical professionals—and the public—are made aware of the efficacy and cost-effectiveness of new medical technologies by periodic published reports. I have long believed that the best method of preventing abuses is by the availability of timely, informative, and reliable information for both practitioners and consumers.

I recognize that we guard scrupulously against any agency having a potential to inhibit innovation and research in the development of new medical technology. This is not my intention, nor, I believe, the intention of this legislation. Accordingly, during hearings on this proposal, I invite the research community and medical professionals to come forward with their analysis and evaluation of this measure in the light of these concerns. Also, at the same time I look forward to receiving the views of the Secretary of HEW as to the advisability of his vesting his authority respecting technology assessment in the proposed institutes of health care research.

Although the precise mechanism for accomplishing such goals may vary from this proposal, I think it is time that we assure both the physician and the consumer that the billions of additional dollars we spend each year are for medical care of the highest quality will result in an improved health status for the American people.

ADDITIONAL COSPONSORS

S. 897

At the request of Mr. GLENN, the Senator from Massachusetts (Mr. KENNEDY) was added as a cosponsor of S. 897, a bill to strengthen United States policies of nonproliferation and to reorganize certain export functions of the Federal Government to promote more efficient administration of such functions.

S. 2142

At the request of Mr. PACKWOOD, the Senator from Washington (Mr. MAGNUSON) was added as a cosponsor of S. 2142, a bill to amend the Internal Revenue Code of 1954 to permit a taxpayer to claim a credit for amounts paid as tuition to provide education for himself, for his spouse, or for his dependents, and to provide that such credit is refundable.

S. 2204

At the request of Mr. GRAVEL, the Senator from Colorado (Mr. HART), the Senator from Kentucky (Mr. HUDDLESTON), and the Senator from Hawaii (Mr. INOUYE) were added as cosponsors of S. 2204, a bill to amend section 4940 of the Internal Revenue Code of 1954 to reduce

the excise tax based on the investment income of private foundations from 4 percent to 2 percent.

S. 2296

At the request of Mr. JOHNSTON, the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 2296, the Minority Business and Economic Development Act.

SENATE RESOLUTION 373—ORIGINAL RESOLUTION REPORTED AUTHORIZING PARTICIPATION IN JUDICIAL PROCEEDINGS

Mr. STEVENSON, from the Select Committee on Ethics, reported the following original resolution, which was ordered placed on the calendar:

S. RES. 373

Resolved, That the Select Committee on Ethics is authorized, on behalf of the Senate or on behalf of Members, officers or employees of the Senate who have been sued for actions taken in an official capacity, to participate in any judicial proceeding, whether initiated by the Select Committee or any other person, to obtain testimony, documents or other evidence concerning or relating in any way to its inquiry into or investigation of allegations that Members, officers, or employees of the Senate have been the object of efforts on behalf of the Republic of Korea, or of persons acting on behalf of or in connection with the Republic of Korea, to influence improperly the conduct of Members, officers or employees of the Senate.

SENATE RESOLUTION 374—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES

Mr. CANNON, from the Committee on Commerce, Science, and Transportation, reported the following original resolution which was referred to the Committee on Rules and Administration:

S. RES. 374

Resolved, That in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Commerce, Science, and Transportation, or any subcommittee thereof, is authorized from March 1, 1978, through February 28, 1979, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $2,677,800, of which amount not to exceed $100,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 375—SUBMISSION OF A RESOLUTION AUTHORIZING EXPENDITURES

Mr. CHURCH (for himself and Mr. DOMENICI) submitted the following resolution, which was referred to the Committee on Rules and Administration, by unanimous consent:

S. RES. 375

Resolved, That the Special Committee on Aging, established by section 104 of S. Res. 4, Ninety-fifth Congress, agreed to February 4 (legislative day, February 1), 1977, is authorized from March 1, 1978, through February 28, 1979, in its discretion to provide assistance for the members of its professional staff in obtaining specialized training, in the same manner and under the same conditions as a standing committee may provide such assistance under section 202(j) of the Legislative Reorganization Act of 1946, as amended.

SEC. 2. In carrying out its duties and functions under such section and conducting studies and investigations thereunder, the Special Committee on Aging is authorized from March 1, 1978, through February 28, 1979, to expend $321,000 from the contingent fund of the Senate, of which amount (1) not to exceed $25,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202 (i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $1,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

SEC. 3. The Committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 376—SUBMISSION OF A RESOLUTION REGARDING APPLICABILITY OF THE LEGISLATIVE REORGANIZATION ACT

Mr. CHURCH (for himself and Mr. DOMENICI) submitted the following resolution, which was referred to the Committee on Rules and Administration:

S. RES. 376

Resolved, That section 104(a)(2) of Senate Resolution 4, 95th Congress, agreed to February 4 (legislative day, February 1), 1977, is amended by inserting "and for purposes of sections 133(g), 134, and 202 of the Legislative Reorganization Act of 1946," before "the special committee".

SENATE RESOLUTION 377—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES

Mr. SPARKMAN, from the Committee on Foreign Relations, reported the following original resolution, which was referred to the Committee on Rules and Administration:

S. RES. 377

Resolved, That, in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Foreign Relations, or any subcommittee thereof, is authorized from March 1, 1978, through February 28, 1979, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $1,231,000 of which amount not to exceed $30,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 378—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES

Mr. NELSON, from the Select Committee on Small Business, reported the following original reolution, which was referred to the Committee on Rules and Administration:

S. RES. 378

Resolved, That, in holding hearings, reporting such hearings, and making investigations as authorized by section 134(a) of the Legislative Reorganization Act of 1946, as amended, and S. Res. 58, Eighty-first Congress, agreed to February 20, 1950, as amended and supplemented, in accordance with its jurisdiction under such Senate Resolution, the Select Committee on Small Business, or any subcommittee thereof, is authorized from March 1, 1978, through February 28, 1979, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency, and (4) to procure the temporary services (not in excess of one year) or intermittent services of individuals, consultants, or organizations thereof, in the same manner and under the same conditions as a standing committee of the Senate may procure such services under section 202(i) of the Legislative Reorganization Act of 1946, as amended.

SEC. 2. The expenses of the committee under this resolution shall not exceed $285,500, of which amount not to exceed $1,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations

for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 379—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES

Mr. RANDOLPH, from the Committee on Environment and Public Works, reported the following original resolution, which was referred to the Committee on Rules and Administration:

S. RES. 379

Resolved, That, in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Environment and Public Works is authorized from March 1, 1978 through February 28, 1979, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $1,414,500, of which amount (1) not to exceed $10,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $500 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 380—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES

Mr. PELL, from the Committee on Rules and Administration, reported the following original resolution, which was placed on the Calendar:

S. RES. 380

Resolved, That, in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Rules and Administration is authorized from March 1, 1978, through February 28, 1979, in its discreation (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $739,000, of which amount not to exceed $76,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

SENATE RESOLUTION 382—ORIGINAL RESOLUTION REPORTED AUTHORIZING ADDITIONAL EXPENDITURES

Mr. CRANSTON, from the Committee on Veterans' Affairs, reported the following original resolution, which was referred to the Committee on Rules and Administration:

S. RES 382

Resolved, That, in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with its jurisdiction under rule XXV of the Standing Rules of the Senate, the Committee on Veterans' Affairs, or any subcommittee thereof, is authorized from March 1, 1978, through February 28, 1979, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

SEC. 2. The expenses of the committee under this resolution shall not exceed $279,000, of which amount not to exceed $30,000 may be expended for the procurement of the services of individual consultants or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than February 28, 1979.

SEC. 4. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

SENATE RESOLUTION 383—ORIGINAL RESOLUTION REPORTED AUTHORIZING EXPENDITURES

Mr. BAYH, from the Select Committee on Intelligence, reported the following original resolution, which was referred to the Committee on Rules and Administration:

S. RES. 383

Resolved, That the Select Committee on Intelligence, in carrying out the duties and functions prescribed by Senate Resolution 400, Ninety-fourth Congress, agreed to May 19, 1976, as amended, is authorized from March 1, 1978, through February 28, 1979, to make expenditures from the contingent fund of the Senate not to exceed $1,925,000, of which amount not to exceed $12,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 2. Expenses of the committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

AMENDMENTS SUBMITTED FOR PRINTING

NAVIGATION DEVELOPMENT ACT—H.R. 8309

AMENDMENT NO. 1680

(Ordered to be printed and to lie on the table.)

Mr. GRAVEL submitted an amendment intended to be proposed to amendment No. 1460 intended to be proposed to the bill (H.R. 8309) authorizing certain public works on rivers for navigation, and for other purposes.

AMENDMENT NO. 1681

(Ordered to be printed and to lie on the table.)

Mr. GRAVEL submitted an amendment intended to be proposed by him to the bill (H.R. 8309), supra.

AMENDMENT NO. 1682

(Ordered to be printed and to lie on the table.)

Mr. DANFORTH submitted an amendment intended to be proposed to amendment No. 1460 intended to be proposed to the bill (H.R. 8309), supra.

USER FEES ON DEEP DRAFT PORTS AND HARBORS

Mr. DANFORTH. Mr. President, Senator DOMENICI's proposed amendment to H.R. 8309 will impose a charge on commercial users of the inland waterway system. This charge, after full implementation, will recover all Federal expenditures for operations, maintenance and repair and 50 percent of Federal expenditures for construction. Today, I am introducing an amendment to extend the same charge to deep draft ports and harbors.

The administration in its fervor to get passed into law the concept of user charges is practicing the age-old art of divide and conquer. In an August 1977 report on "Deep Draft Navigation User Charges: Recovery Options and Impacts," the Department of Transportation studied the extent and effect of Federal expenditures in maintaining and developing this Nation's deep draft ports and harbors. These expenditures are approximately two-thirds of that expended on the inland water system.

If the administration is to be consistent in the application of its philosophy, then it will soon propose a user charge, comparable to that Senator DOMENICI is proposing for the inland waterway system on commercial users of deep draft ports and harbors. In the executive summary of the DOT study it was noted:

The development of a constant and equitable approach to recovery of all federal deep-draft costs was mandated by section 80(c) of the Water Resource Development Act of 1974.

Mr. President, my colleagues, whose States have deep draft ports or harbors, should be aware that the concept they intend to support when voting for Senator DOMENICI's amendment more than likely will be applied against their interests next. I want my colleagues to cast an informed vote.

NOTICES OF HEARINGS

DEPARTMENT OF ENERGY URANIUM ENRICHMENT POLICY

Mr. CHURCH. Mr. President, for the information of the Senate and the general public, the Senate Energy and Natural Resources Committee's Subcommittee on Energy Research and Development will conduct a public hearing on the Department of Energy's uranium enrichment policy. The hearing has been scheduled for Tuesday, February 7, 1978, to be held in room 3110 of the Dirksen Senate Office Building beginning at 9 a.m.

Mr. William R. Voight, Jr., of the Department of Energy and his associates will present testimony. Additionally, the General Accounting Office and other expert witnesses have been invited to testify.

Anyone wishing additional information with regard to the hearings should contact the subcommittee staff director, Will Smith, at (202) 224–4431.

SELECT COMMITTEE ON SMALL BUSINESS HEARING LOCATIONS

Mr. NELSON. Mr. President, the previously announced hearings to be convened by the Select Committee on Small Business on the subject of agricultural labor certification programs and small growers will be held on February 10, 1978, in Portland, Oreg., in the New Federal Building Conference Room 1578 at 8:30 a.m., and on February 13, 1978, in Medford, Oreg., in the Jackson County Courthouse Auditorium at 8:30 a.m.

COMMITTEE ON GOVERNMENTAL AFFAIRS

Mr. RIBICOFF. Mr. President, I would like to announce that the Committee on Governmental Affairs will have hearings on lobbying reform legislation on February 6 and 7 at 10 a.m. in room 3302, Dirksen Senate Office Building.

COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I wish to give notice that a public hearing has been scheduled for Tuesday, February 7, 1978, at 10:30 a.m., in room 2228, Dirksen Senate Office Building, on the following nominations:

Jack E. Tanner, of Washington, to be U.S. district judge for the eastern and western districts of Washington, vice William N. Goodwin, deceased;

Robert F. Collins, of Louisiana, to be U.S. district judge for the eastern district of Louisiana, vice Alvin B. Rubin, elevated;

A. David Mazzone, of Massachusetts, to be U.S. district judge for the district of Massachusetts, vice Frank J. Murray, retired;

Almeric L. Christian, of the Virgin Islands, to be a judge of the district court of the Virgin Islands for a term of 8 years (reappointment).

Any persons desiring to offer testimony in regard to these nominations shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

ADDITIONAL STATEMENTS

THE PANAMA CANAL TREATIES

Mr. HARRY F. BYRD, JR. Mr. President, one of the Nation's ablest military experts is Adm. Thomas H. Moorer, U.S. Navy (retired).

Admiral Moorer is the only person in the history of our Nation to serve as commander in chief, Pacific Fleet, commander in chief, Atlantic Fleet, Chief of Naval Operations, and Chairman of the Joint Chiefs of Staff.

Admiral Moorer testified today before the Senate Armed Services Committee in regard to the proposed Panama Canal treaties.

His statement to the committee is an excellent one which I ask unanimous consent to print in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY ADM. THOMAS H. MOORER, U.S. NAVY, RETIRED

Mr. Chairman and Distinguished Members of the Senate Armed Services Committee: I am honored to be here as a witness before this Committee. For the past 12 years I have appeared here many times as a member of the Executive Branch of our Government. Today, I would like to make clear that I do not represent any particular Group, Organization, or Political Party. Rather, I am here as a very concerned Citizen who has had a high level professional involvement in the use of the Panama Canal—in peace as well as war—as it relates to the military security of the people of the United States.

Although I am prepared to answer questions concerning any aspect of the proposed treaties, I will focus my statement primarily on defense of the Canal in a local sense as well as the defense of the United States in a global sense.

While I was opposed to the disposal of the Panama Canal from the outset for global strategic reasons, and so informed the President in writing, I have now carefully studied the proposed treaties in detail and am even more convinced that ratification in their present form would be very detrimental to the national interests of the people of the United States for years and years to come.

As you know, Mr. Chairman, what we are addressing here today is two Treaties, three Annexes, a Protocol, two Implementary Agreements—and now we have under consideration a sugar coated Amendment which is claimed to give the United States the "right" to defend the Canal and to "go to the head of the line" with her ships. The complexity of such a conglomeration together with the ambiguities in meaning have already surfaced and in my view will continue indefinitely. Certainly there has been quote after quote from Torrijos and his associates contradicting the interpretations placed on these Treaties by the U.S. negotiators. I can supply these quotes for the record, if desired.

Turning now to the global implications contained in these proposed Treaties. The Panama Canal is one of the four maritime gateways of the world, together with the Malacca Straits, the Suez Canal, and the Gibraltar Straits. Anyone who has observed Soviet actions since World War II and studied their literature concerning maritime affairs soon learns that the Soviets fully understand the importance of the Panama Canal, even if some here in Washington do not. Only last August a Soviet strategist, writing in Red Star—later published in England as well as in Cuba—stated that "the Canal Zone must be considered by the Soviet Union as a "Priority Zone." He then goes on to describe ways to attack the Canal, using Cuba, Puerto Rico and Colombia. Writings of this kind which have appeared from time to time over the years serve to reinforce my view that the prime reason that the Soviet Union accepts the burdensome support of Cuba is due to their desire to dominate the Caribbean, including the Panama Canal, as they greatly expand their maritime capabilities—both warships and merchant ships. We have here the development of a Torrijos-Castro-Moscow Axis. Castro has sent thousands of troops to Angola, Ethiopia, and Mozambique armed and transported by the Soviets. He has been to Moscow where he is greeted with open arms. Torrijos has been to Havana where he has been decorated by Castro while both extolled the success of their respective revolutions. He has been to Libya to visit Qaddafi who, next to Castro, is the most active international revolutionary—and rich besides after, like Castro, confiscating millions of dollars worth of property belonging to American citizens. When Torrijos overflew Havana on his return to Panama after the signing of the Treaties in Washington last fall, he sent the following message to Castro: "On my return trip to my country and flying above the sky of Cuba I salute you with friendship always. . . . In Latin America your name is associated with feelings about dignity that have been channeled toward a shameful period of colonialism." Also noteworthy is the fact that in July of last year a Soviet commission visited Panama seeking port and airport concessions and offering economic assistance.

I mention these things, Mr. Chairman, not because I am one who cannot keep up with the times and am still fighting the Cold War, as my critics suggest, but because I am convinced that the above actions and attitudes clearly point to the fact that these proposed Treaties are not, as claimed by the proponents, simply a long-delayed redress of the wrongs of American colonalism imposed on a helpless tiny nation. They cannot be viewed in such a simplistic way since they have worldwide implications. The defense and use of the Panama Canal is wrapped unextricably with the overall global strategy of the United States and the security of the Free World. I submit that, if the United States opts to turn over full responsibility for the maintenance and operation of such an important waterway to a very small, resource-poor and unstable country as Panama and then withdraws all U.S. presence, a vacuum will be created which will quickly be filled by proxy or directly by the Soviet Union as is their practice at every opportunity.

So, Mr. Chairman, and Members of the Committee, do not be surprised if this Treaty is ratified in its present form, to see a Soviet and/or Cuban presence quickly established in Panama. In any event any confrontation over the "neutrality" of the Canal then becomes a confrontation with the Soviet Union rather than with Panamanian

guerrillas or terrorists. With the Soviets already on the scene, fighting our way in—with or without the help of the small 1500-men Panamanian Army will not be without unnecessary loss of U.S. men and material, not to mention loss of the use of the Canal.

I believe a permanent U.S. presence in the Panama Canal Zone to be the only feasible and safe posture for all of the nations of this hemisphere. In saying this I must also emphasize that the year 2000 is meaningless insofar as the requirements for the security of this hemisphere are concerned. The threat, the problems, the global balance will not change as if by magic in the year 2000, so why should we pass this dilemma down to our children and grandchildren?

In view of the above, Mr. Chairman, I have yet to hear any convincing justification advanced as to why the United States should willingly sacrifice the strategic and economic advantages afforded the United States—and indeed all our friends and allies—by our exercise of full control and economical operation of the Panama Canal as we do today and have done for years. In fact, stripped to the essence I have heard only three reasons put forward in support of the proposed treaties: (1) By signing the new Treaties we will divest ourselves of the stigma and guilt we should feel over our ruthless colonialization of Panama. (2) If we do not surrender the Canal some unknown individuals in the Isthmus of Panama will blow it up. Since we are interested in use and not control let us give it away, it is defenseless any way unless we deploy 100,000 troops to Panama and start another Vietnam. (3) The Canal is not of much use. Traffic between oceans is a convenience but is not vital. Besides aircraft carriers and big tankers cannot use the canal and less than 10 percent of the merchant ships fly the American flag—so why the concern? The American people do not buy such logic, Mr. Chairman. Despite a steady drumbeat of often misleading statements highlighting the above positions even the staunchest supporter of the Treaties will readily admit that the American people are two to one against ratification of these Treaties. The people are well aware that the United States has never had a colony of any kind for the purpose of exploitation and that they have paid out more blood and treasure on behalf of mankind, worldwide, than any nation in history. They are aware of the effort it took to construct the Panama Canal. They know that Panama achieved her freedom and her very existence due to the Canal. The Canal does not owe its existence to Panama. The American people are aware of the part often played by the Canal in the rapid transfer of Naval Forces from ocean to ocean in case of an international emergency. But above all, the American people recoil over the thought that we should base our foreign policy on sheer fright or in response to threats. Nevertheless, they have been warned many times lately that failure to ratify these Treaties will result in riots and sabotage. Such encouragement to lawlessness and violence by the advocates of these Treaties could well make them self-fulfilling prophets.

With the above as background I would now like to be more specific as to the military aspects of the proposed Treaties as they relate to: (1) the military value of the Panama Canal to our global strategy; (2) the defense of the Canal against an external threat; (3) defense against the internal threat; (4) the capability of Panama to defend, maintain, and operate the Canal, particularly after the year 2000 when American assistance is no longer available.

(1) The Military Value of the Panama Canal To Our Global Strategy.

The intrinsic value of the Panama Canal lies in its linkage of the Atlantic and Pacific Oceans, thereby saving 8,000 miles and 20 to 30 days steaming time from ocean to ocean. Expressed in military terms, the Canal provides the following: rapid transit of ships, personnel and supplies during periods of tension or actual conflict; flexibility in application of force; timely arrival at the scene of conflict; efficient use of shipyards, warehouses and training areas on both coasts of the United States, and a steady flow of logistic support. In fact, there is no feasible war plan for the United States, taking into account our reduced forces and extended commitments, that does not assume that the Panama Canal will be available for full time priority use. The only alternative that would permit the meeting of time scales of current war plans based on the threat in both the Atlantic and Pacific oceans would be a major buildup of Naval combat forces overall, together with a very large expansion of supply and ammunition storage facilities for both the Army and the Air Force on both coasts. The utility of the Canal has been demonstrated over and over again in times of emergency. World War I, World War II, the Korean War, the Cuban Crisis, and the Vietnam War all placed heavy loads on the Panama Canal which were efficiently handled to the great benefit of the United States.

I see no change whatever in the critical contribution of the Canal to our military strength in the near future or in the out years far beyond the meaningless years of 2000. Only this week the Department of Defense announced a military policy focused on NATO which is time-sensitive and hence demands early Naval use of the Canal. Furthermore, in any NATO war, which by definition is a war with Soviet Russia and hence World War III, the United States will require in Panama air bases, communications, fueling facilities, air defenses, etc., in order to conduct anti-submarine warfare against Soviet submarines which are bound to concentrate in the approaches to the Canal and use the bases we have allowed them to acquire in Cuba, such as Cienfuegos. Therefore, I believe it is most unwise to surrender all of our Panama bases as proposed in these Treaties.

(2) The external threat.

In my view there is no external overt threat to the Panama Canal except in the context of World War III involving the Soviet Union. Here the main thrust of our defense would be primarily the interception of any hostile or suspicious ship well clear of the territorial waters of Panama. However, this operation is now complicated by the inclusion in the proposed Treaties of the dangerous proviso that permits the warships and auxiliary vessels of all nations to transit the Canal freely, without inspection, search, or even surveillance, in time of war or peace, while the policing of the Canal is entrusted exclusively to the Panamanian police and fire departments. This guarantee to all nations does not wait until the year 2000 to become operative. It is immediately applicable despite the fact that the United States "shall have primary responsibility to protect the Canal" until the year 2000. This is responsibility without authority. We were not quite so foolish in World War I and World War II. President Wilson not only barred all enemy ships but also proclaimed that no enemy alien should "enter or be found within the Canal Zone." President Roosevelt amplified these prohibitions in World War II and no nation in the world ever questioned our right to protect, defend, and police the Canal and Canal Zone and adjacent waters, or to sink and destroy enemy warships wherever found. Even the Treaty of Versailles, which was not exactly favorable to the Germans, granted them the right to protect the Kiel Canal in time of war.

The external covert threat is real and exists today. As I have explained earlier, there is a link between Torrijos, Castro, and Moscow. The Soviets have air and naval base rights in Cuba, and they frequently deploy aircraft and ships to Cuba. We would be naive indeed if we did not expect the Soviets to establish direct or proxy presence in Panama at the earliest opportunity.

(3) The Internal Threat.

The proponents of these Treaties proclaim again and again that the only way to handle the internal threat is to ratify the Treaties and give up the Canal. It is repeated over and over again that we are not interested in ownership, only continued use, which can be acquired only with the help of the Panamanians. Otherwise, they say, 100,000 troops will be required to defend the Canal and we will immediately be plunged into another Vietnam. I do not accept any of these scare statements. In the first place, a major part of the income of Panama is due directly to the existence of an operating Canal. If the Panamanians make an effort to sabotage the Canal they are the ones that will be harmed. Most of them know this. In the second place, it is a gross overstatement to suggest that 100,000 men will be required to defend against saboteurs even if they are supported by the 1,500 men Panamanian armed forces. I estimate that 50,000 or less would be adequate even in the face of an unusually large scale determined effort. The most likely attacks can be handled with present forces. So far as the fear of another Vietnam is concerned, there is absolutely no comparison. Vietnam is on the other side of the world, 10,000 miles away. It had at least 17 battle-hardened infantry divisions. It was supported materially and politically by both Soviet Russia and The People's Republic of China. The people of the United States were divided over Vietnam; but in this case the majority are firmly united when it comes to their Panama Canal. Finally, the Canal itself is tough. One hand grenade, or stick of dynamite, will not bring the Canal operations to a complete halt as some suggest. While I do not doubt that there could be student demonstrations motivated from time to time by—to quote Ambassador Bunker—"persons trained in communist countries for political action," I do not think they comprise a threat that will bring about closing of the Canal or serious confrontation. I should point out, however, that under the terms of the proposed treaties, the Canal Zone disappears immediately and this will complicate the defense against intruders and those bent on sabotage since no longer will it be possible to emplace secure electronic warning devices.

(4) The capability of Panama to defend, maintain, and operate the Canal after the year 2000.

The overall capability of Panama to maintain and operate the Canal after the year 2000 when the United States is required to withdraw is a troublesome point. In my view the custodian of such a waterway, so important to so many nations is obligated to operate it at minimum cost for the benefit of all, as the United States has done over the years. We have already had one sad experience in the case of Egypt, which assumed control of the Suez Canal in 1956. First Egypt chose to use the Canal for her own political purposes and denied its use to Israel. Israel retaliated and sank several ships in the Canal. Egypt, lacking any industrial capacity could do nothing about it. The Canal remained closed to all shipping for several years, causing great increases in the cost of world commerce. The Suez Canal would be closed today if the United States Navy had not opened it in 1974. In the case of Panama, her capabilities are far more limited than Egypt with a population of 40 million. In the first place, the Panama Canal with its locks, pumps, and electrical controls is extremely more complex technically than the sea level Suez Canal. Furthermore, Panama is a very small country with a population about the

size of Atlanta, Georgia., i.e., 1.7 million. She is led by a military dictator with Marxist leanings. Political opponents have been exiled. Until recently all political activity had been outlawed. The press is controlled. The country is heavily in debt, and spending 40 percent of its income carrying its debt. Panama has no heavy industry worth the name and is woefully lacking in management skills as evidenced by the fact that several large-scale construction projects attempted recently have failed. It is very doubtful whether Panama will acquire the capability to maintain and efficiently operate an industrial complex the size of the Panama Canal, even long after the year 2000.

Along with the capability to operate and maintain the Canal one must consider the contribution of the Panamanian Armed Forces in the defense of the Canal. What will happen when the United States leaves in the year 2000 under the terms of these proposed Treaties? How long before the Canal falls in unfriendly hands? With the second smallest population in Latin America, Panama's army consists of nothing more than 1,500 light infantry with no modern equipment. In addition, there are about 6,000 of the Guardia Nacional who are assigned police duties, including making certain that Torrijos remains in power through removal of political opponents. It is apparent that some of the Guardia Nacional, such as Colonel Noriega, the director of intelligence, are hostile to the United States. In any event, Panama's capability to defend the Canal is practically nil.

I would like to note at this time that the proponents of these Treaties frequently claim that ratification will not result in cost to the American taxpayer. This leaves me confused since the U.S. investment in the Canal is about $7 billion and it will take about $40 to $50 million of appropriated funds simply to rearrange the U.S. base structure. Furthermore, the sudden increase of 30 to 40 percent in tolls is bound to be felt by both the U.S. importer and exporter of consumer goods and could become critical to our friends and allies in South America. Panama has already announced she intends to raise tolls and operate the Canal for profit.

Finally, Mr. Chairman, I will close with a brief discussion of the proposed Amendment which, it has been reported, has been designed to soften the strong and vociferous opposition that has been continuously voiced by the American people at large. As I understand it, the proposed Amendment will cover two points: the right of the United States to defend the Canal against a threat to its "neutrality", and the right of U.S. ships to expeditious passage. With respect to the first point: who will decide that the neutrality has been violated? Suppose the existing government of Panama supports the insurgents, or claims that there has been no violation? Does the United States make a unilateral decision to intervene militarily in order to force the maintenance of neutrality? If so, how do we reconcile such action with another proviso in the Treaties whereby we agree not to interfere with the internal affairs of Panama? Listen to General Torrijos on this subject, while speaking to the 10th Congress of the Panamanian Students Federation on 15 September 1977. "I am not afraid, nor am I denying that I signed a clause which if misinterpreted by future U.S. generations could give rise to intervention. But I am not afraid, I know the youth we are producing. And in order for there to be intervention there must be people willing to accept intervention and these people here have no intention of accepting it." Rousing applause. The new amendment now being proposed may solve our domestic political problems but the big question still unanswered is: What problems will the United States face when she sets about to correct violations of neutrality and what practical actions do we propose to take? This has not been examined in depth.

Neither has the other point in the proposed amendment, "expeditious passage," been thought through in a practical way. Now listen to Mr. Escobar Bethancourt, one of the Panamanian negotiators on the subject: "Expeditious passage does not mean privileged passage. As a matter of fact the concept of privileged passage is rejected. . . . If, after examining the provision, the Gringos say 'I want to go first,' then that is their problem with the other ships waiting there. We cannot go that far." What do we do even if the Panamanians permit U.S. ships to go to the "head of the line" but then simply walk off the job for a coffee break? The captain of a ship cannot bull his way through this lock-type canal. He must have all controls skillfully manned.

What is very unclear in many of the Annexes, Amendments, etc., is who actually enforces the terms of these agreements. There are all kinds of guarantees but no guarantor. It is shocking, and indeed frightening, to me to observe that so many of my countrymen in high places are supporting the idea that if we try to keep the Canal, Panama will deprive us of its use, and therefore the only solution is to give it away thereby placing all the complex, delicate machinery and controls in the hands of a country whose interests, under influence of our enemies, could well be contrary to those of the United States.

Mr. Chairman, as I pointed out before, the American people are opposed to these Treaties by a significant majority. No one can contradict this fact simply by suggesting that the American people don't understand the fine print. They understand it only too well. So it is of some concern and disappointment to me to learn through the press that plans are now underway to utilize the new amendment so as to permit individual Senators, who choose to do so, to vote for ratification of the Treaties, while at the same time demonstrating to their constituents that they are strongly supporting their opposing position.

Assuming these press reports are correct, it is my judgment that the American people will not be deceived by such a tactic.

Mr. Chairman and Members of the Committee, during the past year the policy of the United States has been to loudly proclaim our support together with our willingness to punish those who oppose majority rule in far away places. The Panama Canal issue is one issue about which a very significant majority of the American people have taken a firm and public position. Why cannot we begin with majority rule right here at home?

In closing, let me repeat that I am strongly convinced of the following:

1. A maritime link between the Atlantic and the Pacific is vital to the security of the United States and will always be so.

2. The Canal is not vulnerable and can be defended.

3. A permanent U.S. presence will provide the best defense and the best insurance against a major conflict in the Caribbean area.

4. There is no reason whatever for the United States to feel guilty about our construction and operation of the Canal for the benefit of all maritime nations and Panama in particular.

5. Our South American friends, despite their public statements, do not want the United States to withdraw from Panama.

6. The provision in these Treaties will cost the American tax payer millions of dollars.

Thank you Mr. Chairman.

SUPPORT FOR EXPANDED EXPORT GRAIN SALES

Mr. PEARSON. Mr. President, today American grain farmers are in economic trouble. Their costs of production have soared but the prices that they have received for their commodities have dropped.

There are a number of things that might be done to strengthen the farm economy. But certainly one of the most important is to increase our foreign exports. A significant increase in export levels would help reduce surpluses here at home while strengthening domestic prices. Moreover this would also help to reduce our balance of payments deficit and this would have a beneficial impact on the entire national economy.

The State Legislature of the State of Kansas has recognized the importance of expanding our export markets and both houses of the legislature have adopted a resolution which calls upon the President and the Congress to develop and implement programs to expand our export sales. I ask unanimous consent that a copy of this resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SENATE CONCURRENT RESOLUTION NO. 1655

Whereas, The United States has led the world in agricultural production, and

Whereas, American agriculture has made a substantial contribution toward feeding the peoples of the world; and

Whereas, Kansas, the largest wheat producer in the nation, ranks fifth among all states in exporting agricultural products; and

Whereas, Farmers have experienced serious declines in prices for their products while costs of production have soared; and

Whereas, Continuation of current trends in the agricultural market will endanger the nation's economy and world food supplies: Now, therefore,

Be it resolved by the Senate of the State of Kansas, the House of Representatives concurring therein: That the President and the Congress of the United States are hereby urged to develop and implement payment programs for the export sale of grain in order to insure fair prices for farm products, to reduce the grain surplus and to strengthen our nation's economy by returning dollars to the United States thereby improving our balance of payments; and

Be it further resolved: That the Secretary of State be directed to transmit copies of this resolution to the President and the Secretary of Agriculture of the United States and to each member of the Kansas congressional delegation.

INDIAN CONSTRUCTION ACTIVITIES

Mr. ABOUREZK. Mr. President, I strongly support quick passage of H.R. 10532, a bill to extend the time in which Indian tribes and local units of government can complete construction activities authorized under the Emergency Drought Relief Act of 1977. Extreme weather conditions have delayed or slowed down many drought relief construction projects across the Nation. This bill would allow those contractors already on the job to complete their work. Failure to act quickly in a positive fashion on this legislation will result in disruption on construction work sites, half finished projects, and a frustration of the intent of Congress in authorizing the drought relief activity.

Though I am in complete support of

this bill, I do want my colleagues to be aware that its provisions do not address a related problem, that is, the negligent way in which this Congress and the administration has treated 16 tribes who, though completely eligible for assistance under the act, were effectively barred from contracting until too late. The net result was that of the total $25 million which the Bureau of Indian Affairs—BIA—had to allocate under the authority of this act, $5.6 million were never obligated and thus were returned to the General Treasury unspent. In short, the needs of 16 tribes that were to be addressed by this act and the accompanying appropriation act, remain unaddressed.

Last August, Congress saw fit to amend Public Law 95–18, the Emergency Drought Relief Act of 1977, by extending the Interior Secretary's program authority and the project construction authority to November 30, 1977, and January 31, 1978, respectively. This action was deemed necessary because of problems encountered by tribes, local governmental units, and the administration agencies in carrying out the intent of the act within the act's deadlines, due to extreme weather conditions and other unavoidable events.

However, in a disastrous oversight, Congress failed at that time to also extend the funding authority of the fiscal year 1977 supplemental appropriation. Apparently, the BIA erroneously informed the 16 tribes that the funding authority had been extended, assisted them in preparing plans for drought relief projects, continued contract negotiations, and then weeks after the actual funding authority had ended, belatedly informed the tribes of the expiration of funding authority. In November, Congress, acting on its own initiative, inserted language in the yet to be approved fiscal year 1978 supplemental known as H.R. 9375 which would extend funding authority for the Emergency Drought Relief Act up to November 30, 1977. Obviously, even if this fiscal year 1978 supplemental is finally approved in one form or another in the next few weeks, it will do nothing to relieve the 16 tribes, since the extension provision expired 2 months ago, thus forcing them to unfairly bear the brunt of the 1977 drought without Federal assistance.

Mr. President, H.R. 10532 which is before this body today, is sorely needed by the many tribes and local governmental units faced with harsh weather conditions beyond their control and should, therefore, be passed immediately without referral to committee and without amendment in order to avoid undue and inappropriate delays.

However, because this bill does not and cannot appropriately address those 16 tribes faced with bureaucratic conditions beyond their control which barred them from participating under the drought relief program, I feel it is now incumbent upon the Department of the Interior to accept the responsibility to immediately assess the remaining needs of these 16 tribes—especially in light of the long delays—and then propose either new authorizing legislation and the necessary appropriations, or, seek the necessary appropriations under other existing program authority in order to carry out the remaining responsibilities which the Federal Government has to the 16 tribes impacted by the drought of 1977.

PRODUCTION OF CRUDE OIL AND NATURAL GAS

Mr. BARTLETT. Mr. President, Mr. C. H. Keplinger of Tulsa, Okla., is a renowned oil and gas consultant with over 30 years' experience. In a recent letter he described the necessity to increase our domestic production of crude oil and natural gas.

His arguments are articulate and well thought out, and I offer a copy of his letter for the benefit of my colleagues. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

REALISTIC LOOK AT IMPORTED OIL, OR "YOU CAN'T HAVE YOUR CAKE AND EAT IT TOO"

The old cliché that appears in the title of this New Year energy message to you can be paraphrased—"Reduction of imported oil cannot take place without replacement with domestic oil and gas." No matter how noble our political endeavors are, we cannot create a vacuum in our dynamic economic system. Our economic wellbeing in America is keyed directly to efficient energy consumption. Future growth of our National Gross Product will be proportional to energy use.

This paper addresses itself on "what can we do" about the huge deficiency in the United States trade balance and corresponding "weakness" of the dollar in international monetary markets of the world. The U.S. trade deficiency—the difference between our imports and exports of goods before considering our foreign bond sales—totals about $30 billion for 1977. Our oil imports cost about $45 billion.

All economic experts and energy expert advisors to government and business alike agree that we simply cannot cut back drastically on our consumption of imported oils which are providing over 50 percent of the crude oil supply to fuel our economy. Slower domestic growth cannot reduce our present use of expensive imported foreign crude oil and products. Economic experts all agree that using large volumes of imported foreign oil is the equivalent of reducing the U.S. Union labor force by thousands of men and women per year and causes serious unemployment problems.

We cannot increase efficiency of energy use beyond the point of no return. The year 1977, through Prsident Carter's encouragement and efforts, has been a banner year on energy conservation—homeowners have spent millions of dollars on insulating their homes, and much effort on turning off unneeded electric lights; and industrial, chemical, and utility companies have made big savings in fuel consumption in many of their plants—in many cases reported to exceed 10 percent decrease in fuel consumption. Paper mills are using leftover wood pulp for fuel to reduce purchases of oil and gas. We know now from experience that we cannot solve the energy problem by conservation alone.

The U.S. consumer from New England to California now comprehends the impact of the cost of substitute fuels for natural gas. Reports on the cost of substitute fuels for natural gas in Ohio, New York, and Pennsylvania are excessive and the changeover to alternate fuel is very expensive. New Englanders are spending millions of dollars more for gas during their heating season due to increasing use of high-cost supplements. Industrial plants have converted to high-cost fuel oil to replace natural gas. Utility companies, during the winter peak-demand period, are drawing high percentages of their gas deliveries from supplemental sources—at prices of $4.50 per MCF for SNG, over $3.00 per MCF for LNG, and more than $7.00 per MCF for propane. The Eastern U.S. consumer knows from recent cost experience that we cannot solve satisfactorily the Eastern residential gas heating problem with high-cost substitute fuels.

In analyzing what we can do about correcting the deficit U.S. trade balance caused by purchases of imported foreign oil, we must first answer the question—"How much crude oil and natural gas is underground in America waiting to be drilled?" We have all heard "expert" predictions on future American reserves ranging from calamitous pessimism to enthusiastic optimism.

The problem can be clarified when you realize that the various authorities are citing four different kinds of reserves: proved, probable, possible, and potential. Within each category there is little disagreement between industry and government experts.

Proved reserves are those that are known to exist and can with reasonable certainty be produced and marketed. One step down from that and we get into probable reserves, defined as those resulting from the probable growth of existing fields and supported by engineering and geological studies.

Possible reserves are somewhat less certain, such as large step-outs in existing fields and in new fields within formations that are known to be productive elsewhere.

Most risky of all are potential reserves which lie in formations or geological areas that have not been known to contain oil or gas in the immediate area. An example would be the Atlantic East Coast offshore area.

At this time, the consensus is that responsible estimators are considering that the undiscovered potential in the U.S. is 150 billion barrels for oil and 600 trillion cubic feet for gas—sizable numbers of conventional supply which our government should encourage the oil and gas operators to find and produce. Successful discovery would provide many years of future supply at present U.S. producing rates of three billion barrels per year for oil and 20 trillion cubic feet per year for gas.

The only factor that will hold down the development of U.S. oil and gas potential is price—price for new oil and gas discovered. The proponents of deregulation of new natural gas are not asking for legislation to deregulate the price of old interstate gas. An adequate price incentive for new oil and gas is the cancer that has been destroying the energy potential and economic strength in America in the last few years. The record of oil and gas discovery has shown less reserves found each year and that the present replacement cost for new oil and gas exceeds $13.48 per barrel for oil and $2.24 per MCF for gas.

The situation has deteriorated to such a point that now utility companies, large industrial users, steel companies, automobile companies, chemical companies, paper companies, and the large interstate natural gas pipeline companies have seen their future domestic petroleum supply severely threatened by inadequate domestic drilling. Federal regulation of prices has forced both large and small users of natural gas to attempt to explore for gas in the unregulated intrastate areas of Texas, Louisiana, Oklahoma, Alabama, Mississippi, New Mexico, and the Rocky Mountain states.

The success record has been outstanding in the finding of gas in the intrastate, non-

regulated area. During the last five years there has been an increase in new supply of gas available in the intrastate market which greatly exceeds what was found for the interstate market. During 1975, the interstate new gas supply was increased by 1.3 trillion cubic feet, or 13 percent of the total gas new supply; whereas the intrastate new gas supply was 8.7 trillion cubic feet, or 87.5 percent of the new gas supply. This significant difference is additional proof that the unregulated intrastate market has a better chance of meeting the gas supply requirements for natural gas.

The recent Senate approved Natural Gas Policy bill with a form of phased deregulation included is persuasive evidence that the facts are being considered in Washington. While the Senate's view on this issue does not coincide with President Carter's original position, there is increasing congressional recognition of support for deregulation.

Had it not been for the success in the unregulated intrastate area our purchases of foreign oil would be much greater than they are because every trillion cubic feet of gas produced in the unregulated intrastate market replaces 180 million barrels of foreign oil with a savings in dollars in the balance of payments equal to an estimated $2.7 billion at present prices for foreign oil.

We look to increased development in the intrastate market from large users of gas if the intrastate market is not placed under Federal jurisdiction as proposed by President Carter's national energy plan. Along the Gulf Coast of Louisiana and Texas, many of the large chemical companies are taking part in oil and gas exploration as partners with oil and gas operators. The Borden Company is exploring for oil and gas in Louisiana. Dow Chemical Company and du Pont are exploring for oil and gas in Texas and other states. The Williams Companies have a subsidiary which has been actively searching for oil and gas to supply their future oil and gas requirements. W. R. Grace Company has acquired numerous companies, both producing companies and drilling companies, and is looking for its own oil and gas supplies to supply its petroleum needs. International Paper Company purchased General Crude Oil Company and has a large exploration department looking for its own oil and gas. Last year, General Electric purchased Utah International and Ladd Petroleum Company to protect its future supplies for its operations. The list of names of large gas users who are being forced to look for their own oil and gas supplies is growing larger every day.

In conclusion, we can reduce foreign oil purchases by replacing them with new domestic oil and gas if Congress allows domestic oil and gas prices equal to the cost of foreign oil or realistic oil and gas replacement costs. With realistic oil and gas prices and maximum use of coal, our energy scenario could change drastically in five years.

We need a strong U.S. domestic drilling segment which would be capable of drilling approximately 80,000 wells per year instead of the 44,000 wells drilled in 1977.

UNITED STATES/UNITED KINGDOM TAX TREATY

Mr. GRAVEL. Mr. President, as many of my colleagues know, one provision of the United Kingdom Tax Treaty now pending before this body has aroused intense opposition. This provision, article 9(4), would severely limit the ability of the States to determine the taxable income of multinational corporations. It would force upon the States an audit method which the U.S. Treasury itself has not been able to apply effectively.

The States and others have been chastized for criticizing a treaty which allegedly would bring the U.S. Treasury large amounts of money. A recent Wall Street Journal editorial claimed that the treaty as whole "amounts to several hundred millions of dollars to—the Treasury."

Before accepting such assertions, my colleagues should read a study of this United Kingdom Treaty prepared by the Joint Committee on Taxation. This study contradicts the Wall Street Journal editorial. It asserts that the refund of British taxes for U.S. shareholders in British corporations, that is the supposed revenue producer for the Treasury, "will not significantly increase U.S. tax revenues because of the special rules contained in the Treaty and Treasury's technical explanation."

Other provisions of the United Kingdom Treaty will cost the Treasury millions of dollars. The reduction in U.S. withholding rates on dividends paid to British shareholders in U.S. corporations will cost the Treasury $70 million each year. The tax credit for oil companies producing in the North Sea will cost millions more. All this is in addition to the hundreds of millions that article 9(4) will cost the States.

When the United Kingdom Tax Treaty comes up for debate this session, I hope that we will not hear cries of the new revenues at stake for the U.S. Treasury. The study cited here makes any revenue gains at all appear highly dubious.

Important as revenues are, however, there are more important issues at stake. The attempt of the U.S. Treasury to dictate tax policy to the States is just one of these issues. This treaty challenges as well the ability of the Congress to determine the broad Federal taxing policy of this Nation.

Treaties are supposed to iron out the wrinkles in U.S. tax laws as they affect citizens of other countries. This treaty goes further, and not just concerning the States. It attempts to establish broad and perhaps irreversible tax policy for the Federal Government as well. Take, for example, the provision of the treaty which would grant a tax refund to U.S. shareholders in British corporations.

This may be a worthy goal, but doing it through a treaty instead of legislation carries serious consequences. It could severely limit Congress' options in considering one of the most sensitive and difficult tax issues before it, the integration of the personal and corporate income taxes. In the words of the joint committee's report:

(I)f the U.S. adopts an integration system, other countries will be able to use it (the treaty) as a precedent for U.S. refunds to foreign shareholders of some or all of the U.S. tax paid by U.S. corporations.

In short, the State's opposition to article 9(4) of the United Kingdom Tax Treaty has served to focus needed attention on the tax treaty process itself. There is a danger that the Treasury Department is overstepping its role, and is using the treaty process to bypass the Senate Finance Committee and the House Ways and Means Committee and establish far-reaching tax policy changes of which these committees might not approve. This is another of those quiet, subtle invasions by the Executive of this body's constitutional powers, invasions which have often gone unnoticed until they had become difficult to reverse.

This is a serious matter. I commend the Joint Committee on Taxation's study to my colleagues, and therefore ask unanimous consent that it be printed in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

ISSUES RELATING TO PROPOSED INCOME TAX TREATIES WITH THE UNITED KINGDOM, THE PHILIPPINES, AND KOREA

I. UNITED KINGDOM INCOME TAX TREATY

The proposed tax treaty was signed on December 31, 1975, and was amended by a subsequent Exchange of Notes and two Protocols. The proposed treaty, as amended by the Exchange of Notes and the first Protocol, has been approved by the United Kingdom House of Commons. The second Protocol has not been ratified.

The proposed treaty is intended to replace the existing tax treaty between the two countries. It is substantially similar to other recent United States income tax treaties and to the model tax treaty of the Organization for Economic Cooperation and Development (OECD). The most significant and controversial departures from standard treaty provisions are summarized below.

A. Limitations on State taxation

The proposed treaty contains a new provision (*Article 9(4). Associated enterprises*) not found in other tax treaties, which places limitations on the combined reporting method used by certain States of the United States to determine the taxable income which corporations derive from sources within the State. Under this apportionment method there is taken into account on a consolidated basis the operations of all related corporations, both domestic and foreign. The proposed treaty provides generally that in determining the tax liability of a British corporation doing business within a State, or of any U.S. or foreign corporation doing business within a State which is controlled by a British corporation, the State may not use the combined reporting method to take into account the operations of any related foreign enterprise which is not doing business within the State.

The principal arguments presented to the committee in favor of this provision are:

(1) The combined reporting method used by these States creates problems in our international relations because foreign governments and companies view the method as subjecting foreign corporations to State tax on business profits which are not properly attributable to operations in these States.

(2) The internationally accepted norm for allocating income among related corporations is the arm's-length method which is used by the Federal Government. The use by the States of a different method often results in double taxation of the same income.

(3) The combined reporting method used by the States can misallocate income where the various corporations in the combined group operate in countries where the profit levels are considerably higher relative to payroll and property values than is generally the case in the United States.

(4) The combined reporting method creates serious reporting burdens because a separate allocation of income is required for State tax purposes from the allocation required for Federal and foreign tax purposes.

This separate allocation requires the companies to collect and submit substantial financial and operating data for all affiliates worldwide which would not otherwise need to be collected. Moreover, this administrative burden is substantially increased because the records and information must be translated from foreign languages, currencies, and accounting systems.

(5) Even assuming the combined reporting method is theoretically acceptable where the business operations of the various corporations in a combined group are closely interrelated, in practice serious distortions of income occur because the States apply the method too broadly, sometimes in situations where the operations of the foreign affiliates have no significant connection with the State.

(6) The provision was a U.S. concession required to obtain beneficial provisions in the treaty, such as the refund of U.K. Advance Corporation Tax (Act) for U.S. direct investors. Thus, a reservation on the limitation on combined reporting might jeopardize U.S. final ratification of the entire treaty.

The principal arguments presented in opposition to this provision are:

(1) It is an unprecedented interference by the Federal Government (through legislation or treaty) with the traditional taxing powers of the States and was negotiated without prior consultation with the States.

(2) It will have a substantial impact on those States using the combined reporting method, causing a significant revenue loss (particularly if extended in future treaties to other countries).

(3) It is not at all clear that the unitary method is a less accurate method of allocating income among affiliated corporations than the arm's-length method.

(4) The treaty provision results in discrimination against U.S. multinationals and multinationals from third countries that complete with British multinationals in those States because their State tax liabilities will continue to be determined under the combined reporting method.

(5) States may be "whipsawed" because British multinationals may be able to compute their State tax liability under the combined reporting method where it is more favorable than the arm's-length method but will be able to insist on the arm's-length method under the treaty when the combined reporting method is less favorable. (The States may be able to solve this problem by denying the use of the combined reporting method to companies entitled to treaty protection, provided such legislation would not violate State constitutional provisions relating to nondiscrimination.)

(6) Because the provision is drafted in general terms, interpretative questions are likely to arise in the determination of the State tax liability of British multinationals. However, the procedures for resolving such disputes do not provide for any formal involvement of the State governments whose tax laws and revenues are at stake.

(7) Even assuming that it may be appropriate for the Federal Government to place some limitations on the States' use of the combined reporting method, it would be preferable to impose any such limitations by legislation rather than by treaty. Serious issues of Federalism and tax policy are involved, and the legislative process would give both Houses of Congress and the tax-writing committees an opportunity to consider the matter. The legislative process would permit the affected parties, the States, to participate in the formulation of limitations. In addition, legislation would permit uniform rules to be applied to all taxpayers, U.S. and foreign.

B. Dividends and the ACT

The proposed treaty contains a new and complex set of provisions (*Articles 10 and 23*) with respect to the taxation of dividends. Under the new British tax system, a tax is imposed upon U.K. corporations with respect to dividend payments (the ACT), and it is refunded to U.K. shareholders. No refunds are paid to nonresident aliens, however, in the absence of an income tax treaty.

Under the proposed treaty, the U.K. is to provide full refunds of the ACT to U.S. portfolio investors in British corporations, but the ACT refunds and dividend payments are to be subject to a 15-percent withholding tax. In the case of U.S. corporate direct investors, the proposed treaty provides for a refund of one-half of the ACT, but also for a 5-percent withholding tax on the dividend and the refund.

The proposed treaty also provides rules governing the treatment of the ACT for U.S. foreign tax credit purposes and provides for the allowance of an indirect foreign tax credit for ACT which is not refunded.

The United States agrees to reduce its withholding tax to 15 percent on dividends to United Kingdom portfolio investors and to 5 percent on dividends to United Kingdom direct investors.

The following factors are relevant to the consideration of the treatment of dividends:

(1) The discrimination of the British integration system against U.S. shareholders is eliminated (in the case of portfolio shareholders) or substantially reduced (in the case of direct investors). This is the first U.S. tax treaty which provides for refunds to foreign direct investors.

(2) The treaty will be an important precedent in U.S. treaty negotiations with other foreign countries (e.g., France, Germany, Denmark, and Canada) which in part integrate corporate and shareholder taxation. On the other hand, if the U.S. adopts an integration system, other countries will be able to use it as a precedent for the U.S. refunds to foreign shareholders of some or all of the U.S. tax paid by U.S. corporations.

(3) U.S. shareholders of U.K. corporations will receive substantial refunds of British taxes (approximately $90 million a year). The ACT refunds of U.K. tax paid to U.S. shareholders in British corporations will not significantly increase U.S. tax revenues because of the special rules contained in the treaty and Treasury's technical explanation which govern the treatment of the ACT for U.S. tax credit purposes. While these technical rules may be appropriate in the context of this particular treaty, the application of those rules to other situations raise complex and difficult issues which require careful examination. Consequently, the committee may want to indicate that these rules should not necessarily be considered a precedent for future treaties.

(4) If the ACT would not be treated as a creditable tax for U.S. foreign tax credit purposes in the absence of the treaty (it is not clear how it would be treated), the treatment of it as a creditable tax results in a substantial U.S. revenue loss. In addition, the treaty reduction in the statutory U.S. withholding tax rates on dividends paid to British shareholders in U.S. corporations results in a U.S. revenue loss of roughly $70 million a year.

C. Petroleum revenue tax

The proposed treaty provides (Article 23) that the U.K. Petroleum Revenue Tax (the PRT) is to be treated as a creditable income tax for U.S. foreign tax credit purposes. The PRT is imposed at a 45-percent rate on assessible profits from oil and gas extraction activities in the United Kingdom (including the North Sea) on a field-by-field basis. It is in addition to, and separate from, the regular U.K. corporate tax and a separate royalty.

The IRS has indicated that in the absence of a treaty provision it would not view the PRT as a creditable tax for U.S. foreign tax credit purposes.

It can be argued that the determinations of whether a foreign income tax is creditable should be solely a matter of tax policy and thus should only be determined by the Internal Revenue Service through its normal administrative processes. In this particular case, however, it can also be argued that the economic substance of the tax is closely comparable to U.S. notions of what constitutes an income tax and that the treaty can thus be viewed as merely overcoming technical deficiencies in the structure of the U.K. tax.

D. Public entertainers and athletes

The proposed treaty contains a separate set of rules, not contained in the existing treaty, which govern the taxation of income earned by public entertainers and athletes (*Article 17*). These rules provide that public entertainers and athletes who are residents of either the U.S. or the U.K. and whose gross receipts from performing in the other country exceed $15,000 for the year may be taxed on that income by the country where the services are performed. These rules insure that highly paid entertainers and athletes will be taxable in the country where they perform regardless of the length of their stay in that country.

The arguments presented to the committee against the provision are:

(1) The provision discriminates against entertainers and athletes. Personal service income earned by other individuals is generally taxable only by the country of their residence. (Articles 14 and 15) as long as they are present in the other country for no more than 183 days during the year. In contrast, income earned by entertainers and athletes will be taxed by the source country without regard to the amount of time spent there during the year if the $15,000 limit is exceeded.

(2) The discriminatory treatment of entertainers and athletes will serve as a precedent for similar treatment in other U.S. tax treaties. This is particularly true since it is the current U.S. treaty negotiating position to apply this special treatment to entertainers and athletes.

The arguments in favor of the provision are:

(1) Separate rules for entertainers and athletes recognize that their situation is somewhat different than most individuals earning income in a foreign country on a temporary basis. Entertainers and athletes often receive large amounts of income over a relatively short period of time, and in most cases there is no substantial problem in determining the amount of income attributable to their performances in a particular country.

(2) Because of the special circumstances, most tax treaties of other countries do not provide any exemption for services performed by public entertainers. Similarly, the OECD model tax treaty does not exempt income earned by public entertainers. Thus, the proposed treaty is more favorable to U.S. entertainers than the international standard.

(3) This is not the first U.S. tax treaty providing that the country of source may tax income of public entertainers which exceeds a dollar (rather than duration of stay) limit. Similar provisions are contained in the recent U.S. tax treaties with Belgium, Iceland, Japan, Romania, and Trinidad and Tobago.

(4) The British tax rates applicable to income earned by U.S. entertainers in the U.K. are generally lower than the U.S. rates. Although British tax rates on British residents are high, U.S. entertainers are only subject to British tax on half of their income earned in the U.K. (provided they do not work for a British company).

(5) U.S. entertainers will not be subject to double taxation on income earned in the U.K. because the foreign tax credit will reduce any U.S. tax on that income dollar-for-dollar.

E. Shipping income

The treaty provides (under Article 8) that income of ships or aircraft in international traffic operated by residents of one country is to be exempt from tax in the other country. By itself, this provision does not represent a major departure from past treaties, although it does not require, as many prior U.S. tax treaties do, that a ship be registered in the country of the operator's residence to qualify for the treaty exemption.

International shipping generally pays no tax anywhere in the world. In recent years there has been significant interest in changing the U.S. tax laws, and the U.S. negotiating position in tax treaties, to tax shipping into and out of the United States at least in some cases. Those arguing for such a change (including a Task Force of the Ways and Means Committee) believe it can be a first step toward initiating international arrangements (through bilateral treaties and perhaps multilateral agreements) whereby all international shipping income would generally be taxed in some jurisdiction. Moreover, some advocates view these changes as an effort toward minimizing the competitive advantages of operators locating their shipping operations in countries which do not tax shipping income. It is likely that Congress will seriously consider statutory changes in this area when it takes up the Administration's tax reform proposals.

The United Kingdom has been regarded as one country which effectively exempts from tax the shipping income of its residents (including U.K. corporations owned by U.S. interests) even in cases where these ships are not engaged in the international commerce of the United Kingdom. As a result, some U.S. companies (and other non-U.K. companies) have tended to establish U.K. corporations to conduct worldwide shipping operations. They thus avoid any tax liability in any country in the world. The treaty provision, in effect, validates this method of operation.

If the United States changes its policy toward international shipping, it can be argued that the exemption in the proposed treaty should be modified. Consequently, it may be appropriate to make it clear in the committee report that the treaty should not be viewed as a precedent for future U.S. treaty policy—particularly as that policy applies to countries which encourage the incorporation and registry of ships which neither operate in the international commerce of that country nor are owned ultimately by residents of that country.

F. Compensation of Government employees

Questions have been raised as to the tax treatment of governmental employees provided under the proposed U.S.-U.K. Income Tax Treaty. The provision of the proposed treaty dealing with governmental employees follows the OECD model tax treaty. It provides that compensation (other than pensions) paid by the government of either country to an individual for services rendered in the other country is generally taxable only by the first country. There are, however, two exceptions to that general rule relating to situations in which the employee is a resident of the country where the services are performed. Such compensation is taxable in the country in which the services are being performed if the recipient is either (1) a resident national of that country, or (2) did not become a resident of that country solely for purposes of performing the services.

This second exception is not contained in the existing treaty with the United Kingdom. As a result, U.S. citizens employed by the U.S. Government in the United Kingdom, who are presently exempt from British taxes under the existing treaty, will be subject to British tax under the proposed treaty if they are residents of the U.K. and if they did not become British residents solely for purposes of performing the services (e.g., they were British residents before they began to work for the U.S. Government). These individuals will also be subject to U.S. tax on the income earned in the U.K. as U.S. Government employees (Article 1(3)), but the foreign tax credit allowed with respect to those British taxes will reduce their U.S. tax on the income on a dollar-for-dollar basis.

This revised treaty provision will not affect dependents and spouses of military personnel. They will remain exempt from British tax pursuant to the Status of Forces Agreement regardless of their reasons for becoming residents of the U.K.

CRIMINAL CODE REFORM WOULD AID LIBERTY

Mr. SCHMITT. Mr. President, yesterday's passage of S. 1437, the Federal Criminal Code bill was a major event in this Nation's legal history. It is obvious to all concerned individuals that there exists a pressing need for a modern Federal Criminal Code to replace the hodgepodge of outdated statutes which form the present law.

Efforts to achieve a modern code have been underway since 1966 when the Congress established the National Commission on Reform of the Criminal Laws. This Commission, the famous Brown commission, named after its chairman, former Governor of California, made its report in 1971. During the course of the past 7 years, a series of bills were proposed and revised until finally S. 1437 was reported out of the Senate Judiciary Committee.

Senators KENNEDY and THURMOND deserve much credit in bringing this bill to the floor. Not to be overlooked, however, are the monumental efforts made by two former Members of this body. I am, of course, referring to the late Senator John McClellan and former Senator Roman Hruska. These two men devoted a large part of their Senate careers to achieving the reform of our criminal laws and the country is deeply indebted to them for their efforts.

In this case, like most legislation which is brought to the Senate floor, S. 1437 is not perfect nor do its adherents make such claims. There are some provisions upon which not everyone agreed. This is to be expected and I think the Judiciary Committee has tried very hard to accommodate various Senators.

For example, it accepted the amendment offered by Senator CRANSTON and others which adopted the rule of strict construction of the Criminal Code. I supported this amendment and believe the bill is better because of its acceptance. Of course, there remain some issues upon which the Senate is sharply divided. But with a bill of this magnitude this is to be expected. Instead of focusing upon these differences, I would like to highlight some of the major achievements of this bill.

First of all, the new code will be a much simpler code. It will be orderly and comprehensible. This in itself, is no small achievement and should well serve the cause of justice at every step in our legal system.

Second, the bill reforms certain aspects of present law. These changes reflect some of our evolving social values. For example, chapter 15 deals with civil liberties and reflects legal and social theories that have been voiced in various court decisions and civil legislation.

An example of an area of much needed reform is reflected in how the bill addresses sex offenses. S. 1437 eliminates the requirement of corroboration in rape cases. It also severely restricts inquiries into the sex history of rape victims. Furthermore, it expands the categories of sex offenses to include those committed by force against males as well as females.

Additional provisions of this legislation are concerned with those who would recklessly endanger the lives and health of others such as polluters and negligent manufacturers. Nor are the grave problems of organized crime, governmental corruption, or haphazard sentencing ignored.

I could continue to discuss the many good provisions of this bill, but others who have worked closely with it have done so and there is no need to be repetitive. The fact is, however, that overall this legislation is good for the country and, as such, deserved to pass the Senate. It now can go to the House where those who might still object to certain provisions will have an opportunity for another hearing. Hopefully the House will act quickly on this measure so that the House-Senate conference will have time to resolve whatever issues are still outstanding.

Mr. President, I ask unanimous consent that a letter written by Senator KENNEDY to the Los Angeles Times explaining his position on S. 1437 be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CRIMINAL-CODE REFORM WOULD AID LIBERTY

(By EDWARD M. KENNEDY)

Contrary to the surprising conclusion reached in a recent editorial in The Times, the enactment of the comprehensive criminal-code reform legislation now pending in Congress would bring significant progress to a wide range of civil-liberties issues.

In urging the defeat of this legislation, The Times does a disservice to the cause of both responsible law enforcement and individual freedom.

The current Senate bill, S. 1437, is the culmination of a decade of effort to modernize the federal criminal code. Experts from one end of the philosophic spectrum to the other have described the present code as "archaic," "repressive," "unfair" and "a threat to the civil liberties of every American."

The pending reform would promote civil liberties in a variety of ways. It would repeal the infamous Smith Act, which was used to hound academics and intellectuals during the McCarthy Era. It would decriminalize the possession of marijuana, modernize civil-rights laws, repeal the sexist stereotypes that have made a nightmare of rape laws and establish a generous compensation program for victims of crime. The measure would also enlarge the right of privacy by prohibiting

the interception of correspondence, and protect the press against contempt charges for violating invalid judicial "gag" orders. For the first time, political "dirty tricks" would be outlawed. In addition, the proposed reform would make hundreds of other fundamental changes in the areas of assembly and free speech, thus breathing new life into the Bill of Rights.

No such comprehensive reform has ever been achieved before. Overall, the bill would streamline and restructure the 3,000 separate pieces of criminal legislation passed by Congress over the past 200 years. For example, a single new section would replace more than 70 confusing theft statutes.

Moreover, 50 perjury statutes would be reduced to three provisions, and four specifically defined states of mind (intentional, knowing, reckless and negligent) would replace more than 70 undefined, vague terms. Also, the legislation would harmonize and clarify scores of other legal terms to assure uniform interpretation.

Most important, the bill would provide the first comprehensive reform of federal policy on punishing convicted criminals. It would phase out both indeterminate sentencing and parole, which have been criticized by law-enforcement experts and prisoners alike as abusive and unfair, and would establish a commission to provide sentencing guidelines for judges. For the first time, sentences would be subject to appellate review.

Some liberals who oppose the bill do so on the ground that it does not go far enough in improving the chaotic state of current law. Beyond a reasonable doubt, that sort of "all-or-nothing" approach will doom the bill to defeat, despite its numerous major improvements. In my view, the continuing opposition from this quarter is a hangover from the amply justified and extremely passionate attacks on S 1 in the past Congress, an early precursor of the present bill that I did not support.

General rhetoric about "eternal vigilance" is no substitute for careful examination of the details of the legislation. Particularly troublesome are the inaccurate statements and misleading assertions made by many of the bill's opponents. Reasonable people may disagree on whether S 1437 should be enacted into law, but there is no justification for distorting and misconstruing its various provisions. The public is entitled to know exactly what the bill would and would not accomplish. Among the most frequently distorted parts of the bill are these six issues:

No section would make it a crime for the press to refuse to disclose confidential sources. Indeed, the bill would provide a defense for refusing to testify or produce documents if a person had a legal privilege to refuse to disclose the information. Nor would S 1437 confer new power on the courts to issue "gag" orders. The bill would simply recodify the existing law of contempt.

The conspiracy section is actually somewhat narrower than current law, since it would allow a person to withdraw from a conspiracy before the illegal object was achieved. Nor would "agreement," in and of itself, be sufficient to make a person a member of a conspiracy; conduct with intent to carry out an objective of the conspiracy would also be made an essential element of the crime. In this respect, the proposed reform is actually more "liberal" than California's own conspiracy law.

The proposal in the area of criminal solicitation would not make it a "new and elastic federal crime," as The Times maintains. In fact, this section simply would redefine a similar federal offense, and follow recommendations by the American Law Institute's progressive Model Penal Code and by the National Commission on Reform of Federal Criminal Laws established in 1966 by President Johnson. The language of the reform would require both "intent" to encourage a crime and "circumstances strongly indicative of that intent." Why shouldn't soliciting a bribe or suborning perjury be a federal offense? In fact, a precedent for considering these acts a federal crime dates back to at least 1949, and the Catrino decision in California. The reform bill would merely recodify existing law to take this, and subsequent rulings, into account, and to conform with recommendations of the American Bar Assn.

Another section would create a new federal offense carrying a maximum term of five days' imprisonment for disobeying an order issued in case of fire, flood, riot or other conditions that created a serious risk to people or property. But, before a conviction for the offense could be obtained, the order would have to be found lawful and reasonably designed. Sen. McClellan and I are taking another look at this provision in light of The Times' concern, to ensure that it is not an invitation to abuse. But should not an official at the scene of an actual or imminent disaster be able to issue orders to save lives or property—and have those orders obeyed?

Contrary to some assertions, the bill would not "expand" the authority of the FBI by making it a crime to give a false statement to a law-enforcement officer. In fact, the bill would substantially narrow the current broad law in this area; the revised provision would come into play only if the false statement was "volunteered" or made after Miranda-type warnings had been given. The defendant would have to know that he was speaking to a law-enforcement officer, and would have to be afforded an opportunity to retract the false statement. None of these protections exist today.

Finally, critics like The Times fasten on the "use-immunity" portions of the bill. But these provisions are found in the current statute, and have been upheld by the Supreme Court as recently as last June. I share The Times' concern with the potential abuses of use immunity, but to argue that the provisions are a clear violation of the Fifth Amendment is to ignore express Supreme Court opinions to the contrary.

In general, the pending legislation follows the recommendations of the Brown Commission, a bipartisan group chaired by former California Gov. Edmund G. Brown and composed primarily of liberal academicians. Indeed, the bill would add additional civil-liberties safeguards that conservative members of the commission opposed.

Opponents of the bill are unfairly confusing the issue by constant and unwarranted references to the now-defunct S 1. The real comparison should be made between the current bill and current law. It is fair to object to the reform proposals because they do not go far enough in some areas—but wrong to castigate them as a step backward.

We now have a rare opportunity to take a giant step forward for the benefit of both law enforcement and civil liberties. It would be foolish to miss this opportunity for truly major advancement because of an "S 1 complex" and the impossible dreams of those who refuse to help lay the foundation for progress unless Rome is built today.

TWENTIETH ANNIVERSARY OF EXPLORER I

Mr. ALLEN. Mr. President, today marks the 20th anniversary of America's first satellite, Explorer I, sent into orbit by a Jupiter C launch vehicle which was developed by the U.S. Army Ballistic Missile Agency (ABMA) headquartered at Redstone Arsenal, Ala.

The launch of this first U.S. satellite followed two successful satellite launches by the Soviet Union. Sputnik I was put into orbit on October 4, 1957, and was joined 1 month later by Sputnik 2, carrying the dog Laika for biological experimentation. The Russians' success caused great concern in the United States, and the public began asking why the Soviet Union had been able to beat us into space.

The answer to that question revolves around President Eisenhower's 1955 approval of the plan to put an American satellite into orbit during the International Geophysical Year (1957–58), while concurrently insisting that this satellite effort be separate and distinct from the military program for intercontinental ballistic missiles which was being conducted at the Army's missile and rocket laboratories at Redstone Arsenal by ABMA. Not only did this directive require development of a new launch vehicle, but it accorded the program relatively low priority within the Department of Defense, which had responsibility for satellite and missile program at that time which was before the creation of the National Aeronautics and Space Administration.

The civilian satellite program, called Vanguard, was assigned to the Naval Research Laboratory which had no involvement in the military missile program. The project had low level support in DOD, although once the Russians had launched their first satellite, it achieved new priority. In the postsputnik rush to achieve a successful launch, testing procedures normally associated with such endeavors were shortened to speed up the program. Those associated with the Vanguard program were not completely surprised, therefore, when the much publicized full-fledged test of Vanguard proved a dismal failure. At 11:45 a.m. on December 6, 1957, the launch buttons were pushed and Vanguard lifted about 1 meter off its launch pad, then crashed to the ground in a fiery display.

Following this embarrassing failure, President Eisenhower reversed his stance and authorized the Army to proceed with its satellite program. The ABMA team at Redstone Arsenal, under the leadership of Dr. Wernher von Braun, had already achieved success with a Jupiter C launch vehicle in September 1956. Had the Jupiter's fourth stage been fueled, a satellite could have been placed into orbit at that time, but the Army was prohibited from embarking on a satellite program. Now the authorization was given and, on January 31, 1958, a Jupiter C booster placed Explorer I into a perfect orbit. Although the U.S. satellite was considerably smaller than its Russian counterparts, it revealed important scientific information. Radiation instruments on board Explorer I discovered what are now known as the Van Allen belts of radiation which encircle the Earth.

On March 17, 1958, a successful Vanguard launch was achieved, and so began the U.S. space program, and the American-Russian space race. The National Aeronautics and Space Administration

was created in 1958 to conduct the civilian aspects of the U.S. space program, and the space exploration efforts at Redstone Arsenal were taken from Army management and transferred to the George C. Marshall Space Flight Center which was established in Huntsville by NASA. Since that time 12 Americans have explored the Moon and returned safely home, four of the other eight planets in the solar system have been explored by automated spacecraft carrying cameras and scientific instruments, and the inhabitants of plant Earth have become routine users of satellite for communications, weather forecasting, earth resources monitoring, and a variety of other purposes.

So, Mr. President, as we celebrate the 20th anniversary of American space flight, we are also celebrating the opening of a new frontier for exploration and development by mankind. I am proud of the important part played by Alabama and Alabamians in helping our Nation come from behind in the space race and in establishing clear leadership for the United States in this exciting and important contest.

RHODESIAN DEVELOPMENTS

Mr. WALLOP. Mr. President, the United States appears to be pursuing a policy of confusion with regards to the Rhodesian situation. We are confusing long- and short-term objectives, we are using the wrong means to obtain our objectives, and we are underestimating the importance of those objectives.

Political developments in Rhodesia have reached a critical stage. American statesmanship can conceivably influence the outcome of a delicately poised situation. I believe that the influence of the United States should be directed toward the evolution of a stable and prosperous Zimbabwe with political institutions firmly rooted in democratic principle.

Two diverse attempts are being made to resolve the present conflict in Rhodesia. One is generated by internal initiatives; the other by external forces, including the British and United States Governments but involving other elements, not all of which share our objectives.

During the last 2 months the internal initiative has made impressive progress and gives promise of producing early agreement on new constitutional arrangements between Mr. Smith's government and representatives of black political groups which together represent, according to the best available information, the overwhelming majority of the Rhodesian people. It is evident that whatever agreement is reached will entrench the principle of majority rule with minority safeguards. This seems to me to be deserving of American support.

It is an outcome compatible with our own perceptions of democratic order, since it will have been reached by parties that are willing to submit themselves to an electoral test. It answers to the principle of self-determination, since it will have been reached by black and white Rhodesians cooperating together without external pressure. It will be conducive to economic prosperity because it promises to retain the confidence of white Rhodesians, who hereafter will play only a subordinate role in the political life of their country but can be expected to continue to make a significant contribution to its economic well-being.

None of these merits are apparent in the alternative arrangements that are being discussed in Malta this week between militant forces and the British Government, with our U.N. Ambassador in attendance. I note that these radical forces have rejected the opportunity of participating in the internal discussions and that they decline to submit themselves to the test of the ballot box. This seems to be an eloquent commentary on their expectations of popular support.

To say, as we have heard said, that failure to bring this militant group within the ambit of an agreement will threaten an escalation of the conflict is to give hostages to violence, which is surely inconsistent with our principles in this or any other situation. In practical terms, there are good grounds for believing that violence will subside once the objective of majority rule is secured. To the extent that it persists, it will be the work of a disappointed minority faction or of a foreign subversive power. In either event, it will be our responsibility not to bow to it but to support a freely elected government of Zimbabwe in resisting it.

Mr. President, it is my hope that the administration will give its early endorsement to an agreement reached in Salisbury and will do its utmost to insure the success of such an agreement by offering cooperation in its implementation.

A TRIBUTE TO ALAN H. OLMSTEAD

Mr. RIBICOFF. Mr. President, I would like to share a happy occasion with my colleagues. Alan H. Olmstead of Connecticut has been named Citizen of the Year by the participants on "Fourth Estate," a Connecticut public television program.

Almost 40 years ago Alan Olmstead was graduated from Yale and became a reporter for the Bridgeport Times-Star. In 1941 he started the "Connecticut Yankee" column in the Bridgeport Telegram. It has been published in that paper and in several others in Connecticut ever since.

For more than 30 years Alan was editor of the editorial page of the Manchester Evening Herald. His editorials were recognized as being in a special class. They rivaled the columns of the best newspapers in the country. Alan could have accepted offers of "promotion" to greater challenges elsewhere. That he belonged to Connecticut and chose to stay has been our good fortune.

The title "Citizen of the Year" is fitting because it suggests what Alan is: a man of many parts. He is a citizen and cares about his town and State as well as his country. He is also a farmer. For years Alan ran his farm at both ends of the day and wrote his columns in between. Another part appreciates the nature of Connecticut. Readers of the "Talk of the Town" in the New Yorker have long read Alan's beautiful prose on nature. But the greatest part is humanist. He is a reader and one who draws from literature in his writing and in his life.

I first met Alan years ago when I ran for the office of Governor. I had great respect for his independence and his open minded approach to politics. The people of Connecticut know Alan as a man who thinks for himself. His columns reveal a sensitive and benevolent but tough minded man. He is a thoughtful, subtle writer, and therefore a powerful one. His readers know that Connecticut politicians are mortals capable of all manner of foolishness. And none is prouder than he who wins a favorable word in a Connecticut Yankee column.

In addition to his columns he also had two books published by Harper & Row. The first, "Threshold," is a journal which lives his adjustment from a daily job to retirement. The second, "In Praise of Seasons," is the most eloquent tribute to New England I have read.

Perhaps because he has more time to devote to his column, Alan Olmstead appears to be having more fun than usual. This past year he has been fresher and more delightfully perceptive than ever. As the soul of Connecticut writers he does honor to the term "Connecticut Yankee." In selecting him as Citizen of the Year the Fourth Estate pays tribute to a remarkable man. Connecticut is proud of Alan Olmstead.

Another perceptive editor, Joseph Owens, of the Bridgeport Telegram, wrote an excellent column on Alan and I ask unanimous consent to print it in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Bridgeport (Conn.) Telegram, Jan. 5, 1978]

MAN OF THE YEAR

(By Joseph A. Owens)

The conscience of the state capitol is being honored by a group of journalists. Alan H. Olmstead richly deserves the distinction being bestowed upon him by the participants on Fourth Estate, a statewide Connecticut Public Television program.

Customarily, the editors, who each week discuss events in the Constitution State, select their Citizen of the Year during the final program in December. In the past, the award has gone to such giants on the political scene as Senators Ribicoff and Weicker and Governor Grasso.

This year, the politicians were put aside and a native of Bridgeport, who is scrupulously dedicated to his craft as well as all that is good in Connecticut, was chosen.

No better choice could have been made.

Through his column, which has appeared on the editorial page of The Telegram continuously since 1941, Alan quietly and unobtrusively labors diligently to keep the citizenry aware of activities in the political arena. At the same time, in his dignified style, Olmstead transmits between-the-lines messages to the congressional delegation, the governor, members of the General Assembly and the leaders of both political parties.

Though he was editor of the editorial page of The Manchester Evening Herald for more than three decades and his commentaries on national and international issues were

thoughtful and logical, Connecticut politics remained closest to his heart. His views, expressed in several newspapers thrice weekly, long ago brought him the respect and admiration of his colleagues.

With the patience of Job, he will sit for hours during a public hearing in the capitol taking notes. Perhaps he will write a column about that session. Maybe not.

There are occasions when he will stand in a doorway for a few minutes and during that time gain special insight into the whys and wherefores of the eventual fate of a legislative proposal.

Elected and appointed officeholders are keenly aware of his ability to see through facades. They know, or suspect, he has detected the motivations for their actions.

During recess periods of Democratic and Republican state conventions in Hartford, Alan perches himself inconspicuously on a small wall, about two feet high, outside the Bushnell Memorial. Politician after politician make the pilgrimage to his station. When activities resume in the auditorium, Olmstead moves into the shadows on the stage savoring the happenings on the convention and podium as well.

His newspaper career began on the old Times-Star in 1928, after Alan graduated from Yale. His first boss was Jim McGovern.

In those days, legislators from Fairfield County would ride the train to Hartford. Olmstead would board it in Bridgeport. Many were the days when he gleaned enough news from the lawmakers enroute that he was able to arrive in the capital city and immediately take the next train back to Bridgeport and write six or seven interesting news reports, with time to spare.

This 1933 graduate of Central High School (he spent some of his boyhood in Newtown) never pretends to be anything other than a newsman earning a living. As he goes his way, he strives for perfection, a model for young journalists to emulate. When the ownership of The Manchester Herald changed hands, Alan would not compromise his principles, so he voluntarily left the paper in 1972.

In nominating Alan for the CPTV award, Sherman London of The Waterbury Republican and American took note of the fact that Alan ended his daily routine gracefully and has continued to be productive through his column and two books published by Harper & Row, London, in a good presentation, credited the tall, distinguished-looking gentleman with being the foremost opponent of legalized gambling in Connecticut. Further, he lauded Alan's concern over the changes of questionable worth taking place in the state he loves.

Seven other nominations were offered, including mine of Harry J. Gray, chief executive officer of the United Technologies. But, as moderator Joe Steinberg, a lawyer, author and teacher observed, it was destined to be Alan's night. There was following the voting unanimous agreement an excellent choice had been made. Soon he will be presented a plaque on a Fourth Estate show.

There is more than one side to Alan Olmstead. He writes not only about politics but also portrays nature as he sees and enjoys it. And for many years, while working full time as an editor and columnist, he would actually till the soil with the arrival of the sun for an hour or two, and then again in the evening after a full day at the office he would labor over his crops.

The passage of time forced his retirement from farming. He still sells evergreen trees at Christmas. Many, many years ago, he purchased seedlings from the old state Agriture Department and carefully nurtured them to maturity. Anyone who purchases an Olmstead-grown tree must do his or her own chopping.

Through his column, Olmstead has allowed his affection for Ray Baldwin and John Dempsey to be obvious. Yet, in his book, "Threshold," Alan revealed that Abe Ribicoff "remains the best-balanced, most intelligent, most responsive political figure I have known."

It is possible that, whether he realizes it or not, Olmstead—the man of fairness—was partly responsible for Dempsey's rise to the governorship. In the early fifties when the Irishman from Putnam was the minority leader in the House, voting was done by paper ballot. A legislator with, in Alan's words, "a vicious streak in him" sought to unseat a judge.

Olmstead suspected that the ballot box was being stuffed. Quietly, he called the matter to Dempsey's attention. An appeal by Dempsey for a more closely monitored vote centered attention on him and the judge retained his seat.

Olmstead, not mentioning his role in the drama, wrote a column about the honesty, courage, character and decency of John Dempsey. Abe Ribicoff, out of office at the time, was impressed and told Dempsey so in a letter. Conceivably, Alan's comments may have influenced Abe's decision to select Dempsey as a running mate in the 1954 gubernatorial race.

As a Yankee, Alan often laments in print the passing of the true Connecticut Yankee from high political office. He is most pleased when he sees an individual in government "rise above himself."

Alan is embarrassed about the high praise he received over the ultra high frequency TV airwaves by men he has known and worked with for a long time, because he sincerely seeks no personal acclaim. The most Alan H. Olmstead will say is, "It has been fun over the years."

THE PANAMA CANAL TREATIES

Mr. GRIFFIN. Mr. President, yesterday the Committee on Foreign Relations, by a vote of 14 to 1, favorably reported the Panama Canal treaties.

I ask unanimous consent that a statement which I prepared for use during committee deliberations be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT

This has been one of the most difficult issues I have confronted in my 21 years in the Congress. I have long recognized that a major revision in our treaty relationship with the Republic of Panama is desirable and could be in the interests of both countries.

I recognize the importance of maintaining close and friendly relations with the people of Panama and with the people of other nations throughout the hemisphere. I am deeply conscious of, and concerned about, the impact that outright rejection of the treaties could have on our relations in the hemisphere.

Sometimes political responsibility imposes upon public officials the necessity of choosing among several undesirable courses of action. That may seem to be the dilemma that we face with these treaties.

After months of agonizing consideration, I have concluded that I cannot consent to ratification of the treaties before us. I think they are fatally flawed in a number of substantive respects. In my view they do not adequately protect the interests of the United States or of other nations which depend upon the canal.

I will, of course, be more specific in a statement of my individual views which will be filed with the committee report. I might just point, however, to Article XII of the Panama Canal treaty, which deeply concerns me. It takes away an option of the United States, between now and the year 2000, to even consider the possibility of building a second canal, possibly a sea-level canal, in another country. Under these treaties we would tie our hands and deny ourselves that option, which I think could be very valuable and important.

I am concerned that too much of the treaty language (and in very important areas) is full of ambiguities—ambiguities so apparent that people representing each country are telling their respective constituents that the language means different things.

If there is concern now about defending the canal—with the troops we have stationed there—and that seems to be a concern of many people who support these treaties, there should be greater concern about what would happen after the year 2000 under the provisions embodied in these treaties. I don't find that the understanding reached (between President Carter and General Torrijos) is adequate to cover that concern.

I am also disturbed that between now and the year 2000 a dwindling number of United States citizens and a growing number of Panamanian citizens would be expected to operate and maintain the canal "as employees of the United States"—but under the laws of Panama, except to the extent that there is other provision made in these treaties. Not in the year 2000, but in 30 months after the treaties are ratified, the area now included in the Canal Zone would become subject to the laws of Panama, to the police of Panama, and to the courts of Panama. I think that is a situation that would be fraught with great difficulty. There is no mechanism, no machinery provided for in these treaties to resolve the disputes that would arise.

Furthermore, I believe the defects—and I have only focused on a few of those which concern me—are so basic and so serious that they cannot be remedied by trying to rewrite the treaties on the Senate Floor.

Although these treaties should not be ratified, I believe there is a course open to the Senate other than outright rejection. Despite all of his knowledge about the history of the canal, or perhaps because of it, David McCullough, the distinguished author of "The Path Between the Seas" acknowledged before the committee that he had experienced great difficulty in reaching a personal decision about the merit of these treaties. Although he finally decided, on balance, to support the treaties, he made a very profound and perceptive point in his testimony before this committee. I would like to quote him:

". . . if we say 'yes' to these (treaties) in a grudging way . . . (because we think) we have painted ourselves into a corner and we have to get out . . . (that would be) unfortunate . . . (and) just as wrong, and in some ways a greater mistake than to say 'no' in the spirit of saying 'no' because (it should be) done right—because we don't want to have to come back in 15 or 20 years and have to do it all over again."

Under the Constitution, of course, the Senate's role is one of "advice and consent." Instead of consenting to these treaties, I believe it would be a wiser course for the Senate to exercise only its "advice" authority. In other words, without rejecting these treaties outright, I believe it would be wise for the Senate in this instance to advise the President to send the negotiators back to the drawing boards with instructions to persist until a more acceptable treaty can be fashioned.

I want to say in all sincerity that I respect the two Senate leaders and those of my colleagues who have come to a contrary conclusion—those who in their own minds are convinced that these treaties do serve the best interests of the United States. To the extent that they have the courage of their convictions, that is in the best interest of the Senate, because I believe with Edmund Burke that a Senator owes his constituents his judgment and should not sacrifice it to public opinion alone.

But, when the call on the merits of an issue is as close as this is, or as I perceive it to be, I think the judgment of the people ought not to be taken lightly. Very honestly and frankly, I have come to the conclusion that in this situation, as is often the case, the people are right.

TWENTY-SEVEN NATIONAL GROUPS OPPOSE B–1

Mr. PROXMIRE. Mr. President, I would like to draw attention to a press release and letter signed by 27 national organizations in support of the deappropriation of $462 million in funding for 2 more B–1 bombers.

This letter is signed by Common Cause, the Oil Chemical and Atomic Workers, National Association of Social Workers, Environmental Action, Business Executives Move for New National Priorities, International Longshoremen and Warehousemen's Union and many other national organizations.

In addition I would like to deal with three of the principal fallacies of the pro B–1 position:

Fallacy No. 1 is that the B–1 is a more cost-effective cruise missile carrier than the B–52 or a wide bodied jet.

According to the Pentagon's own analysis, for equal effectiveness over 20 years in constant dollars, the B–1 cruise missile carrier is 60% more expensive than a wide-bodied jet cruise missile carrier and 20 percent more expensive than a B–52 cruise missile carrier. For equal effectiveness, the B–1 would cost $17.7 billion over 20 years while the B–52 would cost $14.8 billion and the wide bodied jet would cost $10.9 billion.

Fallacy No. 2 is that the B–1 can penetrate more successfully than any other aircraft or cruise missile.

Consider for a moment that the Soviets have invested tens of billions into a massive air defense network against bombers—10,000 surface to air launchers, 6,500 air defense radars, and 2,540 interceptors. Nowhere in the world is there such a massive bomber defense. And now this defense stands naked to the cruise missile. It is the Soviet version of the Great Wall of China. Why?

Because the cruise missile technology can be pressed faster than any air defense deployments and at a fraction of the cost.

Because the present radars, fighters, and surface to air missiles cannot track or intercept even our first generation of cruise missiles.

Because by the time the Russians spend billions on an entire new defense, we will have our second generation cruise missile with built-in maneuverability and supersonic dash speed and possibly even electronic countermeasures.

Those that follow military affairs will recognize this trend as the primacy of the offense over the defense—a fact of life that has been with us at least since the advent of the ICBM.

The third fallacy is the statement that for only $225 million, we can produce two more B–1 bombers as insurance against the future.

Consider the facts.

Of the $1.16 billion appropriated for such production before President Carter's decision, $401 million has been spent.

Contract termination will cost another $297 million.

This leaves $462 million to be saved by deappropriation.

To this must be added $280 million for testing the two additional B–1's. You just can't leave them on the runway.

Thus the true total costs of the two additional B–1's ($1.16 appropriated—$280 million testing) would be $1.44 or $720 million each.

I used to think that a $100 million B–1 was expensive but this is ridiculous.

Mr. President, I have noted that my distinguished colleague from Utah (Mr. GARN) has distributed a series of questions and answers from the Pentagon on the B–1 along with rebuttals prepared by Congressman JACK KEMP. The Defense Department believes these rebuttals to be without merit and has provided me with thorough answers to each of the rebuttal points.

Therefore in order to make the Pentagon's views known in detail, I ask unanimous consent that the official policy statements of the Defense Department, in reply to the aforementioned rebuttals, be printed in the RECORD.

I also ask unanimous consent that the letter signed by 27 national groups be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NATIONAL CAMPAIGN
TO STOP THE B–1 BOMBER,
Washington, D.C., January 1978.

DEAR MEMBER OF CONGRESS: In the next few days you will vote on whether or not to rescind almost half a billion dollars in excess funding for the B–1 bomber. The President has requested the rescission, and the question will arise when you reconsider the FY 1978 Supplemental Appropriations Bill.

We strongly urge you to support such a deappropriation. It is past time for the Senate and House to affirm the President's termination of this very costly and unneeded program.

We have long opposed the B–1 as wasteful and unnecessary, but never before has the program seemed so obviously a creature of the special interests who would benefit from its production. The B–1 prime contractor, Rockwell International Corp., claims that the money in question ($462 million) is needed for further testing of the system. With the funds, Rockwell would build two more B–1s to go with the current "fleet" of four bombers, which were bought at a price of about $3.5 billion, despite the fact that even the Air Force says that "the first four aircraft are adequate to complete the B–1 development program should this be necessary." Proponents of the bomber also conveniently neglect to state that there is already over half a billion dollars in the FY 1978 budget for B–1 research and development.

Your vote can prevent throwing more good money after bad. The B–1 production program has been cancelled. The Congress rejected FY '78 B–1 funding, and the President has made it clear that he will not request further B–1 money in the future. In the eyes of the public, production of two more bombers for a fleet already cancelled must be viewed as pure pork barrel politics.

Spending another half billion dollars may seem trivial when compared to the astronomical total B–1 costs (which would have exceeded $100 billion), but the sum is exorbitant when one considers the severe belt-tightening imposed on so many domestic programs by the President's new budget. As *Business Week* magazine said when it endorsed the President's initial rescission request, "The nation's taxpayers deserve something better."

Our organizations and our friends across the country have been working against the B–1 for as long as five years now. We will be watching carefully to see if the Congress finally extinguishes the B–1 boondoggle, as it ought to do with dispatch.

Sincerely,

Terry Provance, American Friends Service Committee.

VIEWS ON THE B-1 BOMBER

ARGUMENTS MADE ON THE FLOOR

1. "We need to complete aircraft 5 and 6 in order to finish critical research and development testing."

DOD response: The first four aircraft are adequate to complete the B-1 development program. B-1 Aircraft 5 and 6 were originally intended to be used for operational test and evaluation, including weapons certification, prior to the delivery of these aircraft to the operational forces. Since these are deployment related tasks, they are not required at this time.

Rebuttal: At the time the President announced his decision to terminate production of the B-1 in June, he asserted that he wished to retain the B-1 production option in what he described as the "unlikely" circumstance that his cruise missile alternative failed to provide a fully adequate substitute for the B-1. Completion of Aircraft Nos. 5 and 6 insure that should deployment be required by international circumstances, it could be accomplished with minimum delay. The R&D to be accomplished with Aircraft 5 and 6 are crucial to timely deployment. Testing the aircraft for their ability to resist the "electromagnetic pulse" (EMP) from nuclear detonations can only be carried out on an aircraft fully equipped with instrumentation, cabling, aerodynamic configuration, and other characteristics of the full production version of the aircraft. Similarly, nuclear weapons certification can only be carried out on a regular production version of the aircraft. This is an eighteen month long process. Only with the completion of Aircraft 5 and 6 will we have full confidence that an early production option will be available if necessary. Congressional responsibility under the Constitution to raise an Army and Navy makes support of funding for No. 5 and 6 an appropriate and prudent step to take.

Sur-Rebuttal: None of the testing described in the rebuttal must be accomplished prior to the initiation of any B-1 production program. Electromagnetic Pulse Testing can be accomplished on Aircraft 4, the last RDT&E aircraft. Such testing would evaluate the different design approaches incorporated to achieve system hardness against nuclear effects.

2. "The SALT limitation of 1500 nm on cruise missile range will make it essential that the U.S. deploy a manned penetrating bomber." (Please indicate what effect the proposed 1500 nm limitation will have in the cruise missile program.)

DOD response: With a cruise missile range of 2500 km cruise missile carriers can stand outside Soviet defenses through the mid-1980s and cover almost all Soviet targets. Having cruise missiles with ranges greater than 2500 km would not significantly improve target coverage in the face of current and near-term defenses. We plan to maintain some B-52s as manned penetrators (as long as they remain effective) because cruise missiles and penetrating bombers are complementary. They are different types of threats which stress Soviet defenses differently. The mixed force complicates the Soviet air defense problem and, in this way, increases our confidence in the overall bomber force capability to successfully carry out its mission. However, the manned bomber is not necessary for target coverage—especially since we also cover targets in the Soviet Union with ICBMs and SLBMs.

It is important to note that the 2500 km ALCM range limit is contained in the 3-year Protocol. Our studies have shown that the 2500 km is sufficient through at least the mid-to-late 1980s when examined against very conservative estimates of future Soviet defenses. Should Soviet air defenses improve much faster than our intelligence projections, we have the option of insisting on a greater range after the Protocol period. The cruise missile program will be adjusted to be consistent with the limitations agreed in SALT. This, however, will not require major changes.

Rebuttal: There are many unresolved elements of the SALT Protocol relating to cruise missiles. While a 1500 n.m. range cruise missile may be sufficient to engage many targets, it is by no means clear that the Protocol will permit "system operational range" characteristics to proscribe the range of an air launched cruise missile. The Soviet Union is insisting upon a "straight line" range limitation; a limitation which will reduce the operating range of the cruise missile to only 1100 n.m., and with a nominal standoff range of 300 n.m., only 800 n.m. of Soviet airspace can be penetrated by a cruise missile. System operating range makes allowance for the substantial deviation from a straight line course required by a cruise missile to evade known defensive positions.

Soviet air defenses have already improved faster than projected now that evidence has been provided which reveals that the Soviets have initiated deployment of their advanced SA-10 SAM. DoD acknowledgement that manned penetrators are to be kept in the force "as long as they remain effective" demonstrates that it is necessary to maintain a penetrator against Soviet air defenses to force the Soviets to dissipate their air resources over the cruise missile and the short-range attack missile (SRAM) and gravity bomb threat posed by the penetrating bomber. There is great precedent value in a range limitation sanctified by a "temporary" three year Protocol which does not provide too much confidence that "we have the option of insisting on a greater range after the Protocol period."

Sur-Rebuttal: First, the definition of cruise missile range is under discussion in the SALT negotiations. We will agree only to a definition of cruise missile range that allows adequate target coverage.

Second, Soviet air defenses do not appear to be improving faster than projected. Soviet development of an AWACS is a good example of one part of their air defense which is progressing more slowly than we expected.

Third, if future developments indicate (in our view) the national security interests of the U.S. are threatened because the cruise missile range limits in the Protocol were too low, then we would insist on higher limits. This is the reason the limits belong in the Protocol and not the Treaty.

3. "The proposed limits on cruise missile carriers will make it essential that the U.S. deploy a manned penetrating bomber."

DoD Response: Cruise missile carriers will be counted in the 1320 aggregate level (which also includes MIRVed missiles); non-cruise missile carrying heavy bombers (i.e., penetrating bombers) will not, although they will be counted in the overall aggregate level of strategic nuclear delivery vehicles. The fact that ALCM-carrying heavy bombers are limited differently from other heavy bombers in no way leads to a requirement that the U.S. must deploy a manned penetrating bomber. The merits of maintaining a penetrating bomber are dictated by other factors, including those discussed in the answer to the question just preceding. An advanced manned penetrating bomber is one of the options we would consider for additional capability if we did not reach agreement in SALT and the Soviets continued a rapid buildup.

Rebuttal: The proposed terms of a SALT II agreement, while not yet completed suggest severe limits on cruise missile carriers due to the fact that we must maintain a large MIRV ICBM/SLBM force. With a MIRV ceiling of 1,320 or less—with some proposals being considered as low as 1,200 MIRV vehicles (including cruise missile carriers)—our cruise missiles will be heavily concentrated in a very small number of aircraft, less than 150. Such a massive concentration of offensive firepower creates a powerful incentive for the Soviet Union to make a major investment to defeat cruise missile carriers. Owing to their large size and slow speed, the cruise missile carrier will be severely vulnerable to long-range aircraft with a capability to engage cruise missile carriers long before they reach their launch point of 300 n.m. from the Soviet coast. Some obvious candidate aircraft already in the Soviet inventory as platforms for long-range air-to-air missiles include the TU-26 Backfire and the TU-16/TU-22 medium bomber force. The grave long-term risk to large cruise missile carriers unable to penetrate hostile air defenses makes it necessary to maintain a penetrating bomber capability (which DoD acknowledges).

Sur-Rebuttal: Those B-52s that are being modified to carry cruise missiles will have a modernized defensive avionics capability to defend against long range fighter attacks. It would be difficult for the Soviets to establish a barrier defense three hundred miles offshore, and eventually if they do so, we will have a number of effective counters to it.

The certainty in the effectiveness of the cruise missile in the long term is greater than for the manned bomber. As in the case of our current bomber and submarine forces, the number of carriers would be balanced with the certainty of effectiveness.

4. "We must have aircraft 5 and 6 to keep open the option of a manned penetrating bomber."

DoD Response: We currently have a penetrating bomber in the B-52 which, when combined with cruise missiles, will be effective into the late eighties. The B-1 program with the production of aircraft 4 keeps a B-1 production option open until late 1978. The addition of aircraft 5 and 6 would extend the production option only a short period—about a year and a half. After that time, additional funding would be required to maintain the option. In this connection, as you know there is RD funding in the FY 78 budget for the B-1.

Rebuttal: It cannot be determined how effective the B-52 will be in the late 1980s. Professor Albert Wohlstetter (in his essays in Foreign Policy) has demonstrated the persistent failure of the intelligence community to estimate Soviet military capabilities for more than 15 years. The intelligence community has almost always underestimated Soviet strategic forces as a consequence of their preference for attributing American values and objectives to the Soviet military and political leadership. When such crucial issues as the contours of a SALT agreement, and subsequent modifications of the Protocol are unresolved, it would be imprudent for the Congress to prejudice a future decision to accelerate deployment of a manned penetrator by terminating R&D work on Aircraft 5 and 6.

Corrected DoD response: No. Aircraft 5 and 6 are not needed to have the option of a manned penetrating bomber in the future. Spending $500 million for aircraft 5 and 6 is a waste of scarce defense dollars and would have no meaningful effect on a penetrating bomber option.

5. "The cost of cancelling the B-1 program is $750 million compared to $975 million for completing aircraft 5 and 6. Therefore, for only $225 million, the U.S. would obtain two usable aircraft."

DoD Response: The estimates quoted are Rockwell estimates of the cost to terminate the B-1 program and the cost to build air-

craft 5 and 6. The Air Force has estimated the cost to terminate the B–1 production program at $698 million and the cost to continue to produce aircraft 5 and 6 at $116 million. The Air Force estimates are based on data from Rockwell, the airframe contractor; Boeing, the offensive avionics contractor; and General Electric, the engine contractor. Using the Air Force estimates the marginal cost to produce aircraft 5 and 6, over that to terminate, is $462 million.

Neither of these estimates include the cost to operate and support these aircraft upon their completion. The Air Force estimates that approximately $280 million would be required to conduct an operational test and evaluation program with these aircraft.

Rebuttal: Testimony taken by the Defense subcommittee last year from the B–1 prime contractor (Rockwell International) stated that Aircraft 5 and 6 could be completed for $965 million as of 1 October 1977, not $116 suggested by the DoD response.

Sur-Rebuttal: The Air Force estimate is based on data from all three prime contractors and uses accepted estimating techniques. It is our understanding that the Rockwell estimate was based on estimates for their own portion of the production program and extrapolations of that data, based on historical RDT&E relationships, for the other two prime contractors. The historical RDT&E funding relationships cannot be used in establishing a production program estimate since the work force composition, subcontractor mix, and materials percentages differ from RDT&E to production.

6a. Criticisms of the cruise missile program: "The cruise missile is still basically only on paper."

DoD Response: The cruise missile is not a "paper missile" by any stretch of the imagination. There have been six ALCM test flights and more than 20 Tomahawk test flights. The ALCM (AGM–86) evolved from the Subsonic Cruise Armed Decoy (SCAD) program dating back to 1972 and earlier cruise missile research. The technology being applied to both the Tomahawk (AGM–109) and the ALCM (AGM–86) is well tested. The engine has over 2,800 hours of test time which includes 500 hours of simulated flight time in the wind tunnel and over 20 hours of actual flight test. The engine has been started over 7,100 times of which 125 have been cartridge starts.

The navigation guidance system (TERCOM) has compiled over 2,200 fixes from various platforms. From the accuracy data obtained from these tests we expect to exceed our originally planned goals.

Both the Tomahawk and the ALCM have been tested in various flight profiles with the ALCM being flown from a B–52 under simulated operational conditions. Although the ALCM tested was the shorter range version, the data derived from these tests is applicable to the long range version.

In summary, there has been a sufficient amount of data compiled for us to have very good confidence in the cruise missile.

Rebuttal: While the cruise missile is well-advanced in its flight test program, it is well removed from being an operational system, a fact supported by the Administration's posture on the SALT protocol concerning cruise missiles to the effect that the three-year duration of the Protocol will not interfere with the U.S. cruise missile program as it is unlikely that the long range ALCM will be deployed during that period.

DoD has shifted its rationale for the cruise missile program to meet the contingency brought about by the President's unanticipated cancellation of the B–1. The cruise missile program (e.g. ALCM–A) was presented to the Defense Subcommittee as an adjunct to a manned penetrator to facilitate penetration of hostile airspace. Now that the President has cancelled the B–1 production program, DoD has shifted its cruise missile rationale in favor of the cruise missile as a substitute for the B–1. As a substitute for a manned penetrator, the cruise missile is an untested concept.

Sur-Rebuttal: Increased emphasis was placed on development and production of the ALCM as a result of the decision to cancel the B–1. The major effects of the decision on the cruise missile program were to accelerate the IOC and to proceed with cruise missile designs of suitably long range for the standoff mission. These objectives have been incorporated into the program and we see no difficulty in meeting them. We believe the technology is well understood. Only in the sense that the air launched cruise missile has never been a part of the U.S. weapons inventory, is it an untested concept.

6b. Criticisms of the cruise missile program: "The cruise missile program has encountered serious development difficulties and several failures."

DoD Response: The cruise missile program has to be considered one of the more successful undertaken by DoD. Failures, indeed, have occurred. This is normal for a program as it proceeds through advanced and full scale development. Of the 29 flights in support of air launched cruise missile objectives only four can be considered failures and, even so, much useful information was gained during these tests. We do not believe any deficiencies have developed which cannot be fixed with known engineering techniques. Also, see 6a above.

Rebuttal: The cruise missile flight test program has been a successful one, but the program has encountered serious difficulty from the perspective of integrating a missile designed to be carried by a penetrating bomber to enhance its penetration prospects to the role of partial or complete substitute for the manned penetrator. The complications imposed on targeting policy and command-control-communications by the employment of cruise missiles on a large scale is a major development risk.

Sur-Rebuttal: In addressing the Senate Armed Services Subcommittee on Arms Control on 9 December 1977, Lt. General Alton Slay made the following statement regarding cruise missiles: "As far as mission planning, it is going to be basically the same as it is now being done for bombers. We will have to take the intelligence that DIA–CIA gives us and that we gather on our own and we have to do the analysis just as we do today. Our target selection will be the same as we do it today. Our weapon allocation will have the same procedures but, of course, with different application of weapons due to the fact that we have cruise missiles, and our deconfliction procedures will be the same. We still have to build up weapon folders, and we still have to distribute them, but we can continue to analyze as we do and continually update the SIOP. There is no really major change to SAC in the way that they do business." There will undoubtedly be some differences in changing from penetrating bombers to cruise missiles; however, we emphatically do not believe they represent the major development risk cited.

6c. Criticisms of the cruise missile program: "The cruise missile does not have the penetrating capability of the B–1. It is too slow, not maneuverable, less accurate than the B–1."

DOD Response: The currently estimated weapons delivery accuracy for cruise missiles is projected to be comparable to that of the B–1 and cruise missile speed is virtually the same as the B–1. The cruise missile can be programmed to maneuver, but its ability to penetrate is not dependent upon maneuverability. Other characteristics such as flight altitude, radar cross section (RCS), and electronic countermeasures (ECM) are also important factors to consider when comparing cruise missile forces, penetrating bomber forces, and mixtures thereof. The penetrating bomber and the cruise missile each has combinations of qualities that aid in their penetration of defenses. The cruise missile depends primarily on low altitude and low radar cross section to penetrate. The B–1 depends primarily on low altitude flight and ECM.

There are, of course, uncertainties inherent in the projections of defenses that would be deployed in response to our force modernization—both in technological possibility and economic practicability. But we have more confidence in the ability of the cruise missile to penetrate (because of its low altitude flight and small size) than in the ability of B–1 ECM to defeat future defenses. Detailed analyses of the technical and operational strengths and weaknesses of Soviet air defenses indicate that the current first generation of cruise missiles would suffer low attrition. It is estimated that cruise missile attrition would not increase significantly over the next decade since we believe that the cruise missile will be improved at least as fast as Soviet defenses. The picture is not so clear for the B–1. The B–1 would be highly dependent on ECM; if ECM failed, B–1 attrition could be very high.

Rebuttal: The DOD response overlooks important operational details associated with the Electronic Countermeasures (ECM) carried by a manned penetrator when compared to a cruise missile which carries none. When the higher penetration speed (the B–1 is capable of supersonic dash) and the effect of employing ECM against Soviet aid defenses, the B–1 percent of time it is vulnerable to attack by air defenses per air defense encounter is an order of magnitude less than the first generation cruise missile. Moreover, when the B–1 is compared with the cruise missile, the effective visibility of the B–1 to Soviet radar (its "radar cross section") is less than the cruise missile. The short range attack missile (SRAM) carried by the B–1 has a radar cross section 40–50 times *smaller* than the cruise missile. For this reason, the Strategic Air Command studies normally for the cruise missile as opposed to a 100 percent survival probability for the SRAM.

Sur-Rebuttal: Although speed is a contributor to B–1 survival, its ability to penetrate depends more on the ability to degrade defenses by use of ECM. The capability for low altitude dash consumes so much fuel that it could only be employed very sparingly. Because of Soviet advances in electronic warfare technology, it is becoming increasingly more difficult to develop effective bomber ECM, and thus there is considerable uncertainty regarding the B–1's penetration capabilities. We have more confidence in the ability of the small radar cross section cruise missile to penetrate defenses than in the ability of ECM to defend the B–1. While SRAMs can be used to strike defended targets, the ability of a SRAM to destroy a target depends on the bomber's penetration capabilities; the bomber must penetrate to the neighborhood of the target before launching its SRAM. The radar cross section of the B–1 itself is much larger than that of the cruise missile.

6d. Criticisms of the cruise missile program: "It would be more difficult and more expensive for the USSR to defend against the B–1 than the cruise missile."

DoD Response: Defense against either the B–1 or the cruise missile would be difficult and expensive. However, we believe that defense against the cruise missile would present the greater difficulty. This is primarily because current Soviet defenses are designed against bombers. It would, thus, be easier for

the defense to react to new bomber developments.

Defense against low altitude, low radar cross-section cruise missiles requires an almost complete change in defense philosophy. The defenses would have to be oriented to attack cruise missile carriers very far (over 1,000 n.m.)" from Soviet frontiers. Moreover, local area and point of defenses at the targets would have to be very dense to engage cruise missiles which were launched despite the forward defenses. Such a defense combination would require far more equipment than is now deployed, the equipment would have to be much more effective, and personnel requirements, both qualitative and quantitative, would be severe.

Rebuttal: Defense against cruise missile carriers do not need to be effective "over 1,000 n.m." from Soviet frontiers to be effective under proposed SALT constraints because most important Soviet targets are located well inland. Moreover, DoD has testified that if cruise missile carriers were to be denied overflight rights over Scandinavian territory, a very substantial fraction of Soviet targets could not be engaged by cruise missiles. Recent information concerning the deployment of the SA–10 indicates that the Soviet Union intends to increase the effectiveness of its terminal air defenses, a development which makes the absence of ECM on cruise missiles a more significant shortcoming, and makes a manned penetrator more important as a delivery system than would have been the case in the absence of the deployment of an advanced air defense system. The vast increase in the number of mobile air defenses such as the SA–6 complicates cruise missile penetration but does not alter manned bomber penetration probabilities.

Sur-Rebuttal: It would be very difficult for the Soviets to defend against cruise missile carriers at long distances from the Soviet Union because of the vast resource requirements. We believe that most cruise missiles would be launched from their carriers and that the Soviets would have to defend against them in flight. We do not project sufficient deployments of cruise missile defenses to provide coverage of a large portion of the target base. In any event, a sizeable deployment of such defenses would complicate both bomber and cruise missile penetration. Moreover, such large deployments, while imaginable, would be very costly for the Soviets. Large scale deployment of existing defense systems could be highly effective against bombers but would not have significant capabilities against cruise missiles. Defending against cruise missiles would, in essence, require the fielding of large amounts of new equipment. Thus, defense against the cruise missile would be more costly to the Soviets than defense against the B–1.

6e. Criticisms of the cruise missile program: "The ability to destroy the cruise missile is within state-of-the-art for Soviet air defenses."

DoD Response: There are no operationally deployed defensive systems that pose a serious threat to the cruise missile. Most would have no capability to engage an in-flight cruise missile. Any current system which might be able to engage would be able to do so only under the most favorable conditions and kill probability would be so low that a true defense would not be possible.

Rebuttal: Studies conducted by the Defense Science Board indicate that the technology which threatens the cruise missile has been available to the Soviets since 1970. Much of that technology is embodied in the new Soviet SAM, the SA–10 now being deployed. The U.S. cruise missile is several years away from its Initial Operating Capability. It is not correct to state that "there are no operationally deployed defensive systems that pose a serious threat to the cruise missile." Even if the SA–10 were not currently deployed, the significant issue would be to what extent a threat could be posed by Soviet air defense systems by the time the cruise missile became a significant component of our strategic force.

Sur-Rebuttal: Although the basic technology is available, the ability to incorporate this technology into an effective operational system is highly questionable.

Even if new defenses incorporated all the needed technology, the numerical requirements for coverage of strategic targets in the USSR would exceed even the most extreme forecasts for the foreseeable future. Defensive deployments on this large a scale would make both bomber and cruise missile penetration more difficult; to argue that such deployments are likely is not an argument in favor of the B–1. Moreover, we have high confidence that cruise missile technology will advance at least as fast as Soviet air defense technology.

7. The cost of the cruise missile carrier will be $93 million each with a total program cost of $16.5 billion for 114 aircraft.

DoD Response: These figures come from past examinations of a wide-body cruise missile carrier and still appear to be valid for comparison with $22.1B of procurement costs for an equally effective force of 240 B–1s ($20.6B for aircraft and $1.5B for SRAM). Our current plans are to use some of the B–52s as cruise missile carriers. We consider the wide body carrier to be an option for rapidly expanding our planned force capabilities, if we should see the need to do so in the future. The number of wide body carriers that might be needed in addition to our planned B–52/FB–111 force would be determined by the events that dictate the need for expanding strategic capabilities.

Rebuttal: The response neglects to note that a B–1 can, with minor modifications be equipped to carry up to 50 cruise missiles both internally and externally, and can be employed as an advanced penetrator as well. A wide-bodied aircraft cannot perform as a penetrator nor can it carry SRAM missiles. The B–52/FB–111 are inferior to the B–1 as penetrators, and cannot carry as large a cruise missile payload.

Sur-Rebuttal: The B–1 was developed as an advanced penetrating bomber and would be an inefficient cruise missile carrier. A cruise missile carrier version of the B–1 would require extensive tanker support when loaded with 50 cruise missiles because of the heavy payload weight and the large amount of drag of the externally carried cruise missiles.

8. "The President has violated PL 93–344 by not releasing B–1 funds to the prime contractor."

DoD Response: The President has released B–1 funds which were apportioned to the Department of Defense and made available to the Air Force for B–1 production. The Air Force has obligated $5.7 million of such funds to date. Until the contractors have submitted cost and pricing data, it would be imprudent to obligate funds at a substantially higher rate.

In addition, proceeding without a definite contract at this time would be undesirable because there is about a $200 million difference between the contractor's estimate and the Government's estimate of the cost to complete two aircraft, and considerable uncertainty as to the exact configuration of the aircraft to be manufactured. In early March, we expect to receive from all three prime contractors fixed price proposals including cost and pricing data from subcontrators and vendors, information which is not currently available. Until that time we believe it would be imprudent to obligate funds at a greater rate than is now being obligated.

Rebuttal: Under the terms of the Budget Impoundment and Control Act, when the Congress did not take action to support the President's request to rescind funds for Aircraft 5 and 6, the Administration was required to obligate the funds in violation of the intent of Congress when it passed the 1974 Act. The Administration is obligated to execute the FY 77 program as approved by the Congress.

Sur-Rebuttal: There is no requirement in the Impoundment Control Act of 1974 to obligate funds without regard to sound financial practices. The B–1 funds have been released to the Air Force and those funds are, in accordance with the Act, available for obligation. Those funds are being obligated by the Air Force to the extent it is reasonable and prudent to do so. Until cost and pricing data are received from the prime contractors and the configuration of the aircraft is established it would be inconsistent with sound procurement practices and the financial responsibilities of Defense officials to obligate funds at a substantially higher rate.

9. "Top Air Force officials have acknowledged the Congressional Committees that if the B–52 is used to carry our cruise missile, a significant degradation in Americas' nuclear retaliatory capability will result."

DoD Response: The President's decision to deploy cruise missiles on B–52s as the best way to modernize our bomber force for the 1980s was based on the conclusion that this was the most cost-effective option. The high penetration ability of ALCMs, the fact that B–52s can carry more long-range ALCMs than gravity weapons and the fact that the costs to convert a B–52 to a stand-off bomber are not great all entered into this assessment. Arming the B–52s with cruise missiles will enhance America's nuclear retaliatory capability substantially.

Rebuttal: At present the B–52 force operating as a penetrating bomber carries more than fifty percent of the strategic force megatonnage. By diverting a substantial fraction of the B–52 force to the cruise missile carrier role, a sharp reduction in megatonnage will result. The lower probability of penetration of a cruise missile (compared to a SRAM) will raise the cost per weapon delivered substantially.

Sur-Rebuttal: A reduction will occur in total bomber force megatonnage, on the order of about 20%, by converting some B–52s to cruise missile carriers. However, megatonnage alone is not the sole measure of the ability to destroy targets. Equivalent megatonnage (a measure of capability against area targets) will increase by about 15%, while warheads (a measure of the ability to attack point targets) will increase by about 85%. In addition, our analyses have shown that overall bomber force effectiveness will increase by about 40% by using a portion of the B–52s as cruise missile carriers.

10. "If we equip the B–52 with cruise missiles with a 1500 nm limitation under SALT, a very large portion of the most important targets within the Soviet Union will be out of reach."

DoD Response: That is incorrect. ALCMs with a system operational range of 2500 km, when launched from outside current Soviet peripheral defenses, could cover nearly all Soviet targets. The remaining targets could be covered with ICBMs, SLBMs, and penetrating B–52s.

Rebuttal: The deployment of "cold launched" ICBMs which are reloadable are a potentially important target for the highly accurate cruise missile. Although the cruise missile could not be employed as a first strike weapon, it could be employed to attack a silo to prevent it from being reloaded once a missile has been launched. The location of Soviet ICBM complexes on the "ICBM belt" in the Central Asian, Transbaikal, Turkestan, and Far Eastern Military districts along the Trans-Siberian railway puts them out of

range of cruise missiles under proposed SALT constraints, especially if circumstances require greater than a 300 n.m. standoff.

Sur-Rebuttal: Most Soviet ICBM complexes on the "ICBM belt" in the Central Asian, Transbaikal, Turkestan, and Far Eastern Military Districts along the Trans-Siberian railway could be attacked with cruise missiles if all directions of possible attack are considered. Moreover, these targets could be struck with ICBM/SLBM warheads and later by penetrating bomber weapons if desired.

11. "The Secretary of Defense does not even know which aircraft would make the best cruise missile carrier."

DoD Response: We are currently planning to deploy cruise missiles on B–52s since B–52s are clearly the first choice for carrying cruise missiles. Since we are unsure of the final outcome of current SALT negotiations, we must preserve the option for expansion of our planned strategic retaliatory capability. Deploying cruise missiles on other aircraft provides the only option for substantially increasing our capability before 1985. For this reason, and as a hedge against possible growth in future targeting requirements, we are considering several commercial and military aircraft as candidates for cruise missile carriers. If expanded warhead carrying capacity should be needed, it could come from new wide-body CMCs.

Rebuttal: Future requirements for strategic cruise missile carriers are ill-defined by DoD because of the uncertainties in SALT, the Soviet air defense threat, and the evolving targeting policy of the Administration. The protracted lead-times for new delivery systems makes the uncertainty within DoD about a future cruise missile carrier risky.

Sur-Rebuttal: We will continue to review our options in light of SALT and other developments. We currently plan to deploy cruise missiles on part of the existing B–52 fleet. Some variant of existing commercial or military aircraft seems to be a good approach for rapid expansion of our air breathing force capabilities, if such expansion should become necessary.

QUESTIONS OF FACT

1. "If aircraft 5 and 6 are not funded, what would it cost to reopen the production line? Compare this to reopening the production line if 5 and 6 are funded."

DoD Response: The decision not to delay the B–1 weapon system came before an actual production line was established. About $390 million of the FY 1977 B–1 procurement funds were to be expended for B–1 production tooling and an additional $710 million would have been expended over the entire program to achieve an interim production rate of two aircraft per month and then progress to four aircraft per month. Only $165 million of the FY 1977 funds was actually expended or committed on tooling prior to the decision not to deploy the B–1. Since the Congress did not appropriate funds for a FY 1978 B–1 buy, no further expenditures for tooling are planned. The remainder of the funding would be required to produce aircraft 5 and 6.

Thus, since no production line exists, the cost to establish such a production line would be the same whether or not aircraft 5 and 6 are funded. The only difference would be the cost to rehire personnel if aircraft 5 and 6 are not built now.

Rebuttal: The DoO response overlooks the circumstances which could arise when rapid deployment of the B–1 might be required. If Aircraft 5 and 6 are not produced, long and costly delays will be imposed while preproduction R&D is completed. The costs of starting production if 5 and 6 are not built promptly will be significantly higher than if they are produced.

Sur-Rebuttal: Rapid deployment of the B–1 is not a real possibility whether aircraft 5 and 6 are built now or not. From the time of production start to the initial operational capability date would require about seven years under the best circumstances. While building aircraft 5 and 6 would provide a 6 to 10 month advantage in achieving the initial operational capability should production be restarted in late 1979, this advantage dissipates when the aircraft are completed and personnel leave the program.

2. "Are aircraft 5 and 6 true production models to be constructed on a production assembly line or are they 'handmade' as with the other R&D aircraft?"

DoD Response: As stated in the response to Question 1, aircraft 5 nd 6 were to be built on production tooling, building up to assembly line and production rate techniques. If the Air Forces were now required to build aircraft 5 and 6, they would be built using the same methods and development tooling as aircraft 4. The development tooling allows a lower capital investment but is more labor intensive, thus the term "Handmade."

The aircraft that are produced will, however, be true production models.

No rebuttal presented in the Record.

3. What is the estimated cost to the Soviet Union to defend against the cruise missile? What would it require the U.S.S.R. to deploy, over what time period, and with what success? Would the second generation cruise missile overcome these anticipated Soviet defenses?

DOD. response: It is not possible to provide a precise cost of a Soviet cruise missile defense. Our analyses indicate that such an effort would be as great or greater than the effort which went into the development and deployment of the present Soviet air defense network. A cruise missile defense would require:

Major new research and development programs in a number of different fields including look-down radars, interceptor aircraft, air-to-air missiles, and advanced surface-to-air missile systems.

Very large deployment of the new systems.

We believe that the minimum deployment requirements for defense against cruise missiles would include:

Hundreds of air warning and control (AWACS) aircraft with capabilities at least comparable to the U.S. E–3A,

Several thousand interceptors with look-down/shoot-down capabilities at least as good as the U.S. F–14 or F–15, and

For a bare minimum, many hundreds of surface-to-air missile battalions capable of detecting and engaging reliably very low altitude, low radar cross-section targets.

No such system is deployed today, but new systems might possess these capabilities.

It is not believed that the U.S.S.R. could field such defenses within the next decade. Further, it appears that relatively small improvements in the current cruise missiles, such as those being proposed for the second generation of cruise missiles, could offset the improved Soviet defenses to a large degree.

Rebuttal: The response overstates the required Soviet response. Due to the small number of cruise missile carriers feasible within SALT constraints, the launch platforms will be vulnerable to modest improvements in the Soviet long range air defense capability that is certainly within the state-of-the-art. The complacent notion that "it is not believed that the U.S.S.R. could field such defenses within the next decade" has been the type of bromide which has resulted in a much larger than anticipated Soviet strategic threat. The Soviet-American military balance no longer has a substantial margin for error.

Sur-Rebuttal: Although the basic technology is probably available, intelligence analyses do not project that it is within the Soviet state of the art to incorporate this technology into operational systems of the type needed to defend against cruise missiles for the next decade. We do not, for example, project the Soviets deploying an AWACS comparable to ours, in this period. Our forecasts of Soviet defensive capabilities, including technology, have historically been highly accurate.

4. Please compare the radar cross section of the B–1 with the cruise missile in technical and practical terms.

DoD Response: If there were no other factors, a radar could detect the B–1 at 5 to 10 times the range that it would detect the cruise missile. However, at low altitudes a radar's line of sight is very limited. At short ranges, a large difference in radar cross section is not a factor. Instead, the primary consideration is that the cruise missile is small enough that radar return from ground objects obscures the cruise missile. While there are radar solutions to the problem, present radars (enemy as well as domestic) have been designed for aircraft detection and the very low cruise missile RCS will probably require a new generation of radars to provide a satisfactory detection capability.

Rebuttal: The DoD response failed to address the influence of ECM in offsetting differences in radar cross section. With ECM and high speed penetration, the effective RCS of the B–1 is less than the first generation cruise missiles. Moreover, the employment of SRAMs on the B–1 to assist penetration with a RCS of one-fiftieth of a cruise missile obscures the B–1 RCS issue.

Sur-Rebuttal: The ECM factor was not addressed in the basic question nor in the DoD response. The fact that the radar cross section of cruise missiles will require a new generation of radars to properly detect and track them in a low altitude environment remains unaltered. ECM on the other hand, could increase the probability that the B–1 would be detected.

5. Is the B–52 a capable cruise missile carrier? How many cruise missiles can it carry? Please compare it in cost effective terms to the B–1 cruise missile carrier and the wide bodied jet cruise missile carrier.

DoD Response: There are many existing aircraft that could be adapted for cruise missile carriage and could function effectively in a standoff role. The B–52 has an advantage for early cruise missile deployment in that it is in our inventory and requires relatively modest investment for modification compared to the acquisition cost of a new airframe. Additionally, the B–52 is configured with defensive avionics should they be required during a standoff mission.

Each designated B–52 cruise missile carrier will be modified to accommodate up to 20 cruise missiles. On an equally effective basis, the 20-year system cost (in present value dollars) for a force of fully loaded B–52 CMCs is about 20 percent less than a redesigned B–1 CMC force and about 35 percent more than a typical wide-body CMC force. The wide-body CMC is cheaper because it carries so many cruise missiles per aircraft (about 60). However, the wide-body CMC carries the risk of "too many eggs" in a basket. This risk would be considerably less worrisome if the wide-body CMC were deployed along with, say, 200 B–52s carrying cruise missiles. For this reason deployment of cruise missiles on B–52s is the first step we are taking. Deployment of cruise missiles on B–52s minimizes near-term costs, maintains penetrating bomber options, and provides a capability to penetrate possible Soviet long range defenses.

Rebuttal: The cost analysis of the B–52 versus alternative new cruise missile carrier systems commits a frequently repeated error of government accountants, namely to compare the B–52 based on 20 year-old historic costs with a new system at current costs. By failing to compare systems on their replacement value, it overstates the cost advantage

of existing, but costly to replace systems. By the mid-1980s, there will be insufficient B–52s available to perform the manned penetrator and cruise missile carrier missions. A new aircraft will be needed to perform some of these tasks; the DoD response does not provide sufficient information to arrive at an answer to the question posed.

Sur-Rebuttal: The DoD cost estimate for the B–52s included current cost estimates for modifying the B–52s as cruise missile carriers and did not include the cost for a new aircraft. If additional capability is needed later, the wide-body cruise missile carrier offers the best option. In evaluating this option, the cost of new aircraft was included.

6. "What dollar sum has been released to Rockwell International for the B–1 program (A/C 5–7) and what sums are expected to be released for the next several months? What are these funds dedicated to?"

DoD Response: Through November 1977, the Air Force has obligated $655.8 million of FY 1976/Transition Quarter/FY 1977 production funds to Rockwell International, the Boeing Company, and General Electric. These funds were to be used for production of aircraft 5–7, purchase of production tooling, and purchase of long lead items for the FY 1978 production aircraft. Funds are currently being expended for transition back into a production program for aircraft 5 and 6, as well as for termination of aircraft 7, long lead items for the FY 1978 buy, and unnecessary production tooling.

In December 1977, the Air Force released $2.0 million to continue the transition effort as well as begin preparation of definitive contractor proposals to restart Aircraft 5 and 6. These proposals will include detailed pricing information from contractors, subcontractors and vendors.

For the month of January 1978, the Air Force released $3.5 million for the contractors to continue preparation of proposals for production of aircraft 5 and 6 and for the planning necessary to restart production.

No rebuttal presented in the Record.

7. How many jobs are contingent on funding A/C 5 and 6?

DoD Response: At the manpower peak approximately 11,900 jobs would be involved in completing A/C 5 and 6. This total includes 4,300 jobs at the prime contractors and about 7,100 at the suppliers and interdivisional work transfers.

No rebuttal presented in the Record.

8. Please explain why there are three aircraft involved in the rescission (A/C 5–7) but only two are being discussed for construction.

DoD Response: Prior to the President's decision to cancel B–1 production, the Air Force was procuring materials and tooling for the first production lot (aircraft 5, 6, and 7) and long lead materials for the second production lot (aircraft 8, 9, 10, 11, and 12). As a result of the termination action and subsequent interruption in the program as well as the requirement to build the aircraft on development tooling, only two aircraft could be manufactured now within the $1,160 million appropriated for B–1 production. The estimated $1,160 million cost to build aircraft 5 and 6 includes termination charges for aircraft 7, tooling, and long lead materials.

No rebuttal presented in the Record.

9. Given the same mission, does the B–52 have to release its cruise missiles earlier than the B–1? Is there any significant variance in the range or loiter capability of the B–1 and B–52 (cruise missile carrier versions)?

DoD Response: Against current Soviet defenses, the release points would be approximately the same for the B–52 and the B–1 aircraft. The location of launch points might change in the future, depending on Soviet reaction to cruise missile deployment. But, this would probably not change the relative launch positions of the B–1 and B–52.

The following table compares the total unrefueled mission time for the cruise missile version of the B–1 (with one weapon's bay fuel tank) and the B–52 cruise missile carrier. Some of the difference in endurance can be attributed to aircraft design. The B–52 was originally designed for high altitude missions whereas the B–1 was optimized for low altitude. With aerial refueling, the airborne time for either bomber is limited only by the crew endurance or aircraft systems failure.

[In hours]

Cruise missile carrier	Endurance with cruise missile load	
	Internal only	Internal and external
B–1	14.7	9.3
B–52	16.0	9.5

Rebuttal: The DoD response neglects the fact that the cruise missile will not be deployed "against current Soviet defenses" but will have to survive in an environment where Soviet defenses react to the U.S. shift in emphasis on cruise missiles. As a cruise missile carrier or penetrator, the B–1 is more survivable against current or future defenses than the B–52. As a consequence, the B–1 will have a capability of releasing its cruise missiles closer to the Soviet coastline than would be the case with the B–52.

Sur-Rebuttal: As discussed in previous remarks, it is highly unlikely that the Soviets could deploy sufficient high technology defenses at long ranges to be effective against cruise missile carriers. As a hedge against this unlikely threat, we have advanced developments on cruise missiles underway and would not agree in SALT to cruise missile range limitations that threaten the effectiveness of this force. The costs for all modifications to the B–52s (cruise missiles and improved avionics) is considerably less than the cost of adding B–1s to the force—and we have more confidence in the cruise missile addition than we would have in the B–1 addition.

10. Please break down what the $442 million in FY 78 R&D funds for the B–1 are being spent on.

DoD response: The chart below shows the allocation of the B–1 fiscal year 1978 RDT&E funds. During FY 78 aircraft 4 will be structurally completed, the completed defensive avionics system will be installed and checkout of the integrated system will begin. Flight tests of the first three development aircraft will continue to provide data over the full operating envelope. Weapons testing will continue. Ground structural fatigue testing will be completed and an extensive teardown inspection and analysis will be conducted. The continued engine development program which provides improvements in reliability, maintainability, and life cycle costs as well as flight test support will continue.

Fiscal year 1978 R.D.T. & E. appropriation

[In millions]

System	$223.0
Engine	71.4
Avionics	63.3
Flight test extension	50.0
Other Government costs	35.7
Total	443.4

System: Tasks currently on contract with Rockwell International includes production of A/C 4, flight test of A/C 1&2, and structural fatigue testing.

Engine: Tasks currently on contract with General Electric. Includes production of engines for A/C 4, flight test support for A/C 1&2, engine reliability, maintainability, and life cycle cost improvements.

Avionics: Tasks currently on contract with Boeing and AIL. Includes defensive avionics development, support of A/C 4 production and support of flight test.

Flight Test Extension: Support of A/C 3 and 4 fight test. This work is not yet on contract.

Other Government Costs: Funds for Air Force and other government agencies that support the B–1, engineering change orders, and program margin.

No rebuttal presented in the Record.

11. Even if aircraft 5 and 6 are completed, which major R&D testing or evaluation steps remain to be accomplished before the B–1 could go into full-scale production? Please include defensive and offensive avionics in your answer.

DOD Response: The B–1 program was structured to complete a comprehensive test program prior to a production decision being made in late 1976. When production readiness was reviewed at the Defense Systems Acquisition Review Council, the principals agreed that the B–1 had successfully met the stringent criteria for proceeding into a full-scale production program with the airframe, engines and offensive avionics systems.

In order to provide the most responsive defensive avionics to the postulated threat, the start of the defensive system development was delayed. It will be flown for the first time on aircraft 4 in early 1979. The Air Force would have been able to make a defensive avionics production decision after six months of flight testing.

None of the testing to establish B–1 production readiness was dependent on aircraft 5 and 6.

No rebuttal presented in the Record.

12. Could aircraft 1–4 be used for electromagnetic hardening tests? Can such tests be simulated with high confidence?

DoD Response: Hardness testing is an integral part of the qualification of all the hardware used on the B–1. The individual testing of components does not, however, answer the question of total weapon system reaction to electromagnetic pulse (EMP) phenomena. For this reason a full-scale system level test was planned on a production aircraft at the Trestle Facility at Kirtland AFB, New Mexico. It is possible to use one of the development aircraft for this test. Aircraft 1, 2 & 3 are not considered to be similar enough to the production aircraft to provide adequate data for this system level test. Although some configuration differences would have to be analyzed in detail, aircraft 4 is considered the best candidate for the test. Although not a complete production aircraft, EMP test of aircraft 4 would be beneficial in evaluating the different design approaches incorporated to achieve system level hardware and to further our knowledge of complex EMP analysis. There is no analytical equivalent to the system level test planned for the Trestle Facility; however, we are confident of the hardness design and would expect any test to verify that the B–1 is designed hard.

No rebuttal presented in the Record.

13. If the B–1 is redesigned as a cruise missile carrier or dual role cruise missile carrier and penetrator, what impact would this have on the planned tests for aircraft 5 and 6?

DoD Response: Since design and mission differences exist between a B–1 cruise missile carrier, a dual role cruise missile carrier/penetrator and the current B–1 bomber, se-

lection of one of the cruise missile carriers would change the flight testing on A/C–5 and 6.

The basic flight test objectives for the three options are essentially the same since the basic aerodynamics and systems responses of the aircraft would not be changed. The emphasis and the test data requirements would change, particularly in weapons separation accuracy. No preliminary flight testing was accomplished on A/C 1, 2 or 3 on weapon separations from external carriage and these tests would have to be done on aircraft 5 or 6. In the case of the non-penetrating "cruise missile carrier," this testing would replace tasks planned for low level/high speed weapon separation and accuracy testing. In the case of the duel-role B–1 this effort would be totally additive.

Flutter, EMP system level testing and offensive avionics evaluations would be essentially the same as planned for A/C 5 and 6, if they are built, although expanded somewhat for external carriage considerations. The planned flutter testing would have to be examined for either configuration to determine if changes exist in the basic A/C stiffness and mass distribution. Testing required by these changes would be dependent on definitive analyses of the final design. The net result would be a program of approximately the same number of flight test hours (±20 percent) for a nonpenetrating "cruise missile carrier" as compared to the program we would pursue on A/C 5 and 6. In the case of the "dual-role" B–1 the planned flight test hours would increase by approximately 50 percent. The present R&D budget does not include funds for A/C 5 and 6 flight testing, instrumentation or spares. These tasks would increase funding requirements by approximately $280 million.

In addition to flight test, ground testing would also be required for a redesigned aircraft. This testing would include wind tunnel tests for aerodynamics and acoustics, and static and fatigue structural testing.

No rebuttal presented in the Record.

14. Please supply a detailed analysis, if available, of the Rockwell International study on the cost effectiveness of the B–1 as a cruise missile carrier compared to the FB–111H, with bodied jet cruise missile carrier, and B–52.

DOD Response: Information obtained from Rockwell International discussed the nuclear hardness of the B–1 and the proposed design modifications to make the B–1 serve as a standoff cruise missile carrier. Our evaluation of costs for a B–1 cruise missile carrier showed that, for equal effectiveness, the 20-year system cost (in FY 1978 dollars) was about 60 percent higher than for a wide-bodied cruise missile carrier and about 20 percent higher than for a B–52 cruise missile carrier. The same comparison in terms of present value dollars shows the B–1 cruise missile carrier to be about 70 percent higher than the wide body carrier and about 30 percent higher than the B–52 carrier.

While the B–1 prelaunch survivability was the best of all cruise missile carrier alternatives examined, neither the B–52 nor the wide bodied cruise missile carrier suffered significant losses. Although no detailed examination of the FB–111 H as a cruise missile carrier has been made, its prelaunch survivability would be similar to that of the B–1.

Rebuttal: The accuracy of the DOD response cannot be determined from the information provided in their statement because assumptions made by DOD analysis are not explicated.

No surrejoinder required.

15. How long would it take and what would be the cost of converting the B–1 into a cruise missile carrier?

DoD Response: If directed to complete only A/C 5 as a cruise missile carrier prototype, a program could be structured that would deliver one prototype aircraft in late 1980 for approximately $960M of the available $1160M of B–1 production funds. In the RDT&E program, approximately $300M additional would be required for flight test and an additional $100M to "productionize" the aircraft and qualify the design through ground tests if a production decision were made.

Rebuttal: The DoD response misstates the costs of converting the B–1 to a cruise missile carrier. The modifications required are trivial; an internal bulkhead needs to be moved to accommodate the internal stowage of cruise missiles—a change which can be made without structural change, the addition of hard points for the external carriage of cruise missiles, and modifications to the bombing and navigation electronics to accommodate the additional cruise missiles. The $300 million would be required for the flight test program of any new aircraft, and is not unique to a cruise missile carrying version of the B–1. This is also true for the $100 million to "productionize" the aircraft.

Sur-Rebuttal: While the modifications required to convert the B–1 to a cruise missile carrier may seem trivial in terms of the effort involved in designing the complete B–1 aircraft, a significant amount of engineering design, test, and analysis must still be completed. The bulkhead change moves a structural member of the aircraft, requiring detailed stress analysis. The addition of missiles external to the aircraft must be carefully investigated, requiring analysis of wind tunnel aerodynamic data, new computations of drag and performance characteristics, and airload analysis and structural testing. The interactions of the new air flow patterns and the engine inlet air flows must be ascertained.

All of the performance, airloads, and aerodynamic analysis must be verified by flight test. In addition, missile release characteristics from all aircraft stations must be established.

No attempt was made in the DoD response to compare the cost to convert a B–1 into a cruise missile carrier with another aircraft; rather the response answered the question "How long would it take and what is the cost of converting the B–1 into a cruise missile carrier?"

16. As now designed, is the B–1 a cost effective cruise missile carrier?

DoD Response: The present B–1 offers levels of designed-in nuclear hardness not yet available in existing aircraft. However, even considerable redesign of the B–1 for a standoff role does not make it competitive because of the additional development costs involved and the high start-up and production costs of this airframe relative to modification costs for B–52s or wide-body carriers. The costs for equally effective pure forces of three cruise missile carrier aircraft are shown in the following table.

20-year program costs

[Dollars in billions]

Cruise missile carrier	Fiscal year 1978	Present value*
B–1	$17.7	$9.4
B–52	14.8	7.3
Wide body	10.9	5.4

*Discounted at a rate of 10 percent per year.

Rebuttal: DoD overstates the cost of cruise missile conversion for the B–1. The structural modifications are modest. Moreover, the comparison understates the cost of the B–52 by undervaluing the aircraft through the use of historic cost rather than replacement cost. The inability of the wide-bodied cruise missile carrier to be employed in a penetrating role makes it a single purpose airframe, therefore implicitly more expensive in terms of defense resources than the multi-purpose B–1 or B–52. The costs asserted by DoD in their response do not consider the B–1 in its cruise missile carrier configuation. In its full scale all-cruise missile configuration, the 20 year life cycle cost in FY 78 dollars is not $17.7 as DoD asserts, but $12 billion. DoD failed to note that the B–1 can be equipped to carry as many as 50 cruise missiles; its comparison only considered internal stowage of cruise missiles.

Sur-Rebuttal: The major difference between the $17.7 billion and the $12 billion is that the first figure assumes 30 cruise missiles on the B–1 and the second figure assumes 50. In view of the design of the B–1 for penetration, it is highly doubtful that it could carry 50 cruise missiles in an efficient manner. In particular, the tanker needs would be extremely large and the heavy load and drag would severely reduce its advanced performance characteristics.

In the case of the B–52, the rebuttal indicates that we understated the cost of the B–52 through the use of historic rather than replacement cost. In fact, the DoD estimate includes modification of B–52s as cruise missile carriers and did not include any cost for new aircraft. Since there was no intention of buying new aircraft, the argument over historic versus replacement cost is not relevant.

17. For how long do you have confidence that the B–52 can perform the penetrating mission?

DoD Response: Current Soviet air defenses are estimated to be poor agaist low altitude B–52s. However, on-going Soviet air defense improvement programs will probably cause the effectiveness of the penetrating bomber force to decline unless the force is modernized. It should be noted that no known Soviet air defense program has the potential of totally defeating U.S. bombers.

The planned program that modernizes the force with cruise missiles will compound the Soviet's defense problem. In the face of different types of penetrating vehicles (a mix of cruise missiles and bombers) that may demand a combination of defensive responses (instead of a single defense initiative against a pure force of cruse missiles or bombers), the penetrating bomber component should retain present levels of survival through the 1980s and into the 1990s.

Rebuttal: Inasmuch as more than half of America's force megatonnage is in the penetrating bomber force, the continuing effectiveness of the B–52 is of major importance to our ability to deter war. It is not sufficient to assert that "no known Soviet air defense program has the potential of totally defeating U.S. bombers." The ability of Soviet forces to exact substantial attrition from the bomber force will be sufficient to leave important targets "uncovered" thereby weakening deterrence. Considerable testimony has been given to the Defense subcommittee concerning the approaching vulnerability of the B–52. The assertion that the "penetrating bomber component should retain present levels of survival" through the 1980s and into the 1990s contradicts more than five years of DoD testimony.

Sur-Rebuttal: The complementary aspects of modernizing the force with cruise missiles will, over the coming years, maintain the viability of the penetrating bomber force at levels reasonably close to that of the current force.

18. According to the preface of *Janes All the Worlds Aircraft*, the U.S. B–1 decision will create an imbalance of military power between the U.S. and USSR and 1977 (the year of the B–1 decision) "might be recorded as the year in which the seeds of defeat of

the Western powers were sown". Please comment on the accuracy of this assessment.

DoD Response: Since we do not have the benefit of any analysis the author may have done, we cannot comment as to the specifics that might support his editorial remark. However, as stated in some of the preceding responses, we are confident that the cruise missile approach to bomber force modernization is the best one. The B–1 would undeniably give the U.S. a robust strategic penetrating bomber force; but, the B–52/cruise missile combination will confront the Soviets with a formidable threat—a force that gives us higher confidence than the B–1 and that costs less. Furthermore, with our lead in cruise missile technology, we will retain our perceived parity with the Soviets in the long term. And, if the Soviets should decide to abrogate SALT agreements, or if we should decide to expand our forces, the cruise missile offers the best option for rapidly increasing our force capability.

Rebuttal: DoD studies have shown that the most militarily effective force consists of a mixed force of cruise missiles, penetrating bombers with gravity bombs as well as short range attack missiles. It is this force which forces the Soviets to divert the greatest amount of their defense resources away from the strategic attack forces which directly threaten American territory and compels them to invest in anti-aircraft defenses which do not threaten U.S. territory. By cutting off all other production options (as would be the case if 5 and 6 are not procured), cruise missiles will be our only option to increase our strategic capability should the Soviets elect to abrogate an arms control agreement. The lack of alternatives which can be readily exploited by the U.S. in the event that the current "fair" diplomatic weather turns foul will contribute to a perception of declining military potential to the United States in an environment when the momentum of Soviet programs is undisturbed.

Sur-Rebuttal: We have confidence that our B–52 fleet, when used in conjunction with cruise missiles, will be able to penetrate Soviet defenses through the 1980s. To hedge against longer-run needs, we are working on further developments for the cruise missile. Whether or not aircraft 5 and 6 are built, cruise missiles provide the quickest way of increasing our strategic capability; moreover, we plan to complete R&D on the B–1. Maintaining an option, for a year or so, to produce the B–1 very quickly is simply not worth 742 million dollars, i.e., $462 million to build and $280 million to test.

19. Is the Administration going to request any funding for the FB–111H in FY 1979?

DoD Response: We do not contemplate a request for the FB–111H in the FY 1979 budget.

Rebuttal: Although no funds are provided in the FY 79 budget, the FB–111H was authorized in the FY 78 supplemental authorization bill. The Administration may propose a supplemental appropriation at any time through September 30, 1978 to fund the FB–111H program. Strong Administration support for the FB–111H in the FY 78 supplemental authorization/appropriation debate makes one skeptical that the FB–111H program has been forever abandoned by the Administration.

No surrejoinder is required.

20. Please describe the study on the penetrating bomber mission which the press has indicated Dr. Perry may be contemplating. Since this request was stricken from the Conference report on the Defense Supplemental, why now is it being considered again? In what ways would this study be different from the Strategic Bomber Studies under Presidents Ford and Carter?

DoD Response: A strategic bomber study is planned which will be completed in approximately six months. The objective of this study is to conduct a comprehensive review of strategic penetrating bomber alternatives which might provide a viable bomber force beyond 1985. The purpose is to assist the Secretary of Defense in selecting alternatives for maintaining a production option for a strategic penetrating bomber. It will focus on the B–1, B–52 and FB–111H.

B–1 production has been terminated but the R&D program is being continued to provide the option to add the B–1 to our forces if totally unexpected events should so require. Further examination is required to determine whether this or some other option is most cost effective for the future.

This study differs from previous studies in that they focused on strategic bomber program alternatives while this study will focus on strategic bomber production options. These objectives are different in that the most desirable program alternative might not be the most desirable option or hedge position.

No rebuttal presented in the Record.

THE PANAMA CANAL TREATIES: FURTHER MODIFICATION IS ESSENTIAL

Mr. DOLE. Mr. President, the Senate Foreign Relations Committee completed markup on the proposed Panama Canal treaties yesterday. Their recommendation of an amendment to the neutrality treaty concerning American defense and passage rights through the canal signaled a major shift on the part of both the committee and the State Department, regarding modification of the treaties.

The amendment recommended by the committee is, of course, virtually identical to my proposal of last October that the text of the "Carter-Torrijos understanding" be incorporated directly into the treaty itself—not as an "understanding," not as a "protocol" or "annex," but as an integral feature of the document we are asked to ratify.

When the Senator from Kansas introduced the same amendments on October 17, there were some who said it was an obstructionist tactic. Others said that an understanding might be needed to clarify U.S. defense and passage rights, but that a treaty amendment was neither practical nor necessary. Still others—including the State Department—said that the treaties would stand on their own merits and no further alterations were desirable or necessary. I am happy to say that after 4 months of work by this Senator, as well as others, we appear to have got our point across.

MORE TO BE DONE

But let me emphasize that this initial improvement does not eliminate some of the most troublesome aspects of the proposed treaties. While progress has been made in protecting America's vital interests, the threshold of acceptability has not yet been crossed, in this Senator's view. There is more that can and must be accomplished if the Panama Canal treaties are to guarantee that future generations do not have to grapple with problems created by these treaties. My position is not one of obstinacy, but of commitment to the principle that we should not create problems for the long run, by glossing over our misgivings in the short run.

The Senate must still confront the very important issues of the duration of the transition period, our rights to a base agreement in Panama after the year 2000, and whether we are to close our options to construct a new canal outside Panama if we so choose. These and other matters will be thoroughly discussed, I am sure, during the forthcoming Senate debate on these treaties.

Finally, I think it is important to note that the Senate's primary responsibility in the ratification process is to determine whether these treaties are in the Nation's best interests—not whether or not our actions might lead to further negotiations or referendums in Panama. There has developed among some Members a "preoccupation with the plebiscite problem," to the extent that this has become the foremost point of attention in their treaty ratification efforts. In making every effort to avoid the necessity of further treaty negotiations or popular referendums in Panama, the Senate risks the obvious inclination to overlook serious defects and shortcomings in the treaties. As undesirable as further delays might be to the State Department or the Panamanian Government, it is essential that the U.S. Senate fulfill its obligation to fully "advise and consent" on the substance of the treaties.

That is why further amendments and reservations may be necessary, and may well be approved by the Senate during the next several weeks. Our attention must remain directed to the long-term consequences of the treaty, and not to the inconveniences of the moment.

HUBERT H. HUMPHREY

Mr. NELSON. Mr. President, we grope, so haltingly, for words to honor our friend Hubert Humphrey—the man who was never himself at a loss for words. We remember his words inspiring us; he spoke with such conviction, such compassion, such hope for the future. Our own tributes now fall short.

Everyone will remember Hubert in his own special way. He was so many things to each of us—the quintessential campaigner, the eloquent statesman, the tireless civil rights pioneer, the crusader against poverty and injustice, the people's friend.

With all deference to our neighbor State of Minnesota, the people of Wisconsin also remember Hubert Humphrey as their third Senator, their "adopted." I remember well how often during the 1950's I would call Hubert with a problem. He would handle it as he would for one of his constituents.

The man who never won what is, in politics, the ultimate prize, will always be honored as a winner. He is a winner of a very special kind—the kind that can count his political opponents among his friends, whose personal defeats failed to dim his spirit or cause his commitment to waiver.

Most men slow down with age, some are defeated in spirit when they are weakened in body. But Hubert Humphrey was not an ordinary man. His words and his resolve grew stronger as the terrible pain of cancer racked his body.

Our images of Hubert are the images

of a fighter. They are the images of a young man rising before the 1948 Democratic Convention, imploring his party to reject the politics of racism and to embrace the politics of morality. They are the images of a man who would energetically barnstorm a State to help elect a fellow Democrat to a minor political office. They are the images of a man who could become enraged at the sight of injustice, but never intolerant with a fellow human being. They are, finally, the images of a man who was never too busy or too important to shake another hand or offer another encouraging word.

Those of us who had the privilege of serving with Hubert in the Senate remember also a man of unlimited energy bounding down the corridors of the Capitol or the Senate Office Building on the way to a vote or a hearing or to make another impassioned floor speech. The corridors and the Senate floor are quieter now; they echo with his step. The country, too, is quieter. There exists a void that will not be filled. We will be, nonetheless, consoled, buoyed, refreshed, and cheered by his memory for so long as we live.

Lawrence Millman wrote a charming book about Irish story tellers entitled "Our Like Will Not Be There Again." For Hubert the title will be "His Like Will Not Be There Again."

THE PANAMA CANAL TREATIES: ANSWERS TO QUESTIONS ABOUT SENATE RATIFICATION

Mr. DOLE. Mr. President, I want to direct the attention of my colleagues to two documents which may facilitate the forthcoming Senate debate on the proposed Panama Canal Treaties. Both contain highly relevant information pertaining to the treaty ratification processes of the United States and Panama, and I believe that every Member of the Senate will want to be thoroughly familiar with these basic facts before debate begins.

The first document, prepared by the Senate steering committee, is an authoritative review of the distinctions between treaty amendments, reservations, and understandings. Citing a number of historical precedents, this paper clarifies the impact and the consequences of the various treaty modification procedures. There are important differences that every Member of the Senate should be aware of, as this may well be a point of contention in the forthcoming debate.

The second item is a report prepared by the Library of Congress at my request, detailing the treaty ratification provisions of the Panamanian Constitution. The report suggests specific conditions under which a new popular plebiscite might be required in Panama as a result of Senate action.

Mr. President, I ask unanimous consent that both of these documents be printed in the RECORD.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

UNDERSTANDINGS, RESERVATIONS, AND AMENDMENTS TO THE INTERNATIONAL TREATIES

Under the Constitution, the Senate has the role of providing advice and consent to the President on international treaties. The popular misconception notwithstanding, the Senate does not ratify treaties; this act is constitutionally part of the President's role. The "advice" it provides is nonetheless binding on the Chief Executive. In its first years of existence, the Senate limited its actions to acceptance or rejection of treaties. A precedent was set in 1794, however, when an amended version of the Jay Treaty was approved; since then modifications have been included in about sixteen per cent of all international treaties approved by the Senate.

In approving changes on the floor of Congress, the action of the Senate is not technically that of "amending" a treaty (an act which is not within its constitutional province), but rather that of giving detailed "advice" to the President, who, if he decides to proceed with the treaty, is bound to accept it and initiate whatever additional negotiations with the other parties these changes might entail. Changes made by the Senate have at times been quite substantive. The Gadsden Purchase Treaty of 1853 with Mexico was virtually redrafted on the Senate floor; this example, although not representative, indicates the degree to which the Senate may impose fundamental changes. In stipulating conditions, moreover, the Senate has often approved provisions differing sharply with the views of the President or the other nation involved. According to statistics compiled in 1967, one out of every three treaties approved conditionally by the Senate up to that time was subsequently rejected either by the President or another party for the agreement.

There are several kinds of modifications: statements, declarations, understandings, reservations and amendments. All have been employed by the Senate at one time or another. Unlike treaties, which must be approved by two-thirds of those Senators present and voting, these modifications are adopted by a simple majority vote. The Senate may also choose to express its views in the Committee Report, thus making its concerns part of the legislative history of the treaty.

The terms "understanding," "statement," and "declaration" are generally used for statements which clarify or explain a country's position on a given matter in the treaty, or which give notice of a certain policy or principle; these, in other words, are statements which clarify but do not change a contractual relationship.

A reservation, by contrast, is a statement whose effect is to alter the contractual relationship. The difference between an amendment and a reservation is not necessarily one of substance, but rather of procedure. By definition an amendment involves a change in the authentic text of the treaty, and results (if the President wants to proceed with the treaty) in further negotiations with the other parties leading to the adoption of new language. While new rounds of talks are frequently held as a result of reservations, a fundamental difference between amendments and reservations is that the latter do not organically lead to such exchanges.

Although the country imposing conditions may use whatever terms it chooses (understanding, reservation, etc.) to describe them, it is ultimately their substance, and in particular the other parties' perception of this substance, that determines how they are treated. Country A might label a condition as an "understanding," thereby implying that the statement is tangential to the basic operation of the treaty; Country B, however, may feel it is substantial enough to be a "reservation," and treat it as such. Similarly, just as Country A is free to describe a reservation as relating exclusively to its personal obligations, Country B has the right to assert is changes the contractual relationship between all the parties.

Upon receipt of the Senate's conditional consent, the President has several options. He may ratify the treaty, and later notify the other parties of the conditions (or follow these steps in reverse order): he may fail to execute ratification if he considers the conditions to be totally objectionable; and he may also return the treaty to the Senate with additional explanation or for further consideration. There are no limits, either procedurally or legally, to the number of times the Senate might be asked by the President to reconsider conditions it has already insisted on.

With regard to acceptance of reservations (or understandings, statements or declarations) by the other government involved, it is customary in bilateral Inter-American treaties for that government's view to be sought and obtained before ratification takes place. If the conditions are found acceptable, ratification, whereby the instruments of ratification are exchanged by the two nations, can take place.

The second country may convey its acceptance of a reservation either explicitly or tacitly. With reference to the latter, if a country ratifies an agreement without making reference to a reservation by the other nation, but being in full knowledge of it, under traditional law its approval of the treaty is interpreted to embrace acceptance of the reservation.

While this procedure does not normally result in problems, confusion has occasionally arisen, with nations lodging objections after the ratification ceremony.

The second nation may also make explicit reference to its acceptance of a reservation in its instruments of ratification. This procedure makes its acceptance of the reservation binding beyond dispute. Consequently, were the legislative body of Country A concerned about Country B respecting its reservations, it could make ratification by the Chief Executive contingent of receipt of diplomatic messages from Country B explicitly acknowledging and accepting these reservations.

The response of the second party is not always one of simple acceptance of a reservation. At times, it may attach reservations of its own in response to those imposed by the first party. Traditionally, when such reservations are received by the United States after the Senate has finished its consideration of the treaty, they are dealt with by the Executive Branch. The President consults with the Senate on them, but does not normally submit them to that body for official consideration.

Other options open to the second country upon inclusion of reservations by the first are to indicate a desire to reopen negotiations, or to simply withdraw from the treaty.

Amendments, as has been stated previously, automatically lead to further negotiations, in the course of which the Chief Executive of the nation proposing these changes seeks to obtain the approval of the other party for the substitute language. The reopening of negotiations per se does not annul the agreement which has already been signed. Consequently, if an American President fails to achieve agreement by the other party on the proposed changes, he may resubmit the original text to the Senate for renewed consideration.

If any changes are made at all in the wording of the treaty, a new signing ceremony must take place, and the text submitted to the Senate for approval as though it were a new treaty. If this occurs, and the new language agreed to by the second party incorporates some, but not all, of the changes stipulated by the Senate, it is then up to that body to decide between approval of the new text of insistence on the remainder of its earlier amendments. Should it vote to take the latter course, the President would have to reopen negotiations yet another time.

In the case of amendments, the other parties to the treaty would also have to follow the steps provided for under its laws to gain approval of the new language. In the case of Panama, for example, that country's constitution requires a national referendum on any treaty relating to the Canal. Presumably, then, modification of the language of the Panama Canal treaties already approved by the Panamanian people would be contingent on a second referendum. According to the State Department, were General Torrijos to ratify an amended text on his own initiative, the legality of that treaty would be highly susceptible to challenge (and, by inference, the possibility exists that the 1903 treaty would still be in force).

SUMMARY

Historically, the Senate has frequently imposed conditions on the ratification of international agreements. If the Senate uses the language of "understanding," the implication is that the contractual relationship between the parties is merely being clarified. If the Senate attaches a "reservation," to the resolution of advice and consent, the inference is that the obligation incurred under the treaty is being modified. Finally, if the Senate adds an amendment, a change is being made which involves an alteration of the actual treaty text.

Upon receipt of the Senate's advice and consent, the President may ratify the treaty, informing the other parties of the Senate's conditions in the process (in the case of reservations and understandings); he may return the treaty to the Senate for further consideration; or he may simply lay the treaty aside, taking no further steps toward its ratification. When amendments have been added to the treaty by the Senate, the President must initiate further negotiations with the other parties, unless he selects to simply put the treaty aside. If a new text emerges from these negotiations, it must be submitted to the Senate for advice and consent as though it were a new treaty. Before ratification can take place, the other parties to the treaty also have to obtain approval for the new text in accordance with the steps called for under their legal systems and constitutions.

PLEBISCITE FOR AMENDMENTS TO PANAMA CANAL TREATIES

PANAMA

The requester desires an opinion as to whether amendments to the Panama Canal Treaties would require a new plebiscite in Panama.

I. Constitutional provisions

The Constitution currently in force in Panama was enacted and came into effect on October 11, 1972.[1] According to its article 163 (4) one of the functions of the President of the Republic is "to conduct foreign relations, to accredit and receive diplomatic and consular agents, and to enter into international treaties and agreements, which shall be submitted to the National Assembly for consideration."

This provision, also present in all past Panamanian constitutions, has two important exceptions in the current constitution. First, article 277 (transitory) recognizes Brigadier General Omar Torrijos Herrera, Commander in Chief of the National Guard, as the Supreme Leader of the Panamanian Revolution, and, in order to ensure the fulfillment of the objectives of the revolutionary process, authorizes him to exercise for a 6-year period a number of public functions, one of which is the direction of the country's foreign relations.

The second exception related to treaties dealing with the Panaman Canal, which under the purview of articles 274 (transitory) of the Constitution, which reads as follows:

Art. 274. Treaties which may be signed by the Executive Organ with respect to the Panama Canal, its adjacent zone, and the protection of the said Canal, and for the construction of a new Canal at sea level or of a third set of locks, shall be submitted to a national plebiscite.

Finally, article 141 of the Constitution provides that the functions of the National Assembly of Municipal Representatives (*Asamblea Nacional de Representates de Corregimientos*) include enacting laws for several purposes, among which is: "1. To approve or reject public treaties signed by the Executive."

As far as we can ascertain no other constitutional or statutory provisions regulate this subject.

II. The plebiscite of October 23, 1977

Law 33 of September 13, 1977,[2] submitted the Panama Canal Treaty and the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal to a plebiscite in the following terms:

Act 1. A plebicite is hereby convened that shall take place on October 23, 1977, [with the purpose] that the citizens through their vote shall decide whether or not they approve the new Treaty of the Panama Canal, the Treaty concerning the permanent neutrality of the Panama Canal, and the related agreements and annexes signed between the Governments of Panama and the United States of America on Wednesday, September 7, 1977.

According to article 11 of the same law voters had to choose between ballots saying "yes" or "no" to the following proposition provided by article 10 of the same law:

"I agree with the new Treaty of the Panama Canal, the Treaty concerning the Permanent Neutrality of the Canal and the Operation of the Panama Canal, the minutes agreed upon, the exchanges of notes, maps, the related agreements, and the annexes signed between the Governments of Panama and the United States of America on Wednesday, September 7, 1977."

Neither the text of the ballot nor any other provisions of Law 33 of 1977 referred to future amendments to the treaties being approved by the Plebiscite of October 23, 1977.

In the Plebiscite the Canal treaties were approved by a wide margin by Panamanian voters.[3] It appears, therefore, that the remaining constitutional step would be the enactment of the treaties as a law by the National Assembly, according to article 141 of the Constitution, cited above.

III. Conclusions

The 1972 Panamanian Constitution requires that treaties signed by the Executive concerning the Panama Canal must be submitted to a national plebiscite for their approval. Neither the Constitution nor any statutory provision states whether or not a plebiscite is required in the case of amendments to treaties already approved by a plebiscite. Therefore, the law governing the subject must be interpreted by resorting to sources other than the statutes themselves.

The requirement of a plebiscite for the approval of treaties dealing with the Canal was established for the first time in the 1972 Panamanian Constitution. Unfortunately, the materials available to this Library do not cover the legislative history of this Constitution or provide any other judicial, administrative, or even monographic sources related to this problem, preventing us from issuing a substantiated opinion on the subject at the present time.

We can note, however, some of the basic elements that may be considered, within the context of Panamanian law, for arriving at a definite opinion on the subject:

(1) The Plebiscite of October 23, 1977, as noted in part II above, approved the text of the Panama Canal treaties and related agreements and documents as signed by the Governments of Panama and the United States on a specific date: September 7, 1977.

(2) The eventual amendments to the treaties could range from mere formalities to substantial modifications to the nature, extent, and content of the treaties; therefore, the content and nature of the amendments to be introduced to the treaties may determine, to an important extent, the necessity for a new plebiscite.

(3) According to Panamanian law, the interpretation of this legal problem can be considered an attribute of the Executive, which is in charge of the conduct of foreign relations, but the National Assembly of Municipal Representatives could consider the problem while passing the treaties as a law. Also, the Supreme Court could eventually be asked to rule about the legality of the treaties and their formal approval is an important element of the case.[4]

INTERNAL SETTLEMENT IN RHODESIA THE BEST SOLUTION

Mr. ALLEN. Mr. President, I have been greatly encouraged over the past weeks and days by news accounts of progress made in Salisbury, Rhodesia, in negotiations between Prime Minister Ian Smith and leaders of the black community in Rhodesia. All men of good will certainly wish success to these talks and hope for a solution to the problems besetting Rhodesia which will guarantee the freedom of all people in Rhodesia and which will not bring to power a Communist government.

As these talks continue, Mr. President, I encourage our own Department of State to stay out. The bunglers at the Department of State had best stay clear of these negotiations else we can be assured that the talks will fail and that the prospects of an ultimate Communist takeover in Rhodesia will be enhanced. So let us keep our nose out of Rhodesia's business for a change and give Mr. Smith and the moderate black leaders some chance of reaching an internal settlement without outside pressure. And let us stop also, Mr. President, giving encouragement to the Communist terror-

---

[2] *Gaceta Oficial*, Sept. 19, 1977.

[3] New York *Times*, Oct. 25, 1977.

[4] Art. 188 of the 1972 Panamanian Constitution entrusts the Supreme Court with several functions, among which is the following: "1. Guardianship of the integrity of the Constitution, to which end it shall decide, after hearing the Attorney General of the Republic or the Solicitor General, on the constitutionality of laws, decrees, decisions, resolutions and other acts challenged before it by any person on the grounds of content or form." Based on similar provisions of past constitutions the Supreme Court has ruled on the constitutionality of laws and decrees approving treaties. For example: Judgments 1/63 of Jan. 22, 1963, and 12/63 of July 29, 1963, *in* 1 *Jurisprudencia Constitucional* 424–26, 438–39 (Universidad de Panamá, Sección de Investigación Jurídica, Panama City, 1967).

ists who are operating in Rhodesia acting indiscriminately against all of the people of Rhodesia—but chiefly against the black civilian population. These terrorists do not represent the people of Rhodesia but instead represent solely the interests of world communism and the interest of those who would enslave all populations by terror.

These terrorist bands are primarily backed by the Soviet Union through the KGB; however, to our disgrace, these bands also receive support from misguided, or perhaps corrupt, charitable organizations within the United States and elsewhere in the free world. Inasmuch as it has become critical to all civilized countries that terrorists everywhere be held in check and brought to justice and because of the particular importance to world peace of the success of the Rhodesian negotiations, I urge that the administration act responsibly over the next few months in its dealings in southern Africa, and particularly, I urge that no support whatsoever be given or expressed for the so-called Patriotic Front murderers operating from Zambia and Mozambique against Rhodesia. I urge finally that the committees of the Congress take care not to include in any appropriations bill any funds which might in any fashion be diverted, directly or indirectly, to the use of these marauding bands of terrorists or to the Communist governments in Africa which are supporting and encouraging terrorism in Rhodesia and throughout the continent.

I ask unanimous consent that an article dealing with this subject by Robert Morris published in the Ocean County Citizen in Lakewood, N.J., be printed in the RECORD for the review of Senators and their staffs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REALITY IN RHODESIA

(By Robert Morris)

Prime Minister Ian Smith of Rhodesia recently took the peace initiative in Rhodesia from Dr. David Owen of Great Britain and Ambassador Andrew Young of the United States and followed through on his internal solution. He reiterated his offer of September 1976 to effect a transfer to black majority rule and ordered a devastating "hot pursuit" raid against the terrorist guerrilla bases across the border in Mozambique. Both have been successful thus far.

Before then the world had been led to believe that Prime Minister Ian Smith of Rhodesia has been a stumbling block to a smooth transition from a harsh white minority regime to peaceful black majority rule for that lovely land.

Dr. David Owen of Great Britain and Ambassador Andrew Young of the United States have been holding conferences all over Europe and Africa trying to effect the change of government, but always criticizing Ian Smith for his intransigence.

The so-called Front Line States (although Tanzania and Angola do not border on Rhodesia) Angola, Botswana, Mozambique, Zambia and Tanzania, dominated by the Communists in Mozambique and Angola are made parties to the settlement. And two groups of terrorists, one operating out of Zambia and the other out of Mozambique earn with Owen and Young the euphoric title of the "Patriotic Front" and are made prime beneficiaries of the concessions proposed.

The target of all these negotiations, the Rhodesian Government which declared itself independent of Great Britain in 1965 is deemed illegal and is accorded the most contumelious treatment of all the parties involved.

Rhodesia has been a self-governing colony of Great Britain since 1923 and declared its independence after a long series of lengthy sessions in both London and Salisbury.

I am doing a research project on terror and I visited Rhodesia in October and find that the scenario being held forth by Dr. Owen and Andrew Young is just not related to reality as it exists today.

The individual who is most dedicated to a peaceful transfer to black majority rule is Prime Minister Ian Smith.

In September 1976 he entered into an agreement—some say belated—with the United States Secretary of State, Dr. Henry Kissinger, whereunder he agreed to transfer power, in two years, to a duly elected black majority on a one man one vote basis. There were several safeguards written into the agreement, the two year interval for necessary preparations and steps necessary to protect the interests of the minority from a precipitous change.

When the agreement was made Smith was assured by Dr. Kissinger that the agreement had the approval of a majority of the "Front Line States." However, after it was made public, a shadowy figure who dominates the whole scene, Russian Ambassador to Zambia, Vasily Solodovnikov, pressured the left-leaning President of Tanzania Julius K. Nyerere to breach his oral agreement with Kissinger and Nyerere voted with Presidents Neto of Angola and Machel of Mozambique to reject the agreement by a 3 to 2 count.

When Dr. Kissinger was asked to publicly state what had transpired, an account that would have been helpful to Ian Smith's reputation, he declined saying it was an exercise in futility to call Nyerere a liar.

The world should have then recognized that Smith had done everything he had promised to effect a transfer of power to a black majority government.

But as he persisted in his efforts, he realized that Ivar Richards, Owen's predecessor and Andrew Young were giving forth statements that implied that he rather than Nyerere was responsible for the failure to transfer power.

The British negotiators and Young, working closely with an Andrew Lake in the State Department thereupon embarked on a long series of sessions with the terrorists whom they persisted in calling the "Patriotic Front", each time making more and more concessions to their recalcitrance.

I have seen the latest United States-British proposals submitted to Prime Minister Smith on September 1 of last year. They are severe enough but at a press conference held simultaneously with the submission, Dr. Owen, speaking for the two governments issued a statement saying that the "liberation army" would be "the basis" of the new Rhodesia Army that would police the transition. In other words, the terrorists would become the policemen!

The terrorists are of two factions, one headed by Robert Mugabe who educated himself while in Rhodesian detention and who operates out of Maputo the capital of Mozambique.

Mugabe's defense minister is a grim character by the name of Josiah Tongonara who murdered his fellow terrorist leader, Chitepo and was lodged in a Zambia jail for that crime. He was mysteriously released by the Zambians to attend the conference in Geneva that was to settle the fate of Rhodesia. Mugabe recently visited Peking for support. Machel, the Frelimo terrorist who came to power when Portugal abandoned its colony, Mozambique, was originally a proxy of Communist China but who, of late, has been shifting his allegiance to Moscow. The organization these characters operate is called ZANU or the Zimbabwe African National Union.

The guerrilla force operating out of Zambia is called ZAPU or Zimbabwe African Peoples Union and is headed by Joshua Nkomo. Nkomo has a 3,000 man force whose build-up was supervised by Ambassador Solodovnikov. Nkomo's forces, for the most part are recruited by the terrorists kidnapping 14 and 15 year old blacks in Western Rhodesia, some by bus loads, and sending them North for training as guerrillas. These abductions are, understandably enraging the black Rhodesian mothers who, many believe, will dispatch Nkomo if he ever enters the country to stand for election.

The two guerrilla forces sometimes converge in their incursions and when they do they clash, and the number of internecine killings is extensive.

The two terrorist forces are killing hundreds of Rhodesians, mostly blacks. I have seen the photographs taken after the terrorists have struck. Innocent farmers (black and white) and their families are slaughtered often in the dead of night, with the guerrillas conspicuously maiming their victims in order to strike terror in the countryside. Even forced cannibalism is imposed on the victims—with women forced to eat the corpses of their murdered husbands.

Yet these are the people whom Andrew Young is proposing as policemen of Rhodesia.

Ian Smith should be applauded rather then besmirched for refusing to turn his people over to the mercies of these murderers. He would not be a leader worthy of the name if he surrendered his constituents, 4 million black and 270,000 white to these terrorists.

I have seen the mass of arms captured by the Rhodesia security forces. The cannons, mortars, machine guns, automatic rifles and assorted weaponry bear the markings of Communist China, Yugoslavia, Czechoslovakia, East Germany and Russia. The Western world which now professes to be outraged by acts of terror in the skies is not raising a voice in protest against these instruments of death being shipped into Rhodesia to kill innocent men, women and children.

Rather than deploring these acts, men otherwise civilized, are subsidizing them. While I was in Rhodesia, Judith Hart, the overseas minister of the British Labor Government made a clandestine $9 million interest free loan to the Frelimo Government of Mozambique. Our State Department tried to grant that terrorist regime $15 million but Senator James Allen (D. Ala.) mercifully filibustered the effort.

The World Council of Churches has been regularly subsidizing the terrorists, making the thoroughly naive distinction that their funds are going to bandages and medicines rather than guns. I noted that the World Council of Churches recently made a $10 million grant to two Australian Communist organizations. The purpose of the grant was to prevent White Rhodesians from emigrating to Australia.

The man pulling the strings on this whole terror operation is Russian Ambassador Vasily Solodovnikov who operates out of Zambia. When he was appointed he had no diplomatic experience but headed the African Institute of the USSR Academy of Science and was Chairman of the Commission for African Countries. Intimately involved with the KGB his formal mission is "to create an anti-imperialist solidarity front of Africa and Soviet peoples." At a reception in 1976 he declared that his country was "support-

ing the liberation movements of Zimbabwe (Rhodesia) Namibia (S.W. Africa) and South Africa", a condition that Dr. Owen recently acknowledged in a London journal.

These terrorists do not want majority rule. They want a Communist dictatorship such as exists in Angola and Mozambique. Nkomo has almost no support from the Black Rhodesians. The Black National leaders, Bishop Abel Muzorewa, N. Sithole and Chief Chirau would, in the opinion of everyone here, receive the overwhelming majority of any votes cast. For that reason the "Patriotic Front" will not allow a peaceful transfer of power.

President Kenneth Kaunda, of Zambia, let the snake out of the bag on the day I was leaving Salisbury. He openly declared that he did not believe there was need to rush into elections, and that they could be deferred for one or two years after the liberation forces took over the role of policemen. He pointed to the precedent set in Mozambique by Frelimo leader Machel.

The whole situation is so deplorable that I cannot comprehend why my country can support such a mindless policy. Andrew Young, Anthony Lake and these men shaping this policy should account to the American people for these occurrences which are clearly driving another Western country into the Soviet orbit and subjecting 5 million peaceful people now living in relative peace and prosperity to an impoverished Marxist dictatorship.

JOHN SPARKMAN

Mr. CHURCH. Mr. President, our colleague from Alabama, JOHN SPARKMAN, has announced that he will retire from the Senate at the end of his present term a year from now. Having had the privilege and pleasure of serving with him for over 21 years, I know him as a friend, as a valued colleague, and, unfailingly, as a gentleman.

In his retirement statement, Senator SPARKMAN said that he takes "satisfaction in knowing that I have always done all that I could for Alabama and for my country."

That understatement, Mr. President, is a mark of his modesty, for in reality, JOHN SPARKMAN has left an imprint on this institution that will long be remembered. His legislative role, both in the House and in the Senate, has had a major impact upon our country.

During his years of service as chairman of the Senate Banking Committee, Senator SPARKMAN was instrumental in moving through Congress new and far-reaching housing legislation that committed the Federal Government to helping those in need by providing financial resources to States large and small to do the job. He was responsible for new banking measures and laws benefiting small businessmen.

Since 1975, Senator SPARKMAN has served as chairman of the Senate Foreign Relations Committee, and it is on this committee that I have come to know him best.

JOHN SPARKMAN has presided over the Foreign Relations Committee during a period of transition, as the country moved from the end of our involvement in Indochina to a new era of peace. It has been a period during which Congress has turned away from old habits of uncritical acceptance of Executive judgments in foreign policy to a more self-confident awareness of its own powers and responsibilities. The change has often produced tension and strain. It has fallen to JOHN SPARKMAN, as chairman of the Foreign Relations Committee, to preside over this transition, and he has done so with patience, skill, and grace. He has provided an even hand of leadership, always scrupulously fair, always respecting the differing views of individual Senators, while guiding us toward resolution of the issues confronting us.

In his 42 years in Congress, JOHN SPARKMAN has served with eight Presidents, beginning with Franklin Roosevelt. In 1952, he ran for Vice President on the Democratic ticket with Adlai Stevenson. He has witnessed history in the making, and he has been part of it. His record of service to his country and State is matched by few others. It is a record in which he can take justifiable pride.

In all of his future endeavors, Mr. President, I wish for JOHN SPARKMAN only the best: The pleasure of family and friends, a time for reflection and good books, and many more years of that special satisfaction which comes from a long life well spent.

ACTION IS NECESSARY ON THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, when I first entered this Chamber over 20 years ago, there was before this body a treaty which would have condemned the commission of genocide as an international crime. It was my wish then and it is my wish today that I could speak in praise of the action of the Senate in this matter. But it is an embarrassment to me, to this body, and I believe, to this great country, that we have yet to approve this treaty.

Our country has prided itself in the past, and indeed it prides itself today, on its leadership in the field of human rights. The very documents on which this country laid its foundation, the Declaration of Independence and the Constitution, assert repeatedly the importance of individual rights. Will we not today, many years after the signing of these historic documents, welcome the opportunity to reaffirm our commitment to even the most basic human rights as they are so forthrightly expressed in the Genocide Convention?

I call upon the Senate to condemn genocide as a heinous crime, as 82 other nations have already done. I call upon the Senate to correct our failure to act on this matter. I call upon the Senate to pass the Genocide Convention as soon as possible.

PRESERVING AMERICA'S NATURAL DIVERSITY—LEE METCALF'S LEGACY

Mr. RIBICOFF. Mr. President, preserving the quality of the environment and defending the Nation's rich and often endangered natural resources were lifelong tasks of our late colleague, Lee Metcalf.

Lee was always at the forefront of efforts to prevent the needless destruction of forests and streams, to focus attention on dwindling resources, and to maintain the delicate balance between man and his environment. Senator Metcalf was especially concerned over the orderly management of public lands.

In recent times Lee focused his energies in developing a program to preserve America's natural diversity. The "natural diversity" is defined as individual plant and animal species and their associated habitats, aquatic environment, plant communities, geological features, ecosystems and other ecological phenomena. This deep interest and concern became embodied in the Natural Diversity Act, S. 1820, which Senator Metcalf authored. I am honored to be a primary cosponsor of this measure.

The Natural Diversity Act supplements current State programs to protect their natural diversity. It creates a mechanism to provide technical and financial aid to all States for natural diversity programs and biological management systems. It requires Federal land management agencies to initiate programs which complement those of the States. Enactment of this innovative and affirmative program would be a fitting tribute to Lee Metcalf.

Mr. President, the current issue of The Nature Conservancy News contains an article written by Senator Metcalf and Representative KEITH SEBELIUS, the House sponsor of the Natural Diversity Act. I ask unanimous consent that this informative and timely article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PROGRAM FOR PRESERVING AMERICA'S NATURAL DIVERSITY

(By Senator Lee Metcalf and Congressman Keith Sebelius)

At the time of the European discovery, North America was an incredibly rich land. Early explorers were awed by the beauty of the continent's varied landscapes and its diversity and abundance of plants and wildlife. Nearly all narratives of America's exploration contain descriptions similar to one made by an English sea captain on the Delaware River in 1634:

"The land is very good and fruitful, and withal very healthful. The soil is sandy and produceth divers sorts of fruits, especially grapes, which grow wild in great quantity, of which I have eaten six several sorts, some of them as good as they are ordinarily in Italy or Spain . . . The earth, being fruitful, is covered over with woods and stately timber, except only in those places where the Indians had planted their corn. The country is very well replenished with deer, and in some places store of elks. The low grounds, of which there is great quantity, are excellent for meadows and full of beaver and otter. The quantity of fowl is so great as can hardly be believed; we took at one time 48 partridges together as they crossed the river, chased by wild hawks. I myself sprang, in two hours, five or six coveys in walking of a mile. There are infinite number of wild pigeon, blackbirds, turkeys, swans, wild geese, ducks, teals, widgeons, brants, herons, cranes, etc. of which there is so great abundance as that the rivers and creeks are covered with them in winter.

"Of fish here is plenty, but especially sturgeon all the summertime, which are in such

abundance in the upper parts of the river, as that great benefit might be raised by setting up a fishing for them . . . Here are also great store of wild hops, yet excellent good and as fair as those in England. Here are also divers other things which with industry will prove excellent good commodities . . ." (Charles Norman, Discoverers of America, 1968)

With colonization and settlement, our forebears set in motion a vast, continuing transformation of the continent and its "excellent good commodities." As population and economic activity have grown, more and more natural land has been converted to intensive use by millions of individuals, each acting independently and each unaware of the aggregate impact of their actions on the nation's natural biological resources. Ordinary human activities—agriculture, timbering, wetlands drainage, urbanization, reservoir construction, mining and transportation, and energy-related construction—have often destroyed significant natural land and its constituent plant and animal life. While the transformation of the American landscape has helped create an economic standard of living unparalleled in any other civilization, it also has severely depleted the nation's storehouse of biological resources in both numbers and variety.

Already, the impacts of this transformation have been colossal. Large ecosystems have been irretrievably disrupted and destroyed. The prairies that once blanketed nearly a third of the nation have been greatly reduced, as have the virgin swamplands which once covered millions of acres of the southeastern United States. The country's few remaining primeval forests of any significant size are found only in the northwest.

Most states, particularly those east of the Mississippi River, have suffered extensive losses of their natural lands. In the State of Ohio, 99 percent of the original landscape has been altered. The wetlands of Wisconsin have decreased from 7 million to 1.5 million acres, a 79 percent reduction. Illinois estimates that only 1,000 tracts of relatively undisturbed land remain in the state; they are being destroyed at the rate of 15 percent annually. After two years of research, Tennessee has been able to locate high quality examples of only 72 percent of its 132 native plant communities. In Mississippi, over 2,400 miles of the state's streams and rivers have been channelized during the past 15 years; an additional 1,500 miles are planned for channelization.

With the destruction of natural land and ecosystems, hundreds of plant and animal species have become extinct or are threatened with extinction, largely because their natural habitats have been disrupted or destroyed. An estimated 500 extinctions of plant and animal species have occurred in North America since the early 1600's. The Smithsonian Institution reports that 10 percent of the higher plant species of the U.S. are now endangered or threatened with extinction, while the Fish and Wildlife Service lists 177 animals as endangered throughout all or a significant portion of their range, and an additional 18 species as threatened. Another 1,800 plants are being evaluated for possible listing. Also, individual states concerned with perpetuating their resident plants and animals have developed lists of hundreds of species that may soon disappear without deliberate efforts to preserve them. One prediction estimates that 15 percent of all remaining U.S. plant and animal species may become extinct over the next 20 years if current trends continue.

Furthermore, the rate of loss of America's natural diversity is accelerating. In 1975 the President's Council on Environmental Quality estimated that 1.25 million acres of natural and agricultural land—an area the size of Delaware—are annually converted to more intensive uses. Urban expansion alone consumes 740,000 acres; transportation projects 130,000 acres; and reservoirs 300,000 acres. Even the remotest areas of the country are now being developed. As biologist David Ehrenfeld has so aptly noted. "No matter where one goes, nature is somewhere else."

Maintaining or increasing the quantity of each biological species is a desirable goal, but even more important is that the overall diversity of species be perpetuated. Yet all signs point to the irretrievable loss of this diversity. Unless a systematic program is designed and quickly initiated to counteract the negative impacts of the random, pervasive alteration of America's natural lands and resources, present and future generations will be deprived of a resource having incalculable value.

THE CONCEPT OF NATURAL DIVERSITY

The term "natural diversity" refers to the full array of biological species—plants, mammals, birds, insects, reptiles, amphibians, fish, snails, clams, and crustaceans—that have evolved over the last 600 million years, as well as to the different types of terrestrial and aquatic communities and ecosystems into which these species are organized. Collectively, these life forms constitute a vast genetic reservoir that supplies the material for the continuing evolution of planetary life.

Any attempt to maintain or preserve natural diversity must focus on the tangible "elements" of diversity that can be located on the landscape. These elements include:

(1) individual species of plants and animals that are in danger of extinction, and their habitats;

(2) terrestrial plant community types, such as an oak-hickory forest or a tallgrass prairie;

(3) aquatic community types, such as a fresh-water lagoon or an oxbow lake;

(4) outstanding geological features that illustrate geologic processes or the history of the earth; and

(5) miscellaneous biological phenomena of significance, such as a heron rookery.

By locating high quality examples of each of the various elements and protecting them from destruction, we act to preserve natural diversity. The more kinds of elements we protect, the more we contribute to maintaining the maximum amount of diversity in Earth's genetic reservoir.

THE VALUE OF NATURAL DIVERSITY

Although few people recognize it, natural diversity may be reckoned as one of our most valuable assets, for a number of reasons:

First, each element of diversity plays a unique role in the ecosphere. It is now widely acknowledged that all life forms are linked in a complex system of relationships with each other and with the differing physical and chemical properties of the environment. Yet scientists have barely begun to understand the functions that each element plays and how ecosystems and biological communities operate. Sheer logic dictates that we not destroy what we do not understand, especially when the consequences might be drastically adverse for the human race.

Second, maintaining the widest possible spectrum of diversity maximizes our potential for deriving "direct" benefits from the natural world. Each species is a unique biochemical factory containing substances and capabilities found in no other. Our civilization is sustained by our ability to efficiently utilize plant and animal species for food, fiber, chemicals for industry and medicine, and for general research.

Scientists are constantly discovering new uses for species. For example, the substance mercenene, produced by a species of mollusk, has shown the ability to prevent or retard cancer growths in test animals, and is being further researched. An oil produced by the jojoba plant, a southwestern desert shrub, may prove suitable as a substitute for whale sperm oil in certain industry machinery. Agricultural scientists are constantly producing new disease-resistant varieties of food grains by crossbreeding wild grains with domesticated varieties. In fact, few people probably realize that all our grains and cereals were developed from wild grasses.

Although a plan or animal species may seem "insignificant" today, we cannot predict what benefits it may produce tomorrow. Species utility is always relative to a society's evolving needs and circumstances. The Egyptians, for example, once used the papyrus plant for paper, but now rely on paper products made from trees. Preserving the widest possible spectrum of plant and animal life maintains our resource options for the future, and therefore should be a key goal of natural resource management.

Third, maintaining natural diversity through the preservation of natural areas and reserves provides a wide array of other benefits—cultural, scientific, recreational—that enhance our everyday living. Protecting examples of all the elements that collectively constitute this nation's natural biological and geological heritage provides future generations with an important perspective on our natural history. We now preserve the artifacts of our cultural heritage and civilization in museums. Why not maintain examples of our natural heritage—native ecosystems, biological communities, and plant and animal species—in "living museums"?

Protected natural areas are necessary for scientific research and education. Such areas are models of healthy ecosystems from which we can derive information needed to better design the man-made environment. They are particularly useful as undisturbed baseline sites against which we can measure the impacts of our activities on other similar ecosystems.

Natural areas also offer Americans opportunities for recreation and relaxation. A homogenized world comprised only of cornfields, monoculture pine forests, and paved urban settlements would be monotonous and unpleasant. Humans seek and require natural areas to escape the pressures and problems of their urban environments, to maintain their mental well-being, and to reaffirm their ties with the natural world. We need natural areas as places where we can study and observe nature, relax, play, hike, and enjoy other forms of nondestructive recreation.

Fourth, a growing number of people believe that maintaining the earth's diversity of life is, in itself, an intrinsically valuable goal. Humans neither created the natural world, nor should they obliterate it. Noah built an ark to save all species, not just the ones he "liked" or directly used. As the Earth's stewards, we have an obligation to protect the widest array of our planet's biological elements—not only because we must share the same biosphere, but also because our very existence is linked, no matter how remotely, to the existence of every other species.

THE NEED FOR A NATIONAL PROGRAM

As competition for land intensifies and with limited resources available for countering destructive and homogenizing land-use practices, it is critical that we *systematically* identify those areas of land and water which should be set aside to assure protection of the best remaining examples of America's elements of natural diversity. Unfortunately, the information needed to determine the status and location of the nation's elements of diversity, as well as the ecosystems most critical to their preservation, is not available.

This information gap has persistently hampered the conservation planning and

protection activities of federal and state governments and private conservation organizations, as well as the implementation of otherwise well-planned development. There is simply no single source from which one can obtain a comprehensive picture of the natural biological resources that still exist in America—how many are left, where they can be found, and what their condition and protection status is. Without such precise information, we can be sure that randomly occurring human activities will continue to inadvertently eradicate element after element of the diverse natural world.

Biological resource conservation efforts of federal, state, and local governments, and private conservation organizations must become "information smart," and direct more of their resources toward a *new* objective—preserving the full array of natural diversity—rather than just a few species of birds and mammals that are hunted, studied, or otherwise considered of value. *All* plant and animal species, biological community types, ecosystem types, and significant geological features are important to preserving our country's natural ecological heritage, and we must act decisively to preserve examples of each.

THE NATURAL DIVERSITY ACT

During the first session of the 95th Congress, we introduced legislation to establish a national policy and program for maintaining America's natural diversity (S. 1820 in the Senate and H.R. 8650 in the House). These bills differ in several respects and undoubtedly will be refined during the legislative process. There are, however, several major provisions that the final bill might contain:

First, a national goal must be established to systematically *classify, inventory, monitor,* and *protect* the nation's elements of diversity on a continuing basis.

Second, as the most effective strategy for achieving this goal, the states should be given primary responsibility for classifying, inventorying, monitoring, and protecting their natural diversity resources, and for maintaining biological data banks that can be easily consulted by all government agencies, university researchers, industry, and conservation organizations.

Third, successful implementation of this program will require close cooperation between the federal and state governments. A new federal office is needed within the Department of Interior to provide technical and financial assistance to the states, to coordinate and standardize state programs, and to provide a national perspective on the status of America's natural diversity. Federal land managing agencies must adopt the goal of maintaining natural diversity on federal lands and waters, and cooperate with state inventory programs by providing information on the elements of diversity found on federal lands.

Fourth, each state should receive a planning grant to achieve the following objectives:

(1) Designate an individual charged with responsibility for the program, and provide an adequate professional staff to carry it out.

(2) Develop a classification of the elements of natural diversity within the state's boundaries to include:

All types of distinct plant communities;

All types of distinct aquatic communities;

All types of distinct geological features;

All native plant and animal species that—without deliberate efforts to protect them or their habitats—may be eliminated from the state's biota; and

Such other elements of diversity as the state and the Secretary of Interior mutually agree are desirable.

(3) Collect and compile information about the attributes of each element in the clsasification, including, but not confined to, the element's biology, ecology, limiting factors, and other data that are relevant to its perpetuation within the state.

(4) Collect and compile information about locations within the state where remaining examples of each element in the classification currently exist. (This data collection effort should include an inventory of currently protected lands, regardless of ownership and method of protection, to identify high quality examples of the classified elements that are already preserved.)

(5) Consolidate all information into an accessible, standardized, well organized data bank to facilitate continuous maintenance, revision, updating, and utilization by state and federal agencies, private conservation groups, and other users.

(6) Select a list of priority sites worthy of protection by using the information compiled in the data bank. (This list should consist of sites that collectively contain as many high quality examples of each classified element as practicable. The goal is to protect at least one example of each element before resources are committed to protecting a second or third example of the same element. The priority list should be revised as necessary, but not less than once a year.)

(7) Prepare, implement, and annually revise a plan for the protection of priority sites by acquisition or other less costly methods.

(8) Provide timely data obtained by the natural diversity program to state and federal agencies which fund, license, or take actions that directly affect or alter the landscape, and to other information users.

Fifth, states with ongoing diversity programs should receive an annual protection grant from the federal government to safeguard priority sites identified by their inventory and analysis process. To maximize resource protection dollars, the Secretary of Interior must promote the use of effective methods that are less expensive than land acquisition. Some percentage of the federal share should be available for non-acquisition protection techniques, although land acquisition will still be the preferred protection method in certain cases. Furthermore, once a site has been purchased or its owner has agreed to its long-term preservation, the site should be entered on a National Registry of Natural Diversity Reserves. The federal government would be prohibited from taking any action that would adversely impact or destroy sites on the Registry.

Sixth, because of the rate and magnitude of natural diversity destruction, federal financial assistance to the states should be substantial and reliable for at least a 10-year period. Altogether the fifty states need an estimated $10 million annually in federal assistance for data collection and program planning, and $100 million a year for the protection of priority sites identified by the inventory and data analysis process. The federal matching share for each of these activities should be high enough to stimulate timely state participation. A 70:30 ratio of funds (federal:state) should be considered. Allocation of both program and protection assistance to the states should be on a need basis, except that there should be a minimum and maximum amount that any one state could receive annually.

OTHER BENEFITS OF THE LEGISLATION

A key feature of the Natural Diversity Act is that each state, to take advantage of the funding, must establish a standardized data bank capable of continually collecting compiling, analyzing, and updating biological information on the existence, characteristics, numbers, condition, location, distribution, and protection status of the state's elements of natural diversity. The state data banks will provide a valuable resource for environmental impact assessment, biological research, conservation planning and management activities, and will improve the implementation of existing conservation laws.

One of the major deficiencies of the environmental impact assessment process required by the National Environmental Policy Act (NEPA) is the current inability of federal and state agencies to accurately evaluate a proposed project's impact on the natural diversity of a region, a state, or the nation. This failure is primarily due to the lack of organized, accessible data. For example, many environmental impact statements reviewed by the North Carolina Natural Heritage Program showed one or more of the following deficiencies:

(1) No consideration given to plants or animals on the project site.

(2) Contained some analysis of impacts on wildlife, but ignored plants.

(3) Contained a list of plant or animal species at the project location that was taken from range maps in naturalist field guides, but the species were not verified as actually occurring in the project area.

(4) Generally discussed common flora and fauna at the site, but made no mention of the project's possible impacts on these species.

A state-wide data bank can help correct these assessment deficiencies. Such a system will enable planners to compare the relative biological impact of various development siting alternatives, thereby guiding development to the location least destructive to the state's elements of diversity. If biological information is available and consulted early in the planning process, "environment vs. development" confrontations that result in costly delays for federal and state projects can be avoided. Likewise, the data banks can be voluntarily used by private developers to avoid significant biological areas and costly conflicts.

A central data bank can also be used to organize and direct biological research. It is astonishing how little information most states have about their own biological resources. The Ohio Natural Heritage Program, for example, has just completed a one-year assessment of existing data in an attempt to locate known examples of 888 elements of diversity. The Ohio Heritage staff discovered that 10 percent of the state's counties (9 out of 89) accounted for 37 percent of all known element examples. Twenty-one counties had only 10 or fewer examples of the elements being inventoried. This unevenness of previous field survey and research work can now be corrected by directing researchers to those counties and places in Ohio about which little is known.

From a conservation management point of view, a state data bank can improve the effectiveness of public land management programs by identifying and keeping current information on the elements of diversity found within a managed unit. A national park superintendent, for example, can use maps showing the location of elements to accurately determine which areas within the park may be suitable for intensive human use and which are not.

Finally, data banks will be extremely helpful in implementing existing conservation laws. Under the Endangered Species Act, federal officials must sift through volumes of published and unpublished data to determine the status of species proposed for listing as endangered or threatened. They must also define what constitutes a species' critical habitat and the precise location of the habitat. All these questions can be answered more quickly and effectively if each state has a comprehensive biological data bank continually updated and refined by an ongoing inventory process.

CONCLUSION

Randomly occurring development activity has severely diminished America's natural diversity. We are now in a race against time

to preserve examples of the few relatively undisturbed ecosystems, biological communities, and rare species habitats that remain. Once protected, these resources would occupy only a small fraction of the total U.S. landscape. A system of publicly and privately owned natural diversity reserves would in no way jeopardize the nation's overall economic development. In nearly all instances, a development project that would adversely affect an area rich in natural diversity can either be located at a suitable alternative site, or else designed to minimize its detrimental impact on the area's resources.

A number of states, with the assistance of The Nature Conservancy, have already initiated programs to inventory and protect their diverse natural resources. These pilot efforts have shown that the task is accomplishable and that states are willing to do the work. Current state efforts, however, would be greatly augmented by federal financial and technical assistance. The Natural Diversity Act will provide the federal support needed by states to preserve our country's rich natural heritage.

PANAMA CANAL TREATIES

Mr. ROBERT C. BYRD. Mr. President, I testified last Thursday at the Senate Foreign Relations Committee hearings on the Panama Canal treaties.

I ask unanimous consent that my testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE HONORABLE ROBERT C. BYRD

Thank you, Mr. Chairman and members of the committee. I will not unduly detain the committee and its work today.

I certainly want to express my appreciation for the opportunity to appear before the committee today.

I want to commend you, Mr. Chairman, and commend the members of the committee for the diligence of the committee in giving such extensive consideration to the treaties and to the issues that are related to the treaties.

The record you have made in your hearings, involving a wide range of witnesses, constitutes an invaluable source of information on this subject for the public and for the Senate.

I particularly appreciate, Mr. Chairman, the manner in which you and the committee are responding to my request in regard to the timing of the conclusion of your action on the treaties. In my letter of December 1, 1977, to you, Mr. Chairman, I asked the committee to attempt to report the treaties by about January 25 so that the Senate would be able to move to consideration of the treaties shortly thereafter, certainly in early February. I am gratified that the committee has been able to adhere to that schedule.

I know, Mr. Chairman, that you and your colleagues are aware of my announced position in support of the treaties, provided certain conditions, which I will shortly refer to, are met.

Today I want to reiterate that strong support. It will not be a passive support; it will be an active support. And, I want to elaborate on some of the reasons why I believe that ratification is the right step to take.

In reaching this decision, I have attempted to consider all of the relevant factors in an objective manner. An important part of this process was the visit to Panama in November by a delegation of Senators which I led. It was a seven-member Senate delegation, and on that delegation was Senator Sarbanes, who is present. I believe that he was the only member of your committee on that particular visit.

I am pleased to see that most members of this committee have also visited Panama in recent weeks.

I suspect that, as in my own case, the trip was of great benefit in furthering your knowledge and understanding of the issues involved.

Since I first had the opportunity to review the treaties in September, it has been apparent to me that it would be necessary to clarify and guarantee at least two important points, and that this would need to be done in order to gain public support for, and Senate approval of, the treaties. I stated this position as early as last September.

The two critical points as far as I am concerned are:

One, the rights of the United States to guarantee neutral access to the canal at all times, beyond the year 2000; and

Two, expeditious, or "head-of-the-line", passage for United States military and auxiliary vessels.

I stressed to President Carter the the importance of clarifying these matters, these two points, before the Panamanian plebiscite on the treaties on October 23. Some members of this committee will recall a subsequent meeting at the White House at which this was discussed. Thereafter, on October 14, President Carter and General Torrijos agreed to the Statement of Understanding clarifying these two important points.

Our Senatorial delegation discussed this Statement of Understanding with General Torrijos when we were in Panama, as did your group and as did the delegation led by the distinguished member of the committee, our distinguished Minority Leader, Senator Baker. General Torrijos stated to our delegation clearly that he subscribed to the agreement and would be willing to sign it.

Furthermore, it was clear that the Panamanian people had been fully informed about these points before the plebiscite, particularly through the televised address to the nation by General Torrijos on October 20, as well as through newspaper accounts. Our delegation viewed a videotape of General Torrijos' October 20 address while we were in Panama.

In view of all this, there should not be any doubt about our right—and about the recognition of that right by the Panamanians—to defend the canal. However, because this will be a matter of importance to future generations—and so that there can be no question about the interpretation as enunciated by General Torrijos and President Carter in their joint statement—I have consistently taken the position that the substance of the October 14 statement should be formally approved and incorporated in appropriate language and through the proper parliamentary technique by the Senate. Senator Baker, the Minority Leader, has expressed similar concerns, and he and I have, upon several occasions, discussed the necessity for the Senate to take some formal, positive action in this regard. It is our intention to continue to work with members of the committee and with other Senators in seeing that such action is taken.

Senator Baker and I discussed this with some of you recently. We will continue to discuss it with you. The committee is well aware of our position in this regard.

Like most Americans, I take great pride in the Panama Canal. It represents a monumental achievement. Even in today's space age it remains one of history's outstanding engineering feats. As David McCullough, who testified before you a few days ago, wrote in "The Path Between the Seas," the creation of a water passage across Panama was one of the supreme human achievements of all time, the culmination of a heroic dream of 400 years and of more than 20 years of phenomenal effort and sacrifice.

However, while taking justifiable pride in the role that the United States played in constructing and operating the canal, we must also try to understand the pride and the aspirations of the Panamanians. It is their nation—their nation, not ours, it is not my State of West Virginia—that is bisected by a strip of land and water controlled by a foreign power. It is their country that is bisected by the Canal Zone.

One of the benefits of travelling to Panama was the opportunity not only to see things on a first-hand basis, but also to hear the views of the Panamanians. The trip of my delegation to Panama certainly heightened my awareness of how the Panamanians feel, of how American businessmen feel who are in Panama, of how Americans who are living in Panama feel, and of how Americans who live in the Canal Zone feel.

We met with people who are opposed to and supportive of the treaty. We met with the opposition lawyers group. We met with students. We met with Panamanian government officials and with our own government officials. We tried to get a first-hand basic viewpoint from as many sources as possible—both pro and con.

Our discussions with Panamanians, as well as with U.S. citizens, served as a reminder that the 13 years of negotiations under Republican and Democratic Administrations which led to the treaties involved a two-sided process, attempting to reconcile the interests of both nations.

During the period since the treaties were signed, I have been impressed by the good faith exhibited by the Panamanians. Panama's interests and our own interests are closely interwoven. And, after visiting Panama, I am more hopeful and more confident about that country's future political direction, particularly if the Senate approves these treaties, and if they are ratified by the President.

The Senatorial delegation of which I was a member expressed some strong concerns to General Torrijos about human rights and civil liberties in Panama. Senator Sarbanes, in particular, Senator Metzenbaum, and Senator Riegle were among those who expressed these concerns. General Torrijos pledged to that delegation that steps would be taken to abrogate certain repressive laws, including those which had limited the right of assembly and had provided for summary trial and detention.

He has subsequently informed me that these laws have been abrogated, and that action is being taken to insure greater press freedom as well.

Mr. Chairman, I have tried to focus my own analysis of the treaties on one basic question and I stated this in Panama. May I say, parenthetically, that there is no political mileage for any United States Senator in voting for these treaties. Any Senator who votes for these treaties, in my judgment, will have some of the political skin taken off his political nose. And, that is true in the State of West Virginia as elsewhere.

But I believe that as people become better informed concerning the history of the treaties, the content of the treaties, and the implications upon future relations with other countries, particularly Latin American countries, of ratification of the treaties—or, on the other hand, rejection thereof—I believe that a well-informed public, will see that the treaties in the long run are in the best interests of the United States.

This has been the basic question on which I have tried to focus, and I believe that my delegation felt the same. What is in the best interests of the United States? Is ratification of the treaties in the best interests of the United States?

I have concluded that the weight of the evidence argues convincingly that approval and ratification of the treaties are in the

best interests of the United States. Indeed, these treaties better protect our long-term interests than does the 1903 Hay-Bunau-Varilla Treaty, which was never signed by any Panamanian.

Panamanians have long resented that treaty and the unusual circumstances under which it was concluded.

The new treaties would provide Panama with a greater stake in the canal and thus a stronger interest in its efficient and unimpeded operation.

I believe that those of us who have been to the canal are aware of the potential vulnerability of many of the canal facilities. I was particularly impressed by the obvious vulnerability of the facilities to sabotage, to terrorist activity, to guerrilla action. This was particularly apparent during our helicopter overflight of the canal. The potential threats cannot be overlooked.

However, under these treaties the United States would retain a high degree of control over the canal through the end of this century, as well as defense rights thereafter. We will have the right to take action against any aggression, or threat directed against the canal, or the peaceful transit of vessels through the canal after the year 2000.

This must be made clear by the United States Senate as it acts on the approval of these treaties.

In my view, these treaties are the best means of assuring continued access to and use of the canal—and that should be our primary concern.

I have been particularly impressed by the testimony of our top-ranking military officers in support of the treaties. The men who are responsible today—not yesterday, not 50 years ago—but those who are responsible today for the defense of this country support these treaties. The Joint Chiefs of Staff have pointed out that the strategic value of the canal, is in its use, in keeping it open. That is more easily assured if we enjoy cooperation and goodwill from the Panamanians, rather than confrontation with Panama or resentment on the part of the Panamanians.

Although we want to maintain ready access to the canal, there have been significant changes and advances in alternative modes of transportation in recent years. Further, our giant aircraft carriers, as well as the largest cargo ships and the new super tankers, are too big to transit the canal.

Mr. Chairman, I know the committee has looked at all aspects of the treaties, as I have endeavored to do. They rank among the foremost international issues of our time. The committee's action will, I believe, affect the course of international relations with Latin America for many years.

I hope the committee will conclude that, in the final analysis, these treaties are true to our own national values, and that ratifying them will be consistent with our role as a leader among nations. Approval of the treaties is particularly important for our future relations with Latin America and should open a new era of mutual trust and cooperation in inter-American relations.

In discussions with representatives of Colombia and Venezuela, I have found that they are very supportive of the treaties.

It has been claimed by some that approval of the treaties would give rise to increased communist influence in Panama. In my judgment, just the opposite is true. The best way to prevent increased communist influence is to approve the treaties. Our failure to do so would almost certainly give renewed impetus to extremist elements on the right and on the left in the area and would open the way for greater Soviet and Cuban involvement.

As I mentioned earlier, Panama's history is closely interwoven with our own. I believe that the Panamanians desire friendly relations with us. That is their natural inclination. These treaties offer the best way to assure good relations between our nations and to discourage the rise of communism in that area.

In closing, Mr. Chairman, I want to express the hope that the committee, in its recommendations to the Senate, will provide guidance for the Senate as to how the Senate might best meet the concerns that many of us have about the treaties, without creating the necessity for reopening the negotiations, and, I would hope, without creating the necessity for another plebiscite in Panama. That could be a situation fraught with danger and uncertainty and could undercut all that has been done to move us toward a successful resolution of the matter.

Mr. Chairman, the Panama Canal, as David McCullough has written, is an expression of that old and noble desire to bridge the divide, to bring people together. Certainly, the canal has done this in many respects. Now, however, the time has come to bridge the divide between Panama and the United States and for the two nations to work together in seeing that the canal continues to serve the people of the United States and Panama and the world.

I thank you, Mr. Chairman.

TELEPHONE PRIVACY ACT

Mr. ANDERSON. Mr. President, since Congressman LES ASPIN and I introduced the Aspin-Anderson Telephone Privacy Act in October, our offices have received hundreds of letters from all over the country expressing strong support for the legislation (S. 2193 and H.R. 9505). My interest in protecting the privacy of telephone subscribers, fed up with constant and increasing interruptions of their home lives by peddlers of all forms of goods and services, strikes a responsive chord in many, many Americans.

Mr. President, I believe that the citizen's right to privacy is paramount to a salesperson's right to use an individual's telephone for business purposes. No one has the right to invade the privacy of our homes 24 hours a day. The Aspin-Anderson Telephone Privacy Act gives citizens the freedom to choose whether to receive unsolicited commercial telephone calls.

I would like to share two local editorials expressing support for the Aspin-Anderson Telephone Privacy Act. The Washington Post editorial, "Hold Those Calls," appeared on January 23, 1978, and the Washington Star editorial, "Dial Us Not Sequentially," appeared on January 30, 1978.

Mr. President, I ask unanimous consent that the editorials be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

HOLD THOSE CALLS

Have you been called lately by a machine? A lot of people have, especially since something called automated sequential dialing devices came into use last year. These gadgets can automatically dial, in turn, every conceivable phone number—including unlisted ones. Whenever anybody answers, the machine will play a taped commercial spiel and then record the listener's response.

Commercial users say that these low-cost "junk calls" bring good returns and may become a better mass-marketing method than bulk mail. But unsolicited phone calls are also much more intrusive and annoying than unsolicited mail. The new machines, dialing 100 calls per hour or more, have already gotten a lot of people up from dinner or out of the bathtub. One result has been a surge of calls for action by the Federal Communications Commissions, Congress and the states.

Some proposals now pending would bar robot calls entirely. Others would curb some of their habits, such as staying on the line if you hang up before the tape has run its course. Aiming new rules at one particular device, though, strikes us as about as illogical as outlawing computer-generated commercial letters but letting hand-addressed bulk mail go through.

We think people who don't want to be bothered should be able to hold off all unsolicited business calls. Rep. Les Aspin (D-Wis.) and Sen. Wendell Anderson (D-Minn.) are sponsoring bills under which anyone could ask his local telephone company to put his number on a no-call list that phone solicitors—except charities, political groups and politakers—would have to respect. Similiar plans are being used by some bulk mailers and seem to work well.

The mailers' initiatives have had one interesting result. Despite all the complaints about "junk mail," relatively few people register not to get it—and a substantial number, if given the chance, sign up to go on mailing lists for catalogs, magazines and the like. Regarding phone calls, we suspect that the proportions would be different. But if any of you have strong feelings about machines and companies that have your number and use it indiscriminately, we'd be interested in hearing them—by letter. If public sentiment is emphatic enough, perhaps the solicitors will get the message and hang up.

DIAL US NOT SEQUENTIALLY

What we live in is the Insistent Society. Cajoled, admonished, lectured, mandated and solicited from stump, store and pulpit. We are besieged at all hours on behalf of all causes, crises and products.

Something called the "automatic sequential dialing device" is the latest, and most insidious, insistence: "robot phones" dispensing "junk calls." This computerized system can digest in sequence all the telephone numbers of a given exchange at the rate of 100 an hour and then dial every tenth one and present a recorded sales pitch or message. Some of the robot machines refuse to click off when a telephone is hung up, blacking out that telephone until the recorded voice has exhausted itself. Unlisted numbers are no defense.

Happily, this automated intrusion is being resisted. The Maryland Senate on Wednesday approved a bill by Sen. C. Lawrence Wiser, D-Montgomery, that would prohibit the devices. Similar proposals are pending in the House. Del. Marilyn Goldwater, also a Montgomery County Democrat and also a sponsor of restricting legislation, fears—not unreasonably—that the more refined the equipment becomes, the more the 7.5-cent cost of a business call will be able to compete with the approximately 7-cent bulk postage rate for advertising.

In Virginia, after several regulatory bills were unsuccessful in last year's General Assembly, the State Corporation Commission told telephone companies to conduct a study on curbing abuses in phone solicitation. Said study is now in progress.

In federaldom, the White House Office of Telecommunications Policy has urged the FCC to consider banning or limiting all telephone soliciting. But so encompassing a prohibition would be itself an example of insistence.

A more sensible limitation is contained in two bills before Congress—by Rep. Les Aspin,

D-Wis., and Sen. Wendell Anderson, D-Minn. These would permit a customer to tell the telephone company to count them out of automated solicitation—and fine firms which violate the "no call" provision up to $1,000. The soliciting firms also would have to pay for updating phone-customer lists once a year. Because the issue involves interstate activity, a federal role seems unavoidable.

None of the proposals in the Maryland legislature or in Congress, The Star's Sheila Kasi points out, would stop politicians, polltakers or charitable groups from making automated calls. One or all of the above, however, might be sensitive to the risk of angering more people than they can persuade.

For most of us, the telephone's ring is an irresistible summons, out of apprehension, hope or curiosity, and privacy increasingly becomes an endangered value. The "automated sequential dialing devices" are an infringement, even in the Insistent Society.

TRIBUTE TO SENATOR LEE METCALF OF MONTANA

Mr. NELSON. Mr. President, the death of Lee Metcalf leaves a large void in the Senate that will not easily be filled. After over 40 years of public service at the State and Federal levels, the last 17 years of service in the Senate, the Nation has lost a compassionate, thoughtful, and far-sighted individual.

Much has already been said about Lee's role in the House of Representatives, about his work in the field of education, about his role in founding the Democratic Study Group. The passage of the Surface Mining Control Act last year, after a 10-year battle, is characteristic of Lee's unwavering commitment to the stewardship of the public domain and of the foresight and wisdom he brought to our system of government.

Lee strongly believed that the public had a right to know who was advising the various Federal departments and agencies. The long overdue reform of the Federal Advisory Committee structure in practice did not represent the public, was started by Senator Metcalf. The public's right to know was fervently protected by Lee's successful efforts to reform the executive branch's advisory committee system through the enactment of the Federal Advisory Committee Act of 1972.

During my tenure on the old Senate Interior and Insular Affairs Committee, I met and quickly learned to respect Lee Metcalf's judgment. He was one of only a few national leaders who foresaw this Nation's crises in natural resources, environmental protection, and energy. And, he was one of a handful of legislators who, early in the 1960's before it became fashionable or politically acceptable, spoke out strongly and repeatedly for conservation and environmental protection legislation.

This Nation owes a great debt to Lee Metcalf. Lee, for over 10 years carried on the fight for a uniform and strong surface mining control law. He chaired the hearings, developed the legislation and never gave up even when this most needed legislation was twice vetoed by Republican Presidents. Lee Metcalf was instrumental in developing the National Wilderness Preservation System and his presence and strong advocacy for wilderness will be missed in the future as we face more difficult and controversial decisions in this field.

As an environmentalist, as an advocate for consumer protection, and as a believer that the public must be supplied with adequate amounts of energy at fair, reasonable prices, the death of Lee Metcalf comes as a significant loss. We who worked with him and admired him have a responsibility to carry on his most important work.

AGRICULTURE DEPARTMENT RECOMMENDS STRICT ACREAGE LIMITATION IN FEDERAL RECLAMATION PROJECTS

Mr. ABOUREZK. Mr. President, Agriculture Secretary Bob Bergland has written to Secretary Andrus this week to report on the Agriculture Department's study of farming in Federal reclamation projects. The report has been eagerly awaited by all sides in the recent dispute over acreage limitations in Federal reclamation projects. I think that this report should go a long way toward resolving the dispute.

Secretary Bergland, in essence, has concluded that the Interior Department's proposed regulations for acreage limitation in reclamation projects are not strong enough. The Department's data show that farmers can make a good living on 320 acres even at current low prices when they have the assistance of subsidized irrigation water from Federal projects. This subsidy can reach staggering proportions—in the Westlands District in California, for instance, it is equal to $76,000 per 640 acre farm per year. Secretary Bergland properly points out that such subsidies cannot be justified, especially when so many farmers across the country are unable to make a living at all.

Secretary Bergland's comments and the USDA study give strong support, I think, to S. 1812, the Reclamation Lands Family Farm Act, which I have cosponsored with Senators NELSON, HASKELL, BAYH, ANDERSON, and RIEGLE. If anything, our bill has more lenient limitations than this report would support.

I urge everyone concerned with this issue to read the Secretary's remarks carefully. I ask unanimous consent that the text of the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF AGRICULTURE,
Washington, D.C., January 25, 1978.

Hon. CECIL D. ANDRUS,
Secretary of the Interior,
Washington, D.C.

DEAR CECIL: I am writing to offer you the Department of Agriculture's comments on the Department of Interior's proposed reclamation rules and regulations for acreage limitation (Federal Register, Vol. 42, No. 165, August 25, 1977).

At my request, the Economics, Statistics and Cooperatives Service (ESCS) of this Department has analyzed the potential economic impacts of the proposed rules. This study provides insight into some of the key questions surrounding the implementation of more stringent rules for the distribution of reclamation benefits. Among the questions studied are: the minimum acreage in a Federal Reclamation Project which constitutes a viable family farm in today's economy; the potential disruption to the surrounding communities; and the economic impacts of the proposed regulations on cost of production, production patterns and product prices.

To answer these questions, the study team looked at four reclamation projects; two in California, the Imperial Irrigation District and the Westlands Water District; and two in other locations, the Columbia Basin project in Washington and the North Platte project in Nebraska and Wyoming.

In summary, and subject to the qualifications and caveats detailed in the text, the report shows that the income possibilities on a relatively small farm irrigated by subsidized reclamation water are substantial. Annual returns to management and operator labor by farm size vary among the four regions studied. All farm sizes considered in the Westlands and Columbia Basin result in annual returns exceeding median family income. In Imperial and North Platte, using current land prices, 320 acres are required to achieve annual returns equal or greater than median family income. In view of rising production costs, price variability and other risks not considered fully in the analysis, larger operating units may be necessary to provide a return to management and operator labor sufficient to maintain a viable farming operation over time. The other economic impacts are expected to be relatively slight under the proposed regulations. Copies of the study will be made available to you and your staff and, of course, the ESCS staff will be available to work with your staff if there is need for greater detail than the study provides.

Beyond the economic analysis, I would like to draw your attention to some related points that I feel should be resolved before the final rules are promulgated. I concur with the basic and broad objectives of the Reclamation Act of 1902 and your desire to administer that policy fully and equitably. However, though the proposed rules and regulations move in the right direction. I am concerned that under the proposed regulations it would still be possible to comply with the letter of the law, while frustrating its basic intent to use federally subsidized water to encourage the development of small family owned farms.

One such point is the determination of the maximum size acreage which qualifies as a small family farm, and is therefore eligible for subsidized water. Under the current proposed regulations, it would be possible to acquire ownership or use of an area of land, benefitted by federal water, in excess of a size that anyone could classify as a small family farm: with 320 acres allowed a husband and wife, plus an additional 160 for each child and as much through leasing, even a typical family of four could put together an operating unit of 1,280 acres eligible for project water, and, conceivably with more children, larger units could be formed. According to USDA projections in the study, in the two areas in which pre-project land prices have been established, the Westlands Water District and the Columbia Basin, the net income generated from a 640 acre farm under the provisions of the proposed rules, would be $81,000 per year and $189,000 per year respectively. (For the Westlands calculation, projected seasonal average prices for 1977 were used. In the Columbia Basin, wheat was priced at $2.57 per bushel, and potatoes at $54 per ton.)

In 1976, 83 percent of this nation's farmers grossed less than $40,000 in sales. I believe that this discrepancy points out the need for a more precise limit of the total benefits which will accrue to a single operating or

ownership unit than is currently provided under the proposed regulations.

Furthermore, on those farms which benefit from the Reclamation Project water, the federal subsidy is a major portion of the total income. According to the Department of Interior's estimates, the per acre subsidy available in Westlands, for example, is $1,540. If that figure is converted to an annuity for the 50 year project life, at 6½ percent interest, it would equal $118.68 per acre per year. On a 640 acre farm, then, the annual subsidy would be around $76,000. Again, in an average year, according to our study, the net income from a 640 acre farm in Westlands would be around $81,000. The magnitude of these income and subsidy calculations emphasize that this issue cannot be viewed simply from an agricultural perspective, but rather must be evaluated in the broader context of the distribution of social and economic benefits through the Reclamation Projects. (It is perhaps noteworthy that the maximum welfare payment under Aid to Families with Dependent Children for a family of four in the state of California is $5,076.)

Therefore, I recommend that we examine carefully the question of the maximum acreage eligible for subsidized water, with the intent of dispersing the benefits of the reclamation projects as widely as possible, in accordance with the purpose of the Act, yet permitting the establishment of farming units of sufficient size to be economically viable both now and in the foreseeable future. This maximum should be established individually for each project, and even within projects, taking into account the different income possibilities determined by the radically different soils and growing conditions in reclamation projects.

Current levels of income among farmers on irrigated land show the inadvisability of a single maximum acreage for eligibility. For example, in California, the average gross crop value per irrigated acre is $781. In South Dakota, the average per irrigated acre is $128, less than a third of that. Although establishing a series of maximum acreages for eligibility will be difficult and time consuming, it is key to the acceptance and the equity of efforts to enforce the Reclamation Act.

I believe also that, for reasons of administrative convenience and equity, the maximum acreages eligible for subsidized water should be established without respect to the number of persons in a family. The number of persons in a family might change for a number of reasons, and does not seem to be greatly relevant to eligibility for subsidized water. I would suggest instead that eligibility should be determined on the basis of the total amount of land owned by a single person, family, partnership, or other combination thereof, with appropriate language to preclude the possibility of a person participating in more than one farm unit, and, as you have provided, in more than one water district.

A second point of the proposed regulation which concerns me is the 50 mile "neighborhood" designation. A meaningful residency requirement is essential to the fulfillment of the intent of the Reclamation Act. However, the 50 mile limit does not preclude the possibility of investors purchasing the land as an investment, with no intention of farming, and then leasing the land to bona fide farmers. The use of the public subsidy involved in reclamation projects as an investment to support income in this manner was not intended by the Act. To avoid this, it might be useful to require that purchasers of excess land actually farm the land, and live on or near it in order to be eligible for project water.

A related point is the leasing provision under the proposed rates. As you know, leasing can be an important opportunity for young people entering farming; it is also a way for the established farmer to respond to changing market conditions. Further, there are many small landlocked parcels in the Reclamation Projects which are not large enough to provide an adequate income by themselves. However, despite the advantages leasing provides, in the history of Reclamation Act administration, many of the most flagrant violations of the intent of Congress to foster small family farms have transpired through leasing and leaseback arrangements. For this reason, leasing under the new regulations should be limited so that it does not provide a vehicle for avoiding the basic purpose of the law. The language of the regulation should allow exceptions for people who retire or become disabled and the families of deceased farmers.

A third point is the proposed lottery for distribution of excess lands. I foresee a number of problems with this approach. The conclusion of USDA analysts that the smaller farms resulting from the proposed rules are viable is based on an assumption of average or better management abilities. Should excess land be distributed by a random method which fails to consider the experience and capacities of prospective farm buyers, income could be significantly lower than those estimates.

Moreover, distribution of land should be accomplished with consideration for eligible tenants who currently farm land rented from excess landholders. There is no provision in the proposed regulations permitting these tenants to buy their farmsteads. Divestiture of land by excess landholders will effectively end the tenure of those tenants and throw their homes into the lottery as part of larger excess land packages.

I was in California recently and discussed the situation with a number of these families. They are understandably concerned. Much of this land has been rented and farmed by these families for many years, and though they do not own the property, in all other aspects it is their home. I think that it would be consistent with the spirit of the 1902 Reclamation Act to offer these small farmers the first opportunity to own the land they have worked for years.

For these reasons, I recommend that we seek an alternative to the lottery method of distributing the land. I understand that the lottery system was suggesed to ensure fairness and to prevent those with an "inside track" from unfairly obtaining the benefits of the redistribution. Nonetheless, I believe it is possible to develop a method which could ensure fairness, and yet would take into account the experience of prospective buyers, and the human investment that current farm tenants have in particular parcels of land.

A fourth point you may wish to consider relates to the broader issues of federal water policy. As I mentioned earlier, the subsidy to those who receive water under the provisions of the Reclamation Act is very large. Under the proposed regulations, the subsidy would be twofold: the buyer of the excess land would pay "pre-project" prices which are in the range of a third to half the current market price; and in addition, the buyer would then continue to receive the water at a price much below its value as a production input.

I understand that the purpose of charging the pre-project land price is to prevent current owners from enjoying a windfall profit by excluding from their selling price the value of the subsidy provided by the public. Of course, I agree with this goal. However, I am concerned with the magnitude of the federal subsidy resulting from the combination of pre-project land prices and the cheap water it provides, and the dependence of the new farms on this subsidy.

In formulating the 1977 Farm Bill, this Administration took special care to provide an equality of benefits among farmers in various regions of the country who grow different crops. Too often farm programs have distorted market patterns and have provided substantial benefits to one set of growers, while providing relatively little to another.

The size of the subsidy available to those eligible for reclamation project water and the resulting income possible on a given acreage is much more than in other areas in the country which do not benefit from reclamation water. For example, as I mentioned before, our study shows that *net* income on a 640 acre farm in the Westlands would average around $81,000, in Columbia Basin $189,000. Using the same budget techniques to measure income on 640 acres in the High Plains of Texas under the typical conditions of partially irrigated farming and partial dryland farming, the results are remarkably different. On 640 acres, the net income for the same period of time was $79. A dryland wheat farmer in Nebraska last year would actually have a negative net income on 640 acres. Although I understand that these three situations are not strictly comparable, I do think that we need to look at the magnitude of the income provided by the subsidized water in comparison to farms of a comparable size in other areas of the country to gain some perspective on the equity question involved.

It seems to me that the Administration's water policy has been moving toward a system which puts increased emphasis on conservation and under which beneficiaries pay a share of the total cost more commensurate with the benefits received. One way to encourage conservation consistent with this Administrations' water policies in other areas of the country, while at the same time to encourage small family farmers, would be to develop a water pricing system in which smaller farmers would pay a lower rate, with higher rates charged to larger operating units.

This pricing system would be in addition to, not in lieu of, the establishment of maximum eligibility acreages, although the reduced income possibilities which would result from the reduced subsidy would have to be considered in the acreage formula. This would permit recovery of some of the massive federal subsidy involved in these projects without endangering the viability of irrigated farming in these areas. I realize that a pricing scheme poses administrative difficulties but these may be justified if a more equitable solution to the subsidy problem can be achieved.

In summary, I would suggest that the proposed regulations be changed to reflect these considerations:

Maximum acreage size for eligibility for federal project water be determined on a project by project basis, to allow for different soil and growing conditions;

Maximum size would be determined without reference to family size, but rather on the basis of total ownership units, whether composed of a family, an individual, a partnership, or any combination thereof;

Purchasers of excess land must operate the farm and live on or near it to be eligible for reclamation benefits. Leasing should also be limited;

An alternative to the lottery be designed for the distribution of the excess land which takes into account factors such as farming experience and tenancy;

The Department of Interior, in consultation with the Department of Agriculture, look into the possibility of developing a pricing policy which would recoup some of the massive public subsidy in these projects, while still supporting the primary goal of the Reclamation Act to encourage the establishment of small viable family owned farms.

I appreciate the opportunity to share these comments and hope you will let me know if we can be of any further help.

Sincerely,

BOB BERGLAND.

A CASE FOR DICKEY-LINCOLN

Mr. MUSKIE. Mr. President, the release of the draft environmental impact statement on the Dickey-Lincoln hydroelectric project in Maine has dramatically intensified debate on the project.

An environmental impact statement is by its nature a negative document. It describes in great detail the effects of the project on the land, air, and water, fish, and wildlife in the affected area on the upper St. John River. The document was seized upon by opponents of the project, some of whom implied that it provided dramatic new evidence that the project was not worthwhile and should not be built. Of course, the EIS did nothing of the sort.

In fact, it revealed there were few environmental effects we had not foreseen a dozen years ago when the project was authorized.

I expect opponents of the project to seize every opportunity to make debating points. But I was saddened that the vast majority of the Maine press was taken in by the tactic. The displacement of deer, the flooding of land, the loss of timber became almost a litany, repeated again and again across the pages of our newspapers. It was as if no one had realized before that when a river is dammed, land is flooded.

The environmental effects ought to be brought to light. I have enthusiastically supported the environmental study process because I believe we must know all Dickey-Lincoln's costs, and we must explore all the alternatives.

But we must also weigh the benefits. And in making a final judgment, we must determine what we are willing to give up in turn for the benefits we will receive.

I know as well as anyone that when it comes to energy and the environment, there are no benefits without costs. There are no projects built without environmental sacrifice; there are not projects foregone without sacrifice of another sort, or environmental costs at another place.

We have heard much recently about the benefits of small site hydro, for example, but very little about the cumulative environmental costs of those projects. And there has been no attempt to describe the environmental effects of such alternatives to Dickey as nuclear power or coal-fired generating plants.

The Maine media, with some notable exceptions, have for the most part ignored the story of Dickey-Lincoln's benefits. The editorial writers of our major newspapers certainly could not make a balanced judgment on Dickey-Lincoln just by reading their own newspapers. So it is not surprising that although 74 percent of Maine people recently surveyed favor new hydroelectric projects in Maine, the majority in favor of Dickey-Lincoln was only 48 to 41 percent.

It was a public service then for the Maine Sunday Telegram to publish a lengthy article in last Sunday's edition which dispassionately reviews the Dickey-Lincoln debate.

The article was prepared by John Goodwin, director of Maine Citizens for Dickey-Lincoln, which is attempting to present a balanced view of the project, its costs and benefits. Citizens for Dickey-Lincoln supports the project. And the article was properly printed as an opinion. Yet those who read it will find a more balanced and forthright assessment than could be found in the news columns on any given day.

I want to welcome Citizens for Dickey-Lincoln to the fight for the project, and congratulate them for their effort.

Mr. President, I ask unanimous consent that the article, "A Case for Dickey," be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A CASE FOR DICKEY

(By John Goodwin)

Is there nothing to be said for Dickey-Lincoln?

Are the advocates all black hats determined to ruin the environment, drive people from their homes, chase the deer out of their yards and drown the Furbish lousewort?

And just so people in Boston can more conveniently run their electric toothbrushes?

Much of the discussion over the past year or so has made it seem that way.

But the argument, for example, that "all the power from Dickey-Lincoln will be going out of state," doesn't hold up.

Forty-four percent of the total power generated at Dickey-Lincoln will be available to Maine residents, according to the State Department of Conservation. All the base load power at the site has been earmarked for Maine.

Maine will also get 75 percent of the up to 1,900 construction jobs involved. And benefits from Dickey-Lincoln will flow into Maine long after it's constructed.

Historically, light but high-energy-use industries have located near a source of relatively low-cost electric power.

Hydro-electric power is low cost, because its source—the water—is free and immune to inflationary pressures that affect oil, coal and wood.

That Dickey-Lincoln will most definitely be a source of low-cost power is borne out by a Department of Conservation study.

It found that power from a coal-fired plant CMP plans to build on Sears Island will be selling for 5.5 cents per kilowatt; Dickey-Lincoln's will sell for 3.9 cents.

This differential is likely to increase even more in the future.

Because of its low cost, the power from Dickey-Lincoln will mean that Maine consumers will save millions of dollars annually on their electric bills: More than $12 million, according to the Eastern Maine Electric Cooperative based in Calais.

All of Maine will benefit, but especially the eastern and northern sections, where more and cheaper power is most needed for development.

Construction of the dam will mean an immediate boost to the economy of Aroostook County, from which the Corps of Engineers estimates that 29 percent of the dam's labor force will be hired.

The minimum wage paid at the site will be $5.70 an hour—good by any standard, but particularly in a state which has had a history of low wages.

Some critics have claimed that high wages will cause an "adverse impact" in Aroostook County, others that the jobs are only temporary and not worth having. And still others claim that people in Aroostook can't do the work.

But if a low wage is a Maine tradition then it's one that should be ended as soon as possible.

And all construction jobs are temporary. When a project is done, the workers move on to something else. This does not mean, however, that Maine people don't take advantage of jobs that do become available.

Aroostook County workers can't do the work? Maine people drive trucks, operate bulldozers and use back hoes, cranes and so forth—the kind of equipment that will be used for Dickey—every day.

Indeed, the Corps of Engineers estimates that 60 of the 68 people actually operating the dams after construction will be from Maine.

Another myth is that the dams involved will flood and destroy a virgin wilderness.

The area is far from a wilderness. It's largely cut over, with hauling roads and skid trails sometimes just yards apart.

Much of it is owned by a Canadian conglomerate based in St. John, N.B. Much of the cutting in the area is done by Canadian workers, and 90 percent of the saw logs taken from the area are processed in Canada by Canadian workers.

One cost of building the project is the flooding of about 88,000 acres of land behind the Dickey dam, but the potential timber loss there can be more than made up by better management of what remains, according to the Corps of Engineers' Environmental Impact Statement and the Department of Conservation study.

Also, because the existing private road system will be disrupted, the landowners in the area might begin processing more timber in Maine, thus creating more jobs for people in this state.

Is Dickey-Lincoln something the state and region needs at all? It is, now more than ever before.

CMP President E. W. Thurlow says that by the mid-1980s, a significantly base load electrical energy deficit in Maine is projected as demand for power outstrips the available supply. "Unless the state continues to expand its generating capacity, Maine could be subject to power outages, power rationing and inordinately high energy costs."

Just a couple of weeks ago newspaper headlines were saying "It Was So Cold The Clocks Slowed Down," meaning power was so scarce there wasn't enough to keep electric clocks running accurately.

The private power firms have plans to meet a substantial portion of the near-term growth in base load demand (base load is the electric power needed during the normal course of a given day).

In Maine, an addition to the oil-fired plant at Cousins Island in Yarmouth is now nearing completion. A coal-fired plant is scheduled for Sears Island. Small hydro plants are also planned at a number of locations around the state.

The private utilities had been planning a second Maine nuclear power plant to be completed sometime in the 1990s.

However, CMP's Thurlow has announced the indefinite shelving of this project pending further clarification of the nation's nuclear policy.

The various projects planned by the private utilities could substantially meet Maine's base load demand if they are built and if the fuel to power them is available at all and at a feasible price.

Coal and oil, for example, are very expensive and will become more expensive in the future. Yet CMP will burn oil at its 600-megawatt addition at Cousins Island and coal at the new Sears Island plant.

CMP has just asked the Public Utilities Commission for a $24.7 million rate increase and it will be back for more as oil and coal prices rise.

Dickey-Lincoln will replace 2.3 million barrels of oil annually, more than 1 million barrels (42 million gallons) in Maine alone. At today's price of about 50 cents a gallon for

home heating oil, that could mean a saving of $21 million a year.

Also, when the source of electric power is water, there's no "fuel adjustment charge" involved, for the "fuel" is free. It's also non-polluting, renewable and reliable.

CMP is projecting a total electric power demand growth of 5.5 percent over the next ten years (historically, it has increased seven percent annually).

But this forecast may be too conservative. During 1976, CMP saw demand increase eight percent. The pulp and paper companies alone used 27 percent more electric power in the first quarter of 1977.

Peaking power demands is also expected to leap by nearly 75 percent in New England by 1987–88.

If more electricity is to be consumed in the future, then it naturally follows that dependable sources of supply must be developed.

There should also be a good mix of power sources: that is, we should not rely solely on coal, oil, water or anything else.

Maine is fortunate in now having a fairly good mix and Dickey-Lincoln will put us in an even more favorable position.

For even if the coal, oil, and small-site hydro plants proposed for Maine are built as planned, none would be efficient in meeting peaking power needs.

Dickey-Lincoln, on the other hand, is ideal for this purpose. Its basic energy source can be stored and kept available almost instantly when needed.

This single electrical source will meet 25 percent of Maine's and 17 percent of New England's peaking needs.

Opponents sometimes say that Dickey-Lincoln could only operate two hours a day.

Not true.

The dam would operate at varying capacities, depending on peaking power demands.

During periods of low demand, as on weekends and nights during the spring, the generators would hardly run at all.

This is good, for the primary source of the water at Dickey-Lincoln is the spring runoff. This low-demand period is when the Dickey reservoir is replenishing itself.

At peak periods, such as in January and February, Dickey dam would be operated for periods extending up to eight or nine hours daily.

The Lincoln School regulating dam below would normally operate 10 hours a day, seven days a week. When Dickey is operating seven or more hours a day, Lincoln School would be capable of generating electricity for 24 hours a day at full capacity.

Total capacity of the Dickey-Lincoln project is 900 megawatts.

Dickey dam, located just above the juncture of the Allagash and St. John rivers, will be capable of generating 1,183 million kilowatt hours (kwh) annually. This would be primarily peaking power.

Lincoln School dam, 11 miles below Dickey, would have a capability of 262 million kwh of base load power annually, all designated for Maine.

The two dams would increase the capacity of downstream hydro plants in New Brunswick by 350 million kwh annually, half of which would be returned to the United States.

Total cost of Dickey-Lincoln, in 1977 dollars, was projected at $690 million. But taking inflation into account before completion in 1986, the figure is likely to be nearer $1 billion.

Although the U.S. taxpayer will have to meet the initial bill, 98 percent of it will be repaid with interest from revenues derived through power sales.

There has recently been some discussion about the safety of the project. It's been suggested that the dam might collapse or an earthquake may shake it apart.

No dam built by the Corps of Engineers has ever collapsed anywhere in the United States. Not a single life has ever been lost due to a Corps of Engineers dam.

In designing Dickey-Lincoln, the Corps, in consultation with outside seismological and geological experts, has taken into consideration the fact that there is an earthquake-prone region in the St. Lawrence River Valley about 50 miles away from the dam site.

Records dating back to 1638 show no major earthquakes within a 20-mile radius of the dam site. Within a 20- to 40-mile radius, there have been only four recorded events since 1638, all minor.

The dam is designed to withstand the maximum tremor of the largest credible earthquake in the St. Lawrence Valley.

The corps of Engineers, as part of its Environmental Impact Statement on the project, examined 24 alternatives.

The only one close to meeting the peaking power capability of Dickey-Lincoln was to build gas turbine plants which would be fueled by oil.

But oil is becoming prohibitively expensive and scarce. We should be moving away from oil, not building plants to consume more.

The private utilities have been counting on nuclear power to meet a substantial portion of their base load demand. But planned facilities have been long delayed and may never be built.

In any case, there are many unresolved difficulties with nuclear power, such as the disposal of radioactive waste and of the physical plant once its life cycle has been exhausted.

Coal-fired plants aren't trouble free either. The Sears Island plant will burn something like 420,000 pounds of coal per hour, which has to be hauled to the site and an almost equal amount of waste trucked away.

Small dams on the state's rivers are useful for generating moderate amounts of electricity. They have been neglected in recent years, but they can be valuable sources of base load power, and the state's utilities should develop as many as possible.

But these small hydro sites are basically "flow-of-the-river" systems. That is, the power they generate depends on how much water is flowing at a given time. There is no storage behind, and thus no substantial peaking capability.

A spokesman for the American Wildlife Federation said at one Dickey hearing that another alternative would be wood-fired power plants.

But for such plants to meet Dickey-Lincoln's peaking capacity they would consume more than 16,000 tons of wood chips a day. At that rate, all the timber in the Dickey-Lincoln impoundment area would be consumed in just over seven months.

What about the sun and the wind? Isn't there enough energy here to meet our needs forever?

Perhaps someday, but no technology yet exists to harness these sources on a large scale.

Further, if all the heat and hot water in the country were obtained from solar energy, the total electrical power demands would drop by less than five per cent.

Peak load pricing has been held out as another possible alternative to Dickey-Lincoln.

Basically, this means paying more for power during peak periods. Alternatively, a box in the house or factory would regulate power usage. People would be allocated only so much power during these periods and no more.

Some idea of what peak load pricing might mean for Maine can be obtained by looking at what's going on in Massachusetts.

Peak load pricing there will be in effect sometime later this year. The proposal before the Department of Public Utilities is that peak rates be nine times the normal rate for the weekday hours 11 a.m. to 5 p.m. from June through September. During those same months, power costs from 5 p.m. to midnight and from 9 a.m. to 11 a.m. on weekdays would be four times the normal rate.

The lowest rate would be on weekends and daily from midnight to 9 a.m.

Of course, a special meter is needed to tell when you've used electric power. That will cost between $100 and $200.

Central Maine Power has found it would cost its customers $36 million just for the meters and take 15 years to get them installed.

CMP's own proposal now before the PUC is to charge three times as much for power used between 8 a.m. and 10 p.m. on weekdays as would be charged between 10 p.m. and 8 a.m.

The customers would have to buy the meters to take advantage of this pricing, but they could be paid for over a period of time as part of the monthly electric bill.

The latest alternative to grab attention has been pumped storage. In such a system, water is pumped from a lower reservoir into a higher one. When needed, the water from the higher level descends through the force of gravity to turn the turbines.

A pumped storage facility on the Kennebec near Bingham would provide more peaking power at half the cost, it has been suggested.

But to get two kilowatts of power out of such a system, you have to use three kilowatts to pump the water.

There is no such surplus power available today in the New England system, and there are no plans to have such a surplus in the near future.

Dickey-Lincoln is partially a pumped storage project. One of its four generators is reversible so that during off-peak hours it can recycle water from Lincoln back to the much larger Dickey reservoir.

Dickey-Lincoln makes economic sense even without this feature, and even more with it since it can take advantage of whatever small amounts of surplus power might be available. But the whole project does not depend on the availability of such power.

There are obviously social, environmental and economic costs involved in construction of Dickey-Lincoln.

The Corps of Engineers is now doing a complete life-cycle study, but there are some preliminary figures, and Maine's Department of Conservation has examined them very closely. As conservative as the department was in its approach, it concluded that Dickey-Lincoln would mean very real benefits to Maine now and even more so in the future, most particularly after considering the price of the alternatives such as oil-fired plants.

The environmental cost is principally the flooding of 83,000 acres behind Dickey dam and the loss of about 60 miles of the St. John River in its present state.

In total, the impoundment area behind the dam amounts to less than one-half of one percent of the state's forest land.

There were some 2,328 visitor days of canoeing on the St. John in 1975, but only 447 were represented by Maine people.

Whitewater canoeing is a marvelous experience, however, and it ought to be available even if only a small number of people appear interested.

The Allagash Wilderness Waterway will not be affected at all by Dickey-Lincoln. Indeed, one proposed site for the project was rejected precisely because it would disturb this wilderness river where, among other things, whitewater canoeing is available.

Building Dickey-Lincoln will mean 161 families in Allagash and St. Francis having to move.

All steps have been and will be taken to

assure that they can be relocated with as little disturbance as possible.

Federal law requires that they be fairly compensated for their property loss. Further, up to $15,000 can be paid each family to compensate for the inconvenience of moving.

Much mention has been made of the "destruction" of Allagash as a community as a result of building Dickey-Lincoln. I contend that the people don't see it that way.

There's no question many families will have to move if the dam is built, but that's a very long way from saying the community will be "destroyed."

During the peak construction period at the dam up to 1,900 people will be working, 75 per cent of them from Maine and 29 per cent from the local area.

Past history indicates that construction at Dickey-Lincoln will cause no more of a "boom and bust" than any other project of its size.

For example, at the new paper mills built recently in the communities of Hinckley and Jay, there were approximately the same number of people working as there will be at Dickey-Lincoln.

Both towns were able to absorb this temporary influx without social or economic damage.

It's often forgotten that Dickey-Lincoln is a dual-purpose project, designed to control the waters of the St. John, which periodically overflows its banks, as well as to generate electricity. Construction of the dam will end the threat of flooding.

As with any project of this sort, the costs—social, environmental and economic—have to be weighed against the benefits.

Clearly, I would suggest, the benefits far outweigh the costs. As Senator Muskie has put it, "In 10 to 15 years Dickey-Lincoln will look like a bargain. We should not pass it up."

LEAA WINS JANUARY GOLDEN FLEECE AWARD

Mr. PROXMIRE. Mr. President, I am giving my Golden Fleece of the Month for January for a $2 million prototype police patrol car. The car ended up as an earthbound space ship on wheels. This experimental car would make James Bond green with envy. It should leave the taxpayers purple with rage.

The "Fleece" winner for January is the Law Enforcement Assistance Administration (LEAA), which spent the money to develop this car. Fortunately, this is one space capsule that never got off the ground. Because its load of problems exceeded even its load of gadgets, plans for field testing the model car were halted. But this welcome relief came only after $2 million had been drained from the Federal Treasury to pay for this ill-conceived project.

What we have here is an idea which might originally have had some merit. But the car was so loaded down with one gold-plated item after another that ultimately it became a Golden Fleece.

Mr. President, as Senators know, I make monthly "Golden Fleece" awards for the biggest, most ridiculous, or most ironic example of wasting Federal tax funds.

I should point out, too, that I sit on the Senate Appropriations Committee, which oversees LEAA's budget.

What was the purpose of LEAA's so-called "Police Patrol Car System Improvement Program?" According to that agency's draft summary final report on the program, the objective was: Incorporating into the police car the expressed requirements of the police community for a number of technical improvements and the evaluation and demonstration of an improved police car to enhance capabilities, utility, safety, economy, and, ultimately, police officer productivity.

In view of this seemingly noble goal, why does LEAA deserve the "Fleece" for January? There are at least three good reasons.

First, let us look at what LEAA tried to cram into and onto its model car and what this would mean, in practical terms, for the police officer trying to use such a vehicle.

A policeman who was thrust behind the wheel of this wonder car would have a lot on his mind besides crime prevention and law enforcement. In addition to driving the vehicle and thinking about the usual things found on a normal car, he would have to worry about his multiple spark discharge ignition system while grasping his hand-held voice/digital terminal while reading his heads-up display while listening to his audio recorder while looking at his wide-angle periscope rearview mirror.

If this did not keep our beleaguered patrolman busy enough, he would be further occupied by the need to check out his tire sensor, his brake wear sensor, his catalytic converter/exhaust temperature sensor, and seven different condition sensors.

On top of this, he would have to be concerned about keeping tabs on his carbon monoxide monitor, using his voice/digital transceivers, and operating his microcomputer mass memory, while at the same time keeping a watchful eye on his digital cassette reader and his keyboard.

Rather than too little, too late, this is an example of too much, too soon. The result of this equipment overkill would be, in effect, a gold-plated police car suitable, perhaps, for a potentate or a playboy, but not, in my view, for the average working patrolman in this country. What this mountain of equipment suggests is not a close encounter of the third kind but an extravagant encounter of the worst kind with the taxpayers' hard-earned money.

Moreover, anyone who believes that a car with all these gadgets would get more miles per gallon and have lower maintenance costs, as the contractor claims, would also have to believe that Tampa Bay won the Super Bowl and the tooth fairy is alive and well in Keokuk.

Second, LEAA itself, in the draft report referred to earlier, cites a number of shortcomings and problems in its prototype car. Here are some examples from that report:

The multiple spark discharge ignition system "was prone to failure while the vehicle was in operation" and "did not demonstrate any substantive improvement in vehicle operating economics."

Speaking of the hands-free voice communication systems, the report said, "Where officers must hook their radios as well as themselves into the system, rapid ingress and egress, especially under stressful situations, could be hampered by the additional necessary disconnect/connect functions." (In other words, they could get stuck in the car.)

In the case of the hand-held audio-digital terminal, "A problem was the rather large size of the combined unit that includes the terminal, batteries, and two-way radio," and also, "Battery life was quite short due to the high power requirements of the display."

The report, in discussing the wide-angle rearview mirror, said that "It was considered doubtful that a satisfactory design to meet all specifications could be achieved without expensive roof modifications."

These and other difficulties noted in the LEAA report contributed to the demise of this project. But again, this termination came about only after $2 million of tax dollars had gone down the drain.

Third, a critique of this LEAA program by an outside, nonofficial, analyst provided further reasons why it was a wasteful and unwise expenditure of Federal funds. Two points, in particular, stood out.

This observer reported, first of all, that the median price, in 1976, of the LEAA-recommended police-car package would have been $49,078 per automobile, above and beyond the sticker price of the car itself. This amount that local police departments would have had to pay per car was based on an assumption that a city or county would initially invest in 20 prototype cars, choosing what LEAA calls "sophisticated features" midway between the lowest priced and highest priced. Where in the world would local governments get that kind of money, even if these cars were worth every penny?

And second, this critic of the LEAA model car project charged that working police input was ignored by LEAA in developing the prototype. This charge was supported in a General Accounting Office report on the LEAA. Clearly, this failure on the part of LEAA is indefensible, especially when we stop to realize that the kind and amount of equipment in a police patrol car may mean the difference between life and death for the officers in that vehicle.

In 1976, I was one of two U.S. Senators to vote against reauthorizing LEAA. I wanted to abolish the agency entirely. I still do, as I recently indicated to President Carter in soliciting his help to bring this about.

If I am successful in getting rid of LEAA, the taxpayers will not be burdened with paying for projects like this one. In the meantime, I intend to tell the American people about LEAA's wasteful spending practices. And that's why LEAA gets the "fleece" for January.

JOHN LEWIS PAYS TRIBUTES

Mr. KENNEDY. Mr. President, on January 16, 1977, John Lewis who directs our domestic programs at ACTION gave a truly moving speech at a special service honoring Dr. Martin Luther King, Jr., and Senator Hubert H. Humphrey. Mr. Lewis said:

Hubert Humphrey was a man who demonstrates to all of us, as Martin Luther King Jr., did, that one man can, indeed, change the world.

John Lewis worked with, and was influenced by, both these men as they struggled for human rights for all people.

Mr. President, I ask unanimous consent that the full text of Mr. Lewis' speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY MR. JOHN LEWIS

It is difficult for me to find the right words to express my feelings about Dr. Martin Luther King, Jr. He was a man whom I knew personally and regarded as a brother, a spiritual leader, a prophet, and just a good human being filled with love, and compassion for all people.

I will never forget my first impression of the man, Martin Luther King, Jr., while living at my home near Troy, Alabama. I was fifteen years old when I first heard of the Montgomery Bus Boycott and Dr. King in 1955. As a black child deep in the heart of rural Alabama, I had tasted the bitter fruit of racism. As I watched the unfolding drama in Montgomery, just 50 miles away, the concept of nonviolent confrontation with the forces of segregation brought a ray of hope to me, just as it did to people throughout the nation.

I saw him as a very young man, a product of the South. I saw him as a young minister whose way was trying to make his religion relevant to the needs of his people, and I admired that. In my mind he was a Moses, using organized religion and the emotionalism within the black church as an instrument, as a vehicle toward freedom.

Our first meeting in 1958 was the beginning of a long and beautiful relationship. After that, our paths were to cross often in the sit-ins, during the freedom rides, in organizing the 1963 March on Washington, in Mississippi in 1964, on the March from Selma to Montgomery in 1965, and in preparation for his ultimate quest, the poor Peoples Campaign of 1968.

As I grew to know Dr. King intimately in the activities of the movement, my admiration for the man also grew. He was a spokesman, not only for blacks, but for human beings everywhere. Martin Luther King, more than any other figure of our time, had the power to bring people together to do good—black and white; Protestant, Catholic, and Jew; rich and poor; young and old. His message was love. His weapon was truth. His method was creative nonviolence. His goal was the Beloved Community—a community of justice, a community of compassion, a community at peace with itself.

He was a beautiful man—so Black and so American. He could speak and the masses understood from his words that they were "somebody." He was a gentle man who used the teachings of Jesus and the tools of Ghandi. He was a strange man who spoke a strange language—the philosophy of passive resistance to evil and the use of nonviolence in the struggle for good. He was a radical man far too advanced in his concepts of love and peace for the violent times of the nation in which he lived. And so the violence of his beloved nation destroyed him.

It is not insignificant that the first person in line this morning, who had waited in sub-degree temperatures to pay respect to Senator Humphrey was a 75 year old Black woman, who said that Hubert Humphrey had "meant the world to her". Her feeling is shared by millions of Americans.

For Black Americans, this century produced two courageous giants: Dr. Martin Luther King, Jr., and Hubert Humphrey. It is symbolic that one of these is black and one is white, because both of them lived lives—lives committed to the human dignity and human rights for all people.

Throughout our history, those Americans most left out and left behind have been Black Americans. As a champion for the rights of all people, Hubert Humphrey was a major force in helping Black Americans gain their rights.

In 1948, Hubert Humphrey was warned that his strong speech at the Democratic National Convention in favor of civil rights for Blacks would mark the end of his political career. Instead, it marked the beginning of his career as a champion of the American dream. For nearly 30 years, Hubert Humphrey led the forces for good in America. His life was an inspiration for us all.

During the 1960s I had the honor of being a participant in private and public meetings with Dr. Martin Luther King, Jr., and Senator Humphrey. I believe that Dr. King saw in Hubert Humphrey a lasting friend. So this afternoon we also pay tribute to more than a former Mayor, a Vice President, a leader of the Senate, we pay tribute to a lasting friend.

Hubert Humphrey never backed down on a fight for what he believed in. Hubert Humphrey was a man who demonstrated to all of us, as Martin Luther King, Jr., did, that one man can, indeed, change the world.

Let us rededicate ourselves to the struggle that was their struggle and continue to seek the goals which were their goals.

Let us use our skills and the resources of our government to look out for all humankind. But uniting and working with our brothers and sisters, I am confident that one day we will be able to complete the building of the New World—that beloved community which we seek.

SOVIET HELSINKI MONITORING GROUPS HONORED

Mr. JACKSON. Mr. President, at its fifth anniversary dinner in Washington, D.C., on January 26, 1978, the Coalition for a Democratic Majority, presented the 1977 CDM Human Rights Award to the Soviet Helsinki monitoring groups.

On that occasion the honored guests included a unique assemblage of Helsinki monitoring group members and their representatives:

Lyudmila Alekseeva.

Tatyana Yankelevich (on behalf of her mother Yelena Bonner, wife of Andrei Sakharov).

Andrei Grigorenko (on behalf of his father, Peter).

Olga Piamm (on behalf of her father, Naum Meiman).

Yuri Mnyukh.

Avital Shcharansky (on behalf of her husband, Anatoly).

Alexander Slepack (on behalf of his father, Vladimir).

Lydia Voronina.

Tomas Venclova.

I ask unanimous consent to place my remarks on that historic evening in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR HENRY M. JACKSON

I want to welcome all of you to this gathering of the Coalition for a Democratic Majority.

The Coalition's Fifth Birthday is cause for celebration. Five-year-olds are supposed to be seen and not heard. The Coalition has been both seen *and* heard since its founding. It is a robust and healthy five-year-old and we can take pride in that fact.

We are gathered together tonight to honor some absent friends: those brave men and women who have dared to insist that their government abide by the human rights provisions of the Helsinki Final Act.

Some languish in exile. Others are behind the barbed-wire and gun towers of the labor camps. Still others continue to risk arrest and punishment to carry on the struggle for individual rights in the Soviet Union.

I am proud to join in honoring them.

We have filled this room tonight to say to Orlov and Rudenko and Ginsburg and Slepak and their colleagues: you are not alone.

We have filled this room tonight to say to the Soviet prosecutor: stop this ridiculous attempt to accuse Anatoly Shcharansky of spying—let this brave and long-suffering young man leave and join his wife.

We have filled this room tonight to say: the great tradition of a commitment to individual liberty is alive and well and living in Washington.

The Coalition for a Democratic Majority is serious about the cause of human rights. Not just this month or this year. But unceasingly. After all, we fought for human rights before it became fashionable. And we will continue even after the fainthearted have tired of the struggle. Persistence has its rewards, my friends. And Simas Kudirka is with us tonight to prove it.

In 1972 I introduced in the Senate an amendment that made trade concessions to the Soviets contingent upon a liberalization of emigration policies that had turned the Soviet Union into the world's largest prison.

It was opposed by the Nixon Administration.

It was fought by some self-interested businessmen who thought they saw great profits out of trade with the Soviets.

It was opposed by the detente theorists who subscribed to the view that to get along, it was necessary to go along.

It took us two and a half years to get the Jackson amendment adopted. But when the dust had cleared, the Congress of the United States had passed the first statute in this century linking economic policy with respect for international human rights.

In supporting the Jackson amendment for freer emigration, we have international law on our side. By adhering to the Universal Declaration of Human Rights and to the UN Human Rights Conventions, and by signing the Helsinki Final Act, signatories have made the right to emigrate a matter of legitimate international concern—indeed of international responsibility.

The fight for the Jackson amendment was long and hard. The Soviets and their friends lobbied and threatened and cajoled and maneuvered. When they thought they could defeat us by defusing the issue, the Soviets temporarily opened the gates and let more than 50,000 out in the two years while the amendment was pending in the Congress. They have turned the flow of exit visas on again and off again in a cynical campaign to influence the Congress, to weaken our resolve.

In the three years since we passed the amendment, the Soviet economy has stagnated, her hard-currency debt has mounted and her economic prospects have become increasingly bleak. Labor and energy shortages are on the horizon while the Soviets stagger under a military budget that takes twice as much of their resources as our budget takes of ours.

Now, the Jackson amendment is based on the simple principle that the Soviet leadership must choose between the denial of basic rights and economic assistance from us.

They cannot have both. And as their economy deteriorates, the continued choice of repression becomes more and more costly. We can afford to be patient until the Soviets recognize where their true interests lie. Three years after its passage in the Congress, the Jackson amendment constitutes the sort of leverage that we ought to be using on behalf of fundamental liberties.

The Carter Administration has committed itself to human rights. President Carter has pledged, in writing, the full implementation of the Jackson amendment. But like bad pennies, we keep turning up bureaucrats, in this agency or that, who haven't got the message—who draft position papers and circulate memos speculating on and sometimes urging repeal of the amendment.

I call upon the President to instruct the executive agencies—the State Department, the Treasury, the Commerce Department—to join the Administration's campaign for human rights. I urge President Carter to make it clear to the bureaucracies in Moscow and in Washington that we are going to implement the Jackson amendment fully; there will be no MFN, there will be no flow of credits until there is a flow of people.

As we move to increase trade, let us move to decrease tyranny.

As we talk about free trade, let us talk about free people.

We are serious about human freedom.

My friends, we must press our commitment to human rights in our relations not with the Soviet Union, not only because this commitment is a most solemn pledge, only because these values are right in themselves, but because it must be a purpose of our relationship to help bring the Soviet Union into the community of nations—to hasten the end of what that great and courageous man, Andrei Sakharov, has called "an intolerable isolation, highly perilous for all mankind."

Without greater individual liberty in the Soviet Union, without greater freedom of conscience, without the freer flow of people and ideas across the barriers that divide East from West—there can be no sure movement toward a more peaceful world. If we permit the human rights struggle to falter, we will not only fail to keep our own most solemn commitments, we will, in the long run, fail to keep the peace.

THE DEATH OF A DAUGHTER

Mr. KENNEDY. Mr. President, I want to share with my colleagues Victor and Rosemary Zorza's touching and inspirational article about their beloved daughter, Jane, which appeared in the Washington Post on January 22, 1978.

This article has already given so much hope to so many people—including myself—that I believe it ought to be read by everybody who has lost or is afraid of losing one of their loved ones from cancer or any similar affliction. It will give comfort not only to those who fear physical suffering, but it will also provide moral sustenance and a special kind of strength to those—and that surely means all of us—who find it difficult to come to terms with the idea of dying—with the death of someone close to them, and indeed, with their own maturity.

This article has no religious theme—and yet it is profoundly religious in the broadest sense of that word. It has no political content—and yet it is deeply political in the sense that true politics is about ethics and morality, and the purpose is to enable us to live our lives honestly, decently, and to die with dignity in the knowledge that we have tried to make this world a little better place for others.

Jane's story shows that she tried and succeeded—and that we too can succeed if we try. She wanted us to help others to succeed by setting up hospices to make it possible for others to die as "happily"—her own word—as she did, and thus I have agreed to become a member of a committee to provide information on hospices.

Jane Zorza's gallant spirit lives on and embraces us all. We are beholden to her loving father and mother for enriching and ennobling life's meaning by sharing with us their daughter's beautiful and compelling message, and for their commitment to establishing hospices in this country.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 22, 1978]

THE DEATH OF A DAUGHTER

(By Victor and Rosemary Zorza)

Sometimes the things that we dread the most turn out to be altogether different than we anticipated. The particularly painful way in which our daughter Jane's cancer developed seemed to presage a period of suffering and torment so great that we quailed at the prospect. As things worked out, the time of greatest suffering was when the doctors were refusing to tell her what her chances of survival were. Once she was told, after several months of uncertainty, that she has less rather than more time to live, she cried a little, and then smiled through her tears. There was no great, anguished sobbing, but a sad, resigned little sigh, almost of relief, and just a few tears.

"Now that I know," she said, "I want to enjoy every day I have left. I want to be happy—and I want you to help me be happy." Slowly, she dragged herself round the garden with the aid of a stick—she had come home from the hospital in between treatments to spend the weekend with us. It was to be the last time she walked under the trees, the last time she watched the still waters of the pond and heard the rustle of the stream that feeds it. She smiled at the sound. "Could you cut my hair," she said to a friend who was visiting us. "It got too long at the hospital." And to us she said, "Every extra day is a bonus now."

We promised her that she would die at home, but first the hospital would have to be informed. When they previously refused to tell her she was dying, we said we might talk to her ourselves, but the doctors said they knew better. "You don't tell a 25-year-old she is dying, and make the rest of her days a misery," they said. "You don't know whether she is going to have weeks, months, or years. Why, we have known remissions . . ." The doctors brainwashed us so completely—"We know how to handle this, we have had so many of these cases"—that when Jane's brother bombarded us with phone calls from America, insisting that he knew she would want to be told, we could only reply weakly that the doctors knew better. "It's her life," Richard kept saying. "Let her decide what she wants to do with what's left of it."

The doctors wanted to give her another course of radiation treatment, more chemotherapy, to fit her out with a stiff collar to ease the pain in her neck—all of which meant staying in the hospital. They had been trained to save lives, and all their actions and emotions—because in their own way they were as emotional about Jane as her friends and relations—were dedicated to making Jane live longer, even when they knew that her chances were infinitesimal. "We must not give up," the young doctor kept saying. "She is too young to die." He, who had seen death so many times, had still not come to terms with it.

Before long Jane was moved to the farthest corner of the ward, where the nurses had few occasions to pass. They would come only to administer the pain killers, and that only after all the other patients had been taken care of, although Jane had been ready and crying for a pill long before. They had strict orders that the pills were to be given only every two or three hours—so, to be on the safe side, they made it every three hours. They who had come to love Jane and joke and pass the time of day with her earlier did not now dare to come and sit with her for a moment. They were too busy with the other patients, for whom they could still do something.

In the end it was our local general practitioner, the doctor who had known Jane since she was a child, who told her the truth. Once the hospital knew that she had been told, they hurried up her various treatments so that she could be discharged.

We brought her home from the hospital in London to the quiet English countryside, to Dairy Cottage in Buckinghamshire, where she could look out from her bed by the window, at the squirrels feeding in the garden. Once or twice she came out on the terrace, but no further, to take in the view, the land falling away steeply to the pond at the bottom of the garden, and the hill rising from there up to where it met the sky, so that she was enclosed in her own little universe with no other house in sight.

But there was a good deal of life around her, and she loved it. Sometimes the cows on the hillside would stampede to the bottom in a mad rush, and she would look up with interest. The ageless feeling of the garden gave her comfort, for the old avenue of tall yew trees reminded her, she said, of all the beauty that was there before her, and would remain after her.

We were confident we could nurse her at home. Our family doctor—we had become his patients under the National Health Services when we first came to live there in the early Sixties—said he would come at any time of day or night if Jane wanted him. The "district nurses"—also part of the health service—had worked out a roster so that they would come several times a day. The "district health visitor" came every day to see if she could help with any problems that were not strictly medical, talked to us learnedly about the care of the dying, about other families in the same predicament, about how we can adjust to it—and then she went in to meet Jane. She came out crying. She did not know until she saw Jane that she had met her before, when Jane was a teacher at a local school and the health visitor had gone to see her to help sort out the health problem of one of the children. "It is always more difficult when it is someone you know," the health visitor said, half apologetically.

Jane was more comfortable than she had been at the hospital. Her pain had eased a little. She had said earlier that she wanted to die at home, but at the same time she was uneasy about it. "I'll be such a nuisance to you," she said. She was reassured a little when she saw all the help we were getting from the National Health Service.

In all these months of hospitals, tests, treatments, operations, money was never mentioned—it was never an issue. Under the "socialized medicine" system of the National Health Service, all this is paid for out of

taxes. From the first local hospital to the two London hospitals with highly specialized facilities, the treatment she received was the best available—as good, we found out when we considered bringing her to the United States, as any in the world.

Her friends came from London, sat by her bed, talked about oldtimes, held her hand, cooked her favorite vegetarian dishes. Her brother had come from America. We put up a bird table just outside the window by her bed. All day the birds and squirrels came. We robbed the pantry and put out raisins, wheat, nuts, all the leftovers. More birds came every hour, and Jane would say with delight: "A greenfinch . . . a sparrow . . . " She was enjoying herself, forgetting all the claustrophobic months in the hospitals, telling us which of her friends should come to stay and make their farewells—when the cancer again began moving in on her, more and more rapidly. The pain in her body grew to the point where she couldn't bear us to touch her, let alone lift her or even wash her. She needed expert care day and night, but most of all she needed relief from pain. Our doctor gave her everything he knew, but relief never lasted long. Once again we were becoming desperate, squirming with a pain deep inside us every time she winced, every time she held back a complaint.

Jane knew about the hospices for the dying, several of which had been opened recently under the National Health Service, and she had expressed a mild interest in them once or twice when she worried about "being a nuisance." But how could we, having promised her that she would die at home now tell her that she might be better off in the hospice?

She solved the problem herself. Would they really be able to control the pain? That was all she cared about now, for the pain was getting worse not just day by day, but hour by hour. She had to be moved—yet we dared not, for fear of causing her more pain. The nurses came, did whatever was necessary, but the slightest motion still made her grimace with pain—yet she only cried out once. As the ambulance men carried her gently out of the house wrapped in a red blanket, up the steep path, the younger man fumbling at what was obviously a new job to him, the birds were still singing—but she gave no sign of hearing them now.

What does a father think when his 25-year-old daughter is being carried off to a home for the dying? This father thought, with a shudder, that she would never see her home again—and that she would be much better off at the hospice than at home. What does a mother think? This mother thought that the most terrible moment of all had come, and she was overcome by a sense of failure—a feeling that she had failed to preserve a child to whom she had given life and had nurtured for so many years.

The ambulance journey was a nightmare. With every jolt, with every grimace, it was as if a knife was being driven into Jane, deeper every time. The younger man drove, very slowly, very carefully. The older man stood up in the back, with us, watching Jane's face, repeatedly telling the driver to go more gently, trying to make bright conversation to distract her, while her eyes reflected the pain and the desperation which communicated itself from Jane to him at every jolt. In the end, he told the driver to go more quickly rather than more slowly—the injection the doctor gave her at the outset was wearing off, and the ambulance man decided that the quicker we got to the hospice the better. But the pain was now so intense that the decision had obviously come too late. It was good to have someone else make the decision.

By the time Jane was carried into the single room they had prepared for her at the hospice, the pain which was already unbearable when she left home had become doubly so. How does an unbearable pain become even more so? As the hospice doctors told us later, anxiety and the expectation of pain can greatly increase the level of pain. Now, in spite of all the pain killers Jane had been given before and after arriving at the hospice, the pain was becoming still worse. The first increase in pain had generated the fear and expectation of more pain.

Instead of the relief we had promised Jane, the hospice was proving a disaster. Wouldn't she have been better off if left to die at home, among the things she loved, the faces she knew?

What happened next was not a miracle, but the slow and thoughtful application of medical knowledge and of living care by the nurses to yet another cancer patient—and the patient's family. What did Jane want, the doctors asked her. She wanted one of us, her father or mother, to be with her—always, until she died. That was easy. The nurses wheeled another bed into Jane's room, and from then on one of us was with her day and night—except once or twice, when we were talking to the doctor. Then a nurse—or once, when the nurses were too busy, the hospice porter—came to hold her hand and talk to her.

They asked if we would rather take turns at going home to rest, or did we want to stay at the hospice. We didn't want to go home. Home was where Jane was. So they gave us a room with two beds. Earlier, when Jane had been told that she might not have much time left, I (Victor) told her that I would give up writing my column for the duration of her illness, so that I might devote myself completely to her. Jane's reply was to cry out in mock horror. "Help!" she exclaimed—and she made me promise that I would keep up the column, whatever happened. She did not, she said with a smile, want me to devote myself "completely" to her—or there might be trouble. Now, at the hospice, they gave me the other empty room which they kept for visitors, and I used it as a study. It was important, as they explained to us later, that the patient should be comfortable—but it was no less important that she should know that her loved ones are suffering no undue discomfort or disturbance on her account. Helping the family was as important as helping the patient. Jane would adjust to the hospice far better, they explained, if she knew we were happy.

Happy? What a word to use in the circumstances. And yet that was the word Jane used herself, repeatedly, once her pain had been brought under control. She used it to describe her own state of mind—and she urged me to share it with her. I pretended that I did—of course, I would do anything to make her happy. If she was happy, then so was I—or so I said, automatically, for the word meant nothing to me. Jane looked up at me, thoughtfully, with a small smile. "Dad, you're just saying it. That's no good. There is only one way that I know to make you accept it—by a dialectical discussion."

And into a dialectical discussion we went—to please her—to and fro, back and forth, session after session. We had never before discussed my attitude to death. Now Jane was telling me something I had never fully reasoned out with myself. I was afraid of dying, Jane told me, and so long as I remained afraid for myself, I would be afraid for her. But, she said, she herself could only retain the state of happiness about her own dying if she could make me share in it. She could only be happy if she could make us happy too, she said.

Jane was quite unashamedly calculating about it. She worked on her friends who came to see her as she had worked on me. If she could only leave that to us, she said, if she could only make me accept the thought I had always pushed away, if she could show us that it was possible to die with peace and in dignity when our time came—that, she said, would be a great thing to leave behind her. It would be the greatest gift she could bestow on us. And in the very act of accepting the gift, we would be returning it to her and making her own dying easy. And that is how it worked.

Of all Jane's friends, only one, her childhood companion since the age of 5, could not reconcile herself to the thought of Jane dying. ("Don't let her drive home alone," Jane said after her friend had came to make her last farewell. "She's too upset.") To the rest of us Jane gave something that will always be with us, something that we will be able to pass on to others—for she asked us to do so. She made us promise that we would write about it. Perhaps this might make the hospice movement known more widely in England and beyond, she said. The National Health Service has only half a dozen or so hospices. The one Jane was in has only 25 beds—13 of them empty because funds are short. In the United States, 300,000 people die of cancer every year, so that hardly a family can remain untouched by it. There are so many people who could be helped, she said, if only they knew about the hospices.

A girl of about the same age as Jane who remained in the London hospital after Jane left died in torment and in misery, in great pain and in anguish of mind, without being told that she was dying though no doubt suspecting it and fearing it. She needn't have—if only she had been moved to the hospice. They gave the other girl all the conventional pain killers, but still it did not help. At the hospital, Jane had to beg for pain killers, but she would be given pills only as prescribed by the doctors, at regular intervals. At the hospice, the doctors had studied carefully the sources and the channels of the pain coursing through her body—they identified eight of these—and treated each of them separately. They didn't wait the regulation two hours, until the effect of the pain killer had worn off. They made sure that the drugs would be administered to Jane before the pain had a chance to start clawing at her again. They didn't make her into a zombie filled with drugs.

During the first couple of days the drugs—some of which would be forbidden in the United States as habitforming—did bring on hallucinations from time to time, but these eased off later. On one occasion she informed me, with a wicked smile, that my face was "quite funny." My ear was where my nose should be, my eye was in my chin, and there was a gaping hole in my forehead through which, she said, she could see the sky. When I looked distressed, she consoled me. "It's rather like a good Picasso," she said. Next time this happened, she said she could only see half of my face, inordinately elongated. "Very interesting," she chuckled. What, I asked, another Picasso? No, she answered thoughtfully, rather like a Modigliani.

Soon the drugs brought the pain under control. She was probably never completely out of it, but after what she had been through, the relief was so great as to make it possible for her to forget the physical discomfort. She was able to give her mind to music. One morning I had put on a Mozart tape for her, just as she was waking up. She slowly opened her eyes, listened with obvious enjoyment for a few minutes, and glanced at me. What can she be thinking of, I wondered, when she is listening to Mozart—that she will have to leave all this loveliness behind her, to go into nothingness? She was not thinking that at all. "How beautiful you are making it for me to die," she said slowly.

The tape was still on when the doctor came in. "Ah," he said with the air of a connoisseur, "Mozart." When he left the room, Jane turned her head toward me. "He's to have my Mozart tapes." The doctor was a deeply religious man, and we had been a little concerned that Jane's atheism might cause problems. There was a priest at the hospice for those who wanted him. When we arrived, we were asked what Jane's religion was, and

when we said "none," the subject was never mentioned again.

She used to have long talks with the doctor and the nurses. Everybody had time for her, as for any other patient who wanted to talk. That was part of the treatment. "I cannot keep calling you Dr. whatever-it-is," Jane said to him after a few days. "Call me Robert, then," he said matter-of-factly.

"What will it be like to be dying?" she asked on another occasion, and before we had time to frame a suitable reply, the nurse who had just come into Jane's room said: "You'll probably just go to sleep, Jane, and you won't feel anything." The nurse knew, as we didn't, that what Jane was really asking was whether there would be a great flash of pain, a violent convulsion, a breaking up of her body, a tearing of her organs. Jane closed her eyes briefly, to absorb the information the nurse had just given her, and then opened them up again with an expression, which showed that she believed what she had been told. This gave her greater peace than she had known since her illness began. That was another important thing about the hospice. At the hospital, Jane could never be sure they were telling her the truth. At the hospice, she knew that they would never tell her a lie. When you are dying, this can be more important than any medical treatment.

When we ask ourselves what it was that made it possible for Jane to say again and again at that time that she was happy to be dying, we can think of no single answer. The only satisfactory answer would be made up of the hundreds of little incidents of life at the hospice during her last days. Like the time when she said "I would like to touch a piece of velvet before I die"—and soon a piece of velvet was brought to her. She touched it, and a nurse then put it on her bare shoulder, where it remained—forever. Or the time when a friend brought a bunch of roses, put it by her bed, extracted one flower, and held it out to Jane. "Would you like one?" the friend asked. "I have always wanted to wear a rose in my hair," Jane said, "but never dared." The nurse put the red flower in her hair, and there it stayed—forever. Every time Jane was turned to make her more comfortable—which happened every hour or two—the piece of velvet and the red rose were handled with the greatest gentleness and delicacy, as if nothing in the world was more precious.

The atmosphere of the hospice, relaxed and casual, more like that of a family home than an institution, makes an important contribution to the patient's—and the family's—ease of mind. Before that terrible ambulance journey; Richard had gone ahead to the hospice to prepare Jane's room for her, to make it as homelike as possible, to arrange her personal belongings around it, to put on her bed the woolen shawl she had crocheted and treasured so much—and, very important, to put food on the bird table outside the window.

There is no sense of hurry at the hospice, no clatter of busy feet on hard floors, no sense that someone much more important, more seriously ill, is next in line, as might happen in a hospital. The doctor comes not at the head of a swift-moving posse of assistants, nurses and juniors, but usually alone, moving and speaking gently, without noise or stress. He talked alone to Jane for long periods, often late at night, sometimes on his way home from dinner in town. The second doctor was quiet too. One day he came when she was almost asleep. He tiptoed to the bed, bent over, and they whispered together.

Perhaps the best explanation of what the hospice does was given by Robert, the doctor. Its approach, he said, was based on providing relief from symptoms as well as emotional support—and on being honest with the patient. And relieving symptoms was not just relieving pain, important as that was, but also easing nausea to prevent vomiting, or a sore throat, or an itch, or a hundred other small things, such as helping Jane to wash out her mouth when she could hardly part her lips—but could still express her delight at the feeling of freshness it gave her.

It helped, too, that the hospice windows looked out over the countryside. One early evening, outside the open door the sky glowed a rosy pink. The sun had set some time ago, and soon the stars would come out. But as yet there was still plenty of light to see by. We listened to the nightingales singing in the trees. I (Rosemary) tried to describe the evening for her. "A rabbit is coming out from under the hedge, Jane," I said. "He's eating the grass the other side of the path."

"A rabbit," Jane exclaimed, thrilled. "I must see him. Lift me up."

"It will hurt you, Jane," I said, doubtful.

"Oh, Mum, my last rabbit," she begged—and I knew I must help her do whatever she wanted, even though it would hurt her, even though she could not see clearly by now. I put her arms over my shoulders and lifted her body. Her hands hung limply down my back. No, she couldn't see the rabbit—but her memory of other rabbits was refreshed by this visitor.

During her long illness she must have imagined more than once how horrible the final coming apart of everything might be—and yet now that it was happening, it wasn't horrible at all. The contrast between what she had once expected and the present reality must have helped a lot—and for this the hospice alone was responsible. These were the happiest days of her life, she said, because there is nothing more important in life than being born and dying. At birth, she said, I knew nothing. At death, she said, I know everything that I will ever know, and everything around me is good, not evil. That's a good way to die.

She had been in the hospice for eight days. As she sank into unconsciousness, and her breathing became more and more shallow, she was still being turned over by the nurses every few hours to make sure she was comfortable. As the rose in her hair faded and withered, so did Jane's body. Then, as we sat by her bedside, each of us holding one of Jane's hands, she breathed her last, quietly, easily, deep in sleep, as the nurse had promised her. We sat with her for a little while, kissed her lips, and touched the piece of red velvet and the red rose. As we walked out of the hospice, we knew that one day we would tell others how Jane had died—hoping that it would help them, too. We cried a little—but we were able to smile, all at the same time.

Jane died on June 25, at 5 o'clock. She had been ill since February. Her ashes were scattered over the garden, as she had asked. She wanted no funeral, but asked that we should instead give a party in the garden, to make up to her for the 25th birthday party she had missed because she was in the hospital. It was a beautiful day. All her friends came, and the doctor and the nurses from the hospice, and all the people who had helped us during her illness. We made more friends during those few months than we had made for years.

Now that we are back in Washington, we notice one important change. We think far more than we ever did about what really matters in life, about feelings, about the more abiding human values, about people—about people as individuals. Jane talked about these things in her last weeks, and she made them more real to us than they had been. She also took pleasure in giving her more cherished possessions to her friends. She gave a lot of thought to it. She liked to see them walk away with something she had given them, after they had said goodbye.

"I don't need a thing to remember Jane by," said one of her friends. "Jane taught me how to make bread. Whenever I make bread, I think of her." Before she died, we talked of how people live on in what they had done, in their actions, in the memories of those they had influenced. That's how Jane hoped she would live on. And she will.

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

REDWOOD NATIONAL PARK

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now proceed to the consideration of S. 1976, which the clerk will report.

The legislative clerk read as follows:

A bill (S. 1976) to add certain lands to the Redwood National Park in the State of California, to strengthen the economic base of the affected region, and for other purposes.

The Senate proceeded to consider the bill, which had been reported from the Committee on Energy and Natural Resources with amendments as follows:

On page 2, line 11, strike "167–80005–A and dated June 1977" and insert "167–80005–C and dated October 1977";

On page 2, line 17, after the period, insert the following:

tion (b), delete "by donation only". At the end of section 2, insert the following new subsection "(c)":

"(c) Within the area outside the boundaries of Redwood National Park indicated as the 'Park Protection Zone' on the map entitled 'Proposed Additions, Redwood National Park, California,' numbered 167–80005–C and dated October 1977, the Secretary is authorized to acquire lands and interests in land upon a finding that failure to acquire all or a portion of such lands could result in physical damage to park resources and following notice to the Committee on Energy and Natural Resources of the United States Senate and the Committee on Interior and Insular Affairs of the House of Representatives. Any lands so acquired shall be managed in a manner which will maximize the protection of the resources of Redwood National Park.".

On page 3, beginning with line 21, strike through and including page 4, line 8, and insert in lieu thereof:

(4) In subsection 3(b)(1), after "NPS–RED–7117–B", insert "and effective on the date of enactment of this phrase, there is hereby vested in the United States all right, title, and interest in, and the right to immediate possession of, all real property within the area indicated as 'Proposed Additions' on the map entitled 'Proposed Additions, Redwood National Park, California,' numbered 167–80005–C and dated October 1977, and all right, title, and interest in, and the right to immediate possession of, all down tree personal property (trees severed from the ground by man) severed after October 15, 1977, within the area indicated as 'Proposed Additions' on the map, entitled 'Proposed Additions, Redwood National Park, California,' numbered 167–80005–C and dated October 1977,". The Secretary shall permit continued access and use of the K and K, L line M line, and Bald Hills roads at existing levels of access and use.

On page 6, line 10, strike "Within one year of the date of the enactment of this sentence, the Secretary is authorized and directed to convey a right way;" and insert in lieu thereof "Provided the State of Cali-

fornia shall have designated a right-of-way for a bypass highway around the eastern boundary of Prairie Creek Redwood State Park within three years from the date of enactment of this provision, the Secretary is authorized and directed to acquire such lands or interests in lands as may be necessary for such a highway and shall thereupon donate the designated right-of-way";

On page 8, line 21, after the period, strike through and including page 9, line 25, ending with the period;

On page 11, line 15, strike "167-80005-A and dated June 1977" and insert "167-80005-C and dated October 1977";

On page 12, line 3, beginning with "Act:" strike through and including line 16, and insert "Act.";

On page 14, line 15, strike "full consideration" and insert "preference";

On page 14, line 17, strike "in accord with" and insert "notwithstanding";

On page 15, line 2, strike "full consideration" and insert "preference";

On page 15, line 4, strike "in accordance with" and insert "notwithstanding";

On page 15, line 12, strike "full consideration" and insert "preference";

On page 15, line 17, strike "in accord with" and insert "notwithstanding";

On page 17, line 10, strike "$12,000,000" and insert "$33,000,000";

On page 19, beginning with line 10, strike through and including page 20, line 19;

On page 20, line 20, strike "10" and insert "9";

The ACTING PRESIDENT pro tempore. The time for debate on this bill is limited to 2 hours, to be equally divided between and controlled by the Senator from South Dakota (Mr. ABOUREZK) and the Senator from Wyoming (Mr. HANSEN), with 1 hour on any amendment in the first degree, 30 minutes on any amendment in the second degree, and 20 minutes on any debatable motion, appeal, or point of order.

Mr. ABOUREZK. Mr. President, I ask unanimous consent that James Beirne, Thomas Williams, Michael Harvey, Tony Bevinetto, Daniel Dreyfus, and Marsha Williams, and Jeanne Delsener may have the privilege of the floor during consideration of and vote on S. 1976; also Beverly M. M. Charles of Senator JAVITS' staff, and Bob Cooper of Senator BARTLETT's staff.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ABOUREZK. Mr. President, in 1968, the Redwood National Park was created to preserve and protect significant examples of the primeval coastal redwood forests and the streams and seashores with which they are associated. The boundaries of the original measure enacted by the Senate were reduced and modified in conference to a configuration which we anticipated could be protected with the use of supplementary authority granted to the Secretary of the Interior. Such has not been the case.

The threat to the present park resources is immediate, direct, extensive, and, without prompt congressional action, may very well be fatal. This was recognized by the Federal District Court for northern California which stated in a memorandum of decision that—

The court further finds that, in order adequately to exercise its powers and perform its duties in a manner adequately to protect the Park, Interior now stands in need of new Congressional legislation and/or new Congressional appropriations.

It follows that primary responsibility for the protection of the Park rests, no longer upon Interior, but squarely upon Congress . . .

Mr. President, this bill, as reported from the committee, fully meets that responsibility. If enacted as reported, it will provide the necessary lands and authorities for the Secretary of the Interior to administer, manage, and protect a national park which future generations will have to enjoy.

Mr. President, this measure is the result of exhaustive consideration by the committee. I must add that, personally, I regret that the committee did not accept an amendment which I, together with Senator CRANSTON, had proposed to directly address any possible impact on the woods and mill workers in the area. I appreciate the efforts of Senator JACKSON, the chairman of the committee, Senator HANSEN, and the other Members who supported my efforts. I understand that the objections of those who opposed the amendment were not based on any lack of concern for the workingman. It is and will remain my intention and hope that any adversely impacted worker will be taken care of through the jobs created by this measure, new employment as a result of economic diversification with the administration's assistance, or by other means. With that single reservation, I wholeheartedly endorse this measure.

Mr. President, I want to express my thanks to the minority manager of this legislation, Mr. HANSEN, whose work I have appreciated very much on this bill.

I reserve the remainder of my time and yield to Senator HANSEN now.

Mr. HANSEN. I thank the Senator very much.

Mr. President, when Congress established Redwood National Park in 1968, many thought a significant example of coastal redwoods would be preserved for future generations to enjoy. The world's tallest trees were thought to be protected by the inclusion of a narrow peninsula following Redwood Creek and extending upstream from the main body of the park. The tall tree grove is proof of national, and for that matter, worldwide significance. We are here today, hopefully, to finish the job that was started in 1968. That narrow peninsula, called the worm, drains an unstable, silt-laden watershed that is currently being harvested.

The purpose of this proposed expansion of some 48,000 acres is primarily to acquire this watershed ridge to ridge. An additional 30,000 acres will be established as a park protection zone which can only be acquired if land practices occur that would result in actual physical damage to the park.

The legislation has many unique, if not controversial, provisions. It calls for a legislative taking. The days of carving national parks primarily from the public domain are over. This taking is of private productive redwood forest lands owned and utilized by the redwood timber industry. It is expensive. Some lands are cutover lands.

One could reasonably ask, Why are cutover lands included within a national park? I answer: First, to save the remnant patches of old-growth redwoods that remain on the steepest slopes, creek bottoms, and other areas that would make logical extensions of the park. Second, if the cutover lands are properly managed to assure succession of the native redwood species, and you and I were able to return some 200 to 400 years from now, we would see an entire and complete redwood forest that would approximate the size of the old-growth trees now being cut. Finally, most of the land is needed to form an ecologically manageable unit.

Mr. President, this bill also contains provision for a forest rehabilitation program which proposes to repair and patch the land damaged from prior timbering practices. The company's timbering practices, today and in the last few years, are excellent and do minimal damage to the land, but older timbering practices did scar and tear the land and rehabilitation is needed.

The committee deleted provisions which mandated rehabilitation and expanded the regulatory authority of the Secretary of the Interior. The committee added acquisition authority in the park protection zone. I believe the Secretary possessed sufficient authority to protect our national parks under current law. I urge the Secretary to use the acquisition authority in the park protection zone judiciously. If retained in the final bill, I would say the content is clear that the authority given is not a regulatory club, but rather a last resort to prevent physical damage to park resources.

I opposed the effort to include provisions calling for income maintenance of "jobs" for protection of workers who would theoretically be displaced by park expansion. The committee defeated the attempts to add these provisions. The bill as reported goes a long way in using existing Federal programs to mitigate the effect of park expansion. The forest rehabilitation program is labor intensive. I think a dangerous precedent would have been set if the committee adopted a so-called "jobs package." Park expansion is not the root cause of unemployment in Humboldt and Del Norte Counties. I firmly believe that, over the long run, national parks have become positive economic forces in the region in which they are established. The transition in local economies may be rough with some displacement. But, time after time, a national park makes a real contribution to the regional economy. I know from close observation of the symbiotic relationship of Grand Teton National Park and Teton County, Wyo., that this does occur.

In summary, Mr. President, I recognize that this is complex and expensive corrective park legislation. I support it with those reservations.

Mr. CRANSTON addressed the Chair.

The ACTING PRESIDENT pro tempore. Who yields time to the Senator from California?

Mr. ABOUREZK. I yield 15 minutes to Senator CRANSTON.

Mr. CRANSTON. I thank the Senator from South Dakota.

Mr. President, I rise in support of S. 1976, to enlarge the Redwood National Park. This legislation is essential to protect the investment the Federal Government has already made in the existing park. Logging in the Redwood Creek watershed is causing serious erosion and siltation in the creek which, in turn, threatens the stability of the grove of the world's tallest trees within the park.

I want to take this opportunity to express my appreciation to the chairman of the Energy and Natural Resources Committee, Mr. JACKSON, the chairman of the Parks and Recreation Subcommittee, Mr. ABOUREZK—who has been of such great help—and the ranking minority member on the committee, Mr. HANSEN, for their great assistance in reporting the Redwood Park expansion bill. I also want to thank the distinguished majority leader, Mr. ROBERT C. BYRD, for his invaluable help both in clearing this legislation with the Senate Appropriations Committee on which he serves and in scheduling the bill for floor action so promptly in this second session of the 95th Congress.

Mr. President, S. 1976 adds 48,000 acres to the existing Redwood National Park and gives the Secretary of the Interior the authority, where necessary to protect the park, to acquire additional lands upstream within a 30,000-acre area. The bill authorizes funds for watershed rehabilitation, payments in lieu of taxes to Humboldt and Del Norte Counties, and moneys from the Land and Water Conservation Fund for land acquisition purposes. Secretary of the Interior Cecil Andrus has indicated that the total cost of the lands is $359 million.

There have been assertions that the expansion of the Redwood National Park would result in the closure of mills and the loss of over 2,000 jobs in the north coast area. In considering the Redwood Park expansion bill, the Committee on Energy and Natural Resources looked into this issue. The committee found that the range of job loss will be between a minimum of 260 and a maximum of 921 jobs—far less than earlier estimates.

Because of the possible loss of jobs and decline in the local economies as a result of the Redwood Park expansion and reduced logging, the bill contains a number of measures designed to mitigate any adverse effects on the local economy that might result from the expansion of the park. These include the waiving of civil service requirements and preferential hiring in the watershed rehabilitation program for those individuals affected by this taking, a directive to the Secretary of Interior to analyze appropriate Federal actions to mitigate adverse economic impacts to the economy and to report back to Congress, authorization to appoint and fix compensation for personnel to achieve protection and enhancement of park values and for maximum visitor use and enjoyment, and a directive to the Secretaries of Commerce and Labor to take all appropriate actions to implement available authority to mitigate adverse unemployment and economic impacts resulting from the park expansion.

I was very pleased that the Energy and Natural Resources Committee adopted my amendment to increase funds for the watershed rehabilitation program from the $12 million requested by the administration to $33 million. The watershed rehabilitation work is extremely important to stabilize the soils and control the erosion of the slopes which is damaging the park. The additional funds will permit a labor-intensive watershed rehabilitation program which will provide hundreds of job opportunities and guard against the use of heavy equipment which could cause further erosion and damage to the park. These are jobs which call for much the same skills as those possessed by people now employed in the lumber industry in the area.

Unfortunately, the Energy Committee did not accept a second amendment I offered to maintain the incomes of those individuals whose jobs are downgraded or terminated as a result of the Redwood Park expansion.

While I hope that the watershed rehabilitation program, job training, and the implementation of existing programs of the Departments of Commerce and Labor will provide sufficient opportunities for employment, I favor the inclusion of an employee protection provision in the bill to be applied as a measure of last resort to deal with temporary dislocations. I do not intend to offer my income maintenance amendment here on the floor, but I hope that such a provision will be part of the final Redwood National Park expansion bill.

Mr. President, the need for the legislation is urgent and great. There are 10 timber harvest plans within the acquisition area which have been approved by the State of California but not cut. In addition, the California Board of Forestry last spring denied eight timber harvest plans within the Redwood Creek drainage without prejudice until November 7 to give Congress an opportunity to show some progress on the park expansion bill. Largely because of Senate committee action on S. 1976, the board of forestry earlier this month resisted pressures to allow additional timber harvesting in the proposed park additions and again disapproved the eight timber harvest plans which were resubmitted by the timber companies. However, the State board made it clear that it is unlikely to extend the disapprovals beyond May 1.

Presently pending before the board of forestry are two additional timber harvest plans for cutting in the park acquisition area, one involving 19 acres of old growth in skunk cabbage. Also, the California Regional Water Quality Control Board in February will consider two timber harvest plans which are directly across Redwood Creek from the tall trees grove. Passage of this bill by the Senate again could tip the balance against approval of these additional harvest plans.

Finally, I have been advised by the National Park Service that the 3 timber companies which own the land have 36 additional harvest plans in the proposed park addition which will be submitted to the State Board of Forestry in the very near future, all of which could be approved in the absence of immediate Senate action.

Redwoods, Mr. President, are not just a California resource but a national heritage. Preserving them is not just a California problem but a national challenge. Here is what some newspapers across the country have said about the giant redwoods and this bill to expand the Redwood National Park:

Detroit Free Press (Apr. 5, 1977): Since the Redwood National Park was established in 1968 . . . 12,000 acres of some of the finest remaining redwoods in the world (have been cut).

Kentucky Courier-Journal (Apr. 30, 1977): If America's natural resources were ranked for interest and beauty, the California redwood would stand as tall as the trees themselves.

Washington Post (May 3, 1977): There are few things on earth as magnificent as those giant redwoods and the policy of the government ought to be to preserve as many, not as few, of them as it can. Redwood National Park should be expanded. And this should be done not merely to protect the watershed of the existing park . . . but also to protect additional trees. The question is not one of serving just a few thousand acres of redwoods so that future generations can know what they look like, but rather of saving a part of our national heritage.

Battle Creek (Michigan) Enquirer & News (June 2, 1977): A century ago, two million acres of redwood forest flourished in ranks 30 miles wide from south of San Francisco to Oregon. Now only a small portion of that acreage remains. It is making a last stand against the intrusion of man. . . . Congress should take appropriate action to save the giant trees within the park and outside its borders. That way, men and women of the future can stand in awe of nature's giants instead of wondering why we, in a previous generation, did not fight to save them.

Houston (Tex.) Post (Aug. 2, 1977: Take a building—a 25-story building. . . . The redwood would shade the top floors of the skyscraper. The building can be demolished and rebuilt in a few months or years. The redwood cannot be regrown in the lifetime of the living. It takes 20 to 25 generations to grow a giant redwood. Some are 15 to 22 centuries old . . . Congress . . . should act quickly to protect a national heritage comparable to Grand Canyon, Monument Valley and Niagara Falls. Once gone, the redwood giants will never again scrape the skies of America.

Fort Wayne (Ind.) Journal Gazette (Aug. 4, 1977): Redwood National Park is 2,300 miles from Indiana on California's north coast, but distance and problems close to home shouldn't deter Hoosiers from safeguarding the park's grand forest of giant trees, a unique part of nature's gift to all Americans.

Mr. President, the rugged, lonely coastline stretching northward from San Francisco is a land of rolling fog, breakers smashing against high bluffs, and of moist, deep mossy forests. The most renowned of these hold the stately redwoods, which soar to 200 or 300 feet in height and endure for a lifespan over many centuries.

Few human experiences compare to standing within a grove of those ancient redwoods, where the light is a dim cathedral luminescence broken by occasional beams of sunlight filtering through to the forest floor.

In 1820, when California logging began, there were 2,000,000 acres of redwoods in a strip extending from the Big Sur country south of San Francisco into northern California, the far North. Today, less than 270,000 acres of virgin redwoods still stand. And all but a few thousand acres stand in danger of desecration by the end of this century.

The Redwoods National Park, which was established in 1968, will preserve for posterity 58,000 acres of the most handsome virgin redwood stands. But the park is oddly shaped as it now stands. To reach it, one often has to drive past huge sawmills and tepee burners and fight for highway space—even on roads through the national forest. One writer describes it as "an impoverished little park—whose resources are constantly menaced, whose peace and quiet are reserved for the hard of hearing and whose unspoiled vistas are most impressive to those with tunnel vision."

As a Nation, we sometimes too easily use superlatives without thinking about what they mean. And so the idea of saving the world's tallest trees may not have immediate significance when we hear the words.

But think about it: The tallest living things—the greatest expanse of life from deep within our Earth, stretching into the heavens.

What better symbol is there for the eternal struggle of all living things to live, to grow, and to improve. These trees are the tap roots of eternity. To lose them would be to lose part of that divine spark which must inspire all of the work of man and nature.

Surely in this eighth decade of the 20th century we can resolve the economic problems of a few hundred men and women without destroying these creations of the ages.

Several Senators addressed the Chair.

The ACTING PRESIDENT pro tempore. Who yields time?

Mr. ABOUREZK. Mr. President, I think we have to agree to the committee amendments first.

Mr. President, I reserve the remainder of the time that was yielded by Senator CRANSTON.

Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc and that the bill as thus amended be treated as original text for the purpose of further amendment.

Mr. HANSEN. Mr. President, I join with my colleague in supporting these committee amendments.

The amendments are acceptable to this side.

Mr. ABOUREZK. Unless Senator HAYAKAWA wishes to speak on the committee amendments, we will move them.

Mr. HAYAKAWA. Mr. President, I have no objection to the committee amendments.

Mr. ABOUREZK. I move the committee amendments, then.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the committee amendments.

The committee amendments were agreed to.

Mr. ABOUREZK. I move to reconsider the vote by which the committee amendments were agreed to.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ABOUREZK. Mr. President, I reserve the remainder of my time.

UP AMENDMENT NO. 1163

Mr. ABOUREZK. Mr. President, I propose and send to the desk an unprinted amendment.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from South Dakota (Mr. ABOUREZK) proposes an unprinted amendment numbered 1163:

Page 7, beginning on line 13, delete "Effective on the date of enactment of this sentence, there are made available from the amounts provided in section 1(c) herein such sums as may be necessary for the acquisition of interests in land."

Mr. ABOUREZK. Mr. President, the amendment which I have proposed is acceptable to the sponsor of this legislation and has been cleared with the minority. This is a technical amendment to eliminate an inappropriate reference. The language to be deleted is an amendment to the 1968 act which refers to a section of this measure rather than to section 10 of the 1968 act. The sentence, if modified to refer appropriately, would merely restate the intent of Congress in 1968 and is not necessary. The Congress intended and still intends that within the limitations imposed by section 10 of the 1968 act, the Secretary should exercise his full authority for cooperative agreements and contracts. It is not necessary to restate that any sums still authorized but unappropriated in the 1968 act will continue to be available to him for those purposes.

Mr. HANSEN. I have no objection to the adoption of the technical amendments, Mr. President.

The ACTING PRESIDENT pro tempore. Without objection, the technical amendments are agreed to.

Mr. ABOUREZK. I move to reconsider the vote by which the amendments were agreed to.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HANSEN. Mr. President, I yield to the Senator such time as he may desire.

Mr. HAYAKAWA. I thank the Senator.

Mr. President, I am very much opposed to S. 1976, a bill which expands the Redwood National Park by 48,000 acres. This Government takeover of private land is extremely controversial, and the cost of the land alone is in excess of $359 million, at a time when we are trying to balance our budget. This averages out to $7,500 per acre. It is the most valuable timberland in the country.

In 1968 a proposal came before Congress to create a 90,000-acre national park to preserve virgin redwoods. When the final bill reached the President, the acreage figure had been reduced to 28,000 acres. Now, only 9 years later, Members of the U.S. Senate are back on this issue, trying to expand the park by an additional 48,000 acres. In 1968, that 28,000 acres was regarded as a reasonable compromise; but, like other reasonable compromises, in the face of those who are determined to ignore those compromises, we are being pushed now to add another 48,000 acres.

Mr. President, the 28,000-acre park we created in 1968 is already the most expensive national park in the entire country. Although the estimated costs were $92 million for the original park, the cost has since increased to $172 million to date, with an additional $110 million being disputed in court. We have not finished paying for the original national park, yet here we are adding another 48,000 acres to it.

People emotionally argue that we must protect beautiful old-growth redwoods for future generations. Yet we have the finest groves of redwoods already set aside in local, State, and Federal parkland combined. I yield to no one in my admiration and love of the redwood tree. Nothing so inspires all of us, as Californians, to visit these parks, but not everybody does. We already have 181,000 acres of old growth redwoods set aside, as I say, in local, State, and Federal parkland.

Contrary to what people say about destroying this natural resource, timber is a renewable resource. If managed properly, harvesting timber and replanting seedlings will guarantee redwoods for future generations. Northern coastal redwoods replace themselves faster than any other type of tree. Whereas most trees have a hundred year growth cycle or longer, redwoods mature between 40 and 60 years, or about twice as fast as any other kind of tree.

The entire Redwood National Park expansion argument was originally based on the need to round out the park boundaries to provide recreational facilities in northern California—a reasonable desire. However, this argument did not stand up, because the Redwood National Park is the third least visited national park in the United States, besides being the most expensive. The park protection argument was then developed. Department of the Interior employees and members of various conservation groups stated their case for park expansion on the idea that the worm-shaped southern portion of the park was endangered by the harvesting of timber on hillslopes in the same watershed.

This argument has been refuted by many experts. Witnesses for the Department of the Interior, in testifying for the expansion case, have qualified their remarks to the extent that the companies have often quoted them in their arguments for not expanding the park. For any witness who will make a case for expanding the park, there are experts who will refute their statements. There are many acres of privately owned land, miles south of the park boundary. Any cutting of timber on these lands results in sediment eroding into the Redwood Creek, which eventually flows through the worm. Most people agree that the

sediment in the stream beds in the park is the result of logging miles upstream, and not the result of logging on adjacent hillslopes.

The redwood tree has an amazing ability to survive and regenerate. One has to visit, for example, the redwood parks themselves and see them in the wet, foggy climate of our coastal woods to realize how amazing they are in their capacity to regenerate. When a redwood is cut down, new trees begin to grow out of the old stump. By the way, that is happening in my own backyard in Mill Valley. I have seen old redwood stumps with as many as five or six new trees growing from them. Another physical characteristic of redwoods is that in cases where there is sediment buildup around the base of the trees, they simply grow new roots closer to the surface. This factor alone discounts the sediment argument for park expansion. It is true that with some trees, when their roots become covered by sediment, the trees die, but redwoods grow new roots closer to the surface.

The old growth in the Tall Trees Grove, near the central portion of the worm, has survived two major floods and several minor floods in recent years. They can certainly adapt to any gradual sediment buildup. I have seen documented photographs taken more than 30 years ago which show that there was a gravel build up even then. The difference was that the companies who owned the land used to clear out the streambed, and use the gravel for constructing roadbeds. I believe that the park protection arguments that we heard in hearings and that will probably be reiterated on the Senate floor today are nothing but an excuse for an excessive land grab on the part the Federal Government.

I repeat, this legislation before us today will more than double the cost of the Redwood National Park, already more expensive than all other national parks combined. The visitor figures for the 28,000 acres of Redwood National Park we already have are so unconvincing; yet, we face the probability of a 48,000 acre park expansion. There are many places all over the country which are desperately in need of park funds, including the southern portion of California. In the 9 years since the first legislative taking, virtually nothing has been done to make the area more accessible to visitors. Those 28,000 acres remain largely unvisited. In fact, the old logging roads into the woods are blocked off to any vehicles except for those of park personnel. What good is that to the general public? The only people who really want the Redwood National Park expanded are the hikers who want to expand their already enormous playground.

The labor force is very much opposed to this bill, and has been very vocal in expressing opposition to S. 1976. There was an income maintenance provision in the bill, but it was knocked out of the Senate bill in committee. Labor has repeated its position that they are not really interested in receiving Government handouts, and I do not blame them. They have a trade; they have a profession. They have worked at it all their lives. They love those forests. They do not want to lose their jobs, and they do not want Government handouts in place of their jobs. As a result of this bill, the jobs of many people will be sacrificed in order to fulfill the recreational demands of a few.

This bill also has a provision on a "Park Protection Zone" which was substituted for a regulatory provision in the bill. Although I am very happy that the regulatory provision was taken out during markup, I am still concerned about this "Park Protection Zone." This area is 30,000 acres of land south of the park boundary in the Redwood Creek Basin.

If the Secretary of the Interior finds that a failure to acquire all or part of the 30,000 acres south of the park would result in or is likely to result in physical damage to park resources, he may simply acquire these lands. Now most of you can figure out the result of this provision. After the necessary 60 days the Secretary will probably be contacting the House Committee on Interior and Insular Affairs and the Senate Committee on Energy and Natural Resources and report such damages or potential damages. At that time, unless the committees disapprove such action, which would seem highly unlikely, we will have a 78,000 Redwood National Park expansion, instead of the 48,000 acre expansion that we are discussing. This will practically double the costs of expansion of the Redwood National Park, and is unwarranted government intrusion on privately owned land.

I believe that the California State laws are certainly strict enough to guarantee protection to the national park.

One of the problems that I see here in Congress so often is sort of the assumption that the States are not able to take care of themselves. I wish to inform this body that the State of California in its policy of protecting trees and protecting the future of trees is a very rigid and very strict and a very wise one. What we are considering with this provision is providing a buffer zone to the buffer zone of 48,000 acres of park expansion. In other words, what we are doing is to provide buffer zones to buffer zones to the third and fourth power to protect ultimately the worm. This land grab is completely unjustified. Such legislation reflects an attitude of indifference on the part of the U.S. Congress to the well-being of the people who live there and the economic well-being of the State as a whole.

The economy of northern California is dependent on timber as its one major industry, with all other jobs as sort of a spin-off from this industry in one way or another. The unemployment rate, which is 15 percent already in northern California, will certainly rise. Although the land rehabilitation program will provide make-work at the cost of $33 million, and this is not productive makework, this will not satisfy many workers who will not be able to find jobs as fulfilling as the jobs that will be taken away from them as a result of this Federal takeover of private land.

I cannot express in strong enough words my complete opposition to this legislation, and I would urge my colleagues here in the Senate to join me in opposing this unjustified and enormously expensive land grab of the most productive timber land in the entire country.

Mr. CURTIS. Mr. President, will the distinguished Senator yield?

Mr. HAYAKAWA. I yield.

Mr. CURTIS. Mr. President, the distinguished Senator from California has enumerated a number of facts which are most interesting and helpful in the consideration of this matter. I particularly refer to his statement as to the characteristics of the redwood tree, the relative short period of time it takes to reproduce, as well as the other facts relating thereto.

Certain question have arisen concerning other facts connected with this. They have been reduced to writing, and I wonder if the Senator will respond to these questions?

Mr. HAYAKAWA. I am very happy to respond.

Mr. HANSEN. Mr. President, will the Senator yield for 1 moment so that I might offer a unanimous-consent request?

Mr. CURTIS. I yield.

Mr. HANSEN. Mr. President, I ask unanimous consent that Eddie Tweely of Senator THURMOND's staff be accorded the privilege of the floor during debate of the redwood bill, S. 1976.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The Senator from Nebraska.

Mr. CURTIS. What is the slope of the land—the gradation—in the area of the existing Redwood Park, the area proposed to be added, and the drainage area upstream?

Mr. HAYAKAWA. The slope of the land both within and outside the park ranges from about 18 to 45 percent. The average slope is 25 to 30 percent.

In the top 6 to 8 miles of Redwood Creek, the slope is very steep. For this reason, water causes erosion and carries the sediment downstream. In the western section which is about 40 miles in length, the creek's gradation is in the intermediate range. It contains both areas where erosion occurs and areas where sediment is deposited. The lower sections of the stream, which includes the Tall Trees Grove, has a slope which is very much flatter. This, then, is where the remaining sediment from upstream is deposited.

Mr. CURTIS. What is the research, data or evidence regarding siltation, sediment buildup in the lower stream area of the tall growth area, over the years?

Mr. HAYAKAWA. There have been only two studies concerning this erosion and depositing which are based on scientific data. These two are the U.S. Geological Survey Study and the Winzler and Kelly Study, both of which were initiated in 1973.

There have, of course, been other reports on the Redwood Creek basin, but these were based upon hypothesis

and personal opinion—not upon scientific research.

Mr. CURTIS. I understand that a few years ago a Government team went into the area to research land mass shift, but that a report on the study was not conclusive. From what I have been told that was because the heavily wooded areas had rather large shifts of surface that made it impossible to insert testing and measurement instruments in the ground tubes, while those areas that had been forested and replanted were able to be recorded. Has there been any research or scientific study to determine the various effects on erosion and land mass shift between and from areas of heavy timber growth and those of forested and replanted areas?

Mr. HAYAKAWA. The Coleman thesis, which used photographs of the basin before and after logging, is the only source of information we have concerning land mass shifts in logged versus unlogged areas. The report revealed no change in the total miles of slide along the creek because of the logging operations. We also learned that over 60 percent of the banks along the entire main Redwood Creek are sliding and eroding.

Mr. CURTIS. What is the situation with the sedimentation and siltation in the tall trees area—that is, does that sedimentation come from the area proposed to be included in the park expansion, or does it come from further upstream in the steep sloping area of the drainage basin?

Mr. HAYAKAWA. The scientific data available on the sedimentation shows conclusively that the major contributor of the silt is the upper drainage area, which is upstream from any redwood logging. If all of man's activities in the basin were to cease, the natural erosion and subsequent depositing would not decrease significantly.

Mr. CURTIS. How long has this sedimentation and siltation been accumulating—how many years has the process been going on and is there any record that this does or does not destroy the redwood stands?

Mr. HAYAKAWA. The sediment being carried downstream and deposited within the Redwood Creek today is the same type which has been carried down for over 4,000 years. This fact was substantiated by radiocarbon tests made on the soil from test holes within the Orick Floodplain. Orick is just above Eureka.

While soil deposits can destroy trees, it should be noted that the Tall Trees Grove is located on the flat which was formed by this very process. The soil is not topsoil from logging areas, but it is from the stream side slides and deep seated mass movements of soil and, therefore, not at all attributable to logging.

Mr. CURTIS. Is there any evidence or data to show that the sedimentation and siltation in the Tall Trees area is caused directly by cutting of the forest upstream, or that this is a natural occurrence that has probably been going on for decades or longer?

Mr. HAYAKAWA. I call the attention of the Senator from Nebraska again to the Winzler and the Kelly report, the USGS study, and the Department of Agriculture's river basin planning staff which confirm that the sedimentation material is identical to the material carried downstream over 3,000 years ago. 75 to 80 percent of all the erosion in the Redwood Creek Basin is caused by the natural streamside phenomena of "sliding," "creeping," and "bank cutting."

Mr. CURTIS. Is there any data or research to show the suitability for other vegetative cover in the upstream areas of the Redwood Creek drainage basin that may help reduce downstream sedimentation?

Mr. HAYAKAWA. Since 75 to 80 percent of the erosional process is not related to topsoil conditions, the process will continue regardless of what we do to try to reduce it.

Mr. CURTIS. Does the logging industry now apply management practices in this area in the cutting of forest for lumber—by that I mean does it cut percentages of growth every few years and replant cut areas?

Mr. HAYAKAWA. The timber companies, I am glad to inform the Senator from Nebraska, recognize the importance of land management to their survival in future years.

Long-term planning is essential to the timber industry, because the time needed for a seedling to become a harvestable tree is 40 to 60 years. This planning dictates that every single acre of old-growth that is harvested must be immediately restocked with seedlings or replanted with conifer seeds.

I may interject that so many of the popular beliefs about the rape of the forest, and so on, are based upon what people remember or understand of forestry practices of two or three generations ago. In that intervening period there was an enormous growth in forestry science and scientific forestry management as there has been in other fields of science, so many of the analogies of the rape of the forests that we know from three generations ago no longer hold.

In addition, all of the companies owning land in the proposed expansion areas utilize intense forest management practices in order to maximize regeneration efforts, and to minimize environmental impacts. Their practices include fertilizing, thinning, ground maintenance and erosion control.

This land management will permit the companies to sustain their operations in perpetuity, and that is their aim.

Mr. CURTIS. On an average basis, what is the annual yield of board feet from the area that would be added to the national park under the Senate and House bills?

Mr. HAYAKAWA. According to the Department of the Interior, the 48,000-acre expansion area presently contains 1.6 billion board-feet of merchantable old-growth timber. In addition, the area is capable of producing approximately 1,500 to 2,000 board feet of timber per acre per year.

Mr. CURTIS. How much is that in terms of new houses that could be built by this lumber?

Mr. HAYAKAWA. If we use an average of 12,000 board feet of lumber per house, the present growth would supply enough timber to construct 133,000 new homes. Further, the new growth from replantation could supply the timber for 6,000 new homes every year in perpetuity. There is enough timber to construct an additional 3,750 homes every year in the 30,000 acres in the standby acquisition area.

May I add very recently the Secretary of HUD, Patricia Harris, was making a great row about how the price of lumber has gone up enormously in the last few years, and she wanted to have an investigation of the matter. No investigation is necessary. We are cutting down the number of resources right and left through actions of this kind that are now before this Congress, and no wonder the price of lumber goes up. Here is a place where we can stop lumber prices from going up by making supplies of lumber available to the building industry.

Mr. CURTIS. What will the impact be on the local economy if the Redwood Park expansion bills pass the House and the Senate?

Mr. HAYAKAWA. Should this bill pass both Houses of Congress, approximately 2,000 workers in the north coast area of California will lose their jobs. Many other people will be forced to move out of the community because their businesses are reliant on the people of the town.

Just yesterday I heard about 250 houses being put on sale in the Eureka area because there are no buyers inasmuch as people are moving out. It is a real disaster.

When the 1968 taking was considered by Congress, great promises were made. The jobs eliminated by the establishment of the original 28,000 acres of Redwood National Park were to be replaced by the growth of a tourism-oriented economy, centered around the park. This was the promise made in 1968. These new tourist-oriented jobs were supposed to more than offset the decreased forest industry employment. None of this actually took place. At this time the Redwood National Park is the sixth least visited park in the entire United States—it is also by far the most expensive.

To give you some idea, let me tell you what has happened to the town of Orick, Calif., which was most affected by the 1968 act. In 1968 there were seven service stations in Orick. Today there are three. Nine years ago there were five cafes and four grocery stores, while today there are only two cafes and two grocery stores. In 1968 there were six motels, today there are five. The number of dairy farms in Orick has gone from 20 to 5 in the last 9 years. The number of residents has been reduced from 1,200 to only 600.

I will not believe false promises about the benefits of park expansion to the local communities. The park expansion means only economic disaster to the residents of northern California.

Mr. CURTIS. I want to say to my distinguished friend from California that I have a very special interest in our forest lands. I come from a State that had no trees. In fact, the nickname for Nebraska is "the tree planters' State." Our prairies were devoid of trees. The only places you found the trees were along the streams. Consequently, we have been engaged in planting trees.

Arbor Day, which is the holiday observed in more countries in the world than any other holiday as promoted, inaugurated by the country's first Secretary of Agriculture, J. Sterling Morton of Nebraska City.

We have had our project of planting trees, and because of this great interest in it I have studied and observed what has happened in our great forested areas.

It seems to be a well-established fact that forests which have scientific, honest, and conscientious management, and where the trees are cut, survive better, produce more lumber for the future, preserve the environment better than if we merely close it off and do nothing about it.

Does the Senator concur in that observation?

Mr. HAYAKAWA. I certainly concur with the Senator from Nebraska.

I want to call attention to certain analogies. There are great forests, for example, in Germany and in Japan, both nations which have no resources compared with those of the United States, where trees have been harvested for generation after generation after generation. There are good trees, and wise conservation practices have kept those forests going for a long time. Good lumber comes from it. The fact that there is this kind of continuing attention to reforestation perpetual yield which has been in operation for a long time in older nations than ours proves the necessity of following their example in situations like this.

Mr. CURTIS. I am interested in that because after I came to the Washington area, since that time so much building expansion has taken place, and it has been a heartbreak to me to see so bulldozers come in and destroy trees just to give somebody a bare yard rather than keeping them.

Incidentally, in the State of Nebraska we have the only manmade forest in North America. We lost quite a bit of it by fire a few years ago, but there is a national forest that was planted by our Government, and which is maintained as such, the only manmade forest in North America.

As I said a bit ago, due to my long interest in this I am convinced that good forest management does more for trees than the absence of it. It does more to preserve the beauty, the trees and lumber for future generations than letting the land just stand unaided by man and, at the same time, serves our present needs for lumber and the providing of jobs.

The answers that the distinguished Senator has given have been very helpful, and I thank him.

Mr. HAYAKAWA. I thank the distinguished Senator from Nebraska for his penetrating remarks and his equally penetrating questions.

Mr. President, I ask unanimous consent that Mary Goedde of my staff have the privilege of the floor during the consideration of this measure.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HAYAKAWA. Mr. President, is it an appropriate moment to offer an amendment at this time?

The ACTING PRESIDENT pro tempore. The bill is open to amendment.

UP AMENDMENT NO. 1164

Mr. HAYAKAWA. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from California (Mr. HAYAKAWA) offers an unprinted amendment numbered 1164:

On page 14 between lines 4 and 5 insert the following:

(c) The Secretary of Agriculture within one year after the date of enactment of this Act, shall prepare and transmit to Congress a study of timber harvest scheduling alternatives for the Six Rivers National Forest. Such alternatives shall exclude the timber inventories now standing on units of the Wilderness Preservation System and shall be consistent with laws applicable to management of the national forests. In developing the alternatives, the Secretary shall take into consideration economic, silvicultural, environmental and social factors.

Mr. HAYAKAWA. Mr. President, the purpose of this amendment is for the Secretary of Agriculture to study timber harvest scheduling alternatives on the Six Rivers National Forest, and to report back to Congress within a year. The Six Rivers National Forest is in the same general area as the Redwood Park expansion acreage and the timber sales from this forest serve the same general economy of northern California.

By studying the timber harvest scheduling alternatives, the Secretary may determine that the Forest Service could in fact increase the annual timber yield on the Six Rivers National Forest.

My concern stems from the fact that if this legislation, S. 1976, becomes public law, approximately 2,000 people will lose their jobs. It will be extremely difficult for these people to relocate into alternative jobs that would be as lucrative as those jobs they presently hold.

Many people claim that the job loss will be much less severe, but I know for a fact that one of the companies that logs redwoods has already had to lay off over 400 workers. This is because the landowners have not been able to get any timber harvest plans approved in any of the proposed park expansion areas since last spring. People tend to downplay the anticipated unemployment due to park expansion, but I want to emphasize that the situation is quite serious.

I came across an interesting bit of information just recently. In the north coast region of California, in the communities affected by park expansion, there are usually between 25 and 40 houses on the real estate market. At this time there are over 250 houses on the market—250. There are many people willing to sell their homes, but no buyers. Imagine the plight of a logger who is forced out of a job, and who must move to another area, maybe to a different State or even to a different region of the country. Such families will have no one to buy their homes, so they will be faced with losing not only their jobs, but also a lifetime's investment in their homes.

In order to seek alternative employment possibilities, I have introduced this amendment for a study of timber harvest scheduling alternatives on the Six Rivers National Forest. By assessing the existing timber on this national forest the Department of Agriculture may find that there is enough timber available so that the annual cut levels may be increased without any danger to water quality in the streams, or to the environment in general. Northern California's economy is heavily dependent on logging. There are many expert woodsmen in the vicinity of Northern California who feel that the cut levels on the Six Rivers National Forest are not nearly as high as they could be and should be. By this study I hope that the Secretary will determine that this is in fact true. As a result of this study, I hope that the Secretary finds that he can raise the timber harvest levels on the Six Rivers National Forest, that we can employ some of the people in timber jobs from an increased cut—some of the workers who will be losing their jobs as a result of park expansion. This would allow people to remain in their communities and to keep their homes. They would not be forced into uprooting their families and seeking jobs in new places, or in industries they are not familiar with.

It is easy for us here in the Senate to throw around solutions such as job training in new fields, but that is not an easy concept to swallow for a person who has just lost his job. Many of the people who face the prospects of unemployment have been in the logging industry for many, many years. It is an extremely difficult thing for someone who has been a logger for 15 or 20 years to suddenly face the loss of his job and to have nowhere to turn for employment in his field.

In studying the timber harvest scheduling alternatives on the Six Rivers National Forest I am optimistic that the Secretary will turn up facts in support of raising the annual timber outputs on this forest land. In addition I hope that the Secretary will find that by employing intensified timber management methods, we can have a higher board feet yield of timber per acre on this land.

I would like to see some positive results from this study, so that we can keep some of these 2,000 lumbermen in jobs—not just any jobs, but employment in the field in which they are trained—namely forestry.

My office has had informal discussions with Department of Agriculture officials who work in the Forest Service, and they have indicated that there are no serious

problems with this amendment. The 1-year period for conducting the study is a reasonable period according to the Department of Agriculture, and the objective of the study presents no problem. I hope that my colleagues will lend their support for this amendment, the ultimate aim of which is to alleviate to some extent the serious unemployment that will result from Redwood National Park expansion.

I wish to announce, Mr. President, that my distinguished colleague from California (Mr. CRANSTON) has agreed to cosponsor this amendment.

Mr. CRANSTON. Mr. President, I am pleased to join the junior Senator from California (Mr. HAYAKAWA) in sponsoring this amendment to direct the Secretary of Agriculture to conduct a study of timber harvest scheduling alternatives for the Six Rivers National Forest.

Employment in the timber industry in the north coast region of California has been declining for a number of years. While the expansion of the Redwood National Park is not a significant factor in this decline, the debate over the legislation has made it clear that we need to develop a coordinated strategy to arrest this decline.

There are many options which could be considered. One alternative is to see if the harvest levels on the nearby national forests can be increased. I think we should examine this option, and for this reason I am cosponsoring this amendment.

However, every recent study of the economy of the north coast area has come to the conclusion that a viable alternative to the single-based timber industry economy must be found regardless of the park expansion. In recognition of this finding, the Carter administration has pledged up to $40 million in existing Federal programs for Humboldt and Del Norte Counties. These programs will be utilized to bring new job opportunities into the area and help diversify the local economy, now dependent upon the declining timber industry.

Even in bolstering the timber sector of the region's economy, options other than altering the cutting rates on the national forests need to be considered. These should include finding improved methods of utilizing wood fiber, restricting the export of unfinished wood products, finding ways to market more hardwood species, improving management of small private holdings, increasing efforts of rehabilitating and stocking damaged and understocked sites, coordinating management of public and private timber holdings, and analyzing the comparative economic/environmental effects of utilizing different logging methods.

In proposing a study of timber harvest scheduling alternatives on the Six Rivers National Forest I want to make it clear that we cannot assume that harvest levels can or should be increased. We must know what the tradeoffs are in cutting more timber now and doing without later.

The amendment directs the Secretary to consider environmental, silvicultural and social factors as well as economic ones in conducting the study. I believe a wide range of alternatives will allow the Secretary to take such factors into consideration. Moreover, the alternatives must fit within the constraints of existing laws that require multiple use and sustained yield that is in accordance with the even-flow provisions of the National Forest Management Act of 1976 as well as with the other provisions of that act and the National Environmental Policy Act. The Six Rivers National Forest has many uses and values, ranging from its important commercial fisheries and high quality wildlife habitats to its active use by native Americans for traditional spiritual activities. In addition, it should be noted that the Secretary is currently reviewing all roadless areas in the national forest system to bring new proposals for wilderness to Congress in the near future. The study should consider the timber resources in relation to these other resource values.

In sum, this study should help us know more about one of the options for supporting employment levels in the forests products industry in the future in the north coast region, and I urge acceptance of this amendment.

Mr. ABOUREZK. Mr. President, I have discussed this matter with the minority manager of the bill. We are prepared to accept this amendment. I am convinced that current law provides the Forest Service adequate authority to get this kind of information, and even in some instances requires that they in fact gather it, but I have no objection to including this language in the statute.

I emphasize one important point, however. I want to seek the Senator's assurances that my interpretation of this amendment is correct.

It is my understanding that the study, including any alternatives derived from it, shall be in accordance with the applicable provisions of law, including the Forest and Rangelands Renewable Resources Planning Act of 1974, as amended by the National Forest Management Act of 1976.

Mr. HAYAKAWA. I am sure I can give the distinguished Senator from South Dakota that assurance.

Mr. ABOUREZK. All right. I wish to make one other point before I yield to the Senator from Wyoming.

The Senator from California (Mr. HAYAKAWA) has stated a figure of the number of jobs lost which is the same figure used in newspaper advertising by a front committee for the timber companies: That 2,000 jobs would be lost.

I know the Senator is not aware of this, or he would not have used that figure. We sent an informal committee of the logging workers, the committee staff, and the Labor Department out to California to determine how many jobs would be lost. They went directly to the timber companies, and asked the timber companies the maximum number of jobs, and asked them to identify each one.

According to the information they received, the maximum number would be 921 jobs. That is the worst possible case. The best case was something like 200 odd jobs that would be lost with this taking. So I hope the Senator will acknowledge what comes out of the mouths of the timber companies themselves when asked directly, and not when they advertise in the Washington Post.

Mr. HAYAKAWA. I might say to the distinguished Senator from South Dakota, there are 600 who have already been laid off by one company. Another company has refrained from hiring between 100 and 115 this year. The sum of the many, many figures like that coming into our office makes 2,000, which is a very big figure to us.

Mr. ABOUREZK. Mr. President, I ask unanimous consent that this study be printed in the RECORD. This is the result of the report of that informal committee. It includes the number of jobs for each company.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

IMMEDIATE DIRECT EMPLOYMENT IMPACTS ASSOCIATED WITH 48,000 ACRE EXPANSION OF REDWOOD NATIONAL PARK

INTRODUCTION

This analysis has been prepared to detail the potential immediate employment impacts associated with the 48,000 proposed expansion of Redwood National Park. The timeframe selected is two years and the area of concern is Humboldt and Del Norte Counties. The timeframe was selected as a period when company harvest adjustments could result in employment impacts quite different from "average" impacts that have been projected over longer timeframes. It is also a planning period necessary before the proposed Economic Development Administration (EDA) projects can begin economic diversification projects. The area of concern is Humboldt and Del Norte Counties because the primary impact and potential mitigation is concentrated there. Impacts such as those on Louisiana-Pacific's Mendocino operations are not included.

Information for this analysis was gathered in the area during May-September, 1977. Both large and small operations were visited. The large affected companies were better able to define their options than small companies dependent on the large ones.

The options available to each company preclude a precise estimate of how many people will be employed or when they will become unemployed. In general terms, woods workers will be first affected, followed by sawmill workers and finally remanufacturing employees.

SUMMARY OF COMPANY OPTIONS AND ASSOCIATED EMPLOYMENT IMPACTS

The timber supply reduction directly affects three companies: Simpson Timber Company, Arcata Redwood Company, and Louisiana-Pacific Corporation. Direct impacts to other companies buying logs or lumber from these larger companies is also likely. The magnitude of impact is least for Simpson, moderate on Arcata Redwood, and most significant for Louisiana-Pacific. A summary of potential impacts is presented below, followed by a more detailed analysis for each company.

Simpson Timber Company Options. Options to deal with a 10MM loss include:

(1) increase cut on other lands by 10 MM.

(2) maintain planned cut in other areas and internally absorb the 10 MM loss.

(3) maintain planned cut in other areas and reduce log sales by 10 MM:

(a) reduce log sales to firms with alternate supply over short run.

(b) reduce log sales to firms with little or no alternate supply over the short run.

The range of Simpson's employment impact is from 0-15 jobs over the 2 year period.

Arcata Redwood Company Options. The park expansion proposal takes all of Arcata's old growth in nothern Humboldt County and leaves them with roughly 7,000 acres of old growth in Del Norte County. The Company options include:

(1) increase cut on Del Norte County lands to replace 200–300 acre annual planned cuts in Redwood Creek area (California Forest Practice Act and good watershed management may not allow this, but it may be feasible).

(2) maintain planned cut in other areas and reduce woods, sawmill, and remanufacturing employment.

The range of employment impact is from 0–169 jobs depending on the options chosen. Arcata, which now sells its whitewoods, has plans to build a mill to process this timber which will eventually cause employment shifts, but these plans are beyond the 2-year immediate impact period discussed here.

Louisiana-Pacific Corporation Options. This company is the most heavily impacted in the expansion proposal because it has the highest acreage and proportion of old growth timber involved. L–P loses roughly 5,800 acres of old growth and is left with about 2,900 acres of intact old growth and 7,500 acres of residual (primarily redwood) timber. The company options include:

(1) increase cut on remaining lands and accelerate purchase of whitewoods on open market.

(2) maintain cut on remaining lands and accelerate purchase of whitewoods on open market.

(3) maintain cut or slightly increase cut on remaining lands and maintain past timber purchases.

The range of employment impact is 188–573 jobs depending on the option chosen. Because Louisiana-Pacific cannot in all probability maintain its redwood volume even if this was the corporate choice, an unavoidable impact to its old growth redwood milling operations will occur.

Other companies. There is some direct impact on other companies from the company options presented above; the actual impacts are difficult to quantify due to large company options. The small company direct impact is:

Simpson buyers. If Simpson increases its cut, little impact on other companies will occur. If Simpson reduces its 10 MM log sales only to McNamara and Peepe, which has 50 MM of Forest Service timber already purchased, no immediate job loss will occur. Only if Simpson reduces its sales to firms with no inventories will losses of up to 65 mill jobs be lost.

Arcata and Louisiana-Pacific buyers. Several small remanufacturing mills obtain their supplies of redwood timber from Arcata and L-P. Arcata appears to supply a very small proportion of raw material (5-15 percent) compared to L-P (85–95 percent). Up to 72 additional employees could be affected.

Contract loggers. Additional loggers to those directly employed by the companies may be affected. This impact may total 27 people.

Combined Employment Impacts. The integration of all these potential impacts produces an employment loss in the range of 260–921 for the first two years. The Redwoods Interagency Task Force, basing its findings on the Greenacres Report, predicted that maximum immediate impact might be up to 25 percent higher than the average job loss over the first 20 years, or 893 jobs. This figure is reasonably close to the high end of the immediate impact summarized in this analysis.

Induced employment losses through the multiplier effect are not considered in this analysis. However, without mitigation of forest products employment losses, the multiplier effect would become partially operative within the two-year timeframe.

SIMPSON TIMBER COMPANY IMPACTS

The impact of park expansion on Simpson's operation are recognized by all concerned to be minimal. Simpson annually cuts about 200 million board feet (200 MM), and processes close to 150 MM. The annual impact of park expansion is about 10 MM. Simpson's options include increasing cuts on other lands by 10 MM, reducing its processing of wood by 10 MM, or reducing log sales (now over 50 MM) by 10 MM.

Increase Cut on Other Lands. Simpson owns about 285,000 acres of land in the area, and has over 10,000 acres of old growth plus many thousands of acres of residual timber. It is conceivable that Simpson could increase its cut on these lands to produce an annual 10 MM increase to offset the park expansion effect. Company officials have indicated that they do not prefer this option.

Maintain Planned Cut and Reduce Internal Processing. Company officials and others have indicated they will maintain the volume of wood they now process, so that this option is not likely. The company has not estimated employment losses due to this option, but it would be in the range of 15 logging jobs and 50–55 mill jobs for Simpson employees.

Maintain Planned Cut and Reduce Log Sales. Company officials have indicated this as their preferred option. The employment impact depends on which mills are cut off from buying logs from Simpson. If, for example, only McNamara and Peepe, which purchase 54 MM from Simpson last year, is affected, they have sufficient reserves on Forest Service land to last 1½ years even if they are simultaneously affected by Arcata's reduced whitewood supply. If, on the other hand, a mill with little or no inventory is affected, employment impact will occur and could total 65 mill jobs to the small mills. Under this option Simpson's woods operation would be reduced by about 15 jobs.

SIMPSON OPTIONS AND IMPACTS

	Increase cut on other lands	Maintain cut, reduce internal processing	Maintain cut, reduce log sales
Woods	0	15	15
Mills	0	65	[1]0
Total	0	80	15

[1] Under this option, other mills would be affected—see "other mills impacts" section.

ARCATA REDWOOD COMPANY IMPACTS

Park expansion impacts on Arcata Redwood will be intermediate between those on Simpson and Louisiana-Pacific. Arcata now has close to 10,000 acres of old growth, and will be left with about 7,000 acres of old growth in Del Norte County. The company has traditionally milled only redwood and sold its intermixed whitewoods to other mills. After park expansion, the company has indicated it will build a new mill capable of processing whitewoods. However, this development will not be significant in the context of immediate impacts over the next two years The company has essentially two options on its remaining old growth lands in Del Norte County.

Increase Cut on Remaining Lands to Maintain Present Production. Cutting in the Purchase Unit would have to be increased 200–300 acres per year in order to replace volumes lost from the Redwood Creek area. This may not be possible if present timber distributions are such that spacing of alternate cuts as mandated by State regulation will constrain accelerated cutting. It is also a good watershed management principle to refrain from excessive cutting in one area at one time. This option would also considerably shorten Arcata Redwood's lifespan. Although company officials have indicated they could but will not choose this option, it nevertheless may be further considered by management and must be considered an available option. Employment impacts over the short run would be zero.

Maintain Planned Cut on Remaining Lands. This option is preferred by Arcata Redwood, and has definite woods, primary mill, and remanufacturing mill employment. After woods workers are affected by lack of raw supply, primary mill employment (Mill A) will suffer cutbacks in employment. Remanufacturing employment can be maintained for at least one year. Total short run impacts would be 169 jobs under this option.

ARCATA OPTIONS AND IMPACTS

	Increase cut on other lands	Maintain cut-reduce local remanufacture
Woods	0	29
Primary mill	0	40
Remanufacture	0	96
Other	0	4
Total	0	169

LOUISIANA-PACIFIC CORPORATION IMPACTS

Louisiana-Pacific (L–P) owns over 125,000 acres in Humboldt County, and has about 9,000 acres of old growth timber. The park expansion leaves L–P with about 2,900 acres of intact old growth and 7,500 acres of residual (primarily redwood) timber. While a continued supply of old growth redwood is assured, lower production and employment in old growth redwood will occur. Within these constraints, L–P has several options.

Increase Cut on L–P Lands, Accelerate Purchase and/or Cutting of Public Timber. This option is limited by the amount of L–P's old growth and residual redwood that could be cut in the short term and the availability of additional public timber (if only usual amounts of public timber were available, L–P's purchase would only deprive another mill). This option could result in maintaining the Big Lagoon mill employment, reduce woods impact, and maintain the plywood and stud mill operations at Samoa. The study mill and plywood mill would require about 60 million board feet (60 MM) each year of whitewoods, a significant volume. However, L–P now has cutting rights on 50–75 MM of public timber on nearby national forests, and the availability of at least 75 MM per year for 2 years as salvage from the "Hog" fire on Klamath National Forest could supply all of L–P's needs each of the next two years. If implemented, a temporary layoff of workers at the Plywood and stud mills might occur, due to present inventories that may expire before new supplies become available.

Maintain Cut on Remaining Lands, Accelerate Purchase and Cut of Public Timber. This option is similar to the first option, except that redwood production is decreased as in the third option.

Maintain Cut on Remaining Lands and Maintain Past Public Timber Cut. This option is what the company expects to occur. Under this option, redwood production at Big Lagoon and Samoa are curtailed, and the plywood and stud mills are closed. Production is concentrated at the Carlotta Mill where no impacts occur.

L-P OPTIONS AND IMPACTS

	Increase cut on own lands plus public timber [1]	Maintain cut on other L-P lands, increase public cut [1]	Maintain cut on other L-P lands and public timber
Big Lagoon logging	40	80	103
Big Lagoon sawmill	0	26	26
Samoa plywood	[2] 0	[2] 0	227
Samoa studmill	[2] 0	[2] 0	46
Samoa redwood	108	108	108
Redwood engineering	12	12	12
Samoa log handling	3	5	11
Samoa salaried	25	30	40
Total	188	261	573

[1] These options constrained by availability of public timber.
[2] Temporary layoffs possible.

OTHER DIRECT IMPACTS

The removal of Redwood Creek timber will have some direct impacts on other companies. Some of this impact can be directly tied to one of the three major companies, but most are tied to two or all three. Interviews with many smaller operators failed to define precisely what impacts would occur because they were uncertain of supply restrictions which in turn depend on company options.

Some clarifications on information provided by Arcata Redwood and Louisiana-Pacific are in order. Arcata did not include truckdrivers in its employment impact, so that about 10 will be added here. Because remaining log hauls from Klamath to Mill A will be longer no more than 10 drivers should be put out of work. The range of truck driver impact will be 0–10 depending on the Arcata Redwood choice of options. Louisiana-Pacific (9/15/77) notes that an additional 74–84 contract logging employees will be put out of work initially in addition to the 103 woods employees of L-P. This figure is far too high, if justified at all. Based on L-P's production figures from Redwood Creek no more than 120 woods employees should be affected in total. Furthermore all old growth logging is done by union employees, and contract logging is only done on residual acreage. A figure of 17 employees on an annual basis is a more likely estimate for maximum contract employees affected, making a total of 120 woods employees as a maximum impact. These 17 employees could be hired by L-P if public timber were available thus making the employment impact range 0–17.

Other operators affected are listed below with their projected impacts. These projections were based on inadequate knowledge of what the actual large company responses would be. For example several mills depending on Simpson for supply (*) estimated a total log supply reduction from Simpson equal to three or four times what Simpson anticipates removing from its log sales program.

Company:	*Company estimate employees affected*
Britt Lumber	15
Schmidbauer	20
Mission Fence	10
Ramey Lath	10
Boyd Wood Products	5
Amarant	Unknown
Welco	6
McAllister Lath	6
Trend Lumber	*50
Cal-Pacific	*29
Twin Parks	*50
McNamara & Peepe Arcata	*125
McNamara & Peepe Cres. City	*105

McNamara and Peepe have an inventory of public timber sufficient to carry them through the immediate future. Trend, Cal-Pacific, and Twin Parks estimate a combined reduction approaching 20 million board feet from Simpson, while Simpson projects only a 10 million board feet reduction. If McNamara and Peepe are eliminated from immediate impact consideration because of its public timber supply, and the impact to Trend, Cal-Pacific, and Twin Parks reduced by 50 percent (could be reduced to 0 if impact is on McNamara and Peepe) the maximum impact assigned to asterisked mills is about 65 for the near future. This figure correlates well with mill employment required to process 10 million board feet. This figure could also approach 0 if the large companies chose to maintain present supply as much as possible.

The unasterisked mills are primarily involved with remanufacturing of small redwood products (Schmidbauer mill impact is fencing). The same problem of several firms expecting that each of them will be the hardest hit exists here. However, any reduction in impact for this analysis would be arbitrary, and it is possible that several small firms have been omitted from this list. Therefore, the total of 72 will be left unchanged.

Large company response

	Try to maintain present supply	Reduce supply
Arco Truckers	0	10
LP Woods Contractors	0	17
Other mills	72	137
Total	72	164

JOB TYPES, WAGES, AND AGE LEVELS AFFECTED

Jobs were categorized by classes that could be replaced by alternative opportunities or by general skill class (determined by wage level). Woods jobs were primarily classified by job type, while mill jobs were primarily classified by skill level. Actual job types affected can be found in Appendices A and B. The distribution of affected workers by category is also shown below.

Job type:	*Percent affected*
Woods	18.5
Heavy equipment	5.5
Fallers	2.5
Mechanics	1.5
Truck drivers	2.0
Other woods	7.0
Mill	75.5
Vehicle operators	6.5
Skilled workers	9.0
Moderately skilled	11.0
Low skilled	49.0
Supervisor support	6.0

Wage levels were not precisely established, but most job types could be assigned a general wage range. The wage levels shown are based on the 1978 wage levels of Local Union 2592, Lumber and Sawmill Workers Union. These rates apply directly to Louisiana-Pacific employees, and comparable scales are applicable to Simpson and Arcata Redwood employees, even though Arcata employees are not unionized. The independent mills discussed under "other direct impact" are primarily non-union and probably have lower wage rates; this effect is not analyzed.

Benefits of union and non-union employees range from complex to nonexistent. The benefits impact is not discussed here but should be considered for alternative job opportunities.

Job type:	*Pay range*
Woods jobs	
Heavy equipment	$8.16–8.93/hr.
Fallers	20,000–30,000/yr.
Mechanics	7.50–8.00/hr.
Truck drivers	8.16/hr.
Other woods	7.40–9.08/hr.
Mill jobs	
Vehicle operators	7.50–7.77/hr.
Skilled workers	8.50–9.37/hr.
Moderately skilled	7.75–8.50/hr.
Low-skilled	7.50/hr.
Supervisor-support	Unknown ($10–25,000/yr.?)

A weighted average wage can be computed using the figures for proportions of workers by job type and the wage ranges for job types. The average wage is about $7.80 based on 1978 wage scales. This includes the hourly wages of woods workers who usually work 7–8 months of the year.

One obvious problem of this type of analysis in terms of affected employees is that some interval company reshuffling occurs. Senior employees denoted as being unemployed (as, for example, a sawyer or filer) may actually bump a younger person off the job. The result is the senior employee working for a lower wage and the junior employee being unemployed.

Age of affected employees is not well known. Some people of all ages will be affected, and in some operations more older people could be affected than in others. It is probable that the bulk of affected employees will be young, because they will generally have lower seniority. However, if an entire mill closes, then all employees at that mill will be affected.

TIMEFRAMES ASSOCIATED WITH MINIMUM-MAXIMUM UNEMPLOYMENT SCENARIOS

Several alternative unemployment scenarios are possible after park expansion. Rather than attempt to delineate each of them, a choice of the minimum-maximum scenarios were believed to be most informative. The minimum scenarios involves 260 employees and the maximum scenario involves 921 employees. Each is briefly described as a prelude to the timeframe.

Minimum unemployment scenario

The minimum scenario involves no impact on Simpson Timber and Arcata Redwood as they are assumed to increase cuts on their own lands to replace that volume lost from Redwood Creek. Louisiana-Pacific is assumed to increase cuts on its own land and substitute whitewood losses by the availability of additional public timber. At least two and perhaps all three companies have indicated that this option is not a preferred one, and for Louisiana-Pacific it includes public timber constraints not wholly within company control. The main impacts in this scenario are to L–P's old growth redwood operations and associated small company remanufacturing. Big Lagoon logging is curtailed by 40, Samoa Redwood by 108, and other Samoa L–P operations by 40. Local small remanufacturing impact is 72 for a total impact of 260.

Maximum unemployment scenario

The maximum scenario involves some impact to Simpson Timber Company log buyers, significant impact to Arcata Redwood's sawmill and remanufacturing facilities, significant impact to Louisiana-Pacific's sawmill operations, and significant impact to other firms buying logs or lumber from the three large companies. Simpson loses 15 logging employees, Arcata loses 29 woods and 140 mills, remanufacturing, and office employees, Louisiana-Pacific loses 103 woods employees and 470 mill and office employees, and other companies may lose up to 27 woods

workers and 137 mill workers, for a total of 921 employees.

Comparison of timeframes

The actual direct impacts over time by park expansion will range within the limits of the minimum-maximum unemployment schedule shown here. Actual effects on the local economy will depend on integrating these potential job losses with potential job gains and resulting induced employment effects.

Range of potential direct unemployment

Month 1	22–86
Month 3	40–174
Month 6	224–785
Month 9	260–821
Month 12	260–871
Month 18	260–921
Month 24	260–921

Mr. ABOUREZK. I want to emphasize that that is the information that came from the timber companies themselves, when they were asked directly.

I yield to the Senator from Wyoming.

Mr. HANSEN. Mr. President, I support the amendment offered by our distinguished colleague from California (Mr. HAYAKAWA). I think it is important to understand that the study that has been offered as an amendment by the distinguished junior Senator from California is directed at the concern we all feel for people who may be out of work. My point now is to underscore the importance of that study.

I think what we have in mind is that the Forest Service is to determine the feasibility of increasing the allowable cut on Forest Service lands. I think it calls for an intensive and accelerated evaluation of the potential allowable cut on Forest Service lands in the area by the Department of Agriculture and the Forest Service.

I point out further that this is not a routine study. So many, many times, Mr. President, as Senators know, when you really do not want to do anything, you call for a study. That is not the purpose of the amendment offered by the distinguished junior Senator from California. Rather, it is to take a good, tough, close look immediately at the possibility and the feasibility of increasing that cut out there in order that the adverse impact upon workers may be kept as minimal as possible.

I would say that the study addresses a unique situation that will be examined by the Forest Service and by the Department of Agriculture, and I anticipate a positive response by the Forest Service when its examination has been completed.

I ask my colleague from South Dakota if he does not share generally those sentiments, that we want to do all we can to minimize the adverse impact suffered by people who may be out of jobs.

Mr. ABOUREZK. Absolutely. I agree.

Mr. HANSEN. I thank my colleague.

Mr. HAYAKAWA. I thank the Senator from Wyoming.

Mr. ABOUREZK. I am ready to yield back the remainder of my time on this amendment.

The ACTING PRESIDENT pro tempore. Does the Senator from California wish to yield back his time?

Mr. HAYAKAWA. I am perfectly willing to yield back my time.

Did anyone else wish to speak on this?

Mr. HANSEN. I am not aware of anyone.

Mr. HAYAKAWA. I am prepared to yield back my time.

Mr. HANSEN. I am happy to yield back my time.

Mr. HATCH. Will the Senator yield for a unanimous consent request?

Mr. HANSEN. Yes, I yield.

Mr. HATCH. Mr. President, I ask unanimous consent that Tom Parry, of my staff, may be accorded the privilege of the floor during the debate and vote on S. 1976.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Is all time yielded back? All time is yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. HANSEN. I move to reconsider the vote by which the amendment was agreed to.

Mr. ABOUREZK. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The ACTING PRESIDENT pro tempore. Who yields time?

Mr. HAYAKAWA. I have another amendment.

Mr. HANSEN. Mr. President, under the previous order, it is my understanding that the Senator from California may proceed on his own time. He has an hour on each of the amendments he proposes to offer.

UP AMENDMENT NO. 1165

(Purpose: To retain the jurisdiction of the U.S. Court of Claims and to provide a mechanism for the halt of interest-running)

Mr. HAYAKAWA. Mr. President, I send an amendment to the desk and ask that it be considered.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The legislative clerk read as follows:

The Senator from California (Mr. HAYAKAWA) proposes unprinted amendment numbered 1165.

Beginning with "district" on page 5, line 7, strike out all through the period on line 15 and insert in lieu thereof the following: "Court of Claims. At any time after the expiration of six months from the date of enactment of this phrase, the United States may initiate proceedings in the United States Court of Claims or in the District Court for the district in which the property is located, without regard to the amount in controversy, seeking a determination of just compensation for the lands, or interests therein, or down tree personal property, taken by the United States pursuant to the provisions of this Act: *Provided*, That the landowner shall not have previously initiated an action against the United States in the United States Court of Claims for the recovery of just compensation for such lands and property so taken. In any action or proceeding for the recovery of just compensation for the lands and interests therein, and for the down tree personal property, taken pursuant to the provisions of this Act, the United States may deposit in the registry of the court in which any such action or proceeding is pending, the estimated amount of just compensation or any portion thereof due to the former owner of the property generally in accordance with the procedure described in the first section of the Act of February 26, 1931 (40 U.S.C. 258a). Interest shall not be allowed on such amounts as shall have been paid in the court from and after the date of such deposit.".

Mr. HAYAKAWA. Mr. President, the legislation presently under consideration, S. 1976, proposes to change existing law by providing that determination of just compensation be made in the U.S. district court instead of the Court of Claims which is the proper forum. Current law, (28 U.S.C. 1491) provides that the Court of Claims has the jurisdiction in this type of case.

This change in court jurisdictions is in fact "forum shopping" on the part of the U.S. Government.

This amendment would retain the jurisdiction to the Court of Claims. This would follow the original intent of Congress as established in the original legislation of 1968 which we are now amending.

Some people claim that the U.S. district court should have the jurisdiction in this case because it is the court closest to the people. I point out that a jury trial is optional in the U.S. district court, and that Federal Government attorneys have indicated that they would not seek a jury trial in any settlement cases that might result from this legislation.

Because the Court of Claims handled the cases resulting from the 1968 taking of redwood timberlands, this court has

the expertise in matters of timber valuation, volumes and discounting. If this matter were to be taken up in the U.S. district court, the settlement would most surely take a longer time because of the lengthy education process involved. This would result in higher costs to both the taxpayers and the former landowners.

My amendment specifically addresses two problems related to the 1968 taking. The amendment provides that if the former landowners have not acted within 6 months of the enactment of this legislation, the Federal Government may initiate proceedings in either the Court of Claims or the U.S. district court. Second, my amendment permits the deposit of all or any funds by the Federal Government for just compensation and eliminates the need for interest payments on the funds deposited. This will resolve the problem that existed in 1968 of excessive cost to the taxpayer and the former landowners because there was no interest cutoff mechanism in the Court of Claims.

Mr. President, I emphasize that S. 1976 provides for a "legislative taking" of land and not for a condemnation proceeding. This case would automatically be referred to the Court of Claims, which has the proper jurisdiction and the previous experience, if there were no new provision in the bill, as this legislation amends the Redwood National Park Act of 1968.

This amendment has the endorsement of the Washington, D.C., Bar Association, and is acceptable to many of my colleagues of both parties, including many members of the Senate Committee on the Judiciary.

I thank the Chair.

Mr. THURMOND. Mr. President, will the Senator yield me about 5 minutes?

Mr. HAYAKAWA. I am happy to yield to the Senator from South Carolina.

Mr. ABOUREZK. Mr. President, I shall give back the time, but I want to ask for the yeas and nays on the amendment now.

The PRESIDING OFFICER (Mr. GRAVEL). Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. THURMOND. Mr. President, I rise in support of Senator HAYAKAWA's amendment retaining the jurisdiction of the U.S. Court of Claims in S. 1976.

S. 1976, like the Redwood National Park Act of 1968, involves the legislative taking of property. Jurisdiction matters involving legislative taking of lands for the Redwood National Park have traditionally been vested in the U.S. Court of Claims, rather than the U.S. district court.

The bill before us is a legislative taking in that, upon enactment, the right of possession of the property in question would immediately vest in the Government. In such a circumstance the only issue to be decided is the question of just compensation. This differs from condemnation situations in which the Government seeks to exercise right to property under previously granted legislative authority. In these latter situations the Government seeks the U.S. district court's order to obtain possession and title to property as well as determining compensation for the item being acquired.

Mr. President, the Congress correctly recognized in the 1968 Redwood Act that proper jurisdiction in these matters was within the Court of Claims. S. 1976, as it presently stands, ignores not only the 1968 act but other firm precedents in this area of the law.

In addition to the legal precedents, the severe practical effect of failure to amend this bill would be to throw out the vast amount of expertise gained by the Court of Claims in determining timber and land values stemming from the cases it handled in the 1968 taking.

Mr. President, the U.S. Government should not be in the business of forum shopping between separate jurisdictions when such an action would not be in the best interests of judicial economy and in direct conflict with the precedents set forth in the original Redwood National Park Creation Act of 1968.

In summary, Mr. President, the provision of S. 1976, which Senator HAYAKAWA seeks to amend, presently contains a special exception to the judicial code of the United States. I do not believe that the necessity for such a precedent setting exception has been demonstrated. The amendment before us solves the problems of interest running payments, the right of the Government to initiate the legal proceedings and also the right to proceed in the district court should the landowners not act themselves within 6 months.

Senator JACKSON stated in floor debate on the 1968 act that even if no reference to court jurisdiction were included in the language of the bill, that the litigation would still be heard in the Court of Claims. It made sense in 1968 and it makes sense today, to see that any such litigation resulting from this bill be adjudicated in the proper court of jurisdiction, for the sake of economy if for no other reason.

Mr. President, when this bill was first reported, I was somewhat disturbed by certain of its provisions on the legislative taking, and felt that it should be rereferred to the Committee on the Judiciary for evaluation. I believe, however, that Senator HAYAKAWA's amendment resolves the concerns I previously had. The amendment gives the United States the opportunity to sue within 6 months and insures that interest would not be incurred against the Government pending final disposition.

For these reasons, Mr. President, I urge the adoption of the amendment by the distinguished Senator from California (Mr. HAYAKAWA).

The PRESIDING OFFICER. Who yields time?

Mr. HAYAKAWA. I thank the distinguished Senator from South Carolina.

Mr. President, I would like to add that the Government paid only 6 percent of the money, on the money not yet paid out for landowners. The companies, on the other hand, have to pay the payments between 12 to 13½ percent interest. Therefore, the companies are likely to lose some $3,000 to $4,000 a day, and if they changed courts, our additional process will be very lengthy.

This is another reason for not changing courts.

I yield to the distinguished Senator from Utah.

Mr. HATCH. I thank the distinguished Senator from California.

Mr. President, I rise to support the position of the distinguished Senator from California in this matter because I believe he is doing the State of California, the owners of the redwoods, and of course the Government, a great service, it seems to me, in providing this amendment for consideration by the Senate.

S. 1976 and H.R. 3813, a proposal to expand the Redwood National Park, proposes to change existing law by providing that determination of just compensation for lands taken for the park be made in the U.S. District Court and not in the Court of Claims. Absent this provision granting jurisdiction to the district court, the court with jurisdiction under established jurisdictional statutes and the 1968 Redwood Park Act [1] would be the U.S. Court of Claims.

Although it is unclear why such a complete jurisdictional change is necessary for this park expansion, a number of reasons have been advanced for the change.

The House report suggests, as one reason in support of the transfer provision, that before the district court, "the landowner's rights to a jury proceeding are . . . protected." [2] It is true that the Court of Claims does not provide for jury trials. However, trial in the district court for condemnation lawsuits does not automatically guarantee a jury trial. The case may be heard by a jury, by the court itself or by a valuation commission appointed by the court.[3] Furthermore, there is a substantial question whether cases resulting from the legislative taking proposed in this legislation are best heard by a jury in any event. Indeed, when the 1968 act was under consideration, the Department of the Interior supported the Court of Claims as the proper forum precisely because there would be no jury involved:

> We believe that there are sound reasons for using a tribunal other than the jury trial. First, the bill will condemn a large area of very similar land, involving a number of owners. The Court of Claims' approach affords an opportunity to insure uniformity in awards and avoid the inconsistency that the jury system tends to promote. This assures fairness to all former landowners and to the Government alike. . . .[4]

Thus, the very reason which was used to urge retention of the established jurisdictional framework in the 1968 act is now turned around to support an amendment to that act which would disrupt that framework. Moreover, that amendment is advanced allegedly to protect landowners when the landowners have made no such request. Under the circumstances, it is apparent that the concern for the affected landowners ex-

Footnotes at end of article.

pressed in this regard is unnecessary. More than likely, these claims would be heard by a judge or three-man commission rather than a jury even if tried in the district court because of the magnitude and the complexities of the claims involved.[5] The reasons advanced by the Department of the Interior in 1968 apply equally today, and support retention of jurisdiction in the Court of Claims, not transfer to the district court.

The lack of a deposit mechanism for receiving estimated amounts of just compensation has been cited in support of a change in jurisdiction.[6] This mechanism would enable the Government to make deposits of estimated compensation and thereby stop the running of interest on the deposit.

It should be pointed out that the lack of a deposit mechanism was not solely responsible for interest payments to landowners following the 1968 Act. A deposit into court stops the running of interest only on the amount deposited by the United States. Any judgment in excess of the deposit will accrue damages for delay in its payment in either the U.S. District Court or the Court of Claims. Delay damages of this type represented a significant portion of the interest paid pursuant to the 1968 Act and was not the result of a lack of a deposit mechanism.[7]

An additional reason offered to support the transfer of jurisdiction is that "the Court of Claims has traditionally not been an available forum through which the United States can initiate an action to pay just compensation."[8] It is true that the Court of Claims normally hears citizens' claims against the United States and therefore the Government is the defendant but the relationship to the jurisdiction question is unclear. If the statement means that it is the desire of Congress that the United States be the plaintiff in these actions rather than the defendant, then the only apparent basis for that desire is to give the United States the ability which the plaintiff has to determine when the litigation will be commenced.[9] Such control over the timing of the suit does give the United States an advantage in the normal condemnation case, since the date of valuation can, in effect, be chosen by the condemning agency. Thus, in the normal situation, the United States could withhold commencement of the suit until market prices were down, and gain the benefit of the lower values on the date selected for filing the declaration of taking. In this instance, however, no such advantage can accrue to the United States, since the date of taking (and thus, the date of valuation) will be fixed immediately upon the enactment of the legislation into law.

If, on the other hand, the concern underlying this rationale for the transfer provision is that the landowners will delay the commencement of litigation, several points can be made. First, no advantage could accrue to the landowners by reason of any such delay, as such delay would only increase their cost of borrowing money at market rates higher than those historically ordered by the court. On the contrary, it is in their best interests to conclude the litigation as quickly as possible in order to reinvest the proceeds. Second, if no deposit is paid in the Court of Claims, the United States gains the benefit of the use of the moneys which would otherwise be deposited during the period between appropriation and payment. Third, the United States can, if it wishes, proffer its estimate of just compensation to the landowner at any time prior to or during the course of the litigation. The landowner would undoubtedly accept such as proffer. Even if the proffer were rejected, however, the landowner would still be barred from claiming delay damages on the amount proffered from the date of the proffer.

The reasons offered in support of a change in jurisdiction do not withstand analysis, particularly in view of the reasons supporting retention of the Court of Claims.

Another argument is that disruption of the court jurisdiction on a piecemeal basis, in response to concerns which may or may not be present in a given specific case, ought to be avoided in the absence of overwhelming justification to the contrary. Ad hoc selection of a court through legislation presents serious questions as a precedent for future actions and if such selections could be justified, requires consideration by the appropriate congressional committees. Therefore, I think we can avoid piecemeal legislation if we support Senator HAYAKAWA's good amendment.

With regard to judicial economy, the Court of Claims' general experience in complex litigation and in the field of property evaluation should not be ignored. In addition, its considerable experience with the creation of the park in 1968 will likely create a judicial climate favorable to prompt action on any new park expansion that may be approved by the Congress. The benefits from such expeditious litigation will flow both to the Government and the landowner. In contrast, an interruption in what can be viewed as a single chain of events with relationship to the park by changing to a new court at this time would only serve to increase the chances of delay.

With regard to consistent awards, as one of the Department of Interior's own reasons for preferring the Court of Claims in 1968, the concern of uniformity in awards should not be ignored. The judicial goal of consistency is best served by returning to the Court of Claims to complete the valuation of park land. Properties of similar locale, quality, and value, should be judged in similar conditions with differences rationally supported. Continuation of claims arising from the expansion of the park in the Court of Claims would serve this goal, while a change to a new court would jeopardize this goal.

While the concerns expressed for removing jurisdiction from the Court of Claims do not justify the proposed remedy, the primary concerns can be effectively met without a complete disruption of established jurisdictional statutes. An approach contained in the attached amendment is responsive to the problem raised by the House and Senate committees.

Specifically the amendment provides that the United States may initiate action, seeking a determination of just compensation, in either the U.S. district court or the Court of Claims if, after 6 months from the date of taking the landowner shall not have previously initiated action in the Court of Claims. In addition, the amendment provides for the deposit of funds in the Court of Claims in accordance with 40 U.S.C.A. § 258(a), and on those funds deposited, interest shall not be allowed.

Adoption of the amendment would continue in force the fundamental elements of the current law which has provided the Court of Claims with jurisdiction over this type of claim for over 90 years under the Tucker Act. The substantial justification and careful consideration which should accompany such a significant departure as proposed by the pending bills is lacking. Jurisdictional shifts based on anything less than that consideration and justification can only be described as forum shopping and should be rejected. The amendment, however, provides the Government with the flexibility it seeks without a radical jurisdictional change or disrupting basic notions of judicial evenhandedness through legislative action.

FOOTNOTES

[1] 28 U.S.C. §§ 1346(a)(2), 1491 (1970); 16 U.S.C. § 79(c)(b)(2) (1970).

[2] H.R. Rep. No. 95-581, 95th Cong., 1st Sess. 27 (1977).

[3] Fed. R. Cir. P. 71A(h) provides that the court hearing a condemnation case may, in its discretion, refer the issue of just compensation to a valuation commission for an initial determination when such reference is warranted by the "character, location, or quantity of the property to be condemned, or for other reasons in the interests of justice." Thus, the right to a jury trial in condemnation cases is not, absolute. Often, in large or complicated cases, such a commission will be appointed; or the court may order trial to the court itself. *See United States* v. *Reynolds*, 397 U.S. 14 (1970); *United States* v. *Cunningham*, 246 F. 2d 330 (4th Cir. 1957).

[4] Letter from Edward Weinberg, Solicitor, Department of Interior, to Sen. Henry M. Jackson (Sept. 18, 1968); cited with approval as part of the debate on S. 2515, Cong. Rec. Sept. 19, 1968, S. 11046.

[5] Such complexity has frequently been recognized as supporting the denial of a demand for a jury trial in a condemnation case. *See, e.g., United States* v. *Chamberlain Wholesale Grocery Co.*, 226 F. 2d 491 (8th Cir. 1955), *cert. denied* 350 U.S. 989 (1956).

[6] H.R. Rep. No. 95-581, 95th Cong., 1st Sess. 27 (1977), and *See* Report of Comptroller General, "Information on the Acquisition of Lands for Redwood National Park", B-125035, 13 (Aug. 16, 1977).

[7] Report of the Comptroller General, "Information on the Acquisition of Lands for Redwood National Park", B-125035, 4 (Aug. 16, 1977).

[8] H.R. Rep. No. 95-581, 95th Cong., 1st Sess., 27 (1977).

[9] It should be noted that the language of the amendment as presently drawn does not preclude the landowners from beginning the litigation in the district court and casting the United States in the role of defendant. The language provides: "Any action against the United States with regard to the provi-

sions of this Act and for the recovery of just compensation for the lands and interests therein taken by the United States . . . shall be brought in the United States district court. . . ."

Mr. HAYAKAWA. I thank the distinguished Senator from Utah.

Mr. President, I believe that the Senator from Alaska would like to make some comments at this time. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. ABOUREZK. The time to be charged against whom?

Mr. HAYAKAWA. I ask unanimous consent that the time be charged to me.

The PRESIDING OFFICER. On the amendment.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HANSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I ask unanimous consent that the following staff members have the privilege of the floor during the consideration of and voting on S. 1976: Fred Craft; Ted Orf; Tom Imeson; Kit Caples, of Senator McCLURE's staff; Patty McDonald, of Senator WALLOP's staff; Jim Range, of Senator BAKER's staff; and Charles Wood, of Senator DANFORTH's staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, I suggest the absence of a quorum, on behalf of the Senator from California.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, is the time controlled?

The PRESIDING OFFICER. Time is controlled.

Mr. STEVENS. Mr. President, will the Senator yield me some time?

Mr. HAYAKAWA. I am happy to yield.

The PRESIDING OFFICER. The Senator from California has 8 minutes remaining.

Mr. STEVENS. Three or four minutes will be sufficient.

Mr. HAYAKAWA. I yield 3 or 4 minutes to the Senator from Alaska.

Mr. STEVENS. Mr. President, I have received a letter from the Bar Association of the District of Columbia concerning the pending Hayakawa amendment. I should like to inform the Senate of the position of the bar association.

There is strong opposition to the bill as it stands now from the Bar Association of the District of Columbia, and they do support the Hayakawa amendment, which is pending.

I have looked through their memorandum and their position, and I ask unanimous consent to have printed at this point in the RECORD the letter that the bar association has sent to me. I assume they have sent it to other Senators along with a brief summary of the bar association's position on this amendment.

Mr. ABOUREZK. Is that the District of Columbia Bar Association or the California Bar Association?

Mr. STEVENS. The District of Columbia Bar Association.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.,
January 12, 1978.

Re pending legislation affecting the traditional jurisdiction of the United States Court of Claims.

Hon. TED STEVENS,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR: Currently before Congress are two bills (H.R. 3813 and S. 1976) which propose certain amendments to the 1968 Redwood National Park Act, including the legislative taking of additional properties for this National Park. One provision, present in both versions of the bill, would divest the United States Court of Claims of its traditional jurisdiction to hear claims arising from legislative takings, transferring such jurisdiction in this instance to the United States District Court for the district wherein the taken property is located. The Bar Association expresses no view on any other portion of the proposed Park Expansion legislation, nor does it take any position with respect to whether the legislation as a whole should be enacted.

As President of the Bar Association of the District of Columbia, I would like to communicate to you the Bar Association's strong opposition to the passage of the proposed jurisdictional amendment and briefly summarize the reasons for our position. Please find enclosed a memorandum which sets forth in more detail the views of the Bar Association summarized herein.

The Bar Association opposes passage of the proposed jurisdiction amendment to the Redwood National Park Act for several reasons. At the outset, it must be emphasized that absent any mention in the 1968 Act or in the proposed legislation, all claims by affected landowners for payment of just compensation for property legislatively taken could be brought properly *only* in the Court of Claims, pursuant to 28 U.S.C. § 1491 and § 1346(a)(2). This provision, which would oust the jurisdiction of the United States Court of Claims in favor of the district court, constitutes an unprecedented and undesirable alteration of well-established jurisdictional statutes granting the Court of Claims sole power to hear suits arising out of legislative takings, such as occurred under the original 1968 Redwood National Park Act and as are proposed in the current legislation. Such well-established statutes, both of general and specific applicability, should not be disturbed absent overwhelming justification and should be revised only after full consideration of overall policy implications has been completed by the appropriate Congressional Committees on the Judiciary. It is the Bar Associations' opinion that legislation affecting the jurisdiction of federal courts must always be approached with overall judicial policy in mind, rather than merely as a response to specific concerns which may or may not be present in a given narrow situation.

Furthermore, the Bar Association does not find the various reasons advanced in support of jurisdictional transfer away from the Court of Claims to be convincing. The argument that the numerous claims could be heard by juries in district court is clearly unpersuasive, since it is doubtful that such cases would actually go to juries even if that trial method were available. Rather, it is more likely that these complicated claims would be determined, in actual practice, by a district court judge and/or a valuation commission appointed pursuant to the applicable Federal Rules of Civil Procedure. (Jury trials are not guaranteed in district court condemnation trials. The court may, in its discretion, refer the issue of just compensation to a valuation commission or hear the case itself without a jury.) It should be noted also that the federal government has recognized the inherent problems which exist when the jury system is relied upon to decide numerous, complicated legislative taking cases and has specifically questioned the soundness of attempting to use jury trials for the determination of claims arising under the Redwood National Park Act.

Arguments for transfer of jurisdiction predicated on the availability in district court of provisions allowing the government to deposit its estimate of just compensation are also not convincing. In the first place, there is no basis in fact for the allegations that damages for delay in payment, as determined by the Court of Claims in prior litigation under the 1968 Act, have been excessive. Instead, an objective study of past Redwood National Park Act litigation indicates that the Court's decision in this regard was, if anything, conservative and that current precedent governing district court decisions might well mandate use of a substantially higher rate of interest to measure damages for delay in payment of just compensation. Furthermore, while such a deposit in district court could perhaps *partially* terminate the running of interest as damages for delay in payment, several viable alternative methods could be utilized in the Court of Claims with the same result. After considerable study on this matter, it is the belief of the Bar Association that sound judicial policy is best served by use of these available methods at the Court of Claims, rather than by the adoption of a jurisdictional provision which would result in such drastic revision of the traditional methods of handling legislative taking litigation.

An additional argument which has been proffered in support of the transfer of jurisdiction to the district courts claims that the United States is somehow put at a disadvantage by not being the named plaintiff in Court of Claims litigation. This argument seemingly does not comprehend the "uniqueness" of legislative takings, especially with regard to the fact that the date of valuation is automatically set upon the signing of the relevant legislation by the President. A proper understanding of the differences between a legislative taking and a taking through "normal" condemnation procedures is extremely important and indicates that the proper forum for the claims arising under the Redwood National Park Act is the Court of Claims, even if the United States is not technically named plaintiff in the litigation.

It should be noted that even if the above-described arguments possessed more merit than they do, they would be overwhelmingly outweighed by the presence of factors which strongly support retention of jurisdiction at the Court of Claims. Specifically, retention of jurisdiction in the Court of Claims would avoid the possible effect of the proposed jurisdictional amendment as precedent for piecemeal jurisdictional legislation, and would allow both the government and the affected landowners to benefit in future litigation from the experience already gained by the Court of Claims in complex valuation cases generally, and Redwood cases in particular. Retaining jurisdiction in the Court of Claims would also serve the interests of all parties in securing uniform and consistent awards for the various landowners

affected, and would help assure that the judgments as to the determined values of different properties differ only on rational bases related to identifiable differences between them. As stated previously, the United States has noted the possibility of widely inconsistent jury verdicts which would be present if the cases were heard in district court. This problem would not exist if the cases were heard in the Court of Claims.

Finally, any provisions transferring jurisdiction over these cases to a district court would be undesirable when, as here, there are less drastic alternative actions available. These alternative methods easily can be designed to respond to the concerns raised by various parties, without the drastic effect that the jurisdictional transfer provision would have. These alternative methods could assure expenditious litigation of these cases, prompt payment of deposits of estimated just compensation and would assist in fulfilling the Constitutional mandate of the Fifth Amendment that fair and reasonable just compensation be paid for property taken by the United States.

After a full consideration of all the relevant factors, the Bar Association is of the view that enactment into law of the jurisdictional provision now included in the bills proposing to expand the Redwood National Park would constitute an undesirable and unwarranted derogation of well-established jurisdictional statutes, which would work to the detriment of sound judicial policy. Accordingly, the Bar Association opposes enactment of any provision transfering jurisdiction of claims arising under the Redwood National Park Act away from the United States Court of Claims.

The Bar Association of the District of Columbia appreciates this opportunity to present its views concerning this important matter. We will be glad to provide whatever further information or assistance you may desire.

Sincerely,

JOHN P. ARNESS,
President, Bar Association of the District of Columbia.

BRIEF SUMMARY OF BAR ASSOCIATION'S POSITION

The attached memorandum fully explains the opposition of the Bar Association of the District of Columbia to those provisions of H.R. 3813 and S. 1976 which provide that claims by landowners for just compensation for property legislatively taken be heard in the U.S. District Court and not in the U.S. Court of Claims, as is provided under existing applicable jurisdictional statutes and prior Redwood National Park legislation.

(1) Current law provides that the Court of Claims is the proper court of jurisdiction. Congress reaffirmed that jurisdiction in the 1968 Redwood National Park Act.

(2) Legislative takings and condemnation actions are separate and distinct. The Court of Claims has possessed jurisdiction over legislative takings for ninety years. An abrupt divestiture of Court of Claims jurisdiction ignores substantial Court of Claims expertise, precedents, and disregards judicial economy.

(3) Arguments in favor of transferring jurisdiction of these claims away from the Court of Claims are not convincing. However, even if the concerns of proponents of the jurisdictional transfer provision were more convincing, less drastic alternatives are available to meet those concerns without wholesale alteration of established jurisdictional statutes.

(4) Retention of jurisdiction in the Court of Claims provides numerous advantages including avoidance of piecemeal litigation, consistency of awards (advanced by the Department of Interior in support of Court of Claims jurisdiction in 1968) and proper utilization of the Court's experience in handling complex timber valuation cases.

Mr. STEVENS. Mr. President, a very lengthy memorandum has been prepared by the District of Columbia Bar Association. I think it is too long to place in the RECORD at this point. The summary does explain their position.

Basically, it seems to me that the amendment of the Senator from California to retain the jurisdiction of the Court of Claims is the proper way to deal with this question.

Later, I will have some comments, and I hope to be able to discuss with the managers of the bill the references to the land and water conservation fund. In any event, I think that the jurisdiction here should not be changed and the Court of Claims should have jurisdiction over suits for compensation which arise from the expansion of this park. I believe that the position of the Bar Association of the District of Columbia, which has not taken a position on the bill itself, but is taking a position on the jurisdictional question, should be given great weight by the Members of the Senate.

Therefore, I do support the Senator from California and his amendment to restore jurisdiction to the Court of Claims.

Mr. HAYAKAWA. I thank the Senator from Alaska.

The PRESIDING OFFICER. Who yields time?

Mr. ABOUREZK. Mr. President, I yield myself 3 minutes.

Mr. President, I have a statement on this amendment that I wish to read after we come back in. I understand we are going to recess very shortly and come back in about an hour or so. But I shall make a couple of comments about some of the statements that have been made on this amendment in direct response to the arguments in favor of the amendment.

The phrase has been used over and over again in the speeches supporting the amendment that the bill would change existing law by keeping the condemnation cases in the district court in San Francisco. The fact is it is not a change in existing law. The change occurred in 1968 when for the first time a condemnation case was taken out of the district court where it belonged under Federal jurisdiction law and put it in the Court of Claims. That happened in 1968, and I am going to tell you why in just a minute. The existing law is that all condemnation cases go into the district court for the district where the taking is happening. Let me tell you why the timber companies want this in the Court of Claims rather than the district court. When the original redwoods park bill was passed in 1968 the timber companies fought against the concept that jurisdiction should go in the Court of Claims. They said they wanted a jury trial. Naturally you would expect the timber companies to try for every single advantage they could get, and they thought the advantage would be in the district court back in 1968. Somebody, I do not know who, decided to put it in the Court of Claims in 1968.

All right. Since that time the timber companies have found that the Court of Claims has been extremely generous to them with taxpayer money in paying out money to the timber companies for the taking that was affected in the 1968 redwoods bill. And the timber companies have also found out that just last year a declaration of taking was filed on a new piece of the Redwod Park. The jurisdiction went into the Federal District Court in San Francisco, and the timber companies found out that the district court was not as generous as the Court of Claims was. So that is what this is all about.

What surprises me? It does not surprise me that the timber companies want to shoot for every advantage they can get to drain the Treasury of whatever money they can get out of the U.S. Treasury. What surprises me is this lineup of conservatives, conservative Republicans standing up here, on the one hand, and saying it is costing too much to take the park and save it for our future generations and, on the other hand, trying to put it into a jurisdiction that will rip off the taxpayer for the benefit of the timber companies. That is what surprises me.

After listening to this lineup of Republican speakers on this side just a few minutes ago, I was reminded of what happens in a circus. There was a bunch of Republican elephants all lined up with the trunk of the one elephant wrapped around the tail of the one ahead of him and they would just go around in circles and around and around and around.

Mr. McCLURE. Mr. President, will the Senator yield?

Mr. ABOUREZK. When I am through.

Mr. STEVENS. Will the Senator yield first to me on that last comment?

Mr. ABOUREZK. Mr. President, I choose not to yield at this point.

The PRESIDING OFFICER. The Senator from South Dakota has the floor.

Mr. McCLURE. Will the Senator inform the Senator from Idaho when he is going to be through so he will yield?

Mr. ABOUREZK. I will be happy to.

Mr. McCLURE. Can we have an estimate of that time?

Mr. ABOUREZK. Mr. President, may we have order in the Senate here?

The PRESIDING OFFICER. The Senate will be in order.

Mr. ABOUREZK. I just think we ought to lay it out as to why the supporters of the timber companies over here want to put this into the Court of Claims. It is just purely a matter of money. I do not even mind that so badly. That does not bother me so much.

But whoever was foolish enough to put it in the Court of Claims in 1968, and it

was not the timber companies then, did a very foolish and ridiculous thing, I think. You took it out of a court where jurisdiction belongs for taking, where they have equity jurisdiction, where they can decide issues other than the value of the land. That is what the district court has been set up to do, not the Court of Claims.

And when you do that you actually turn Federal jurisdiction law upside down. Why they did it I do not know. But let me say this, that upon principle I am opposed to making the same mistake they did 10 years ago. I am opposed to compounding the stupidity of putting it in the Court of Claims then. And I think at some point we have to stop allowing these little bitty compromises where they eat you up bit by bit until they finally get everything they want, and in this case it is the timber companies that want to get everything they want.

So, Mr. President, when we come back in from the recess, I have another statement to make, but I thought it would be appropriate at this time to try to correct some of the misstatements made by some of the speakers who tried to do sort of an Alice-in-Wonderland thing by setting the truth and the facts on its head by saying that in this bill we are changing the law. Changing the law? We are trying to keep the law the same. It is they who are trying to change the law.

I reserve the remainder of my time.

Mr. McCLURE. Will the Senate yield before yielding the floor?

Mr. ABOUREZK. I will yield on the Senator's time.

The PRESIDING OFFICER. Who yields time?

Mr. McCLURE. Is the Senator through with his remarks? He indicated he would yield to the Senator from Idaho for a question.

Mr. ABOUREZK. If he has some time, I will yield on his time.

Mr. STEVENS. Yield time on the bill?

Mr. HANSEN. I yield such time as the Senator needs.

Mr. McCLURE. Will the Senator from Wyoming yield 2 minutes to the Senator from Idaho?

Mr. HANSEN. I yield 2 minutes to the Senator from Idaho.

Mr. McCLURE. I am amazed at my friend. He is always adroit at trying to inject issues that do not really pertain to the issue at hand in order to divert the attention away from the real issue. And to try to convert this into some kind of a partisan show is obviously either an attempt to obfuscate the issue or the result of a lack of information on the part of my friend from South Dakota, because if ever there were an organization which is not known as a stalwart, mainline, conservative Republican association, it is the AFL–CIO, and I think my friend from South Dakota would admit that. And, as a matter of fact, the AFL–CIO supports the provision that would require it to be in the Court of Claims rather than the district court.

Maybe my friend from South Dakota is unaware of that or maybe he has decided that the AFL–CIO has suddenly become a stalwart, conservative, mainline Republican organization, and perhaps he has some information to that effect and, if so, the Senator from Idaho would be glad to know that.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. McCLURE. I am happy to yield to my friend.

Mr. STEVENS. I wish to add to my friend from South Dakota that this is a legislative taking. A legislative taking is different from the filing of condemnation procedure pursuant to authorization granted after seeing exactly what is going to be taken. This is a broad brush, just open-ended legislation taking, and the only place under tradition where that should be reviewed, since it is an act of Congress as opposed to an act of the Executive pursuant to an act of Congress, is the Court of Claims. The 1968 act was absolutely correct and followed the traditions of this Congress over many years, and the attempt now to put it in the district court, because some one perceives here may be some advantage——

The PRESIDING OFFICER. The Senator's 4 minutes have expired.

Mr. STEVENS. Will the Senator yield 1 more minute on the bill.

Mr. HANSEN. I yield 1 additional minute.

Mr. STEVENS. There may be some advantage in going to the district court in San Francisco which seems to me warrants the attack that has been made by the bar association of the District of Columbia. Here is a disinterested group on the issue itself that says we are bastardizing the jurisdictional concepts of the Federal U.S. courts if this does not go to the Court of Claims where it should go.

Mr. ABOUREZK. I yield myself 2 minutes, Mr. President. I just want to make a response to what Senator STEVENS said. If I may have the attention of the Senator from Alaska, I just want to respond to what the Senator said.

When the Senator said it belongs in the Court of Claims, because it is a legislative taking, let me say that the Court of Claims handles only inverse condemnation cases where the Federal Government has been found to have acquired land by ignoring private property rights. That is not the case with a legislative taking. Every legislative taking in the world goes into a district court in the location of the taking.

I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

RECESS UNTIL 1:45 P.M.

Mr. CRANSTON. Mr. President, I move that the Senate now stand in recess until the hour of 1:45 p.m.

The motion was agreed to, and at 12:40 p.m. the Senate recessed until 1:45 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. ALLEN).

The PRESIDING OFFICER. Who yields time?

Mr. CRANSTON. I suggest the absence of a quorum with the time charged equally to both sides.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will please call the roll.

The assistant legislative clerk proceeded to call the roll.

(Mr. BUMPERS assumed the chair.)

Mr. ABOUREZK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ABOUREZK. Mr. President, how much time do I have left on this amendment?

The PRESIDING OFFICER. The Senator has 15 minutes remaining.

Mr. ABOUREZK. Mr. President, the committee carefully considered the arguments in support of this amendment to change jurisdiction from the district court in San Francisco to the Court of Claims. But the committee itself, by a vote, defeated the amendment and refused to repeat the error of the 1968 act.

The amendment would compound that error by modifying the procedures of the Court of Claims until it begins to resemble the district court. Turning the Court of Claims into a district court is not the solution. We have learned through experience that the Court of Claims is not the appropriate forum, either procedurally or substantively, to consider a condemnation action. Claims arising from acquisition of land pursuant to condemnation have been required since 1888 to be heard in the Federal district court. The district courts have procedures and remedies to resolve all of the issues which accompany a condemnation action and the ability to consolidate all issues within one forum. The Court of Claims does not.

The proponents of this amendment recognize the deficiencies of the Court of Claims and have sought to graft procedures of the district court onto the Court of Claims. I do not think that it is appropriate to turn the Court of Claims into a district court. The legislation reported by the committee proposes an exercise of eminent domain power of the U.S. Government; in short, a condemnation action. The committee saw no reason to repeat the error of the 1968 act and place this condemnation action in a forum other than that forum in which Federal land acquisition type actions are tried; that is, the appropriate Federal district court.

These courts have a set and orderly procedure for handling such cases. There is absolutely no justification for continuing to have an inappropriate court handle the redwood cases. There is no

reason for separating jurisdiction into the Court of Claims for the three timber companies and the district court for everyone else and I can see absolutely no justification for turning the Court of Claims into a district court.

Mr. President, it is worth noting that the district court in California has extensive experience in Federal land acquisition. As of December 27, 1974, the district court had cases covering 89 tracts of land. On November 28, 1975, the district court had cases covering 80 tracts. In January 1977, the district court had cases covering 88 tracts and in June of 1977 cases covering 142 tracts. The most recent figure, from earlier this month, was that the district court had cases covering 133 tracts. Some of these cases, Mr. President, were major timber valuations. As recently as last year, the United States filed a declaration of taking in the redwood timber land within the boundaries of Redwood National Park. Clearly, the weight of experience, especially in this area, lies in the district court.

Moreover, it is important to remember that the Court of Claims does not have equity jurisdiction. It cannot enforce decisions on the duties and obligations which one landowner owes to his neighbor. These questions which have arisen in the context of the 1968 act can only be litigated with finality in the district court.

Mr. President, it has been alleged that a legislative taking is akin to inverse condemnation, over which the Court of Claims has jurisdiction pursuant to the Tucker Act. This argument boggles the mind. There is nothing inverse about this bill. This measure contains the ultimate exercise of the Federal Government's power of eminent domain. It is a straight, unconcealed, direct condemnation. I hasten to point out that the Court of Claims itself agrees. Judge Lydon, of the Court of Claims, in one of the Redwood cases, specifically found that the legislative taking was not analogous to a Tucker Act inverse condemnation but was, rather, a straightforward condemnation by legislative flat.

Mr. President, I ask unanimous consent that a letter from the Deputy Assistant Secretary for Fish and Wildlife and Parks of the Department of the Interior, enclosing two analyses by the Associate Solicitor in support of district court jurisdiction, together with an excerpt from Judge Lydon's opinion, and a letter from the Justice Department, James Moorman, Assistant Secretary for Lands, be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C.

HON. JAMES ABOUREZK,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ABOUREZK: This is in response to your call of yesterday, January 19, 1978, requesting this Department's analysis of the position of the Bar Association of the District of Columbia in opposition to a portion of the proposed Redwood National Park expansion legislation presently under consideration by Congress. As you know, S. 1976 contains a provision that would divest the United States Court of Claims of its jurisdiction to hear claims arising from the proposed legislative taking, as the 1968 Redwood Act had provided, and place that jurisdiction with the United States District Court for the District where the land is located. The Bar Association is opposed to that change.

Enclosed is a memorandum from our attorneys analyzing the basis for that opposition. As indicated, they do not agree that the Court of Claims is a traditional forum to hear legislative taking cases. In their view, the legislative taking is analogous to a condemnation action not an inverse taking as the Bar Association seems to suggest.

Sincerely yours,

DAVID HALES,
Deputy Assistant Secretary, Fish and Wildlife and Parks.

Enclosure.

JANUARY 20, 1978.

MEMORANDUM

To Deputy Assistant Secretary, Fish and Wildlife and Parks
From Associate Solicitor, Conservation and Wildlife
Subject Redwoods—

On January 12, 1978, the Bar Association of the District of Columbia sent a letter to the Speaker of the House—the Honorable Thomas P. O'Neill—to communicate "strong opposition" to the passage of a portion of the proposed Redwood National Park expansion legislation presently under consideration by Congress. A copy of that letter is attached. As indicated therein, both S. 1976 and H.R. 3813 contain a provision that would divest the United States Court of Claims of its jurisdiction to hear claims arising from the proposed legislative taking, as the 1968 Redwood Act had provided, and place that jurisdiction with the United States District Court for the district where the property is located. The Bar Association is opposed to that change. You have asked that we review their letter and provide our comments to you.

The Bar Association's position is that under current law the Court of Claims is the proper court of jurisdiction and that Congress reaffirmed that jurisdiction in the 1968 Redwood National Park Act. In defense of this position they argue that legislative takings and condemnation actions are separate and distinct and that the Court of Claims has possessed jurisdiction over legislative takings for ninety years. Finally, the Bar Association acknowledges that there were problems with the grant of jurisdiction to the Court of Claims in the 1968 Act, but suggests these are correctable without change of court.

We disagree that the Court of Claims is the proper court of jurisdiction. As suggested by the problems that developed with the 1968 Act—there is no tradition of vesting claims for just compensation from the legislative taking of real property in the Court of Claims. The tradition is to permit the Court of Claims to retain jurisdiction over inverse condemnation situations—where property is taken by the physical act of possession by the Executive. *See, Mitchel* v. U.S., 267 U.S. 341. A legislative taking—where property is identified and taken by act of law not by physical possession—is quite different. The 1968 Redwood Act was really the first law to confront the direct legislative taking issue.[1] Accordingly, while the Court of Claims would have residual power to hear these legislative taking cases if Congress did not direct otherwise,[2] there is no basis to argue that the Court of Claims was the correct, or traditional, forum.

The Congress has not permitted all claims against the United States to be heard by the Court of Claims. There are numerous situations where the Congress has directed that such claims be heard in a different forum. Claims arising from acquisition of land pursuant to condemnation action have traditionally been heard in an appropriate Federal District Court as required by statute since 1888, 28 U.S.C. § 1403. Similarly, the Congress has recently directed that actions for just compensation by mining claim holders under the 1976 "Mining in the Parks" legislation may be brought in the United States District Court, Pub. L. 94–499, 16 U.S.C. § 1901, 1910. Congress has also directed that actions to quiet title in real property may also be initiated in the appropriate Federal District Court, Pub. L. 92–562, 28 U.S.C. § 2409 *et seq.*

The real question concerns whether the Court of Claims or the applicable Federal District Court is the more appropriate forum. This question was debated in 1968 after the Conference Committee added the legislative taking provision and provided that the actions arising from those takings would be heard in the Court of Claims. *See,* Congressional Record, September 17 and 19, 1968, p. 27154 *et seq.* and p. 27583 *et seq.*

As explained in our legal memorandum of October 4, 1977, a copy of which is attached hereto, the Administration sought to change that provision in the 1968 law because of a variety of problems that developed thereafter. While most of the problems that arose in implementing that provision could be remedied by proposed changes in the procedures of the Court of Claims, the fundamental issue remains. That issue is whether such a legislative taking should be treated as if it were a condemnation action or as if it were an inverse taking.

The traditional inverse condemnation situation is reflected in *Mitchel v. U.S.*, 263 U.S. 341 (1924). That case concerned a statute that authorized the President to physically take land necessary to increase facilities for testing ordnance materials and authorized the landowner to sue for just compensation in the Court of Claims. No specific land was identified. Rather the Executive was given broad discretion to identify those lands nec-

---

[1] In a legal opinion prepared to support the adoption of the 1968 legislative taking, the Solicitor of the Department of the Interior cited 5 statutes said to constitute legislative takings. Each of those Acts concerned Indian Tribal lands, however, which are in a somewhat unique position to the United States. *See,* Congressional Record, Sept. 19, 1968, p. 27154 *et seq.* Several of these statutes also required the initiation of a condemnation action, if agreement could not be reached concerning just compensation. The Bar Association has cited no examples of legislative takings prior to 1968 to support its position.

[2] Should Congress pass a legislative taking without spelling out which court should handle questions of just compensation—the Court of Claims would have jurisdiction. Absent such jurisdiction the taking would be unconstitutional. *See, Regional Rail Reorganization Act Cases,* 419 U.S. 102 (1974) (Rail Act Cases).

essary for military purposes and to take possession. Inverse condemnation also occurs when the actions of the Executive constitute a taking although that result was not intended. *See. U.S. v. Causby*, 328 U.S. 256 (1945), *Benenson v. United States*, No. 368-75, Ct. Cl. (Jan. 26, 1977).

These inverse condemnation actions are now penalized. Under § 304(c)(3) of the Uniform Relocation Assistance and Real Property Acquisition Policies Act, 42 U.S.C. § 4651 *et seq.*, the United States must pay litigation expenses if it is determined that an inverse condemnation has occurred.

The legislative taking in Redwoods is strikingly different. In 1968, and in the proposed legislation, the land to be taken is specifically identified. The landowners are on notice of the deliberations of the Congress. No physical taking has or will occur until after the passage of the legislation. This procedure is a taking by legal process—not by physical action as in an inverse condemnation.

In this regard, we note that in the litigation in the Court of Claims concerning the 1968 taking it was concluded that the legislative taking was not an inverse condemnation. In *Arcata* v. *United States*, Judge Lydon specifically found that the United States was not liable for attorney fees under § 304(c) of the Uniform Relocation Assistance Act, *supra*. That provision is applicable if "(3) a property owner brings an action in the nature of inverse condemnation and obtains an award of compensation". He concluded that provision was not applicable. The recommended opinion stated as follows:

The thrust of the above underscored language, *supra*, [§ 304(c)(3)] manifests a congressional intent to allow litigation expenses only in those instances where a property owner is forced to bring a Tucker Act suit in order to establish liability, *i.e.*, that the government by its actions did take the owner's property.[57] Where the government legally condemns property, and the only viable issue is one of amount, Public Law 91-646 does not purport to allow for recovery of litigation expenses if suit ensues over the amount of just compensation due. Any contrary holding, as noted in the excerpt from H.R. Rep. No. 91-1656, *supra*, would be an "invitation to increased litigation." The result should not be different, under the purpose and rationale of Public Law 91-646, because legislative fiat and not condemnation results in a taking of the property. In either case, the property owner does not have to litigate liability and this is the situation to which the purpose and force of Public Law 91-646 was directed. Plaintiff is not entitled to recover litigation expenses, *Rocca* v. *United States* Ct. Cl. No. 27-70, Slip Op. filed July 19, 1974.[58]

Arcata National Corp. v. *United States*, No. 777-71, Slip. Op. at 133 and 134 (Ct. Cl. July 25, 1974) (opinion).

Clearly this conclusion demonstrates beyond a doubt that the proposed legislative taking in Redwoods is not an inverse condemnation and should not be controlled by the precedent applicable to such takings. The recommended opinion in the *Arcata* case concluded that the legislative taking in the 1968 Redwood Act was analogous to a condemnation action, not an inverse condemnation.

In our view, this conclusion is correct. We believe that the legislative taking in the Redwood bill is similar to an action in condemnation—not an inverse taking—and that the traditional vesting of jurisdiction in the Federal District Court should be followed.

JAMES D. WEBB.

MEMORANDUM

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C., October 4, 1977.

To Assistant Secretary, Fish and Wildlife and Parks.

From Associate Solicitor, Conservation and Wildlife.

Subject Redwoods Expansion Proposal—Jurisdiction in the District Court.

This responds to your request that we further articulate the need for those provisions of the Redwoods legislation—S. 1976—providing that claims for just compensation shall be brought in an appropriate federal district court. The applicable portion of subsection 1(a)(5) of this proposed legislation is as follows:

(5) In subsection 3(b)(2), delete the last sentence and add the following sentences at the end of the paragraph: "Any action against the United States with regard to the provisions of this Act and for the recovery of just compensation for the lands and interests therein taken by the United States, and for the down tree personal property taken, shall be brought in the United States district court for the district where the land is located without regard to the amount claimed. The United States may initiate proceedings at any time seeking a determination of just compensation in the district court in the manner provided by sections 1358 and 1403 of title 28, United States Code, and may deposit in the registry of the court the estimated just compensation, or a part thereof, in accordance with the procedure generally described by section 258a of title 40, United States Code. Interest shall not be allowed on such amounts as shall have been paid into the court."

As indicated, the effect of this amendment would be to vest jurisdiction over these claims with the district court, not the Court of Claims as in the original Redwoods Act.

Initially, we note that the original selection of the Court of Claims was closely debated in 1968. The provision was added at Conference. Upon consideration of the Conference Report on the floor of the Senate there was significant opposition. As indicated in the Congressional Record, private property owners protested this section; this provision was said to have "caused considerable concern among the lumber companies and the management of the forest industry in the West." Two basic reasons for this opposition were provided. First, the various district courts handle the vast majority of land acquisition matters undertaken by the United States. Second, placing these cases with the Court of Claims would remove the possibility of trial by jury. Copies of these portions of the Congressional Record for September 17 and 19, 1968, are enclosed herewith.

The last nine years have established that the choice of the Court of Claims was indeed unwise for three essentially procedural, but very important, reasons. First, there was no way the United States could initiate these suits. Second, once the suit was initiated, there was no way the United States could make a deposit into the court to stop the running of interest. And, third, the Court of Claims does not have the jurisdictional basis to resolve all issues—there is no way to consolidate all of the various claims that have arisen and will continue to arise under this legislation.

The first two points have been amply documented. The GAO report of August 16, 1977, copy enclosed, clearly establishes the problems faced by this Department in attempting to make partial payments to the companies to stop the running of interest. There can be no question that the procedures inherent in the selection of the Court of Claims were detrimental to the interests of the United States.

The third problem with continuing jurisdiction in the Court of Claims is even more fundamental. The Court of Claims does not have the jurisdiction to resolve fully all the issues in dispute. As was discussed in the 1968 debates, and as remains true today, the Court of Claims has jurisdiction only to award money judgments—it cannot issue any form of equitable order. While this would not appear to present any particular problem, the litigation with Georgia-Pacific over the values of their lands taken in 1968 has demonstrated the concern.

At this time, the United States has settled all claims with Georgia-Pacific except the question of severance damages. The value of land and timber has been settled at $36,942,000. The issue of severance has not been resolved because Georgia-Pacific is claiming an additional severance cost in excess of $51 million. The United States appraisal indicates severance should not exceed $1.8 million.

The almost 50 million dollar difference on this issue of severance turns on a question that the Court of Claims can only partially resolve. The Georgia-Pacific claim is that severance should reflect the fact that a willing buyer would not want to buy land that is next to a park—and would discount its value accordingly—because of the foreseeable possibility of environmental litigation or other restrictions being placed on those lands.

The obvious defense available to the United States is that such foreseeable changes in timber harvest practices would be the result of the National Park Service seeking to enforce a landowner's general duties to a downstream owner and that no owner should be paid to comply with existing laws.

The United States is presently briefing the Georgia-Pacific severance issues. We do not yet know how this will be resolved. We do know, however, that these types of issues should be consolidated in the same court. If this matter were in the district court, the United States could defend itself adequately against this severance claim on the basis of existing laws of nuisance. As it presently stands, such a defense may be beyond the jurisdiction of the Court of Claims. Certainly any finding by the Court of Claims as to the duties owned under existing law cannot be enforceable; that court cannot issue an order requiring either side to perform any actions whatsoever. Accordingly, the best the United States can do in the Georgia-Pacific case is establish that it should not pay twice the value of the land taken—no park protection will ever be established by this case. Should the United States seek a court order to enjoin harmful timber harvest practices, the district court

---

[57] A perfect example is to be found in *Drakes Bay Land Co.* v. *United States*, 191 Ct. Cl. 389, 424 F. 2d 574 (1970) wherein the land owner successfully established that governmental action constituted a taking of its property and subsequently was awarded litigation expenses on the authority of Public Law 91-646. *Drakes Bay Land Co.* v. *United States*, 198 Ct. Cl. 506, 521-22, 459 F.2d 504, 512 (1972).

[58] Findings of Fact and Recommended Conclusion of Law underscoring the above determinations are set out in a separate document which accompanies this recommended opinion.

will have to reconsider similar factual issues.

As presently reflected in Rule 42 of the Federal Rule of Civil Procedure, consolidation of such claims is well recognized. Based upon traditional concepts of judicial economy and a need for the same court to resolve related issues, the concept of consolidation would encourage a district court to take all these issues at the same time. Vesting of jurisdiction in the Court of Claims prohibits such a logical approach.

These three problems should be resolved. As indicated, it has been our opinion that the most appropriate solution is to simply place jurisdiction with the appropriate federal district court—in the manner provided by the declaration of taking provisions—so that the United States can utilize the already existing procedures to initiate litigation, to pay into the Court as appropriate, and to consolidate all related claims. This solution is not a reflection on the quality of these various courts or an attempt to choose a substantively more desirable forum—it is an effort to resolve problems of legal procedure and jurisdiction. The traditional approach to land acquisition situations—placing jurisdiction with the local federal district court—is such a solution.

We trust this memorandum will answer the questions that have arisen concerning the development of this provision by the Department. If we can be of further assistance, we will be happy to do so.

JAMES D. WEBB.

Enclosures.

ARCATA NATIONAL CORPORATION v. THE UNITED STATES

Richard Murray, attorney of record for plaintiff. Hudson, Creyke, Koehler, Brown & Tacke and McCutchen, Doyle, Brown & Enersen, of counsel.

Howard O. Sigmond, with whom was Assistant Attorney General Wallace H. Johnson, for defendant.

OPINION [1]

Lydon, Trial Judge: Public Law 90-545, approved October 2, 1968, 82 Stat. 932, 16 U.S.C. § 79, established a Redwood National Park in Del Norte and Humboldt Counties, California. The Park was comprised of some 28,000 acres and included property formerly owned by the plaintiff herein. The appropriation of plaintiff's property for Park purposes by Public Law 90-545 has been characterized as a "pure legislative taking." *Drakes Bay Land Co.* v. *United States*, 191 Ct. Cl. 389, 408, 424 F. 2d 574, 584 (1970). Plaintiff in this action seeks to recover, under the allowance of compound interest in just compensation cases as well as in other types of cases. Plaintiff is entitled to simple interest as part of the just compensation determination in this case.

VII

Plaintiff also seeks to recover litigation expenses actually incurred in litigating herein the amount of just compensation to which it believes itself entitled. Plaintiff relies, in this regard, on the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, Public Law 91-646, 91st Cong., 2d Sess., approved January 2, 1971, 84 Stat. 1894, 42 U.S.C. § 4651. In particular plaintiff points to section 304(c) of said Act, which provides as follows:

(c) The court rendering a judgment for the plaintiff in a proceeding brought under section 1346(a)(2) or 1491 of title 28, United States Code, awarding compensation for the taking of property by a Federal agency, or the Attorney General effecting a settlement of any such proceeding shall determine and award or allow to such plaintiff, as a part of such judgment or settlement, such sum as will in the opinion of the court or the Attorney General reimburse such plaintiff for his reasonable costs, disbursements, and expenses, including reasonable attorney, appraisal, and engineering fees, actually incurred because of such proceeding.

Defendant maintains that plaintiff is not entitled to recover litigation expenses, especially attorneys' fees, relying on the well established prohibition against recovery of such costs absent specific statutory authorization for the same.

* * * * *

Dohany v. *Rogers*, 281 U.S. 362, 36 (1930), *United States* v. *100 Acres of Land, supra*, 468 F.2d at 1270; *see United States* v. *Worley*, 281 U.S. 339, 344 (1930).

The question here is whether Public Law 91-646, *supra*, specifically authorizes the award of litigation expenses to plaintiff under the circumstances of this case.

Plaintiff, in arguing that Public Law 91-646 justifies an award of litigation expenses to it, stresses that it sought relief herein under 28 U.S.C. 1491, relative to the taking by the United States of its property, and thus the language of section 304(c), *supra*, supports its entitlement to recover litigation expenses. Defendant, on the other hand, points out that section 304(c) is for application where the taking of property is by a *Federal agency*. Since plaintiff's property was taken by legislative action, no Federal agency was involved and thus the Act in question is not for application under these circumstances.[55] It seems clear that legislative and not executive action was responsible for the taking of plaintiff's land, and this conclusion is not affected merely because the President, as head of the Executive Branch of Government, signed into law the Redwood National Park Act, or that executive acts, *e.g.*, surveys, boundary determinations and occupation of the Park by the National Park Service, were necessary to fully consummate the taking. As indicated earlier, the taking that occurred in this case has been described as a "pure legislative taking." *Drakes Bay Land Co.* v. *United States*, *supra*, 191 Ct. Cl. at 408, 424 F. 2d at 584. On its face, section 304(c) does not apply to takings achieved by legislative fiat.[56] To construe section 304(c) otherwise would do violence to the words chosen by Congress and any such undertaking by the court must be avoided. *See Crawford* v. *United States*, 179 Ct. Cl. 128, 138, 376 F. 2d 266, 272 (1967). Accordingly, the prohibition against awarding litigation expenses such as are sought herein, mandated by *Dohany* v. *Rogers*, *supra*, must be observed.

The legislative history of Public Law 91-646 also lends support to denial of plaintiff's claim for litigation expenses. The purpose of section 304, *supra*, was set out in H.R. Rep. No. 91-1656, 91st Cong., 2d Sess. 25 (1970), in the following language:

Section 304 would authorize the reimbursement of owner of any right, or title to, or interest in real property for reasonable expenses of litigation, including legal, appraisal and engineering fees, actually incurred because of the taking of real property by Federal agencies, where (1) the court determines that a condemnation was unauthorized, (2) the Government abandons a condemnation, or (3) *a property owner brings an action in the nature of inverse condemnation and obtains an award of compensation.* (Tucker Act)

Ordinarily the Government should not be required to pay expenses incurred by property owners in connection with condemnation proceedings. The invitation to increased litigation is evident. [Emphasis supplied.]

The thrust of the above underscored language, *supra*, manifests a congressional intent to allow litigation expenses only in those instances where a property owner is forced to bring a Tucker Act suit in order to establish liability, *i.e.*, that the government by its actions did take the owner's property.[57] Where the government legally condemns property, and the only viable issue is one of amount, Public Law 91-646 does not purport to allow for recovery of litigation expenses if suit ensues over the amount of just compensation due. Any contrary holding, as noted in the excerpt from H.R. Rep. No. 91-1656, *supra*, would be an "invitation to increased litigation." The result should not be different, under the purpose and rationale of Public Law 91-646, because legislative fiat and not condemnation results in a taking of the property. In either case, the property owner does not have to litigate liability and this is the situation to which the purpose and force of Public Law 91-646 was directed. Plaintiff is not entitled to recover litigation expenses, *Rocca* v. *United States*, Ct. Cl. No. 27-70, Slip Op. filed July 19, 1974.[58]

DEPARTMENT OF JUSTICE,
Washington, D.C., January 26, 1978.

Hon. JAMES T. ABOUREZK,
Chairman, Parks and Recreation Subcommittee of the Senate Committee on Energy and Natural Resources, U.S. Senate, Washington, D.C.

DEAR SENATOR ABOUREZK: The Assistant Secretary for Fish and Wildlife and Parks of the Department of the Interior has requested that we clarify the Administration's position concerning a portion of S. 1976, a bill to expand and protect the Redwood National Park. As you are aware, the Administration has adopted the position that claims for just compensation arising from a legislative taking—as provided by S. 1976—are more properly litigated in the appropriate Federal District Court.

We have now been advised by the Department of the Interior that questions have arisen concerning this position. Accordingly,

---

[1] The trial judge's recommended decision and conclusion of law are submitted in accordance with Rule 134(h).

[55] Public Law 91-646 defines a "Federal agency" as "any department, agency, or instrumentality in the executive branch of the government * * *." Section 101(1), 84 Stat. 1894, 42 U.S.C. § 4601.

[56] Whether legislative takings should be covered by the provisions of Public Law 91-646 is a matter for legislative determination not judicial decision. Plaintiff cites a bill (S. 261) introduced in the 93d Congress wherein it is proposed to amend section 101(1) so as to include legislative takings within the coverage of Public Law 91-646. *See* H.R. Rep. No. 93-747, 93d Cong., 1st Sess. (1973). Plaintiff sees in this bill and the House Report, *supra*, which accompanies it, support for its argument the Congress intended legislative takings to be considered within the scope of Public Law 91-646 coverage. However, such an amendment, even if enacted, would reflect at best an expression of how a subsequent Congress interpreted a statute passed by a prior Congress or intended that it be so construed. * * *

[57] A perfect example is to be found in *Drakes Bay Land Co.* v. *United States*, 191 Ct. Cl. 389, 424 F. 2d 574 (1970) wherein the landowner successfully etablished that governmental action constituted a taking of its property and subsequently was awarded litigation expenses on the authority of Public Law 91-646. *Drakes Bay Land Co.* v. *United States*, 198 Ct. Cl. 506, 521-22, 459 F. 2d 504, 512 (1972).

[58] Findings of Fact and Recommended Conclusion of Law underscoring the above determinations are set out in a separate document which accompanies this recommended opinion.

at Interior's request we have reviewed the arguments pro and con on this issue as presented in Interior's legal memorandum of January 23, 1978 and October 4, 1977 and the attachments thereto, as previously provided to you. We have concluded that the District Court would be an appropriate forum for determining just compensation for the takings contemplated by S. 1976.

Sincerely yours,

JAMES W. MOORMAN,
Assistant Attorney General,
Land and Natural Resources Division.

Mr. ABOUREZK. Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. ABOUREZK. Mr. President, I am ready to vote if Senator HAYAKAWA is.

The PRESIDING OFFICER. The Senator from South Dakota has all the time remaining. The Senator from California has no time remaining.

Mr. CRANSTON. Mr. President, if my colleague needs time, we should yield him time, because it was used up in a quorum call while he was absent.

The PRESIDING OFFICER. Does the Senator make a unanimous-consent request?

Mr. ABOUREZK. Does the Senator want some more time?

Mr. HAYAKAWA. No, I do not need any more time. I am prepared to yield back any time left.

Mr. ABOUREZK. I yield back my time. I am ready to vote.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment of the Senator from California. The yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. ANDERSON), the Senator from Florida (Mr. CHILES), the Senator from New York (Mr. MOYNIHAN), the Senator from Florida (Mr. STONE), and the Senator from Louisiana (Mr. LONG) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Maryland (Mr. MATHIAS) is necessarily absent.

The result was announced—yeas 36, nays 57, as follows:

[Rollcall Vote No. 22 Leg.]

YEAS—36

Allen	Griffin	Pearson
Baker	Hatch	Percy
Bartlett	Hayakawa	Roth
Bellmon	Helms	Schmitt
Chafee	Huddleston	Schweiker
Curtis	Inouye	Stevens
Danforth	Laxalt	Talmadge
DeConcini	Lugar	Thurmond
Dole	McClure	Tower
Domenici	Morgan	Wallop
Garn	Muskie	Weicker
Goldwater	Packwood	Young

NAYS—57

Abourezk	Church	Haskell
Bayh	Clark	Hatfield, Mark O.
Bentsen	Cranston	Hatfield, Paul G.
Biden	Culver	Hathaway
Brooke	Durkin	Heinz
Bumpers	Eagleton	Hodges
Burdick	Eastland	Hollings
Byrd, Harry F., Jr.	Ford	Jackson
Byrd, Robert C.	Glenn	Javits
Cannon	Gravel	Johnston
Case	Hansen	Kennedy
	Hart	Leahy
	Nelson	Magnuson
	Nunn	Matsunaga
	Pell	McGovern
	Proxmire	McIntyre

	Ribicoff	Metzenbaum
	Riegle	Sarbanes
	Sasser	Scott
	Sparkman	Stafford
	Stennis	Stevenson
	Williams	Zorinsky

NOT VOTING—6

Anderson	Long	Moynihan
Chiles	Mathias	Stone

So Mr. HAYAKAWA's amendment was rejected.

Mr. ABOUREZK. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 1166

(Purpose: To authorize appropriations for this act under general revenues)

Mr. STEVENS. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes an unprinted amendment numbered 1166:

On page 11, line 23 and 24, strike the words: pursuant to the Land and Water Conservation Fund Act (78 stat. 897) as amended.

On page 19, delete lines 8 and 9.

Mr. STEVENS. Mr. President, what is the time limitation on this amendment?

The PRESIDING OFFICER. One hour, 30 minutes to each side.

Mr. STEVENS. Mr. President, I shall not consume much time. I call the attention of the Senate to the report that was filed by the Appropriations Committee on this bill. That report, basically, did not take a position but did raise the question of the spending problem under this bill.

I am disturbed that the moneys are earmarked to come from the land and water conservation fund. I believe that a taking of this type, a legislative taking, on a bill that is considered to be an extraordinary approach to a problem concerning the national parks, should not be funded from the land and water conservation fund. This is a legislative taking, there is no definite estimate of the amount of money that will be required to satisfy the taking here under the Constitution.

It seems to me that to earmark the Land and Water Conservation Fund is going to disrupt the normal priorities.

As is pointed out on page 3 of the Appropriations Committee report:

It should be noted further that the bill provides for acquisition costs to be borne by moneys deposited to the Land and Water Conservation Fund. This fund, financed primarily by oil and gas receipts from Outer Continental Shelf leases, currently finances the bulk of Federal recreation land acquisition as well as providing assistance to the States for recreation development. The Redwood National Park expansion, then, will substantially encumber the fund and disrupt normal spending priorities.

I think we should remove the potential that was pointed out by the Appropriations Committe report, that this expansion bill would encumber the fund and disrupt normal spending priorities of the land and water conservation fund.

I also point out that, in connection with the Alaska lands bill, my bill provides for the creation of a fund into which moneys derived from the utilization of Alaska's resources would be placed to augment the moneys that are available for acquisitions such as this.

What this really means is that acquisitions of this type should be financed by normal appropriations.

I think the statement in the bill, in section 8, that Congress acknowledges and directs that the full faith and credit of the United States is pledged to the prompt payment of just compensation as provided for by the fifth amendment to the Constitution, for the lands taken by this act, is sufficient. That is a full and immediate obligation for just compensation.

To encumber the fund is going to put us in the position of having an overdraft on that fund, and it could well jeopardize the assistance that is provided to the States for recreation and development, in my opinion.

I hope that the committee will not oppose this amendment. I can understand the problem with regard to the Budget Committee, and I hope the Budget Committee, too, will understand.

If we do not do this—if we do not take this language out of there—we will have to get from the authorization committee and on the floor, by May 1, a change in this fund, because this is an open-ended commitment of the Land and Water Conservation Fund account to settle the Redwood National Park obligations. Since they are not subject to being estimated, the whole fund, whatever we put in there, is encumbered, in my opinion, by this act, if it is passed in this fashion.

That overrides the priorities that we have set for State assistance to recreation and would really just amount to Congress deciding the Land and Water Conservation Fund is going to be tied up until the Redwood National Park additions have been compensated for according to the Constitution. I think that is wrong to do that, and I hope the committee would agree and let us take this reference to the Land and Water Conservation Fund out of the bill.

Mr. BUMPERS. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. ABOUREZK. I yield.

Mr. BUMPERS. Mr. President, I ask unanimous consent that Ark Monroe, of my staff, be accorded the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. Mr. President, I reserve the remainder of my time.

Mr. ABOUREZK. Mr. President, I personally am in a difficult position on this particular amendment. I agree with it. The problem is that when we gave our redwoods bill to the Budget Committee to look over, they approved it on the basis that the money would come out of the Land and Water Conservation Fund and not out of general appropriations. The

committee, therefore, took that position. So I am not in a position, and I do not think Senator HANSEN is either, to accept the amendment. What I would have to suggest to the Senator from Alaska is that we have a vote on it. I will just have to say what I said, and I am ready to vote.

Mr. STEVENS. Does the Senator wish a rollcall vote on it?

Mr. ABOUREZK. I think we better, yes.

Mr. HANSEN. Mr. President, I too am in a difficult situation as I was on the last vote. I am sympathetic with the point made by the distinguished Senator from Alaska and shall support him. However, in order that the record be kept clear and there be no misunderstanding, I think, as far as the Energy and Natural Resources Committee goes, our position must be to resist the amendment as representatives of that committee. If the issue is brought to a vote, I intend to support the Senator from Alaska.

Mr. STEVENS. Mr. President, again I have feelings about what the acquisition means here, this legislative taking, but this is not brought forward as one who opposes or supports the bill. I am bringing this forward because of our role on the Appropriations subcommittee that deals with this Land and Water Conservation Fund. It is my position that since this is a commitment to compensation, the amount of which is undefined, no matter how much money we put in the Land and Water Conservation Fund, it would be encumbered until that amount was defined by the court, and under those circumstances, we could not in good conscience tell the States that they could have their distribution this year out of the Land and Water Conservation Fund. I believe by taking this reference out—I understand the budget problem—we will face the proposition of making the moneys available because it is in fact a legislative taking and under the Constitution we have no alternative but to fund this taking. We do have an alternative to fund the taking of a bill where we authorize an acquisition through negotiation or through a declaration of taking procedure. That is another matter. But this one since there is a legislative taking the compensation, as is pointed out by section 8, is in fact pledged by all of the moneys that Congress has at its disposal. Unfortunately, by tying it in the Land and Water Conservation Fund, we then complicate the problem and really I think put a burden on the other States they should not have.

Mr. HANSEN. I yield back any time I have.

Mr. ABOUREZK. I yield back the remainder of my time.

Mr. STEVENS. I yield back the remainder of my time and move the adoption of the amendment.

Mr. McCLURE. Mr. President, will the Senator yield for just a moment?

Mr. STEVENS. Withhold that.

I yield.

Mr. McCLURE. I thank the Senator for yielding because I want to ask the manager of the bill one question about the Land and Water Conservation Fund. I do not want the impression left incorrectly that the expenditure of money from the Land and Water Conservation Fund might take away all of the money that is available to the States. There is an allocation formula in the Land and Water Conservation Fund in which the States are guaranteed a portion of that fund which could not be deprived them with this expenditure. I wonder if the manager of the bill might respond?

Mr. ABOUREZK. What is the Senator's question?

Mr. McCLURE. What is the allocation formula in the land and water conservation fund? And as a matter of fact this will automatically take the money away from the State's share in the land and water conservation fund.

Mr. ABOUREZK. I am just told by committee staff that the Appropriations Committee determines the States' share.

Mr. STEVENS. That is right.

Mr. ABOUREZK. So that is what it amounts to.

Mr. HANSEN. It would not affect them.

Mr. STEVENS. It is not automatic, I tell the Senator from Idaho.

Mr. McCLURE. It is not automatic. All right.

Mr. STEVENS. It could happen. That the impact of this could encumber the fund to the extent that we would not have the normal amounts available for distribution to the States. It is not an automatic thing.

Mr. McCLURE. Mr. President, if the Senator will yield further, the reason I mention that is that I was opposed to the change in the law in the allocation formula between the State and Federal Government for precisely this reason, that the States do have a great backlog of demand as does the Federal Government in demand against these expenditures from the land and water conservation fund.

While we change the formula to guarantee the Federal would not get less, we set a minimum for the Federal Government, but we set no minimum for the State allocation. That, in my judgment, was an error when we did that but we did it with the expectation that, the fund being enlarged, the States share would not be diminished, not in terms of percentage but in terms of dollars, and I wish to reaffirm that understanding here today that there is no expectation that the Appropriations Committee is going to reduce the States allocations in dollars below what they enjoy before the change in the allocation formula. We have been fighting for a long while to make certain that the land and water conservation fund was there, that the money would be appropriated and available, that the plans being made by both the Federal agencies and the State agencies could be met because the fund would be fully appropriated. I resisted the change in the fund from a dedicated fund, a trust fund concept to an appropriation concept for precisely the same reasons, and I lost in that effort. But now to come in here and suggest that somehow the States are going to lose flies right in the face of all of the assurances that we were given throughout all of the debate in the committee and on the floor with respect to the States funding under the Land and Water Conservation Fund Act. Certainly, this would increase the pressures, but I would hope that the record would reflect all of the earlier commitments that were made, that the amount of money to be given to the States and allocated to the States in this fund would not be reduced under the dollar amounts that were allocated to the States under the prior formula.

Mr. HANSEN. Mr. President, although Public Law 95–42 did authorize an additional $300 million for the Federal side for fiscal year 1978 to bring a total authorization to $900 million, it may not be enough to cover the cost of legislative taking.

I agree with my distinguished friend from Alaska. I urge the adoption of the amendment.

Mr. McCLURE. Mr. President, will the Senator yield further?

Mr. STEVENS. I yield.

Mr. McCLURE. I thank the Senator for yielding.

I do not disagree with my friend from Wyoming and I do not oppose the amendment of the Senator from Alaska. This is one way of protecting the Land and Water Conservation Fund from the consequences that might flow in the way that he has described them.

But I am alarmed if we start talking about the State fund being reduced, because the assurances have been made all the way along that State funding would not be reduced irrespective of the action we might take on this.

I think what this debate may focus on, though, is whether or not this bill, this expenditure of money from the Treasury, has that kind of a priority call upon the moneys that are available for this kind of a Federal activity.

My judgment is if we really look at it arrayed against all of the other possible expenditures for land and water conservation, acquisition of land for protection and recreation, we would not assign this high a priority to this particular project. And if, as a matter of fact, the committee had looked at it in terms of whether this was the most important activity of the Federal Government in this area should it move ahead of all the rest, that the committee might well have turned down this request rather than having passed this legislation.

So I do not oppose the amendment of my friend from Alaska; I support it. But I think again it underscores the lack of wisdom on the part of the committee in having adopted this particular bill.

Mr. STEVENS. Mr. President, I want to underscore again that I do not have any disagreement with the Senator from Idaho; that the provision of the bill I am trying to delete is this. It says:

> From the appropriations authorized for fiscal year 1978 and succeeding fiscal years pursuant to the Land and Water Conservation Fund Act (78 Stat. 897), as amended, such sums as may be necessary may be expended for the acquisition of lands and interests in lands, and down tree personal property, authorized to be acquired, or acquired, pursuant to the provisions of this act.

I understand what the Senator is saying. No one should read into my comments any intent to in any way abrogate

the understandings we have about the moneys that are available to the States.

My point is this is an open ended amount. I mean we have no way of defining how much money is to be charged against the land and water conservation fund pursuant to Redwood acquisition. By virtue of the fact that all of the funds deposited in the land and water conservation fund are earmarked for that acquisition, we have no leeway in terms of the moneys that are there. They are first obligated to this Redwood Park acquisition. Until that is settled, how can we make payments to anybody, States or for the Federal portion of acquisitions, from moneys that we have available in that fund under the circumstances?

I just merely seek to delete the reference of the land and water conservation fund because, therefore, it is an open ended authorization for appropriations which Congress has no alternative but to provide if the bill passes.

I again yield back the remainder of my time, and I ask for a vote on this amendment.

The PRESIDING OFFICER. The Senator from South Dakota.

Mr. ABOUREZK. I have yielded my time back.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alaska.

The amendment was agreed to.

Mr. HANSEN. I move to reconsider the vote by which the amendment was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 1167

(Purpose: To exclude certain areas from the Park; to prohibit certain other areas from being subsequently included in the Park)

Mr. HAYAKAWA. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from California (Mr. HAYAKAWA) proposes an unprinted amendment numbered 1167:

On page 2, line 17, beginning with the word "At", strike out all through line 6 on page 3.

Mr. HAYAKAWA. Mr. President, the purpose of this amendment is to simply delete from the bill the section known as the park protection zone.

This so-called park protection zone is an additional 30,000 acres south of the park expansion area of 48,000 that would be added to the Redwood National Park by this legislation.

Mr. ABOUREZK. Does the Senator want a rollcall vote on this amendment? I think we should get the yeas and nays now.

Mr. HAYAKAWA. Yes, I do.

Mr. ABOUREZK. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. HAYAKAWA. Mr. President, as I say, this so-called park protections zone is an additional 30,000 acres south of the park expansion area of 48,000 that would be added to the Redwood National Park by this legislation.

After 60 days, if the Secretary of the Interior finds that activities on this 30,000 acres could even potentially result in what he terms "physical damage to the park resources" then he may report such findings to the Senate Committee on Energy and Natural Resources and the House Committee on Interior and Insular Affairs. The Secretary may then acquire some or all of the 30,000 acres unless the committees disapprove.

Mr. President, this is an incredible provision. First of all, I have no doubt that within 2 months after passage of this bill the Redwood National Park will then be expanded by 78,000 acres instead of by the proposed 48,000 acres that we are talking about today. Let us say that one of the landowners decides to cut a few trees on the land that he owns. The Secretary need only to decide that potentially this action could be dangerous to park resources by causing some soil erosion that would eventually flow through the Redwood Creek that goes through the Redwood National Park. The Secretary would then merely report to the proper Senate and House Committees that this future activity could possibly cause some soil erosion that would affect the park, and he has the right to go in and condemn this privately owned land, which is then taken over by the Federal Government. The trees would never even have to be cut. Nothing would ever have to affect the park. But if future activity on any of that 30,000 acres could in any way possibly affect the park, and the Secretary decides that it is recommended that the Federal Government take over that land, he may do so.

There is room for every kind of arbitrary decision of this nature.

Now there are no specific guidelines as to how the Secretary may or should take over any of the land if he decides this is "necessary to protect park resources." For example he could take parcels of land in checkerboard fashion. He could take the outer perimeter of land, and leave a parcel in the middle. He could take the entire 30,000 acres at once and get it over with.

Mr. President, the original Redwood National Park is only 28,000 acres. That land alone cost more than all other national parks combined. The reason for the high cost is that we are taking over prime timber land—these redwoods are the fastest growing trees in the entire United States of America. The 1968 legislative taking of redwoods was debated by the House and the Senate. The results of this legislative taking have deeply affected the northern California region whose economy is heavily dependent on the timber industry.

To take over an additional 48,000 acres is incomprehensible to the people who live in the area and depend on the logging of redwoods for their livelihood. And yet we casually toss in this so-called "park protection zone" which gives the Federal Government the right to take over an additional 30,000 acres without any concern whatsovever.

I would hate to own a 7-acre parcel of land or a 19-acre parcel, or several hundred acres or even any of that land, and have to face extremely depressed market values if I put that land an the market, as a result of the stringent Federal Government controls over any activity on it. Our country was founded on the concept of freedom, and I think it is wrong for our U.S. Congress, made up of elected officials, to pass legislation that imposes strict Federal controls on privately owned land.

People will be afraid to make a move on their land for fear that the U.S. Government will step in and take it away from them. I believe that this so-called park protection zone is nothing but an excuse for the Government to expand the Redwood National Park by another 30,000 acres making the total expansion acreage for this legislative taking 78,000 acres rather than the 43,000 acres as stated in S. 1976. If the private property rights of the citizens of this Nation are jeopardized, then we no longer live in a free society.

Mr. President, imagine how each of my colleagues would feel it the Federal Government had the license to come in at any time and take over their private homes and their property, because they decided to cut down some trees in their yard, or they wanted to use their land in any way that the Government suddenly determined could be damaging to other property several miles away.

This is what the land owners in the 30,000 acre area of so-called "park protection zone" face at this very moment. I believe that this section of the legislation is an incredible infringement on private property rights, and should be removed from the bill.

I must emphasize that the State of California operates under the most strict set of State forestry laws in the entire country.

Any timber harvests must first be approved by the California State Board of Forestry, and timber harvests must be conducted under the strict State regulations.

The assumption of all this is that the State is not capable of protecting its own resources, and the Federal Government has to do it for them.

Given these circumstances, I certainly see no reason for this added 30,000 acres of park. We do not need to add a buffer zone to protect the buffer zone to the park.

I would like to point out that the properties involved here, this 30,000 acres, involves an awful lot of individuals and corporations. I will not read the whole list, but let me give a sample:

Louisiana Pacific, 4,328 acres.
Simpson Timber, 6,973 acres.
A. M. Lyons, 979 acres.
Barnum Timber, 2,189 acres.
Mr. Steele, 200 acres.
Mr. Gould, 38 acres.
Mr. Anderson, 40 acres.
Mr. Peters, 35 acres.
Mr. Eller & Son, 45 acres.
Sierra Pacific, 19 acres.

And so on. There is a whole cluster of individual owners.

These data are as of the fall of 1976. This is the kind of private property into which this measure intrudes.

Throughout this discussion, Mr. President, I would like to protest what seems to me to be a stereotyping, here, of the opposing forces on this legislation. It has been alleged that we who hold a position opposed to the Redwood Park expansion are tools of the great big, rich lumber companies, as opposed to, let us say, the common people. This kind of stereotype, I think, is based on what I would term a kind of vulgar Marxism of the most debased kind.

The people of the State of California include the large corporations, and they include the many thousands of hard-working men and women who make their living off those forests. One does not have to be a tool of the corporations to be interested in the common fate of the men, the truck drivers, the woodsmen, the people who work the saws, the landscape, and the trees, who cut the lumber and shape it for the market. One does not have to pit one against the other to realize that they are all bound together in a common enterprise.

The one very important thing about the great lumber industry is that it is because they are large—outfits like Arcata, Georgia Pacific, Weyerhauser, and many other companies—it is because they are large that they are able to put in the capital investment that makes possible perpetual yield from these forests, so that decade after decade, century after century, these trees will continue to produce, and produce for the benefit of all our posterity. Therefore, the false dichotomy of these large corporations versus the common people is an absurdity.

What I wish to call attention to is the fact that because these large corporations exist, they have foresters on their staffs who understand the principles of scientific forestry; because they have the capital to pay to put money into this kind of long-range development, we can preserve the jobs of the common people and the forests for all the people, for posterity, better than we can by simply abandoning them to no use whatsoever, as is proposed, in the redwood parks.

I say no use whatsover, because we know what has happened to the 28,000 acres already appropriated under the 1968 act. As I have pointed out, the parks are not used. They are abandoned. The economic life of the entire area of the State has declined, and with the passage of such legislation it will decline further.

To return to the particular provision of which I am speaking, I regard the 48,000 acres to be a great enough deprivation of the future of the people of California. If we go to an additional 30,000 acres being taken arbitrarily by individual decisions on the part of some higher bureaucracy, it is a frightening prospect indeed. This is why I urge my colleagues to vote in favor of my amendment to delete this section that provides for a park protection zone of an additional 30,000 acres.

Mr. McCLURE. Mr. President, will the Senator from California yield?

Mr. HAYAKAWA. I yield.

Mr. McCLURE. I join the Senator in the hope that the Senate will delete this provision from the bill, for the many reasons which he has stated.

I would like to ask the managers of the bill a question concerning the construction of the language, so that we might be better able to understand the impact of the proposed language; and I take the floor at this time for that purpose.

As the managers of the bill will recall, there was a provision giving the Secretary discretionary authority to acquire land, and that provision was changed by the committee to provide for this standby authority to protect the park's values.

There is in the committee report language, which appears on page 8, with regard to the establishment of guidelines, for the Secretary to establish guidelines and standards for violation of the guidelines before he moves to acquire lands and interests in lands in the protection zone.

That is, as I understand, the response of the committee in the concern that the landowner might find himself subjected to an acquisition authority without knowing what it was he had done wrong. It was felt that it was fair that guidelines be established against which he could make judgments and take actions, knowing in advance of the actions he took whether they would meet the guidelines or be in violation of the guidelines.

But the underlying requirement, in the event he decides the guidelines have been violated, is still a finding in the courts that the values of the Redwood National Park are being threatened by the land use practices outside. In other words, the Secretary would still have to establish that by evidence in court—not simply a violation of the guidelines.

There is a fear on the part of some that once the guidelines have been established, then that in itself becomes evidentiary in proceedings to justify acquisition of the land. My understanding of the intention of the committee is that that not be the case, that it would still require a finding of adverse impact upon the park lands themselves, and the guidelines are simply a means to notify the property owner of what is expected, rather than a means of establishing evidence in court that there was an impact.

I wonder if the managers of the bill might be able to comment on that, and confirm my understanding of the intention of this provision in the bill and the language in the committee report, on page 8 of the report, dealing with the establishment of guidelines.

Mr. ABOUREZK. I was talking to somebody else. Would the Senator mind repeating his question?

Mr. McCLURE. I noticed that.

Would the Senator assure the Senator from California that if we run out of time repeating the question, the Senator from South Dakota will yield him some time?

Mr. ABOUREZK. It looks like the Senator would have gotten my attention before he asked.

Mr. McCLURE. I did my best, I say to the Senator.

Mr. ABOUREZK. I shall yield the time if necessary.

Mr. McCLURE. We established in the legislation the opportunity for the Secretary of the Interior to acquire lands or interest in lands if necessary to protect against damage to the parklands themselves. The Senator from California has suggested that that provision be stricken. What I am seeking is an understanding of what the provision means.

On page 8 of the committee report, it is stated that the Secretary should establish guidelines. That was written in as an attempt to say to the property owner, "You are entitled to know, before you take action, whether or not the Secretary is going to deem that action likely to adversely affect the parklands themselves."

That is to put him on notice, give him a standard against which to manage his lands; rather than substitute a new test as the basis for the taking of the property. My understanding of that provision is that this is not evidentiary in the court proceedings, that the guidelines were violated. That does not establish anything that would justify the taking of lands or interests. The underlying test would still be whether or not, as a matter of fact, the value of the lands and the assets of the park were being damaged by this action taken outside.

Mr. ABOUREZK. My understanding of that section is that the guidelines do not constitute the standard, but physical damage would constitute the standard of evidence for determining whether a taking order ought to occur.

Mr. McCLURE. In other words, violation of the guidelines does not, of itself, establish the right to the taking.

Mr. ABOUREZK. The guidelines are more for notice to the landowners and purposes of discussion, and so on. It would give the landowners some kind of idea. The physical damage that would be proved through the hearing process is what really would count.

Mr. McCLURE. The Secretary would still have to establish that. Even though they might be able to show the guidelines had been violated, they would still have to show that that violation or that conduct resulted in physical damage to the park land.

Mr. ABOUREZK. That is correct.

Mr. McCLURE. I thank the Senator for that response, because I think it is important that we not elevate the guidelines to evidentiary standing; they are simply guidelines for the notice of the parties.

I am concerned, with my friend from California, that we are establishing a precedent for Federal control of lands outside of Federal lands, in a buffer zone in which we really inhibit the operation and the ownership, and diminish the value and diminish the dominion of the people who own those lands, without any compensation and without due process of law. As a matter of fact, it is possible that this provision might fall as a result of the constitutional prohibition against taking of property without due process.

Regardless of that, I do not believe that there was any compelling evidence produced in the committee that what was happening or was likely to happen on these lands would have that kind of effect.

Redwood National Park was established to preserve for future generations large stands of very large trees. If we remember that that is what the purpose is, then we begin to see what effect operations outside will have. Was there any showing or is there any showing that operations on lands outside will have an adverse effect upon the tall trees, the large trees, or any very large number of large trees, within the park? I would say the answer is "No."

As a matter of fact, the strongest evidence was it had some effect upon the aquatic stream. That was not the reason the park was established. We have extrapolated from one purpose, the protection of the park, for an entirely unrelated purpose, maybe something that is worthy of discussion, and perhaps of some consideration by Congress. But we should not understand that what we are doing with this 30,000-acre zone, let alone the 48,000 acres being acquired, is to protect tall trees. It is not. It is to protect an aquatic environment in one stream.

Congress is being asked to spend hundreds of millions of dollars and interfere with the livelihood of hundreds of men and women in order to do that one thing which has never been clearly identified to Congress as the purpose of this legislation.

I think it is significant that there has been no effort made to settle on that basis, because there is no expectation in the minds of the sponsors that Congress would begin to disrupt the lives and the communities in this part of the State and expend hundreds of millions of dollars of taxpayers' money for the reason that is really the fundamental reason behind this legislation.

It is an emotional issue. It is one in which we have chosen sides—are you for or against redwoods on the basis of this bill? That is nonsense.

I was a Member of the other body at the time the original bill passed through. I was a member of the Parks and Recreation Subcommittee of the Interior Committee in the House at the time this bill was passed. I participated in all of the hearings, including the field hearings on site. I have been on the ground. I have been up Redwood Creek. I have looked at the tall trees. I can say without any doubt and without any fear of contradiction that the original bill, a compromise, that was drawn at that time would adequately meet the needs of the United States in preserving what is not a recreational park and not intended to be for the use of people, but for the preservation of tall trees.

As a matter of fact, some of our colleagues may have seen the National Geographic special on television this last Sunday, in which they were looking a national parks. The redwoods were identified by National Park Service in the National Geographic special as being not recreational parks, not for the use of human beings, because they were not suited to that use. How many thousands of acres of tall trees do we have to have to preserve that kind of thing for future generations and for the scientific community that may look at it when, as a matter of fact, is it not intended that human beings will have any use of it other than as a scientific preservation of an existing bionic system?

I think that, for those reasons, it ought to be abundantly clear that we do not need the passage of this legislation. Certainly we do not need to extend the Federal grasp beyond the boundaries we are extending by saying to the owners of another 30,000 acres, "You must subject your lands to our control, even though we do not intend to buy them from you."

Mr. HAYAKAWA. I thank the Senator from Idaho for his very eloquent and perceptive remarks.

Mr. President, I might add that there are more old redwood trees under preservation than any other tree at the present time. Not only that, of the 48,000 acres which we wish to add to Redwood Park, only 1 in 5 acres actually contains old redwood growth. Most of the rest—all of the rest—is in second growth. Therefore, on this whole matter of preserving trees for the sake of preserving trees, we have gone to absolutely absurd lengths. Therefore, to add to that this additional 30,000 acres of protection is the height of absurdity.

Mr. HANSEN. Mr. President.

The PRESIDING OFFICER. Who yields time?

Mr. ABOUREZK. I yield time, whatever the Senator needs.

Mr. HANSEN. Mr. President, it pains me to have to disagree in any respect with my esteemed colleague from California. I would say, on this specific provision, that it was very carefully gone over. We tried as best we could to insure, first of all, that there would be no additional taking if actual fiscal damage did not result. In the event that it did, I think we then tried to provide a mechanism whereby the property owner would be treated fairly, where the value of the property that would be taken by the Government would be adequately compensated for.

I just have to say that, given the parameters within which we were working, I think we tried to approach the problem at arms' length; first, to insure that no additional land would be taken unless the actions on the outside lands contributed to actual physical damage within the park. I appreciate the concern of my friend from California and I am grateful, as well, for the observations made by the Senator from Idaho. But I think we really tried to deal with the problem at arms' length and come up as best we could with a fair solution all the way around.

Mr. ABOUREZK. That is right.

Mr. President, we had three alternatives we looked at in the committee. This is the one we adopted by a substantial vote. If I recall, I think it was 15 to 2 in the committee. It was a sizable vote. We defeated the effort to delete this provision.

We could either have taken 78,000 acres, included this 30,000 acres in the taking, or we could have put in regulatory authority, which we talked about and rejected in the committee, regulatory authority over this additional 30,000. But we adopted this approach which gave the Secretary standby authority under certain procedural safeguards, hearings.

The Secretary would have to make a showing if there is physical damage to the existing park and only then could he exercise his authorization to take or condemn the additional 30,000 acres, or any part of it.

I think it is probably the best way to do it. We do not want to go back to 1968 again when we did not take enough the first time. That is why we are back in 1978 trying to protect what is left of the old trees.

I might say one thing that has been repeated time and again here, that redwoods grow fast, and all we have to do is give them some time and they will grow back again. The roots stay alive even though we kill the trunk.

All that is very true. I went out to the Redwood Park and I saw what the redwood can do.

But we are not talking about producing more timber; we are talking about saving the old trees. The only way we can regenerate the old trees is to wait 1,500 to 2,000 years.

I do not think anybody, including my colleagues from Wyoming, wants to wait that long.

So we have to preserve those trees now, and that is exactly what this will do.

If we do not give them standby acquisition authority in this bill, we will have to have another fight 5 years from now, 10 years from now, and I do not think we ought to visit that kind of situation on our colleagues who will be in the Senate then.

Mr. McCLURE. Will the Senator yield?

Mr. ABOUREZK. I yield 1 minute to the Senator.

Mr. McCLURE. I thank the Senator.

If we have no interest in waiting for trees, why is it that of the 48,000 acres being taken nearly all is second growth in which we will have to wait to have any kind of a park purpose in having it?

Mr. ABOUREZK. The reason for taking second growth timber is because it is the watershed which protects against erosion for the old growth trees that exist near the stream beds, below where the new growth is.

That is the exact purpose.

Mr. McCLURE. That is the exact statement of purpose. But, as a matter of fact, the evidence does not sustain the need to do that.

As a matter of fact, all of the evidence, the very great part of the evidence, is that only a very small number of tall trees are affected by the condition of the stream. A small number are.

There might be an argument, but if the Senator had been at the tall trees grove, as I have, and looked at the sedimentation that occurred, and prior to this time, prior to any activity upstream,

he would note that there are at least 11 to 12 feet around the base of the trees already and they are continuing to grow as they have hundreds upon hundreds of years.

So the addition of some further siltation is a perfectly normal happening in that area, something to which the trees have long been accustomed and grown and survived, no threat to them, even the ones on the stream bank, but the great majority of them are not on the stream bank.

Mr. ABOUREZK. Every single expert on the redwoods in California, with the Government, outside the Government, with the exception of the timber company foresters, has said there is a danger.

Mr. McCLURE. That, I would say to my friend, is not exactly true. But it may make good debate.

Mr. ABOUREZK. Mr. President, I reserve the remainder of my time.

The committee opposes this amendment very strongly.

Mr. President, I am ready to yield back the remainder of my time.

Mr. HAYAKAWA. I yield back the remainder of my time.

Mr. ABOUREZK. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from California. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. ANDERSON), the Senator from New York (Mr. MOYNIHAN), and the Senator from Florida (Mr. STONE) are necessarily absent.

I further announce that, if present and voting, the Senator from New York (Mr. MOYNIHAN) would vote "nay."

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Rhode Island (Mr. CHAFEE), and the Senator from Maryland (Mr. MATHIAS) are necessarily absent.

The result was announced—yeas 28, nays 65, as follows:

[Rollcall Vote No. 23 Leg.]

YEAS—28

Allen	Hatch	Schmitt
Bartlett	Hayakawa	Schweiker
Bellmon	Helms	Scott
Byrd, Harry F., Jr.	Laxalt	Sparkman
	Lugar	Stevens
Curtis	McClure	Thurmond
Dole	Morgan	Tower
Garn	Nunn	Wallop
Goldwater	Pearson	Young
Griffin	Roth	

NAYS—65

Abourezk	DeConcini	Heinz
Bayh	Domenici	Hodges
Bentsen	Durkin	Hollings
Biden	Eagleton	Huddleston
Brooke	Eastland	Inouye
Bumpers	Ford	Jackson
Burdick	Glenn	Javits
Byrd, Robert C.	Gravel	Johnston
Cannon	Hansen	Kennedy
Case	Hart	Leahy
Chiles	Haskell	Long
Church	Hatfield, Mark O.	Magnuson
Clark		Matsunaga
Cranston	Hatfield, Paul G.	McGovern
Culver		McIntyre
Danforth	Hathaway	Melcher
Metzenbaum	Randolph	Stevenson
Muskie	Ribicoff	Talmadge
Nelson	Riegle	Weicker
Packwood	Sarbanes	Williams
Pell	Sasser	Zorinsky
Percy	Stafford	
Proxmire	Stennis	

NOT VOTING—6

Anderson	Chafee	Moynihan
Baker	Mathias	Stone

So Mr. HAYAKAWA's unprinted amendment No. 1167 was rejected.

Mr. ABOUREZK. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ABOUREZK, Mr. President, I ask unanimous consent that Tom Graham, of Senator DURKIN's staff, have floor privileges during this legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Mr. President, will the Senator from South Dakota yield for a question?

Mr. ABOUREZK. I yield.

Mr. McCLURE. I thank the Senator for yielding.

A question was asked by Members coming in asking about the last amendment that seems to me might well be an issue which could be laid to rest, and that is whether or not any land acquired under the authority of the Secretary to acquire land in the protection zone that land itself then must be protected from other uses. Does it become a part of the park, thus subjecting other lands to the burden of necessary protection of those lands thus acquired?

Mr. ABOUREZK. In the legislation those lands are not defined as part of the park. So I think that if there is a concern about that, there need not be since to come in and enlarge the park beyond what we are enlarging it here today would require a new definition of boundary and a new definition of what the park is. This standby—taking authority according to the legislation would merely be there available for protection of the existing park boundaries.

Mr. McCLURE. So that would be the land that is in the park now, the land would be added by this bill, but not any land that might be acquired within the protection zones themselves?

Mr. ABOUREZK. Without the standby authority zone, that is my understanding of the legislation.

Mr. McCLURE. That is my understanding as well, and I thank the manager of the bill for making that clarification.

The PRESIDING OFFICER. Who yields time?

UP AMENDMENT NO. 1168

Mr. HAYAKAWA. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from California (Mr. HAYAKAWA) proposes unprinted amendment numbered 1168.

Mr. HAYAKAWA. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page —, line —, insert the following:

On page 2 line 12 and on lines 22 and 23 strike the following: "167–80005–C and dated October 1977" and insert the following: "167–80005–D (excludes Skunk Cabbage and Lost Man Creeks) and dated January 1978".

On page 2 line 14 delete the following: "one hundred and six thousand" and insert the following: "ninety-eight thousand".

On page 4 lines 15 and 16 delete the following: "167–80005–C and dated October 1977" and insert the following: "167–80005–D and dated January 1978".

On page 4 line 22 delete the following: "167–80005–C and dated October 1977" and insert the following: "167–80005–D and dated January 1978".

On page 11 line 16 delete the following: "167–80005–C and dated October 1977" and insert the following: "167–80005–D and dated January 1978".

Mr. HAYAKAWA. Mr. President, the amendment I just submitted would delete two parcels of land commonly known as Skunk Cabbage and Lost Man from the proposed park expansion areas. These two areas are to the north of the existing Redwood National Park and are not immediately adjacent to the rest of the proposed expansion areas.

There is a very simple reason for not including these two parcels of land in the park expansion area. They are in a different watershed from the rest of the land in question.

There is no possible way that any logging on this land can cause soil erosion that would affect the trees in the Tall Trees Grove, the center of these discussions on Redwood Park expansion. There is no apparent reason for including Skunk Cabbage and Lost Man in the park expansion area, and I propose to take them out. The only reason I can see is that this 8,300 acres in question is merely a small part of the enormous land grab we are now dealing with. I do not believe that we can justify including this land merely for the sake of rounding out the park boundaries, which is apparently what some people claim.

Mr. President, this Redwood Park expansion affects a large number of people in the northern part of California. It is not a simple matter to be locking up valuable timber lands in unneeded parks, just because some people thousands of miles away in Washington, D.C., think that this sounds like a great idea—save the redwoods. But we already have the best redwoods set aside. In fact, we have 181,000 acres of the most beautiful north coast redwoods preserved in Federal, State, and local parks. There is absolutely no reason to add 48,000 acres to the 181,000 acres we already have. The absurdity of this expansion is really magnified by the inclusion of these two parcels, Skunk Cabbage and Lost Man. It is very obvious that activities on these two parcels could not possibly be damaging to the Tall Trees Grove, or indeed any part of the "worm," as they are not even in the same watershed.

In addition to not needing this 8,300 acres, we also cannot overlook the tre-

mendous cost of this land, which averages out to over $7,500 per acre. Why pay for 8,300 acres of timberland when we could keep this land in production? Mr. President, time and again this Congress is responsible for passing legislation that is meant to do well. I believe that many people feel that expanding the Redwood National Park is a good cause, and so they will support it. But the citizens of Humboldt and Del Norte Counties already face an unemployment rate of about 15 percent. Today we are considering a proposal to lock up 48,000 acres of their most productive timber land, under the pretenses of "park protection." I believe that we have a responsibility to weigh the consequences of putting about 2,000 people out of work. Why should we include two parcels of over 8,000 acres, when the issue of park protection is not even related to them?

Mr. President, if we are going to expand the Redwood National Park, let us at least do so for a reason. I certainly object to throwing an additional 8,000 acres into the park without substantial cause. I hope my colleagues here in the Senate will join with me today in at least limiting this Federal park expansion to a sensible degree.

Mr. ABOUREZK. Mr. President, I yield myself whatever time I might consume.

This amendment from the distinguished Senator from California would delete Skunk Cabbage and Lost Man, two units, from the proposed park expansion which are critical from a park management and visitor interpretation and enjoyment standpoint. These areas were included by the Senate in the original 1968 measure but were, unfortunately, deleted in conference.

The reasons for their inclusion in 1968 are all the more significant now. The addition of these units would provide a continuous belt from the ocean to the first inland ridge, including over 1,000 acres of old growth forest. These units are necessary to connect sections of the present park and provide a link between State and National Park units. The inclusion of these units would add tributaries which are now partly in the park as management units. These areas are critical from a physical standpoint to protect the existing park lands in the lower reaches which are still threatened by erosion from recently logged-over land.

Mr. President, we have learned here as we have learned elsewhere that the failure to protect park resources and to think in terms of ecosystems can be disastrous. The failure to acquire the watersheds will repeat the error made in 1968 when this body excluded them in conference.

So I have to say the committee very strongly opposes the deletion of these units.

I am ready to vote, and I yield back the remainder of my time.

Mr. HAYAKAWA. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from California.

(Putting the question).

Mr. ABOUREZK. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. ABOUREZK. Mr. President, I withhold that. I ask for a division instead of a rollcall vote.

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. ABOUREZK. Mr. President, I ask unanimous consent that the order for the yeas and nays be vitiated.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ABOUREZK. I ask for a division.

The PRESIDING OFFICER. A division is requested. Senators in favor of the amendment will rise and stand until counted. (After a pause.) Those opposed will rise and stand until counted.

On a division, the amendment was rejected.

Mr. ABOUREZK. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HANSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open for further amendment.

Mr. ABOUREZK. So far as I know, there are no further amendments—at least we have not been notified of any—so I am ready to yield back my time on the bill, except I want to take care of technical amendments.

Mr. BENTSEN. Mr. President, I would like to add my support to S. 1976, the redwoods expansion bill and congratulate my colleague, the senior Senator from California for his untiring efforts to protect a truly magnificent resource in his State.

The marvelous redwoods that this bill proposes to protect comprise only a small portion of the 2 million-acre redwood forest that spread along California's coast when it became a U.S. territory over a century ago. Unique in the world their stateliness and majesty awed even the early explorers. Efforts to protect the resource began as early as 1850, and finally in 1968, Congress created the Redwoods National Park to "preserve significant examples of the primeval coastal redwood forest and the streams and seashores with which they are associated for purposes of public inspiration, enjoyment, and scientific study." The grandeur and serenity that awed our western explorers would now be preserved for present and future generations to experience.

Unfortunately, due to the acquisition pattern set up by the 1968 law and logging activities occurring upstream from the park, the preservation goals established by the act are not being met in certain areas of the park.

The Congress, in establishing boundaries for the original park in 1968 did not acquire whole watersheds, but rather relied upon the authority of the Secretary of the Interior to enter into cooperative agreements with timber companies as a means of protecting the park resources from potential damage. However, the Congress simply underestimated the magnitude of the damage that was to occur as a result of continued logging upstream within the portion of the watershed excluded from the 1968 park legislation.

According to a study conducted for the U.S. Park Service, this logging activity and associated roadbuilding have accelerated the natural processes of erosion and initiated additional new processes, so that the present basinwide rate of erosion is now more than seven times the natural rate. The result: Streamside trees have been directly toppled by bank erosion, others have been killed by overbank deposits or drowned by locally elevated groundwater levels. Tributary streams that flow into the park have been transformed from idyllic havens to nightmarish tangles of debris and gravel. This damage, unfortunately, is not subsiding and any addition of sediment, even a relatively small addition, has the potential to do a disproportionately large amount of damage.

Something needs to be done to protect these valuable resources. One of the favorite sites in the park, the Tall Trees Grove, which contains the first, third, and sixth tallest trees known in the world will face growing danger from damage, if steps are not taken to remedy this problem.

Mr. President, S. 1976 provides the protection that should have been provided in 1968. Not only do we now find it necessary to provide additional protection for these environmental treasures that once lost will never be duplicated; but we also find ourselves in a position of having to protect the Federal investment that has and will continue to be made in the present park.

Mr. President, I am supporting S. 1976 today so that the present park will be preserved as originally intended by Congress and generations to come will be able to share in the beauty and awesomeness of this truly unique resource.

Mr. LAXALT. Mr. President, S. 1976 has become a highly emotional issue and is a classic example of the conflict between conservation and jobs. It is estimated that this proposal to take over 48,000 acres of privately owned land will cost the American taxpayer $359 million to $400 million. However, Mr. President, this dollar figure does not include the cost resulting from the anticipated unemployment or the so-called rehabilitation of the land.

With respect to the unemployment situation, the areas that would be affected by this park expansion already face a 14–15 percent rate of unemployment. The estimated job loss due to park expansion is somewhere between 1,200 and 2,400 jobs, depending on whose figures one relies. So, it is obvious to me, Mr. President, that we are considering more than just a proposal to expand the Redwood National Park. It is a measure which could make displaced citizens out of hundreds of hard-working, self-respecting, and self-supporting people and their families.

Mr. President, the land use policies and land withdrawal programs of Fed-

eral and State governments are destroying the resource base and economy of the California north coast area. The net result of these land withdrawal programs is that the timber industry in the north coast area is being destroyed with a dramatic increase in the area's unemployment.

Direct employment by the timber industry has fallen sharply—from 8,850 in 1969—or 38 percent of all workers in the area—to 6,950 in 1977—or 24 percent of all such workers. If the Redwood National Park is expanded as proposed by this measure, the unemployment in the areas affected would rise an additional 4 percentage points. Mr. President, that would be the equivalent of the loss of 4 million jobs on a national scale. Further, Mr. President, the total annual earnings of the workers in the areas would be reduced by about $26 million. Mr. President, these cold statistics do not truly express the agony of dislocated families, stripped of their livelihoods, and torn from community and cultural ties.

Mr. President, I am of the opinion that S. 1976 is unnecessary, because the Redwood is already the most protected species of trees in the United States, unwarranted—because a little over half of the proposed addition is downstream from the area that is to be protected and less than 25 percent has old growth redwoods, and too costly, because this addition will triple the cost of what is already the most expensive park in the National Park System. Mr. President, S. 1976 is economically extravagant, of dubious environmental merit, and will bring economic disaster to hundreds of people in northern California.

Mr. President, there are those who want to save some trees, but, in my view, it is much more important to save jobs. I urge my colleagues to reject S. 1976 in its present form.

Mr. DOLE. Mr. President, a good deal of controversy has surrounded the "Redwood National Park expansion bill" since its introduction last summer. On the one hand, there are those who claim that its provisions are vital to the environment. Others maintain that the bill will cripple local industry through extravagant and unnecessary protection devices.

The Senate must, of course, weigh the alternatives. While threats to the natural environment are vitally important and must be faced, so must the threats to our social and economic environment be rationally considered. A balance must be struck between our need to preserve the environment and our need to live and prosper in it. In most cases these can be compatible if we allow for continued use of some resources while setting others aside for protection.

CALIFORNIA REDWOODS NOT ENDANGERED

The California redwood forest is certainly a valuable national resource. Congress would be remiss if it allowed the best redwoods to perish through inaction. But this is not the case. Excluding Redwood National Park, there are already over 153,000 acres of redwoods protected in other national, State, and local parks in California. The redwood is not in danger of becoming extinct, but in fact is one of the best preserved species in the country.

Proponents of the expansion of the park contend that eroded sediment from the Redwood Creek may affect the tall trees. But this cannot be substantiated by the evidence. Logging has occurred in the north coast region for over 40 years. The area, due to natural causes, is highly erodible and subject to disastrous flooding, yet the tall trees are still standing after 600 years. While the debate over whether logging operations actually accelerate erosion has been intense, the evidence is at best inconclusive.

DAMAGING TO AREA'S ECONOMY

While the evidence that continued logging accelerates the rate of erosion is inconclusive, the evidence that enactment of S. 1976 will erode the economic base of the north coast region is overwhelming. The Sierra Club, the Friends of the Earth, the Environmental Defense Fund, many other environmental groups, and the administration all support passage of S. 1976. However, those who stand to be directly affected by the bill oppose it. The board of supervisors of Del Norte and Humboldt Counties as well as the mayor of Eureka, the largest city in the region, have been quite vocal in their opposition to the bill. The presidents of the three timber companies to be affected maintain that it will cripple their industry. And the representatives of organized labor in the north coast region are opposed to it because it will mean the loss of over 1,800 jobs. Unemployment in the region is already 14 percent—over twice the national average—and passage of S. 1976 will increase that figure to 18 percent.

Mr. President, our choice is not one between trees and no trees; it is a choice between trees and money, trees and jobs, trees and people. I have never advocated environmental callousness, but I believe that in an area where 80 percent of the population make their livelihood from the timber industry, it makes little sense to beleaguer families and communities with nonessential preservationist causes.

TIMBER INDUSTRY'S CONCERN

You may recall that last spring a caravan of logging trucks, from as far away as Alaska, came to Washington, D.C. protesting this needless reduction in the amount of harvestable timber. Earlier 7,000 loggers had staged a rally in San Francisco during congressional hearings on this bill, urging its defeat. Many argue that the forestry industry in foundering and that increased unemployment would occur anyway, regardless of the effects of S. 1976. The evidence suggests otherwise. From 1966 to 1976, employment by the three timber companies affected actually increased substantially. This may be an environmental issue for us, but for the loggers of Humboldt and Del Norte Counties, it is a bread and butter issue.

COST OF BILL EXTREME

Finally I would like to point out that passage of this bill will entail an expenditure of approximately $359 million. This will bring the total land acquisition cost of Redwood National Park to over 6 times that of the other 36 national parks combined. This estimate is conservative. It does not include the dollars lost from the region's eroded tax base, nor does it include the potential cost of retraining loggers who already have a skill, for new jobs which they do not need or want.

Redwood National Park does not exist in an environment of untouched natural beauty as in the past, but is unalterably connected with the present. It is impossible to divorce the North Coast Redwood forests from the communities which make their living from them. I believe there is a general public understanding that the economic base for this area must be protected, and that this security cannot be provided wthout some minimal impact on the environment.

The California Redwood is a vital natural resource and must be protected. However, I do not believe the evidence indicates that the Redwood is in any danger. In trying to insure a balance between our environmental concerns and our economic concerns, we must be sure that the scales do not tip too far to one side.

Mr. CRANSTON. Mr. President, I wish to comment on the potential acquisition of State parklands within Redwood National Park and to request that the Sectary of the Interior consider the appropriateness of using the discretionary exchange authority granted him by the Congress in Public Law 95–579, the Federal Land Policy and Management Act of 1976, in acquiring the State parks.

The act to establish Redwood National Park Included Prairie Creek, Jedediah Smith, and Del Notre State Parks within its boundaries, but recognized donation by the State as the only possible method of transfer to the Federal Government, as does this bill.

California has done an excellent job in the management of its parks and indeed the current value of the 28,000 acres preserved in these three parks is conservatively estimated at $700,000,000 based upon the price per acre paid by the Federal Government in its recent acquisition of comparable land in Skunk Cabbage Creek.

It is important to note, however, that in carrying out its responsibility in the acquisition and preservation of the coastal redwoods, California has often had to defer recreation needs within its urban areas.

The State recognizes that both the State and Federal redwood parks should be planned and operated as a single unit to provide for sound ecological management and visitor service. However, I believe it is proper for the Secretary to consider the possibility of exchanging Federal lands within the State that could be used for urban recreation for the State parks. There are probably many suitable Federal lands in or near urban areas within the State that would make wonderful, well used urban recreation areas. If such exchange or exchanges could occur, we would be responding to park needs in both Redwood National Park and the State's urban areas.

In the Federal Land Policy and Man-

agement Act of 1976, we have provided the Secretary with appropriate discretionary authority to consider the exchange of lands in cases such as this where the public interest would be served and have set criteria by which to determine the appropriateness of such exchange.

I would like to review the criteria because it is particularly appropriate to the potential acquisition of the State parks:

When considering the public interest, the Secretary shall give full consideration to better Federal land management and the needs of State and local people, including needs for lands for the economy, community expansion, recreation needs . . .

The Secretary should consider the acquisition of the State parks through exchange for Federal lands within the State, particularly those suited for urban recreational needs, if it would lead to better Federal land management by allowing for the unified management of Redwood National Park and give full consideration to the needs of the State and local people by providing an increase in urban recreation.

I therefore request that the Secretary investigate the possibility of using his discretionary authority to exchange lands for the State parks and report back to the Senate if he determines the use of that authority to be appropriate.

Mr. BAKER. Mr. President, I rise in support of the Senator from California, Mr. HAYAKAWA, and in opposition to S. 1976. The expansion of the Redwoods National Park has been an extremely complex and highly emotional issue. It would appear from the facts before us, however, that the expansion does not make either economic or environmental sense.

First, there are already more than 283 square miles of prime redwoods timberlands preserved in State parks and reserves across the State of California.

Second, the existing Redwood Park is more than adequate in size and contains virtually the entire natural spectrum of species representative of redwood forests.

Third, while I agree that the Park's resources should be adequately protected from outside influences, I do not feel expansion is the answer. Information I have received indicates that outside the Park's boundaries the California's Forest Practices Act controls timber operations throughout the State. Members of industry and the conservation community agree that this act is one of the most stringent anywhere in the Nation. I feel that this legislation along with local industry's consent to carry on any timbering operations adjacent to the Park under supervision of the Park Service will provide an adequate measure of protection to the resources within the Park.

Finally, the cost of expanding the Park (estimated at approximately $600 million) and resulting job loss will be tremendous. This cost coupled with the projected use of the Park, which is one of the Nation's lowest, bring into serious doubt the economic wisdom of this proposed expansion.

For these reasons, I would urge my colleagues to reject S. 1976 and consider other mechanisms for preservation and protection of this beautiful area.

Mr. PELL. Mr. President, the Senate today is voting on legislation to protect an irreplaceable natural resource—the Redwood National Park in California.

When legislation was passed in 1968 establishing the original Redwood National Park, I believe the Congress at that time committed the Government to full moral and financial support in efforts to preserve the unique and awesome beauty of the Redwood Park. Indeed, I believe we in Congress have a responsibility to the citizens of this country to preserve the integrity of this magnificent and irretrievable natural resource.

The Washington Post of April 15, 1977, in an editorial regarding the Redwood National Park issue, state,

The question is not one of saving just a few thousand acres of redwoods so that future generations can know what they look like, but rather of saving a part of our national heritage.

In protecting all of the virgin resources which we have designated for the enjoyment of this and future generations, I believe the role of the Government should be an aggressive and enlightened one. Because I share in that commitment to the people of this Nation, I intend to vote in favor of final passage of S. 1976, which is presently before this body.

Mr. President, although I intend to vote in favor of final passage of this legislation, I must at the same time admit my strong reservations regarding the financial commitment of the Government involved in passage of this bill. We have seen, 10 years after the enacting legislation establishing the Redwood National Park, that the actual costs of acquiring these lands was far greater than the estimated costs of acquisition at the time of enactment. Congress in 1968 appropriated $92 million for the acquisition of 28,000 acres of park lands. To date, over $170 million has been expended, and another $100 million is pending in the courts.

The National Park Service estimates that the acquisition of these additional 48,000 acres will cost the Federal Government approximately $359 million. In passing this legislation, the Congress again makes a total moral and financial commitment to future protection of the Redwood National Park.

I am concerned not so much over the total estimated cost of acquisition, as I am over the potential for a soaring and unforeseen increase over this present estimate.

The report of the Senate Committee on Appropriations stated that the estimated cost of acquisition of $359 million "is not based on appraisals, and can be considered preliminary at best," and that "in the committee's judgment" the actual cost is "likely to increase well beyond that figure."

Mr. President, I fear that we may reach a point in the next few years where the cost of land acquisitions such as this will become prohibitive to the protection of those resources which we wish to preserve.

Although I support the efforts of the Congress and the administration to preserve this vast and irreplaceable national heritage, I would strongly urge the administration to consider its imperative responsibility of containing future cost increases, and urge the Department of the Interior to carefully administer this act so as to prevent any recurrence of the staggering cost increases which have accompanied the original acquisition.

Mr. ROBERT C. BYRD. Mr. President, a decade ago Congress enacted a law to preserve much of the redwood forest in California as a national park. Our purpose was to insure that future generations would be able to enjoy the natural splendor of this primeval woodland.

Now, the survival of the Redwood National Park is threatened. As trees are cut from the watersheds on the edge of the park, soil erosion at seven times the normal rate has occurred along Redwood Creek. Streams are clogged with sediment; trees topple into them or are flooded. It is clear that the park is not receiving the protection mandated by the National Park Service Act of 1916.

After more than 5 years of determined effort on the part of judicial and other bodies, this problem has not been resolved. Those involved in the dispute have turned to Congress for direction. Mr. President, I believe that S. 1976 provides the necessary direction.

A key concern is the economic well-being of the area near the park. S. 1976 provides for several forms of economic aid. One of the most significant of these is a $33 million land rehabilitation program, which will generate hundreds of jobs for lumbermen in the area and restock the land with trees, thus beginning the restoration process.

Federal economic assistance programs already in existence will provide additional protection to the lumbermen. New employment programs would be established to alleviate specific problems as they arise in the local economy. Beginning in fiscal year 1979, up to $40 million could be made available to finance supplementary assistance should it be needed. In addition, the Economic Development Administration is planning the promotion of other industries in the area, such as fisheries, agriculture, transportation, and tourism. Each of these measures will help sustain and revitalize the economy near the park.

At the same time that we insure the economic health of the region, we must reaffirm our commitment to preserve the natural resources of the region. To that end, S. 1976 provides for an expansion of Redwood National Park. Heavily logged land will be replanted with seedlings and watersheds will be rehabilitated to slow down erosion.

Mr. President, we cannot allow this land to further deteriorate. S. 1976 will satisfy both the need to protect the land and to protect the legitimate economic concerns of the residents of the area.

The PRESIDING OFFICER. Is there further amendment?

Mr. HANSEN. I yield back the remainder of my time.

The PRESIDING OFFICER. If there be no further amendment, the question

is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

Mr. ABOUREZK. Mr. President, I ask for the yeas and nays on passage.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. All time having been yielded back, the question is, Shall the bill pass? The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. ANDERSON), the Senator from New York (Mr. MOYNIHAN), and the Senator from Florida (Mr. STONE) are necessarily absent.

I further announce that, if present and voting the Senator from New York (Mr. MOYNIHAN) would vote "yea."

Mr. STEVENS. I announce that the Senator from Rhode Island (Mr. CHAFEE), and the Senator from Maryland (Mr. MATHIAS) are necessarily absent.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. CHAFEE) would vote "yea."

The result was announced—yeas 74, nays 20, as follows:

[Rollcall Vote No. 24 Leg.]

YEAS—74

So the bill (S. 1976) was passed, as follows:

S. 1976

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) in order to protect existing irreplaceable Redwood National Park resources from damaging upslope and upstream land use, to provide a land base sufficient to insure preservation of significant examples of the coastal redwood in accordance with the original intent of Congress, and to establish a more meaningful Redwood National Park for the use and enjoyment of visitors, the Act entitled "An Act to establish a Redwood National Park in the State of California, and for other purposes", approved October 2, 1968 (82 Stat. 931), is amended as follows:

(1) In subsection 2(a) after "September 1968," insert "and the area indicated as 'Proposed Additions' on the map entitled 'Proposed Additions, Redwood National Park, California,' numbered 167–80005–C and dated October 1977,".

(2) In section 2, subsection (a), delete "fifty-eight thousand" and substitute "one hundred and six thousand" and delete the period at the end of the subsection and add "and publicly owned highways and roads." In section 2, subsection (b), delete "by donation only". At the end of section 2, insert the following new subsection "(c)":

"(c) Within the area outside the boundaries of Redwood National Park indicated as the 'Park Protection Zone' on the map entitled 'Proposed Additions, Redwood National Park, California', numbered 167–80005–C and dated October 1977, the Secretary is authorized to acquire lands and interests in land and upon a finding that failure to acquire all or a portion of such lands could result in physical damage to park resources and following notice to the Committee on Energy and Natural Resources of the United States Senate and the Committee on Interior and Insular Affairs of the House of Representatives. Any lands so acquired shall be managed in a manner which will maximize the protection of the resources of Redwood National Park.".

(3) In subsection 3(a), delete the period at the end of the sentence and add the following: "which donation of lands or interests in lands may be accepted in the discretion of the Secretary subject to such preexisting reverters and other conditions as may appear in the title to these lands held by the State of California, and such other reverters and conditions, as may be consistent with the use and management of the donated lands as a portion of Redwood National Park. Notwithstanding any other provision of law, the Secretary may expend appropriated funds for the management of and for the construction, design, and maintenance of permanent improvements on such lands and interests in land as are donated by the State of California in a manner not inconsistent with such reverters and other conditions.".

(4) In subsection 3(b)(1), after "NPS–RED–7114–B", insert "and effective on the date of enactment of this phrase, there is hereby vested in the United States all right, title, and interest in, and the right to immediate possession of, all real property within the area indicated as 'Proposed Additions' on the map entitled 'Proposed Additions, Redwood National Park, California', numbered 167–80005–C and dated October 1977, and all right, title, and interest in, and the right to immediate possession of, all down tree personal property (trees severed from the ground by man) severed after October 15, 1977, within the area indicated as 'Proposed Additions' on the map entitled 'Proposed Additions, Redwood National Park, Calif', numbered 167–80005–C and dated October 1977,". The Secretary shall permit continued access and use of the K and K, L line, M line, and Bald Hills roads at existing levels of access and use.

(5) In subsection 3(b)(2), delete the last sentence and add the following sentences at the end of the paragraph: "Any action against the United States with regard to the provisions of this Act and for the recovery of just compensation for the lands and interests therein taken by the United States, and for the down tree personal property taken, shall be brought in the United States district court for the district where the land is located without regard to the amount claimed. The United States may initiate proceedings at any time seeking a determination of just compensation in the district court in the manner provided by sections 1358 and 1403 of title 28, United States Code, and may deposit in the registry of the court the estimated just compensation, or a part thereof, in accordance with the procedure generally described by section 258a of title 40, United States Code. Interest shall not be allowed on such amounts as shall have been paid into the court. In the event that the Secretary determines that the fee simple title to any property (real or personal) taken under this section is not necessary for the purposes of this Act, he may, with particular attention to minimizing the payment of severance damages and to allow for the orderly removal of down timber, revest title to such property subject to such reservations, terms, and conditions, if any, as he deems appropriate to carry out the purposes of this Act, and may compensate the former owner for no more than the air market value of the rights so reserved, except that the Secretary may not revest title to any property for which just compensation has been paid. To the extent that revestment is not feasible, as provided above, the Secretary may sell at fair market value without regard to the requirements of the Federal Property and Administrative Services Act of 1949, as amended, such down timber as in his judgment may be removed without damage to the park, the proceeds from such sales being credited to the Treasury of the United States: *Provided*, That the State of California shall have designated a right-of-way for a bypass highway around the eastern boundary of Prairie Creek Redwood State Park within three years from the date of enactment of this provision, the Secretary is authorized and directed to acquire such lands or interests in lands as may be necessary for such a highway and shall thereupon donate the designated right-of-way to the State of California subject to such conditions as the Secretary may determine necessary to assure the adequate protection of Redwood National Park for a new bypass highway from a point south of Prairie Creek State Park through the drainage of May Creek and Boyes Creek to extend along the eastern boundary of Prairie Creek Redwood State Park within Humboldt County. Such acreage as may be necessary in the judgment of the Secretary for this conveyance, and for a buffer thereof, shall be deemed to be a publicly owned highway for purposes of section 1(a)(2) of this amendment effective on the date of enactment of this section. Any relocation of United States Route 101 to this corridor shall be constructed by the State of California as a part of the Federal aid primary system and shall be financed from funds appropriated to the State for expenditure on the Federal aid primary system under provisions of section 104(b)(1) of title 23, United States Code.

(6) In subsection 3(e), delete "sixty days" in the last sentence and add the following sentences at the end of the subsection: "Effective on October 1, 1978, there are authorized to be appropriated such sums as may be necessary for the implementation of contracts and cooperation agreements pursuant to this subsection: *Provided*, That it is the express intent of Congress that the Secretary shall to the greatest degree possible insure that such contracts and cooperative agreements provide for the maximum retention of senior employees by such owners and for their utilization in rehabilitation and other efforts. The Secretary, in consultation with the Secretary of Agriculture, is further authorized, pursuant to contract or cooperative agreement with agencies of the Federal Executive, the State of California, any political or governmental subdivision thereof, any corporation, not-for-profit corporation, pri-

vate entity or person, to initiate, provide funds, equipment, and personnel for the development and implementation of a program for the rehabilitation of areas within and upstream from the park contributing significant sedimentation because of past logging disturbances and road conditions, and, to the extent feasible, to reduce risk of damage to streamside areas adjacent to Redwood Creek and for other reasons: *Provided*, That authority to make payments under this subsection shall be effective only to such extent or in such amounts as are provided in advance in appropriation Acts. Such contracts or cooperative agreements shall be subject to such other conditions as the Secretary may determine necessary to assure the adequate protection of Redwood National Park generally, and to provide employment opportunities to those individuals affected by this taking and to contribute to the economic revival of Del Norte and Humboldt Counties in northern California. The Secretary shall undertake and publish studies on erosion and sedimentation originating within the hydrographic basin of Redwood Creek with particular effort to identify sources and causes, including differentiation between natural and man-aggravated conditions, and shall adapt his general management plan to benefit from the results of such studies. The Secretary shall also manage any additional French lands under his jurisdiction that are within the hydrographic basin of Redwood Creek in a manner which will minimize sedimentation which could affect the park, and in coordination with plans for sediment management within the basin. To effectuate the provisions of this subsection, and to further develop scientific and professional information and data concerning the Redwood Forest ecosystem, and the various factors that may affect it, the Secretary may authorize access to the area subject to this subsection by designated representatives of the United States.".

(b) That the first section of the Act of August 18, 1970 (84 Stat. 825), is amended by adding the following: "Congress further reaffirms, declares, and directs that the promotion and regulation of the various areas of the National Park System, as defined in section 2 of the Act of August 18, 1970 (16 U.S.C. 1c(a)), shall be consistent with and founded in the purpose established by the first section of the Act of August 25, 1916, to the common benefit of all the people of the United States. The authorization of activities shall be construed and the protection, management, and administration of these areas shall be conducted in light of the high public value and integrity of the National Park System and shall not be exercised in derogation of the values and purposes for which these various areas have been established, except as may have been or shall be directly and specifically provided by Congress.".

(c) Notwithstanding any provision of the Act of October 2, 1968, supra, the vesting in the United States of all right, title, and interest in, and the right to immediate possession of, all real property and all down tree personal property within the area indicated as "Proposed Additions" on the map entitled "Proposed Additions, Redwood National Park California", numbered 167–80005–C and dated October 1977, established by subsection (a)(4) of the first section of this Act shall be effective on the date of enactment of this section. The provisions of subsection 3(b)(3) of the Act of October 2, 1968, supra, shall also relate to the effective date of this section. From the appropriations authorized for fiscal year 1978 and succeeding fiscal years, such sums as may be necessary may be expended for the acquisition of lands and interests in lands, and down tree personal property, authorized to be acquired, or acquired, pursuant to the provisions of this Act.

SEC. 2. (a) The Secretary of the Interior, in consultation with the Secretaries of Agriculture, Commerce, and Labor, shall conduct an analysis of appropriate Federal actions that may be necessary or desirable to mitigate adverse economic impacts to public and private segments of the local economy, other than the owners of properties taken by this Act, as a result of the addition of property to Redwood National Park under the first section of this Act. Not later than September 30, 1977, the Secretary shall submit to the Speaker of the House of Representatives and the President of the Senate a report of his analysis, including his recommendations with respect to actions that should be taken to mitigate any significant short-term and long-term adverse effects on the local economy caused by such addition.

(b) The Secretary of Commerce and the Secretary of Labor, in consultation with the Secretary of the Interior, and pursuant to his study, shall apply such existing programs as are necessary and appropriate to further mitigate identified employment and other adverse economic impacts on public and private segments of the local economy, other than with regard to the payment of just compensation to the owners of properties taken by this Act and by the Act of October 2, 1968, supra. In addition to the land rehabilitation and employment provisions of this Act, which should have a substantial positive economic effect on the local economy, the Secretaries of Commerce and Labor are further authorized and directed to implement existing authorities to establish employment programs, pursuant to such grants, contracts, and cooperative agreements with agencies of the Federal Executive, the State of California, any political or governmental subdivision thereof, any corporation, not-for-profit corporation, private entity or person, for the development and implementation of such programs, as, in the discretion of the Secretaries of Commerce and Labor may be necessary, to provide employment opportunities to those individuals affected by this taking and to contribute to the economic revival of the Del Norte and Humboldt Counties, in northern California.

(c) The Secretary of Agriculture within one year after the date of enactment of this Act, shall prepare and transmit to Congress a study of timber harvest scheduling alternatives for the Six Rivers National Forest. Such alternatives shall exclude the timber inventories now standing on units of the Wilderness Preservation System and shall be consistent with laws applicable to management of the national forests. In developing the alternatives, the Secretary shall take into consideration economic, silvicultural, environmental and social factors.

SEC. 3. (a) In order to utilize the skills of individuals presently working in the woods and in the mills to the greatest degree possible to both ease the personal economic effects of this taking, and to assist in the necessary rehabilitation, protection, and improvement of lands acquired by this Act through implementation of sound rehabilitation and land use practices, the Secretary shall have power to appoint and fix the compensation of additional full-time and temporary personnel to assist in carrying out such programs necessary for the protection and enhancement of Redwood National Park. In filling these positions, preference shall be given to those applicants affected by this taking for a period ending on September 30, 1983, notwithstanding applicable civil service laws and regulations.

(b) In order to effectively administer the expanded Redwood National Park created by this Act in a manner that will provide maximum protection to its resources and to provide for maximum visitor use and enjoyment to ease the local economic effects of this taking, the Secretary shall have power to appoint and fix the compensation of additional full-time and temporary employees in the competitive service. In filling these positions, preference shall be given to those applicants affected by this taking for a period ending on September 30, 1983, notwithstanding applicable civil service laws and regulations. The Secretary shall further have power to appoint and fix the compensation of additional full-time and temporary employees in the competitive service as provided by this subsection at the time of the donation of those park lands or interests in land owned by the State of California as are within the boundaries of Redwood National Park as provided herein. In filling these positions, preference shall be given to those State employees affected by this transfer for a period not to exceed six years from the date of transfer; permanent State civil service employees shall be provided the opportunity to transfer to a comparable Federal civil service classification notwithstanding applicable civil service laws and regulations.

(c) Employees appointed pursuant to this section shall have their compensation fixed at rates not to exceed that now or hereafter prescribed for the highest rate of grade 15 of the General Schedule under section 5332 of title 5, United States Code.

SEC. 4. (a) The Secretary shall submit an annual written report to the Congress on January 1, 1979, and annually thereafter for ten years, reporting on the status of payment by the Secretary for real property acquired pursuant to section 1(a)(4) and section 1(c) of this amendment; the status of the actions taken regarding land management practices and watershed rehabilitation efforts authorized by section 1(a)(6) and section 2(b) of this amendment; the status of the efforts to mitigate adverse economic impacts as directed by this Act; the status of National Park Service employment requirements as authorized by section 3 of this amendment; the status of the new bypass highway and of the agreement for the donation of the State park lands as contemplated by section 1(a)(5) of this amendment; and the status of the National Park Service general management plan for the park.

(b) No later than January 1, 1980, the Secretary shall submit to the Committee on Interior and Insular Affairs of the House of Representatives, and to the Committee on Energy and Natural Resources of the Senate, a comprehensive general management plan for Redwood National Park, to include but not be limited to the following:

(1) the objectives, goals, and proposed actions designed to assure the preservation and perpetuation of a natural redwood forest ecosystem;

(2) the type and level of visitor use to be accommodated by the park, by specific area, with specific indications of carrying capacities consistent with the protection of park resources;

(3) the type, extent, and estimated cost of development proposed to accommodate visitor use and to protect the resource, to include anticipated location of all major development areas, roads, and trails including the specific locations and types of foot trail access to the Tall Trees Grove.

SEC. 5. Effective on October 1, 1978, there is hereby authorized to be appropriated $33,000,000 to carry out the rehabilitation provisions of this Act.

SEC. 6. (a) Notwithstanding any contrary provision of the Act entitled "An Act to provide for certain payments to be made to local governments by the Secretary of the Interior based upon the amount of certain public lands within the boundaries of such locality", approved October 20, 1976 (90 Stat. 2662), the Secretary is authorized and directed to make payments on a fiscal year basis to each unit of local government, in the manner provided by the Act of October 20, 1976, in which lands owned by the United States within Redwood National Park are located. Such payments may be used for any governmental purpose. The amount of

such payments shall be computed as provided in subsections (b) and (c).

(b) Payment made for any fiscal year to a unit of local government shall include that amount determined pursuant to the provisions of section 2 of the Act of October 20, 1976.

(c) Payment made for any fiscal year to a unit of local government shall also include that amount determined pursuant to the provisions of section 3 of the Act of October 20, 1976: *Provided, however,* That any amount computed as provided by section 3(c)(1) of the Act of October 20, 1976, but not paid because of the limitation of subsection (c)(2) and subsection (d) of that section shall be carried forward and shall be applied to future years in which this portion of the total payment would not otherwise equal the amount of real property taxes assessed and levied on such property during the last full fiscal year before the fiscal year in which such land or interest was acquired for addition to Redwood National Park until such amount is exhausted.

(d) The Redwoods Community College District shall be considered as an affected school district for purpose of section 3(a) of the Act of October 20, 1976, as amended herein.

SEC. 7. The Secretary is further authorized, and the Congress specifically directs that it shall be a purpose of this Act, that the community services and employment opportunities provided by Redwoods United, Incorporated, a non-profit corporation located in Manila, California, shall be maintained at the present rate of employment to the greatest degree practicable.

SEC. 8. The Congress further acknowledges and directs that the full faith and credit of the United States is pledged to the prompt payment of just compensation as provided for by the fifth amendment to the Constitution of the United States for those lands and properties taken by this Act.

SEC. 9. Unless otherwise indicated hereinbefore, a reference to the Secretary will refer to the Secretary of the Department of the Interior.

Mr. ABOUREZK. Mr. President, I move to reconsider the vote by which the bill passed.

Mr. CRANSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. SARBANES). The Senator from South Dakota.

Mr. ABOUREZK. Mr. President, first of all, I want to express my thanks to everybody who assisted on this legislation. It has been quite a long time since we started working on it. Particularly, Senator HANSEN, the minority leader as far as this bill is concerned in the Energy Committee, has been a very hard worker for the establishment of Redwood Park. I am very grateful for his help.

I thank Senator CRANSTON, especially without whose help we could not have gotten this through the committee. Even though he is not a member of the Energy Committee, he sat in during the mark-up session, and I hate to use this word, but he "muscled" everybody he had to to get the bill through. It was due to Senator CRANSTON that we were able to get as far as we have. I express my appreciation.

Mr. CRANSTON. I want to thank the Senator very much. I rise on a point of personal privilege. I never "muscle" anybody.

Mr. ABOUREZK. He persuaded everyone.

Mr. CRANSTON. I thank the Senator for his wonderful help on this bill. He has been magnificent.

Mr. ABOUREZK. I ask unanimous consent that S. 1976 be ordered printed as passed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ABOUREZK. I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of the Senate amendments to S. 1976.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, I want again to express my thanks to JIM ABOUREZK for his remarkably effective work on this bill and his dedication to a matter that was far removed from his own State. He was magnificient in the work he did on this.

I also thank Senator HANSEN for his fine work. He was most cooperative and helpful. Senator JACKSON was also a great source of strength to us in this effort.

Senator ROBERT BYRD, the majority leader, was of great help in getting this through the Committee on Appropriations at a difficult point in the career of this legislation. I am deeply grateful to him for that and also for helping get it scheduled in time to meet some important deadlines that will save many trees. Finally, I want to thank Jim Beirne of the Senate Energy Committee staff, Tony Beunito of Senator HANSEN'S staff, and Roy Greenaway, Kathy Files, and Ann Wray of my own staff for their invaluable assistance.

The important thing is that the Senate has passed this bill—and I am confident that the House will soon pass a bill matching this one. We have accomplished the saving of some magnificent trees that are a great national heritage, precious not only to the people of California and the West but also to all the people of our Nation and, indeed, to many people throughout the world who have visited or will visit these redwood groves to see these magnificent trees in their natural home.

I thank all Senators for their help.

SENATE RESOLUTION 375—AUTHORIZATION FOR EXPENDITURES BY THE SPECIAL COMMITTEE ON AGING

Mr. CHURCH. Mr. President, I send to the desk a resolution authorizing expenditures by the Special Committee on Aging for the coming year, March 1, 1978, through February 28, 1979; and I ask unanimous consent that the resolution may be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

EMERGENCY DROUGHT RELIEF MEASURES

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on H.R. 10532.

The PRESIDING OFFICER laid before the Senate H.R. 10532, an act to amend Public Law 95–18, providing for emergency drought relief measures.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the bill be considered as having been read the first and second times and that the Senate proceed to its immediate consideration. I do this on behalf of Mr. JACKSON.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JACKSON. Mr. President, on Wednesday, January 25, the Senate Committee on Energy and Natural Resources, during a full committee business meeting, discussed the request by the administration for an amendment to Public Law 95–18, the Emergency Drought Act of 1977. The committee was unanimous in reaching the decision that the proposed amendment should be acted upon as rapidly as possible and on the following day, January 26, I introduced S. 2439, a companion measure to H.R. 10532.

As the members will recall, last spring the Congress acted with expediency in passing the Emergency Drought Act of 1977. In August, as experience with the drought program dictated, the Congress amended the act to provide for an extension of the drought relief program to January 31, 1978.

On January 20, Secretary of the Interior Cecil D. Andrus submitted a draft bill to provide for a further extension of the drought program. As the Secretary pointed out in his letter of transmittal, unforeseen delays caused by adverse weather, scarcity of supplies or other conditions will prevent the completion of at least 66 drought-related construction projects by the January 31 deadline for completion as stipulated in Public Law 95–18.

As passed by the House, H.R. 10532 will not authorize any new projects or new funds. Simply, the bill provides the needed time to complete construction which is already underway, utilizing funds that have already been obligated.

I ask unanimous consent that the letter of transmittal from the Secretary of the Interior and a list of the projects on which construction will not be completed by January 31, 1978, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C., January 20, 1978.

Hon. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: The Emergency Drought Act of 1977 (P.L. 95–18) as amended, requires that all construction activities undertaken to implement the programs authorized by the Act be completed by January 31, 1978. Our approval of drought assistance requests has been based on the ability of the recipient to complete the proposed project before the January 31, 1978, deadline, and that date has been included in each contract.

It has now come to our attention that there are several instances where we have obligated funds, where construction work has begun and is being diligently pursued, but where delays in delivery of required supplies,

bad weather, or other unforeseen circumstances will not permit completion of all construction by January 31, 1978.

We have carefuly examined the provisions of the Emergency Drought Act, and find that we are without authority to allow construction work undertaken with funds provided by that Act to continue past the statutory deadline. The Act is clear in setting a cut-off date on construction activities. The language provides no exceptions to this limit. In extending the Act once already (P.L. 95–107), Congress has again provided no exceptions. Therefore, we must conclude that we have no authority to administratively grant exceptions.

We are, of course, in sympathy with those who have diligently pursued construction activities but will be unable to complete them because of unforeseen circumstances. Therefore, we would support legislation further amending P.L. 95–18 to authorize us to allow construction to continue past the current deadline to permit completion of work in special circumstances such as those outlined above.

In order to assist in achieving this objective, we have attached a proposed bill providing authority to the Secretary to allow, in his discretion, continuation of construction activities for a reasonable time. No new projects or new funds are authorized. Extended construction activities would utilize funds already appropriated and obligated.

The bill would also extend the time for the Secretary to report to the Congress and the President on activities under the Act from March 1, 1978, to May 1, 1978. This change would be necessary to accommodate the program extension.

We would recommend that the bill be introduced and swiftly enacted. If the Congress has another approach to resolving the problem, we would be most interested in working with you. Of course, time is of the essence on this matter.

The Office of Management and Budget advises that there is no objection to the presentation of this proposed draft bill from the standpoint of the Administration's objectives.

Sincerely,

CECIL D. ANDRUS,
Secretary.

Enclosure.

EMERGENCY DROUGHT ACT OF 1977 (P.L. 95–18) CONSTRUCTION PROJECTS WHICH WILL NOT BE COMPLETED BY JANUARY 31, 1978

REGION: 1 PN

1. Okanogan Irrigation District—Washington ($1,750,000)—replace pumping plant—might make it by January 31, 1978, but probably not quite—due to various delays in deliveries and weather—would need additional couple of weeks at most.

2. B and P Irrigation District—Idaho ($30,000)—to drill new well—work is continuing but do not expect completion by January 31, 1978—delay caused by bad weather, late start—would need extra couple of weeks.

REGION 2: MP

1. Santa Ynez River Water Conservancy District—California ($340,000)—two wells and pumps—one pump is not yet installed—late delivery and bad weather—would need extra 2 weeks to finish (weather permitting).

2. Chowchilla Water District—California ($4,500,000)—wells, tailwater return system pipelines—most work is completed but some pump installations are not finished—delay due to back log of work for electrical contractor and bad weather—need about another month to finish.

3. Georgetown Divide Public Utility District—California ($184,750)—four diversion structures and pipelines—having trouble doing concrete work because of bad weather—rest of work done—need another month or 2 of good weather to finish.

4. Merquin County Water District—California ($440,000)—20 wells and pumps—not all pumps have been installed on the wells due to electrical contractor's back log of work and also due to poor weather conditions and a late start—need another month to finish.

5. Madera Irrigation District—California ($1,193,273)—pipelines, pumps, and meters—some pipelines not yet installed due to bad weather—but work might be completed on time if weather improves.

6. Placer County Water Association—California ($201,020)—pipeline—contractor can't get additional pipes delivered until end of January—would need about a month to finish after pipes arrive.

7. West Side Irrigation District—California ($569,000)—replace 10 miles open ditch with pipelines—late delivery of pipe, not all pipe installed yet—would need additional month to complete.

8. Natomas Central Mutual Water Conservancy—California ($250,000)—modify pump station, install pumps, dredging and pilings—most work completed, but final placement of concrete being delayed by weather—need additional month or more (depending on weather) for completion.

9. Jacob Rancho Water Conservancy—California ($500,000)—five deep wells—wells completed but bad weather has hampered installation of pumps—work might be completed by January 31, 1978, if weather improves—otherwise they will need additional time.

10. El Nido Irrigation District—California ($1,000,000)—new wells—wells completed but pumps not all installed—due to contractor's back log and bad weather—need additional month to finish.

11. Truckee Carson Irrigation District—Nevada ($268,400)—pumps, meters and lining of ditches—bad weather has slowed work and all lining might not be completed by January 31, 1978, unless weather improves.

12. State of California—grant for $3,604,-103—State would like more time for removal of Delta barriers—State's weather modification program is just starting and will probably not use all of the obligated Federal funds by January 31, 1978.

REGION 3: LC

Not aware of any, although some of the Fish and Wildlife projects were on tight schedules and might not quite make deadline.

REGION 4: UC

1. Muddy Creek Irrigation Company—Utah ($600,000)—repairs to Emery Reservoir—start delayed 3 months by Forest Service's refusal to approve permit—now weather is bad—not much work has been done—work would not be finished until spring at earliest.

2. Newton Water Users Association—Utah ($65,000)—to line 13,040 feet of ditch—cold weather has prevented final concrete work from being completed—other than that job is completed—estimated 90% complete—final completion would have to wait for warmer weather.

REGION 5: SW

1. New Mexico Department of Game and Fish ($223,000)—various water saving features at hatcheries and wildlife areas—work about 75% done, some final installations not yet completed due to delays caused by bids, slow deliveries and weather—would need about an extra month to complete all work.

REGION 6: UM

Not aware of any problems.

REGION 7: LM

1. Gering Irrigation District—Nebraska ($247,300)—to line canals—request was submitted late and not approved until November 29, 1977—also weather delays—work is progressing but it's expected they need another month.

2. Pathfinder Irrigation District—Nebraska ($534,400)—to line laterals—late request, late start, bad weather—work is progressing but will need additional month or 2 to complete.

3. Amity Mutual Irrigation Conservancy—Colorado ($194,000)—repair and line canals—late request and late start, bad weather—need additional month to complete.

4. Central Nebraska Powerplant and Irrigation District—Nebraska ($346,400)—13.2 miles of pipeline—work is progressing but is being hampered by weather—need another month to finish.

INDIAN PROJECTS NEEDING EXTENSION FOR DROUGHT IMPROVEMENTS

	Total drought improvements	Total funds obligated
Idaho: Fort Hall Tribes	12 irrigation wells drilled, cased and equipped	$528, 500
New Mexico:		
Isleta Pueblo	20 irrigation wells	530, 000
Jemez Pueblo	4 irrigation wells	60, 000
Picuris Pueblo	4,000 ft concrete canal lining	48, 300
Pojoaque Pueblo	Rehabilitate diversion dam	23, 600
San Juan Pueblo	8,800 ft concrete cana. lining	94, 500
Santa Ana Pueblo	4 irrigation wells	60, 000
Santo Domingo Pueblo	5 irrigation wells	114, 000
Taos Pueblo	12,500 ft concrete and lining, rehabilitation of of canal and 1 irrigation well.	402, 200
Zia Pueblo	Enlargement of storage reservoir	139, 200
Mescalero Apache	7,000 ft concrete pipeline	137, 000
Navaio	Lining looking siphon	200, 000
Total		1, 808, 800
Washington:		
Colville	2 irrigation wells and equipment	55, 000
Yakima	Development equip irrigation wells	5, 000, 000
Hoh Fishery	1 well	7, 500
Lower Elwa Fishery	New diversion structure and lining of rearing ponds.	243, 000
Lummi Fishery	Well drilling and stream diversion	103, 000
Muckleshoot Fishery	To acquire water source	36, 000
Nisqually Fishery	Acquisition of water source and develop wells	230, 000
Skokomish Fishery	Install well and rearing ponds	155, 600
Total		5, 830, 100
Arizona:		
Gila River (Pima)	Drill and equip 15 wells	1, 500, 000
Kaibab	Spring development and pipeline	71, 000
San Carlos Apache	Wells and river pumps	128, 100
Total		1, 699, 100
Nevada:		
Campbell Ranch	Drill and equip wells	148, 000
Fort McDermitt	do	226, 000
Pyramid Lake (Fishery)	Rehabilitate 1 well	8, 400
Summit Lake (Fishery)	Drill and equip 1 well	44, 000
Walker River	Drill and equip 4 wells	186, 000
Yomba	Drill and equip 3 wells	145, 000
Total		757, 400

Mr. HASKELL. Mr. President, the Emergency Drought Assistance Act of 1977, which I sponsored, has been most helpful to Colorado. It has enabled local communities to mitigate the disastrous effects of last year's paucity of rainfall. We in the West have long appreciated the need to conserve water for periods of drought.

Communities such as those represented by the Amnity Mutual Ditch Co. and the Central Colorado Water Conservancy District have participated in the program established by this act. They and the Department of the Interior deserve our acclaim for the enthusiasm with which they have embraced this program and have worked to see that it was quickly implemented. Unfortunately, it is not always possible to control delay caused by frozen ground and equipment failure. It was never this body's intention to impose unrealistic timetables upon those who must implement this program. It is my understanding that the extension of this program will allow the time necessary to complete these vital projects. This is as it should be, for our desire is to see that drought is mitigated, not that incomplete projects result. Mr. President, I wholeheartedly support the extension of this program.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

The bill was considered, ordered to a third reading, read the third time, and passed.

Mr. CURTIS. Mr. President, I move to reconsider the vote by which the bill passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

OFFICE OF RAIL PUBLIC COUNSEL

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. CANNON, I ask that the Chair lay before the Senate a message from the House of Representatives on H.R. 5798.

The PRESIDING OFFICER laid before the Senate H.R. 5798, an act to amend the Interstate Commerce Act to authorize appropriations for the Office of Rail Public Counsel for fiscal year 1978.

Mr. ROBERT C. BYRD. I ask unanimous consent that the bill be considered as having been read the first and second times and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill was considered, ordered to a third reading, read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-334), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE AND SUMMARY

The reported bill amends section 27(6) of the Interstate Commerce Act to authorize an appropriation of $1,000,000 for the Office of Rail Public Counsel in the Interstate Commerce Commission (ICC or Commission) for fiscal year 1978.

Basis and need for the legislation

In section 304(a) of the Railroad Revitalization and Regulatory Reform Act of 1976, amending the Interstate Commerce Act, Congress established the Office of Rail Public Counsel as an independent office affiliated with the ICC. The Office is charged with presenting the views of the public and representing the public interest with respect to rail transportation matters subject to the jurisdiction of the ICC.

The administrative forerunner of the Office of Rail Public Counsel was the Office of Public Counsel, established in 1974 by the Director of the Rail Services Planning Organization (RSPO) in the Commission, pursuant to the discretion vested in him by section 205 of the Regional Rail Reorganization Act of 1973. This office was instrumental in procuring and assisting the participation of traditionally unrepresented and underrepresented segments of the public, such as communities and users of rail service, in aspects of the regional rail reorganization process affecting them.[1] Subsequently, Congress provided for the establishment of the Office of Rail Public Counsel, with expanded powers.

To assure vigorous public participation and representation in the governmental decision-making process affecting rail service, Congress empowered the Office to participate as a party in proceedings before the Commission, initiate such proceedings, and, in accordance with applicable law, to seek judicial review of Commission action, where such proceedings or action involve a common carrier by railroad subject to Part I of the Interstate Commerce Act. The Office is also directed to solicit and present in proceedings before the Commission the views of communities and users of rail service affected by such proceedings when such communities or users might not otherwise be adequately represented and to evaluate, represent, and assist the representation of the public interest in safe, efficient, reliable, and economical rail transportation services before the Commission and other Federal agencies.

The active public participation and representation envisioned by Congress in formulation by the Commission of decisions affecting rail service has been thwarted by the failure of the Executive to appoint a Director of the Office of Rail Public Counsel, as mandated by statute. In its proposed budget the new Administration has requested $700,000 to fund the Office for fiscal year 1978 and apparently intends to submit to the Senate a nomination for Director in the near future. Congress originally authorized to be appropriated to the Office $500,000 for the fiscal year ending June 30, 1976; $500,000 for the fiscal year transition period ending September 30, 1976; and $2,000,000 for the fiscal year ending September 30, 1977. The Committee urges the prompt appointment and confirmation of a Director and recommends that $1,000,000 be authorized for the Office for fiscal year 1978. These funds would enable the Office to perform its critical functions in a period during which the nature and extent of rail transportation service are undergoing considerable change and a large segment of the railroad industry remains in a state of upheaval.

The Committee is cognizant that legislation for the creation of a Federal agency for consumer protection is under consideration by Congress. It is not the intent of the Committee that the functions of the Office of Rail Public Counsel be performed by or within two Federal agencies, resulting in unnecessary duplication. However, the Committee firmly supports the objectives embodied in the legislation creating the Office and believes that the performance of the responsibilities of the Office should not be delayed further to the detriment of communities and users of rail services. Should a consumer protection agency be established, serious consideration should be given to whether the Office should be made a part of such agency. A determination should be made whether the performance of the responsibilities of the Office and hence the attainment of the statutory objectives can better be accomplished within or without the framework of such an agency. The Committee does not intend this authorization to preclude any action which would strengthen and make more effective the activities of a public counsel acting with respect to rail matters before the ICC.

[1] In its Report on Federal Regulation and Regulatory Reform, October, 1976, pp. 358-65, the Committee's Subcommittee on Oversight and Investigations evaluated the activities of the Office of Public Counsel and concluded that the public participation in the reorganization process made possible through the efforts of the Office had contributed significantly to the reorganization process.

ORDER THAT COMMITTEE HAVE UNTIL MIDNIGHT TONIGHT TO FILE REPORT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Human Resources have until midnight tonight to file a report on a clean bill dealing with labor law reform.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I believe an order has been entered that after the two leaders or their designees have been recognized on tomorrow under the standing order, Mr. LEAHY will be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. That order has already been entered.

Mr. ROBERT C. BYRD. I thank the Chair.

BUDGET ACT WAIVER

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 448.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 286) waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 897.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution.

The Senate proceeded to consider the resolution.

Mr. BAKER. Mr. President, I rise only to inform my friend, the majority leader, that the item is cleared on this calendar. We have no objection to it passing.

Mr. ROBERT C. BYRD. I thank my friend.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was agreed to, as follows:

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 897. Such waiver is necessary because hearings were delayed in order to accommodate the Administration in formulating its position on nuclear nonproliferation and to await its substantive testimony which did not occur until May 6, 1977. Furthermore, the Administration bill, S. 1432, was not introduced until April 29, 1977, and three committees were given jurisdiction over it. The number of hearings which were required in order to receive input from all necessary groups of witnesses made the May 15 deadline impossible to meet.

The effect of defeating consideration of the authorization will be to substantially reduce the program of cooperation and assistance to developing countries for the purpose of developing indigenous energy resources. In particular, a program to promote exchange of United States scientists, technicians, and energy experts with those of developing countries will have to be deferred.

The desired authorization will not delay the appropriations process and can be easily accommodated in a supplemental appropriation.

An authorization of this kind was contemplated in the congressional budget. There is a $5,000,000 authorization for "international cooperation" in the fiscal year 1978 Energy Research and Development Administration authorization bill. The present authorization raises this amount to $10,000,000.

This authorization is sufficiently small that it will not significantly affect the congressional budget. However, its impact in terms of nuclear proliferation will be considerable in relations to its size, it is therefore considered an important part of the Nuclear Nonproliferation Act of 1977.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

NATIONAL DRUG ABUSE CONFERENCE

Mr. ROBERT C. BYRD. Mr. President, I send to the desk a resolution on behalf of Mr. JACKSON and Mr. MAGNUSON and I ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows.

A resolution (S. Res. 381) to express the sense of the Senate in support of the National Drug Abuse Conference in Seattle on April 3–8, 1978.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. JACKSON. Mr. President, this year the National Drug Abuse Conference will be held in Seattle on April 3–8, 1978. NDAC 1978 is the largest and most comprehensive drug and alcohol conference in the world and is expected to attract representatives from the drug and alcohol abuse, social services, law enforcement, medical, psychological, psychiatric, and pharmaceutical fields from around the world. Ethnic and cultural groups, the young, the elderly, and the military will be represented. Some 5,000 people are expected to be in attendance.

The spread of drug abuse across America continues to threaten the quality of our national life. It is destroying individual lives, dividing families and disrupting the social structures of our cities and communities. The economic cost alone, in terms of lost productivity, narcotics-related crime and drug abuse prevention programs, is estimated in excess of $10 billion a year. The toll of human suffering is beyond measure.

The Conference is designed to help people working in the drug abuse field to improve professional skills, increase knowledge of the drug and alcohol abuse field and share their experiences and ideas.

I believe there is a need to highlight the international scope of the dangerous substance abuse problem, to focus attention on the cultural and topical issues in the field, to address the critical issues which concern those working in the field, and to increase the public awareness and understanding of drug abuse, prevention methods, education, treatment, and research. I believe that this Conference will achieve these objectives; I wholeheartedly support the efforts and objectives of the Conference organizers; and I am introducing this resolution to aid in increasing national awareness of both the Conference and the nationwide dangerous substance abuse problem.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 381) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

S. RES. 381

Whereas the National Drug Abuse Conference is being held in Seattle on April 3–8, 1978; and

Whereas it is the purpose of the Conference to bring together those people involved in the drug and alcohol abuse fields for an exchange of ideas and information on treatment, education, research and techniques; and

Whereas it is also the purpose of the Conference to increase public awareness and understanding of substance abuse problems, solutions and treatments available; Now, therefore, be it

Resolved, That it is the sense of the Senate that it is fully supportive of the principles behind, and the goals and objectives of, this Conference.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR RECESS TO 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 9:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS ON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the recognition of Mr. LEAHY under the order previously entered there be a brief period for the transaction of routine morning business on tomorrow, until the hour of 10 o'clock a.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Senators may be permitted to speak during that period for the transaction of routine morning business for not to exceed 2 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, has an order been entered already to the effect that at 10 o'clock tomorrow morning the Senate will proceed to the consideration of the amendment that is in disagreement between the two Houses on the supplemental appropriations bill?

The PRESIDING OFFICER. Such an order has already been entered.

Mr. ROBERT C. BYRD. I thank the Chair.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now, again, be a period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Is there morning business?

COMMUNICATIONS ACT AMENDMENTS OF 1977

Mr. HOLLINGS. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of S. 1547, Calendar No. 534, a bill to amend the Communications Act of 1934.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. BAKER. Mr. President, reserving the right to object.

The PRESIDING OFFICER. The Senator from Tennessee, the minority leader.

Mr. BAKER. I would only say to my friend from South Carolina that this item was carried until a moment ago when it was cleared and we have no objection to proceeding to its consideration and passing at this time.

Mr. HOLLINGS. I thank the minority leader.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1547) to amend the Communications Act of 1934, as amended, with respect to penalties and forfeitures, and to authorize the Federal Communications Commission to regulate pole attachments, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Commerce, Science and Transportation with amendments as follows:

On page 1, line 5, strike "Communication" and insert "Communications";

On page 7, beginning with line 15, strike through and including page 8, line 18, and insert in lieu thereof:

SEC. 5. Section 2(b) of the Communications Act of 1934 (47 U.S.C. 152(b)) is amended by striking the word "Subject" and inserting in lieu thereof the following "Except as provided in section 224 and subject".

SEC. 6. Title II of the Communications Act of 1934 is amended by adding at the end thereof the following new section:

"REGULATIONS OF POLE ATTACHMENTS

"SEC. 224. (a) As used in this section:

"(1) The term 'utility' means any person whose rates or charges are regulated by the Federal Government or a State and who owns or controls poles, ducts, conduits, or rights-of-way used, in whole or in part, for wire communication. Such term does not include any railroad, any person who is cooperatively organized, or any person owned by the Federal Government or any State.

"(2) The term 'Federal Government' means the Government of the United States or any agency or instrumentality thereof.

"(3) The term 'State' means any State, territory, or possession of the United States, the District of Columbia, or any political subdivision, agency, or instrumentality thereof.

"(4) The term 'pole attachment' means any attachment by a cable television system to a pole, duct, conduit, or right-of-way owned or controlled by a utility.

"(b)(1) Subject to the provisions of subsection (c) of this section, the Commission shall regulate the rates, terms, and conditions for pole attachments to provide that such rates, terms, and conditions are just and reasonable, and shall adopt procedures necessary and appropriate to hear and resolve complaints concerning such rates, terms, and conditions. For purposes of enforcing any determinations resulting from complaint procedures established pursuant to this subsection, the Commission shall take such action as it deems appropriate and necessary, including issuing cease and desist orders, as authorized by section 312(b) of title III of the Communications Act of 1934, as amended.

"(2) Within 180 days from the date of enactment of this section the Commission shall prescribe by rule regulations to carry out the provisions of this section.

"(c)(1) Nothing in this section shall be construed to apply to, or to give the Commission jurisdiction with respect to rates, terms, and conditions for pole attachments in any case where such matters are regulated by a State.

"(2) Any State which regulates the rates, terms, and conditions for pole attachments shall certify to the Commission that it regulates the rates, terms and conditions for pole attachments.

"(d)(1) For purposes of subsection (b) of this section, a rate is just and reasonable if it assures a utility the recovery of not less than the additional costs of providing pole attachments, nor more than an amount determined by multiplying the percentage of the total usable space, or the percentage of the total duct or conduit capacity, which is occupied by the pole attachment by the sum of the operating expenses and actual capital costs of the utility attributable to the entire pole, duct, conduit, or right-of-way.

"(2) As used in this subsection, the term 'usable space' means the space above the minimum grade level which can be used for the attachment of wires, cables, and associated equipment.

"(e) Upon the expiration of the 5-year period that begins on the date of enactment of this Act the provisions of subsection (d) of this section shall cease to have any effect.".

On page 11, line 8, strike "6" and insert "7";

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Communications Act Amendments of 1977".

SEC. 2 Section 503(b) of the Communications Act of 1934 (47 U.S.C. 503(b)) is amended to read as follows:

"(b) Any person who is determined by the Commission, in accordance with paragraph (3) or (4) of this subsection, to have—

"(A) willfully or repeatedly failed to comply substantially with the terms and conditions of any license, permit, certificate, or other instrument or authorization issued by the Commission;

"(B) willfully or repeatedly failed to comply with any of the provisions of this Act or of any rule, regulation, or order issued by the Commission under this Act or under any treaty, convention, or other agreement to which the United States is a party and which is binding upon the United States;

"(C) violated any provision of section 317 (c) or 509(a) of this Act; or

"(D) violated any provision of section 1304, 1343, or 1464 of title 18, United States Code;

shall be liable to the United States for a forfeiture penalty. A forfeiture penalty under this subsection shall be in addition to any other penalty provided for by this Act; except that this subsection shall not apply to any conduct which is subject to forfeiture under title II, part II or III of title III, or section 507 of this Act.

"(2) The amount of any forfeiture penalty determined under this subsection shall not exceed $2,000 for each violation. Each day of a continuing violation shall constitute a separate offense, but the total forfeiture penalty which may be imposed under this subsection, for acts or omissions described in paragraph (1) of this subsection and set forth in the notice or the notice of apparent liability issued under this subsection, shall not exceed—

"(A) $20,000, if the violator is (i) a common carrier subject to the provisions of this Act, (ii) a broadcast station licensee or permittee, or (iii) a cable television operator; or

"(B) $5,000, in any case not covered by subparagraph (A).

The amount of such forfeiture penalty shall be assessed by the Commission, or its designee, by written notice. In determining the amount of such a forfeiture penalty, the Commission or its designee shall take into account the nature, circumstances, extent, and gravity of the prohibited acts committed and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require.

"(3)(A) At the discretion of the Commission, a forfeiture penalty may be determined against a person under this subsection after notice and an opportunity for a hearing before the Commission or an administrative law judge thereof in accordance with section 554 of title 5, United States Code. Any person against whom a forfeiture penalty is determined under this paragraph may obtain review thereof pursuant to section 402(a).

"(B) If any person fails to pay an assessment of a forfeiture penalty determined under subparagraph (A) of this paragraph, after it has become a final and unappealable order or after the appropriate court has entered final judgment in favor of the Commission, the Commission shall refer the matter to the Attorney General of the United States, who shall recover the amount assessed in any appropriate district court of the United States. In such action, the validity and appropriateness of the final order imposing the forfeiture penalty shall not be subject to review.

"(4) Except as provided in paragraph (3) of this subsection, no forfeiture penalty shall be imposed under this subsection against any person unless and until—

"(A) the Commission issues a notice of apparent liability, in writing, with respect to such person;

"(B) such notice has been received by such person, or until the Commission has sent such notice to the last known address of such person, by registered or certified mail; and

"(C) such person is granted an opportunity to show, in writing, within such reasonable period of time as the Commission prescribes by rule or regulation, why no such forfeiture penalty should be imposed.

Such a notice shall (i) identify each specific provision, term, and condition of any Act, rule, regulation, order, treaty, convention, or other agreement license, permit, certificate, instrument or authorization which such person apparently violated or with which such person apparently failed to comply; (ii) set forth the nature of the act or omission charged against such person and the facts upon which such charge is based; and (iii) state the date on which such conduct occurred. Any forfeiture penalty determined under this paragraph shall be recoverable pursuant to section 504(a) of this Act.

"(5) No forfeiture liability shall be determined under this subsection against any person, if such person does not hold a license, permit, certificate, or other authorization issued by the Commission, unless, prior to the notice required by paragraph (3) of this subsection or the notice of apparent liability required by paragraph (4) of this subsection, such person (A) is sent a citation of the violation charged; (B) is given a reasonable opportunity for a personal interview with an official of the Commission, at the field office of the Commission which is nearest to such person's place of residence; and (C) subsequently engages in conduct of the type described in such citation. The provisions of this paragraph shall not apply, however, if the person involved is engaging in activities for which a license, permit, certificate, or other authorization is required. Whenever the requirements of this paragraph are satisfied with respect to a particular person, such person shall not be entitled to receive any additional citation of the violation charged with respect to any conduct of the type described in the citation sent under this paragraph.

"(6) No forfeiture penalty shall be determined or imposed against any person under this subsection if—

"(A) such person holds a broadcast station license issued under title III of this Act and if the violation charged occurred—

"(i) more than 1 year prior to the date

of issuance of the required notice or notice of apparent liability; or

"(ii) prior to the date of commencement of the current term of such license,

whichever is earlier so long as such violation occurred within 3 years prior to the date of issuance of such required notice; or

"(B) such person does not hold a broadcast station license issued under title III of this Act and if the violation charged occured more than 1 year prior to the date of issuance of the required notice or notice of apparent liability.".

SEC. 3. (a) The first sentence of section 504(a) of the Communications Act of 1934 (47 U.S.C. 504(a)) is amended by inserting immediately after "recoverable" the following: ", except as otherwise provided with respect to a forfeiture penalty determined under section 503(b)(3) of this Act,".

(b) Section 504(b) of such Act is amended (1) by striking out "parts II and III of title III and section 503(b), section 507, and section 510" and inserting in lieu thereof "title II, parts II and III of title III, and sections 503(b) and 507"; and (2) by striking out ", upon application therefor,".

SEC. 4. Section 510 of the Communications Act of 1934 (47 U.S.C. 510) is repealed in its entirety.

SEC. 5. Section 2(b) of the Communications Act of 1934 (47 U.S.C. 152(b)) is amended by striking the word "Subject" and inserting in lieu thereof the following "Except as provided in section 224 and subject".

SEC. 6. Title II of the Communications Act of 1934 is amended by adding at the end thereof the following new section:

"REGULATIONS OF POLE ATTACHMENTS

"SEC. 224. (a) As used in this section:

"(1) The term 'utility' means any person whose rates or charges are regulated by the Federal Government or a State and who owns or controls poles, ducts, conduits, or rights-of-way used, in whole or in part, for wire communication. Such term does not include any railroad, any person who is cooperatively organized, or any person owned by the Federal Government or any State.

"(2) The term 'Federal Government' means the Government of the United States or any agency or instrumentality thereof.

"(3) The term 'State' means any State, territory, or possession of the United States, the District of Columbia, or any political subdivision, agency, or instrumentality thereof.

"(4) The term 'pole attachment' means any attachment by a cable television system to a pole, duct, conduit, or right-of-way owned or controlled by a utility.

"(b)(1) Subject to the provisions of subsection (c) of this section, the Commission shall regulate the rates, terms, and conditions for pole attachments to provide that such rates, terms, and conditions are just and reasonable, and shall adopt procedures necessary and appropriate to hear and resolve complaints concerning such rates, terms, and conditions. For purposes of enforcing any determinations resulting from complaint procedures established pursuant to this subsection, the Commission shall take such action as it deems appropriate and necessary, including issuing cease and desist orders, as authorized by section 312(b) of title III of the Communications Act of 1934, as amended.

"(2) Within 180 days from the date of enactment of this section the Commission shall prescribe by rule regulations to carry out the provisions of this section.

"(c)(1) Nothing in this section shall be construed to apply to, or to give the Commission jurisdiction with respect to rates, terms, and conditions for pole attachments in any case where such matters are regulated by a State.

"(2) Any State which regulates the rates, terms, and conditions for pole attachments shall certify to the Commission that it regulates the rates, terms, and conditions for pole attachments.

"(d) (1) For purposes of subsection (b) of this section, a rate is just and reasonable if it assures a utility the recovery of not less than the additional costs of providing pole attachments, nor more than an amount determined by multiplying the percentage of the total usable space, or the percentage of the total duct or conduit capacity, which is occupied by the pole attachment by the sum of the operating expenses and actual capital costs of the utility attributable to the entire pole, duct, conduit, or right-of-way.

"(2) As used in this subsection, the term 'usable space' means the space above the minimum grade level which can be used for the attachment of wires, cables, and associated equipment.

"(e) Upon the expiration of the 5-year period that begins on the date of enactment of this Act the provisions of subsection (d) of this section shall cease to have any effect.".

SEC. 7. The amendments made by this Act shall take effect on the thirtieth day after the date of enactment of this Act; except that the provisions of sections 503(b) and 510 of the Communications Act of 1934, as in effect on such date of enactment, shall continue to constitute the applicable law with the respect to any act or omission which occurs prior to such thirtieth day.

Mr. HOLLINGS. Mr. President, the Committee on Commerce, Science, and Transportation held 2 days of hearings on this bill on June 23 and 24, 1977. Thereafter, after study of additional statements and official reports of the FCC, the committee amended the bill in executive session in October and reported the bill as amended to the full Senate on November 2.

This bill accomplishes two major objectives. First, it would expand, simplify and enlarge the scope of the forfeiture provisions of the Communications Act to provide the Commission with more adequate enforcement powers over persons and entities subject to its regulation. However, while giving the FCC greater enforcement authority, the bill at the same time establishes certain guarantees of due process and fair warning for some persons or entities which are not presently subject to FCC forfeiture liability. Thus, for certain parties the Commission is required to issue, in effect, a "warning" citation before fining for infraction of the rules. Only if a person so warned again commits the same violation of FCC rules would he or she become liable for a forfeiture.

Mr. President, the forfeitures portion of S. 1547 is identical to S. 2343, which passed the Senate in the 94th Congress. I believe that the Commission requires the extra authority which this bill would provide in order to assure the persons who benefit from use of our Nation's electromagnetic spectrum adhere closely to the terms of the Communications Act and FCC rules promulgated thereunder.

The integrity of the Commission's regulatory authority must be fostered. The FCC presently experiences severe difficulty in enforcing some of its rules. For example, because it lacks forfeiture authority over cable television the Commission must resort to the cumbersome and time-consuming procedures of cease-and-desist proceedings. None of the parties involved in those proceedings profits from lengthy and costly adjudication.

I am sensitive, nevertheless, to the concerns expressed by some of the smaller cable system operators that FCC forfeitures may be indiscriminately imposed upon parties unable to absorb large fines, and for rule violations which have insignificant impact on other interested parties. I note, however, that the bill directs the Commission whenever considering imposition of a fine, to consider the gravity of the offense and the ability to pay. Moreover, the committee report expresses confidence, which I share, that the Commission will exercise its new enforcement powers over regulatees not previously liable for forfeitures in an evenhanded and equitable fashion.

Another reason for providing statutory guidance to the Commission in the matter of rates is to avoid lengthy start-up proceedings at the Commission before it begins active regulation. I am concerned that in view of the long period of time that has already elapsed while the FCC has had pole attachments under study that we do not allow further delay in giving cable television its right to be heard in any pole attachment dispute. The need for a forum exists today, not at some indefinite point in the future after further lengthy study.

Of equal significance to expedition is the need for a simple and effective procedure for resolution of disputes. Accordingly, this bill directs the Commission to institute a simple complaint procedure to adjudicate pole attachment disputes when such disputes are brought to the Commission. The bill does not contemplate the inauguration of a full-scale, common carrier-type regulatory plan, whereby utility companies would have to file tariffs or seek other authority to set pole rental rates at a predetermined level. Essentially, the FCC's involvement would arise only where the parties to the dispute are unable to agree among themselves as to the appropriate rates, terms, and conditions. The Commission may, however, publish advisory guidelines to assist the parties in reaching a mutually satisfactory rental agreement.

S. 1547 as amended in committee exempts telephone and electric cooperatives and municipally owned utilities from FCC regulation. It is believed that these utilities are of a different type than investor-owned utilities in that they are closer to the grassroots level of government whose discretion in this matter the bill seeks to protect.

Because the pole rates charged by municipally owned and cooperative utilities are already subject to a decision-making process based upon constituent needs and interests, S. 1547 precludes substitution of the Commission's judgment for that of locally elected managers of municipal utilities and the managers of customer-owned cooperatives.

Mr. President, I wish to take this opportunity to clear up some other ques-

tions which have recently arisen as to the pole attachment provisions of S. 1547. First, it has been said that the bill would take away the inherent power of the States to regulate CATV pole attachments. This is decidedly not the case. No State which regulates pole attachments on the effective date of this bill would loose jurisdiction. For a State which is not so regulating upon the effective date, its unexercised powers would be displaced only to the extent necessary to give cable television systems in that State a forum to take their complaints regarding unjust or unreasonable pole attachment arrangements. Should that State at any time act to provide that forum, the FCC would drop out of the picture. Furthermore, this bill contains no restrictions nor imposes any guidelines as to the manner by which a State may regulate. The rate-setting formula in this bill applies only to the FCC, and for only a period of 5 years. It is not intended to be a precedent to the States, or the Commission for that matter, after its 5-year life has expired. Thus, the inherent power of a State to regulate CATV pole attachments in a manner of its own choosing is preserved. There is consequently no need to create a "window" or delay period before the FCC may act.

Second, questions have arisen regarding the Federal ratesetting formula contained in the bill. It has been said that this formula would require a cable television system to pay a proportional share of the pole's costs attributable only to the usable space on the pole, and not a proportional share of the costs of the entire pole. Some ambiguity did exist on this point in the language of the bill as introduced. However, the Commerce Committee amendment makes abundantly clear that cable will pay a share of the costs of the entire pole. For example, on a typical pole 35 feet in length there are 11 feet of usable space. CATV usually occupies 1 foot of these 11 feet of usable space. Cable's share of the total capital costs and operating expenses would be one-eleventh of those total costs for all 35 feet, not one eleventh of the costs attributable to the 11 feet of usable space, and not one thirty-fifth of the costs of the pole. There should be no confusion on this point; the language of the bill as amended by the committee is unmistakable. The committee's report reiterates this clearly defined cost allocation.

Another question relating to the bill's Federal ratesetting formula has to do with a purported conflict between the language of the bill and language in the committee's report. It is said that the report errs in suggesting that pole rates can be based on "future" as opposed to "embedded" costs, since section 224(d)(1) of the bill refers to "actual capital costs".

It is said that the terms "future capital costs" and "actual capital costs" are mutually exclusive. However, this purported inconsistency is based upon a misapprehension of the pertinent discussion of the formula in the committee's report. As the report makes clear, it is not the purpose of this bill to require the FCC "to establish a separate system of accounting to determine operating expenses and capital costs attributable to poles, or to reexamine on its own initiative, the reasonableness of the cost methodology made by the utilities and sanctioned by State or local regulatory agencies." Thus, if a utility employs a cost methodology incorporating future as opposed to embedded costs, and that particular methodology is sanctioned by a regulatory body, then there is not need for the Commission to embark upon its own accounting system. It may simply consider the sanctioned use of future or replacement cost methodology in its own deliberations in a particular pole attachment complaint proceeding. There is no need to foreclose the Commission from accepting a replacement cost approach in a particular situation where that approach has the approval of a State public utility commission in analogous contexts. The report of the committee merely recognizes that establishment of pole attachment rates using a longer term "future" costs or "replacement costs" methodology is fraught with uncertainty, and will probably give rise to debate as to its reasonableness. Nevertheless, the committee recognizes that in some limited situations determination of rates based upon future as opposed to embedded costs of pole space may be entirely appropriate. Not wishing to foreclose the Commission from accepting any particular costing methodology, the committee merely seeks to permit the Commission to consider each case on its own merits and according to its own facts.

One further point deserves comment. The report of the committee (No. 95–580) (page 15) appears to suggest that as a jurisdictional requirement for FCC pole attachment authority a cable television facility must already be attached to a utility pole. While it is true, as the report explains that this bill does not grant a CATV system a right of access to the poles of a utility company, it is not necessary in all situations that a cable system be physically attached on a utility pole for FCC jurisdiction to arise. Thus, where an electric power company contracts with a cable company for the latters initial leasing of space on an electrict utility pole, FCC jurisdiction arises upon execution of the contract, regardless of the fact that at the moment the CATV system has not yet attached its facilities to the utility company's poles. Thus, following the reasoning of the report, if, the contract between the electric power company and the CATV company makes provision of communications space for attachment of cable TV facilities, a communications nexus is established sufficient to justify, in a jurisdictional sense, the potential involvement of the Commission. While the bill would not require a power company to dedicate a portion of its pole plant to communications use, if it voluntarily chooses to do so by contracting with a CATV company, it has submitted itself to FCC jurisdiction in this area.

Mr. President, I ask unanimous consent that the committee amendments be considered and adopted en bloc.

The PRESIDING OFFICER. Without objection, the committee amendments are considered and agreed to en bloc.

UP AMENDMENT NO. 1169

Mr. HOLLINGS. Mr. President, I send to the desk a technical amendment on behalf of myself and Senator MAGNUSON.

The PRESIDING OFFICER. The clerk will state the technical amendment offered by the Senator.

The legislative clerk read as follows:

The Senator from South Carolina (Mr. HOLLINGS) proposes certain technical amendments, unprinted amendment numbered 1169.

The amendment is as follows:

On page 10, strike out lines 13 through 16 and insert in lieu thereof the following:

"(2) Each State which regulates the rates, terms and conditions for pole attachments shall certify to the Commission that—

"(A) it regulates such rates, terms and conditions; and

"(B) in so regulating such rates, terms and conditions, the State has the authority to consider and does consider the interests of the subscribers of cable television services, as well as the interests of the consumers of the utility services.

Mr. HOLLINGS. Mr. President, the amendment which I offer today would express more clearly the intent of the bill to assure that pole attachment regulation by the States be conducted in a just fashion, and that due consideration be given by the States to the interests of all parties involved in pole attachment disputes. My amendment would make explicit what is now implicit in S. 1547—a State choosing to preempt Federal pole attachment regulation must certify to the FCC that it has the authority to consider and considers the interests of both utility and cable television customers. All State public utility commissions, of course, regulate utilities under a mandate to serve the interests of the consumers of utility services—the customers of electric power and telephone companies. However, in most States cable television is not regulated as a public utility service. Consequently, State or local regulatory bodies in many cases may not feel that their regulatory duties encompass the interests of the consumers of cable television services—in each case the State will have to determine for itself whether existing statutory or other legal authority is sufficiently broad to permit the regulatory body to act in behalf of CATV as well as utility customers.

Since pole attachment disputes involve cable television as well as utility companies, and ultimately their customers, it is only fair that State or local regulatory forums which will consider pole attachment disputes consider the interests of all parties to a dispute; any forum which undertakes to adjudicate these disputes must consider the interests of the public represented on both sides of the dispute.

My amendment would require any State wishing to recapture its authority to regulate in this area to represent to the FCC that its regulation of pole attachments will be based upon even-handed consideration of the interests of both utility and cable television custom-

ers. I believe that this amendment expresses the intent of the Commerce Committee that pole attachment regulation, whether conducted at the Federal or State or local level, be carried out in a fair and reasonable manner.

However, I must emphasize that it is not the intent of my amendment to authorize the Federal Communications Commission to pass upon the regulatory program of any State. Any state certification to the FCC which complies with the two simple requirements of my proposal—subsection (c)(2) (A) and (B)—will have the effect of automatically foreclosing further Commission pole attachment authority within that State—(of course, there will be a need for cooperation between the FCC and State or local regulatory bodies during the transition from Federal to local jurisdiction.) The FCC will not be called upon to look behind the certification to determine whether in fact the statements made are accurate.

Any discrepancy between the representations made in the certification and actual circumstances should be resolved at the State level. I ask unanimous consent that the technical amendment be agreed to.

Mr. President, I ask for adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from South Carolina.

The amendment was agreed to.

UP AMENDMENT NO. 1170

Mr. HOLLINGS. Mr. President, I send to the desk a technical amendment, No. 2, on behalf of the distinguished Senator from Hawaii (Mr. INOUYE), and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from South Carolina (Mr. HOLLINGS), for Mr. Inouye, proposes certain technical amendments, unprinted amendment No. 1170.

The amendment is as follows:

On page 11, strike line 8 and insert in lieu thereof the following:

SEC. 6. Section 222(a)(10) of the Communications Act of 1934 (47 U.S.C. 222(a)(10)) is amended by striking out ", except Hawaii".

SEC. 7. Section 222 of the Communications Act of 1934 (47 U.S.C. 222), as amended, is further amended by adding at the end thereof the following new subsection:

"(g)(1) The authority of any carrier to provide any service or operate any facilities which it is authorized to provide or operate on the date of enactment of this subsection shall not be altered solely by the inclusion of Hawaii within the definition of 'Continental United States', nor shall such inclusion restrict or impair any carrier's eligibility after the date of enactment of this subsection for new or additional authority.

(2) Whenever, upon a complaint or upon its own initiative, and after opportunity for a hearing, the Commission finds that any charge, classification, regulation, or practice relating to intercarrier arrangements of any carrier serving Hawaii is or will be unjust, unreasonable, discriminatory, or not in the public interest, the Commission shall determine and prescribe what charge, classification, regulation, or practice, or such other remedy as is or will be just, reasonable, nondiscriminatory and in the public interest to be thereafter followed.".

SEC. 8. The amendments made by this Act shall take * * *.

Mr. INOUYE. Mr. President, this amendment is intended to remove the anomalous designation of the State of Hawaii as an international point under section 222 of the Communications Act of 1934. It would do this by amending section 222(a)(10) to include Hawaii within the definition of "Continental United States." It thus would remove the applicability of the international/domestic dichotomy to the Hawaiian market and would foster competition among all carriers serving that market. My amendment would further amend section 222 by adding a new subsection, which would provide that carriers currently serving the Hawaiian market may continue to do so. Additionally, it would provide for the entry of additional carriers and the offering of new or additional services to the Hawaiian market, subject to the approval of the Federal Communications Commission.

Mr. President, my amendment is identical to S. 1866 which passed the Senate unanimously last August.

Before the Senate passed S. 1866, extensive hearings were held on the issue by the Senate Committee on Commerce, Science, and Transportation.

Nearly all witnesses, including representatives from the State of Hawaii, the Federal Communications Commission, the IRC's, the Office of Telecommunications Policy, and Hawaiian business and consumer groups testified in favor of extending to Hawaii telecommunications services comparable to those available in the continental United States.

S. 1866 is currently pending before the House Communications Subcommittee. In response to my inquiries, the chairman of that subcommittee has said he has no problem with S. 1866, but inasmuch as he believes section 222 of the Communications Act should be repealed in its entirety, he prefers to consider S. 1866 in that overall context at a later, unspecified date. Meanwhile, Mr. President, the consumers in Hawaii and those on the mainland wishing to communicate with Hawaii suffer.

This situation is especially exasperating for those who wish to communicate between Hawaii and the mainland because the House could pass S. 1866, without jeopardizing its consideration of legislation to repeal section 222. In other words, the one does not preclude the other.

I therefore urge the Senate to once again in the form of my amendment pass the necessary legislation to treat Hawaii equally with her 49 sister States.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. HOLLINGS. Mr. President, I ask that the Senate proceed to third reading of S. 1547, as amended.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for third reading, was read the third time, and passed.

Mr. HOLLINGS. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HOLLINGS. Mr. President, I ask unanimous consent that the Committee on Commerce, Science, and Transportation be discharged from further consideration of H.R. 7442 and that the Senate proceed to its immediate consideration, and that the text of S. 1547 as amended be substituted for the text of H.R. 7442.

The PRESIDING OFFICER. Without objection, it is so ordered.

Without objection, the passage of S. 1547 will be vitiated.

The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 7442) was read the third time and passed.

Mr. HOLLINGS. Mr. President, I move to reconsider the vote by which H.R. 7442 was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HOLLINGS. Mr. President, I ask unanimous consent that further consideration of S. 1547 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HOLLINGS. I thank the distinguished majority leader and the distinguished minority leader for their consideration.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene tomorrow at 9:30 a.m.

After the two leaders or their designees have been recognized under the standing order, Mr. LEAHY will be recognized for not to exceed 15 minutes, following which there will be a period for the transaction of routine morning business, with a limitation of statements therein of 2 minutes each, and such period to culminate at 10 a.m.

At 10 a.m., the Senate, under the previous order, will proceed to the consideration of the amendment involving the disagreement between the two Houses on the supplemental appropriations bill. There is a time limitation on that amendment and motions in relation to the same of not to exceed 5 hours, with the final vote to occur not later than 3 p.m. tomorrow. So Senators may expect a rollcall vote or rollcall votes on tomorrow.

RECESS UNTIL 9:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance

with the order previously entered, that the Senate stand in recess until 9:30 a.m. tomorrow.

The motion was agreed to; and at 4:22 p.m. the Senate recessed until tomorrow, February 1, 1978, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate January 31, 1978:

NATIONAL COUNCIL ON THE ARTS

The following-named persons to be members of the National Council on the Arts for the terms indicated:

For the remainder of the term expiring September 3, 1982:

Theodore Bikel, of Connecticut, vice Hal C. Davis, deceased.

For a term of 6 years expiring January 26, 1984:

Maureen Dees, of Alabama, vice Mrs. David K. Wilson, term expired.

Jacob Lawrence, of Washington, vice Richard F. Brown, term expired.

IN THE ARMY

The followir y-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Marion Collier Ross, [redacted], U.S. Army.

HOUSE OF REPRESENTATIVES—*Tuesday, January 31, 1978*

The House met at 12 o'clock noon.

The Reverend H. Bailey Stone, Jr., pastor, First Baptist Church, Bryan, Tex., offered the following prayer:

Our Father, in this day of awesome challenge, we sense the tremendous pressure placed squarely on the shoulders of these who debate issues so vital to the national and international well-being of our great Nation. Decisions made here can well affect for good or for ill the future generations of Americans.

Responsibility such as this demands selflessness. Father, thank you for making your wisdom available. Please rest our minds and wills in your hands. In this day of challenge may we heed the admonition of the great Moses, "Be strong and of a good courage; fear not, neither be afraid of them, for the Lord your God, He it is who goes with you; He will not fail you nor forsake you."

In Jesus' name. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 666. An act to allow Federal employment preference to certain employees of the Bureau of Indian Affairs, and to certain employees of the Indian Health Service, who are not entitled to the benefits of, or who have been adversely affected by the application of, certain Federal laws allowing employment preference to Indians, and for other purposes.

The message also announced that the Vice President, pursuant to Public Law 92–484, appointed Mr. STEVENSON to be a member, on the part of the Senate, of the Technology Assessment Board, vice Mr. Humphrey, deceased.

And that the Vice President, pursuant to Public Law 86–42, appointed, Mr. SPARKMAN, Mr. GRAVEL, Mr. LEAHY, Mr. SASSER, Mr. DURKIN, Mr. CURTIS, Mr. GRIFFIN, and Mr. STEVENS to attend, on the part of the Senate, the Canada-United States Interparliamentary Conference, to be held in New Orleans, La., February 9–13, 1978.

And that the Vice President, pursuant to Public Law 95–45, appointed Mr. SPARKMAN (chairman), Mr. RIBICOFF, Mr. BAYH, Mr. NELSON, and Mr. STAFFORD as members, on the part of the Senate, to the Interparliamentary Union spring meeting, to be held in Lisbon, Portugal, March 27–31, 1978.

PRESIDENT SHOULD EXERCISE LEADERSHIP IN DEALING WITH COAL STRIKE

(Mr. DEVINE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DEVINE. Mr. Speaker, the State of Ohio continues to be in an emergency situation because of the recent blizzard. I recall the President earlier talking about seeking alternative sources of energy, and Ohio responded and converted to coal in many instances. This emergency has been compounded because we cannot get coal due to the strike of the United Mine Workers. I looked with great sorrow on the President's press conference yesterday, wherein he said that he did not intend at this time to invoke the provisions of the Taft-Hartley law as it relates to this coal strike.

Mr. Speaker, we need leadership in the White House, not timidity. It seems to me that the President should exercise leadership and not be afraid of how his actions might offend the United Mine Workers. The welfare of the people of Ohio and surrounding States facing shortages of coal and electricity should take preference over what appears to be the President's preoccupation with labor votes. Many rank-and-file coal miners want to go back to work and the President should do his duty and invoke the provisions of Taft-Hartley.

INTRODUCTION OF LEGISLATION ESTABLISHING PERMANENT OFFICE OF SPECIAL PROSECUTOR

(Mr. COCHRAN of Mississippi asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COCHRAN of Mississippi. Mr. Speaker, I take this opportunity to advise the Members of the House that my friend and colleague, the gentleman from California (Mr. KETCHUM), and I are introducing legislation to establish and make permanent the Office of Special and Independent Prosecutor.

I think that the events of the last several days have indicated to us quite clearly that there is a growing suspicion throughout the country that there should be an investigation into the circumstances surrounding the dismissal of David Marston, and that in fact the entire procedure for selecting and dismissing U.S. attorneys needs the careful scrutiny of this body. We do not know but what the conclusions that have been reached were tainted with political and not just legal considerations.

Whenever Members or public officials are involved, Mr. Speaker, in possible wrongdoing, we think that in order to insure that there is a fair and impartial and enthusiastic investigation and prosecution of such persons, an independent prosecutor is necessary. I would like to invite all Members to look carefully at the legislation and join with us in the sponsorship of this needed change.

ESTABLISHMENT OF INDEPENDENT PROSECUTOR SEEN AS NECESSARY FOR PROPER INVESTIGATIONS

(Mr. KETCHUM asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KETCHUM. Mr. Speaker, as indicated by my friend and colleague, the gentleman from Mississippi, THAD COCHRAN, we shall today introduce legislation establishing a special prosecutor.

One might ask why. Is this just something for the press?

I would say no. Last week we read with interest headlines in the Washington Post which said, "Justice Department Clears Carter and Bell." We read a few weeks before that: "Justice Department States Only Nonincumbents May Be Indicted in the Korean Affair."

It seems to me, Mr. Speaker, that it is time we establish an independent prosecutor so that those who are accused may be assured of a proper investigation and either cleared or indicted. The American public expects no less. They do not trust us now; they read the papers.

Mr. Speaker, this is so reminiscent of Watergate that it is disgusting. I think it is time that we establish an independent Office of Special Prosecutor to handle these cases and to handle them in the best interests of the people of the United States.

ANNOUNCEMENT OF DEATH OF FORMER CONGRESSMAN, HON. WILLIAM T. MURPHY

(Mr. ROSTENKOWSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. Speaker, it is with regret that I inform the House of the death of a former colleague, the Honorable William T. Murphy. Our friend, Bill Murphy, who served in the House from the 86th through the 91st Congresses, passed away yesterday in Chicago at the age of 79.

An outstanding Member of Congress, Bill Murphy served as the alderman from Chicago's 17th ward for almost 25 years before his election to this House. Many people were unaware that besides being an attorney for 50 years, Bill was also a licensed professional engineer and a registered land surveyor. He served with distinction as a member of the Chicago Planning Commission from 1947 to 1959.

I am sure that many of my fellow Members of the class of the 86th Congress remember the dedication and the expertise that Bill brought to his service on the Foreign Affairs Committee, where he served as chairman of the Asian and Pacific Affairs Subcommittee.

Bill was an extremely interesting man whose interests were varied and not restricted to the legislative process. He certainly knew more about geography and ancient history than any man I have ever known. He was also one of the warmest men that I have ever known. It was good just to be around him.

Bill is survived by his two sons, William T. Murphy, Jr., of Washington, D.C., and Dr. John P. Murphy of Bethesda, Md., and by his daughter, Mrs. William Blyth of La Grange, Ill. He is presently being waked at the Sheehy Funeral Home at 107th and Crawford Streets in Chicago. The funeral services will be at 11:30 a.m. on Thursday at St. Christina's Church, 111th and Homas Streets, Chicago, Ill.

Mr. Speaker, I expect that at some time in the near future, our colleague, the gentleman from Illinois, MORGAN MURPHY, will take a special order so that we may commemorate the life, contributions and public service of our friend, Bill Murphy.

PROVIDING FOR STRIKING OF NATIONAL MEDAL IN COMMEMORATION OF BICENTENNIALS OF HISTORIC EVENTS AND PERSONALITIES FROM 1777 TO 1789

Mr. BARNARD. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the joint resolution (H.J. Res. 386) to provide for the striking of a national medal to be issued annually in commemoration of the bicentennials of outstanding historic events and personalities from 1777 to 1789, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the joint resolution.

The Clerk read the Senate amendments, as follows:

Page 4, lines 2 and 3, strike out "less than one medal each year for thirteen years" and insert "more than 104,000 medals".

Page 4, line 6, strike out "thirteen".

Page 4, line 10, strike out "1989" and insert "1978".

Page 4, line 10, strike out all after "1989." down to and including "Congress." in line 14.

Page 4, line 15, strike out "thirteen".

Page 4, line 21, after "expenses" insert ", plus a surcharge equal to 25 per centum of such cost of manufacture. Such surcharge shall be deposited in the Treasury as miscellaneous receipts".

Page 4 line 21, strike out all after "expenses." down to and including "Mint." in line 24.

Page 5, lines 2 and 3, strike out "and announcement of the medals."

Amend the title so as to read: "Joint resolution to provide for the striking of a national medal to commemorate the bicentennial of an outstanding historic event or personality during 1977.".

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

Mr. LEACH. Mr. Speaker, I reserve the right to object.

Mr. BARNARD. Mr. Speaker, will the gentleman yield?

Mr. LEACH. I yield to the gentleman from Georgia.

Mr. BARNARD. Mr. Speaker, the chairman of the Coinage Subcommitee sponsored this resolution for the U.S. Capitol Historical Society last year, and it was passed by the House last year.

The resolution authorizes the U.S. Mint to strike and furnish to the U.S. Capitol Historical Society national medals commemorating historic events that occurred during the Revolutionary era.

All costs would be reimbursed by the society, and there would, therefore, be no expense to the Government.

Joining in the sponsorship of the resolution is the ranking Republican member of the Subcommittee on Historic Preservation and Coinage, Mr. LEACH. They were joined by Mr. WRIGHT, the Democratic leader, and Mr. RHODES, the Republican leader, and by Mr. CONABLE and Mr. PICKLE, who are members of the board of the U.S. Capitol Historical Society. The chairperson of the Joint Committee on the Arrangements for the Bicentennial, Mrs. BOGGS, also joined us in sponsoring this resolution. The joint committee, of course, ceased to exist at the end of the 94th Congress.

The departmental report, sent to the House last year, indicated that the administration had no objection to this bill, although the Director of the Mint did later object before the Senate Banking Committee to one provision involving the use of a mailing list. As a result, an amendment striking this provision was offered and was passed by the Senate.

While other amendments passed by the Senate may not have been desired by the leadership of the U.S. Capitol Historical Society, I have been advised by the society's president, the Honorable Fred Schwengle, a distinguished former Member of the House, that he favors our acceptance of the amendments at this time.

The resolution in the House was earlier unanimously favorably reported by both the Subcommittee on Historic Preservation and Coinage as well as the Committee on Banking, Housing, and Urban Affairs.

Mr. Speaker, I urge the adoption of House Joint Resolution 386, as amended.

Mr. LEACH. Further reserving the right to object, Mr. Speaker, the minority strongly supports this joint resolution.

Under the direction of the Honorable Fred Schwengle, the Capitol Historical Society has done an outstanding job; for the time being this resolution adequately meets their needs.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore (Mr. WRIGHT). Is there objection to the request of the gentleman from Georgia?

There was no objection.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. BARNARD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks on the legislation just considered.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Georgia?

There was no objection.

IMPROVED CARGO AIR SERVICE

Mr. ANDERSON of California. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 9851) to amend the Federal Aviation Act of 1958 to improve cargo air service.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That section 418(a) of the Federal Aviation Act of 1958 is amended by renumbering paragraph (3) and any reference thereto as paragraph (4) and by adding immediately after paragraph (2) the following new paragraph:

"(3) Any citizen of the United States who has a valid certificate issued under section 401(d)(3) of this title and who provided supplemental air transportation carrying only cargo at any time during the period from January 1, 1977, through the date of enactment of this section may, during the forty-five day period which begins on the date of enactment of this paragraph, submit an application to the Board for a certificate under this section to provide all-cargo air service. Such application shall contain such information and be in such form as the Board shall by regulation require.".

SEC. 2. Section 418(b)(1)(A) of the Federal Aviation Act of 1958 is amended by deleting "or (2)" and by inserting in lieu thereof ", (2), or (3)".

SEC. 3. Section 418(b)(1)(B) of the Federal Aviation Act of 1958 is amended by deleting "(3)" and inserting in lieu thereof "(4)".

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. ANDERSON) and the gentleman from Kentucky (Mr. SNYDER) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from California (Mr. ANDERSON).

GENERAL LEAVE

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of this legislation.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California (Mr. ANDERSON)?

There was no objection.

Mr. ANDERSON of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 9851 makes one limited change in Public Law 95–163 which we passed last session to establish a program of regulatory reform of air cargo service. H.R. 9851 modifies the cargo deregulation program to permit supplemental air carriers to participate in the program immediately rather than requiring these carriers to wait 1 year.

The early participation of supplementals in the new program for air cargo will improve service to the shipping public. Supplemental carriers have been pioneers in the development of all-cargo equipment and have a substantial cargo life capability which they can use to provide scheduled all-cargo service under the new program. Exclusion of the supplementals from the first stage of the program could have an adverse economic impact on these carriers since they would be subject to new competition from scheduled carriers, but would not have the opportunity to compete by instituting new scheduled all-cargo service. H.R. 9851 resolves these problems by permitting supplementals to participate in the first stage of the cargo program.

Mr. Speaker, I urge my colleagues to pass this needed legislation.

Mr. SNYDER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I fully concur with the remarks of the gentleman from California (Mr. ANDERSON) in support of the pending bill, H.R. 9851. This legislation simply corrects a flaw in the air cargo deregulation provisions of H.R. 6010—the omnibus aviation bill which was signed into law by the President on November 9, 1977 (Public Law 95–163).

As I stated during our conference committee deliberations on H.R. 6010, and again on the floor during consideration of the conference report, the cargo deregulation language in the bill—Senate language, I might add—precluded supplemental (charter) air carriers which provide all-cargo service from applying immediately for new all-cargo certificates. Instead, they were required to wait until 365 days after the legislation was signed—until November 9, 1978—to submit their applications.

The conferees recognized that this exclusion would work to the disadvantage of the supplementals, because other all-cargo air carriers would have a substantial head start in establishing service in lucrative markets. In fact, the chairman of the conference, Senator HOWARD W. CANNON, agreed with me that our intent was to apply the cargo deregulation provisions to all categories of all-cargo air carriers—and he went on to state that "it was probably inadvertent on my part" that the supplementals were not included. Because inclusion of the supplementals would have gone beyond the scope of the conference—due to the fact that there was no House provision on cargo deregulation—the conferees decided to go with the Senate language—and remedy the problem involving the supplementals at a later date.

The bill before us today, H.R. 9851, accomplishes this result. It places the all-cargo supplemental air carriers on the same footing as all other all-cargo carriers in terms of their eligibility for new all-cargo certificates—although it is true that they will be penalized to some degree because the Civil Aeronautics Board already has issued 54 new all-cargo certificates under the authority provided in Public Law 95–163.

Mr. Speaker, I urge my colleagues to support H.R. 9851. Equity and fair play dictate that we eliminate the present disparity in the law—and it is essential that we have prompt action. If passed by the House today, we have every reason to expect that the Senate will follow suit without delay.

Thank you, Mr. Speaker.

Mr. DICKINSON. Mr. Speaker, will the gentleman yield?

Mr. SNYDER. I am happy to yield to my distinguished colleague, the gentleman from Alabama (Mr. DICKINSON) such time as he may consume.

Mr. DICKINSON. Mr. Speaker, I rise in support of H.R. 9851, the purpose of which is to improve cargo air service.

The legislation introduced by the gentleman from California and others is of great interest to the citizens of Alabama. Being off the mainstream of most trunk carrier service routes, the cities of Alabama have for the most part not received the air freight and mail service enjoyed by others. The rapidly growing industrial centers in Alabama require healthy all-cargo service patterns in order to provide the product distribution capabilities necessary to compete in both domestic and world markets.

The supplemental carriers, many of which presently fly scheduled all-cargo service domestically for the Department of Defense, have the fleets of all-cargo aircraft to greatly improve this short to medium haul lift. Additionally, as was mentioned, it was the initial congressional intent to test the deregulation theories, particularly that of free entry, on the air cargo industry. Without the presence of the supplementals, the free entry provision would only receive token attention. The 401(d)(1) carriers who presently qualify for the grandfather provision of H.R. 6010 basically operate all-cargo aircraft suited primarily to long-haul high density markets. Their economic ability to enter the short and medium haul markets are either limited or nonexistent. The other group of carriers qualifying under the grandfather provision operate small air taxi type equipment, not suitable for larger shipments or the majority of air cargo containers presently in use today.

Mr. Speaker, if the deregulated air cargo environment is to receive a true test, it is imperative that H.R. 9851 be passed without delay. Therefore, I urge that the Members of the House support it.

Mr. SNYDER. Mr. Speaker, I have no further requests for time, and I reserve the balance of my time.

Mr. ANDERSON of California. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Oregon (Mr. AUCOIN).

Mr. AUCOIN. Mr. Speaker, I rise in support of H.R. 9851 which will return equality to air cargo service.

Last year legislation was passed deregulating air cargo service and grandfathering certificate rights to a large group of airlines—many more than had actually been in the cargo business, at least to any significant degree. But that legislation excluded one small, but significant group—supplemental airlines or airlines that operate charter service.

This situation has been described as an oversight by our honorable colleague in the other body, Senator CANNON, the chairman of the committee with jurisdiction over the matter. This view is shared by Chairman JOHNSON and Chairman ANDERSON, which is why late in the closing days of the last session they brought this bill forward for a floor vote. Because of the lateness in the session, the bill was brought up by unanimous consent. But even though the bill was described as correcting an oversight, there was an objection and the bill was forced to languish until this year.

The result of this has been to unfairly place supplemental airlines at a competitive disadvantage. Since passage of the legislation I referred to last year, the Civil Aeronautics Board has granted all-cargo grandfather certificates to 53 airlines. Action is pending on another 18.

It is my understanding that many of these airlines are commuter carriers which had operated only minimal cargo service with small aircraft. It also is my understanding that the law passed last year gave vast new potential authority to an airline the size of Pan American which previously never enjoyed any domestic route authority.

I do not regard this as necessarily bad. Quite the contrary. The purpose of deregulation is to allow the marketplace to shape competition, to give the consuming public more choices.

But I think it is contrary to the spirit of deregulation, not to mention competitive fair play, to deny the same treatment to the historically active supplemental airlines who have been left behind.

The reason for my interest in this matter is because one of the supplemental airlines affected has its corporate headquarters in McMinnville, Oreg., in

my district. I make no bones about it that I am concerned about what this unequal footing will do to this employer's ability to continue to operate profitably.

This company, Evergreen International Airlines operates 15 airplanes and is buying 5 more. It has a total capital investment in this aircraft of more than $17 million and another $3.2 million is devoted to annual leases. The portion of the company involved in the charter airline service totals 220 employees. The company's total payroll is 787 people.

The company has two primary service contracts that engages its fleet of planes. It flies a cargo transport service between Air Force bases and it provides overnight cargo delivery between major and intermediate destinations for a cargo company, which incidentally serves a host of small American cities.

Evergreen flies good size all-cargo planes, including two DC-8's, three DC-9's, five Convair 580's and a C-46. It is buying three Lockheed Electras and two other planes.

So what is Evergreen's problems? It is simple.

Because it is regulated—while its competitors are not—Evergreen is required to sell its cargo space on any given plane to a single customer. It cannot take on two or a combination of customers to fill the plane to capacity. It is one customer or nothing.

It does not take an economist to figure out the competitive disadvantage of that position when a competitor is able to make whatever kind of a deal he can with customers. It gives competitors the opportunity to serve medium and small shippers and, quite possibly, to make a good offer to larger shippers.

That is exactly Evergreen's fear.

Under present law, Evergreen and other supplemental airlines may apply to the CAB for an all-cargo certificate after 1 year. After lengthy review, they probably would get the certificate. But in the meantime, their competition would be able to erode their traditional routes and raid their markets.

I do not question the wisdom of the legislation passed last year, only the wisdom of helping one competitor and hurting another. I do not say this was intentional. But the fact is it happened. And I say it should be corrected. This bill makes that correction. I urge my colleagues to support it.

Mr. ANDERSON of California. Mr. Speaker, I thank the gentleman from Oregon (Mr. AuCoin) for the contribution he has made.

Mr. HARSHA. Mr. Speaker, throughout 1977, committees in both Houses of Congress devoted considerable time and attention to legislation which would substantially deregulate the air transportation industry. The adoption of meaningful deregulation legislation, however, has been delayed due to the many questions which have been raised as to whether free market entry would create destructive overcapacity on some routes and reduced service on others, and whether greater pricing freedom would damage the shaky financial condition of some of our major scheduled passenger carriers. It finally was decided that the air cargo industry—severely underdeveloped from the beginning—could be used to test the highly controversial issues of a total deregulation bill—without running the risk of derogating our existing scheduled passenger service.

In the fall of 1977, the Senate added an amendment to the omnibus aviation bill (H.R. 6010) which provided for deregulation of the air cargo industry. The language, however, as my colleagues have noted, precluded the immediate certification of supplemental carriers—thereby creating not only a competitive disadvantage for them, but also failing to accomplish the stated purpose of the bill.

Prior to the enactment of H.R. 6010 into law—in fact during the conference on H.R. 6010—some of my colleagues on the conference committee pointed out the error, but, due to the legislative situation, the necessary changes could not then be incorporated in the bill. In order to remedy the problem, and with the full concurrence of the Senate conferees and the able and willing assistance of the gentlemen from California (Messrs. JOHNSON and ANDERSON), H.R. 9851 was developed and promptly reported by both the Aviation Subcommittee and the full Committee on Public Works and Transportation.

Mr. Speaker, enactment of H.R. 9851 is a matter of simple justice. It will provide for inclusion of our supplemental air carriers in the all-cargo deregulation program—along with the other all-cargo carriers already covered by Public Law 95-163. The supplementals operate the majority of the large, modern all-cargo aircraft in our civil fleet. Several have been true pioneers in aviation development over the years. It is simply wrong to exclude them—and I urge my colleagues to support the pending bill.

Thank you, Mr. Speaker.

Mr. JOHNSON of California. Mr. Speaker, I rise in support of H.R. 9851.

The bill will permit supplemental air carriers, who have pioneered in the development of air charters of cargo, to begin providing scheduled cargo service for domestic shippers.

In recent years the all-cargo service provided by scheduled airlines has declined substantially.

The cargo deregulation bill, Public Law 95-163, which was passed last session, will help remedy the situation by giving the scheduled airlines freedom to adjust their service and rates to the demands of the marketplace. H.R. 9851 will allow the supplemental air carriers, who have been leaders in meeting the needs of the traveling and shipping public, to begin providing scheduled all-cargo service.

The new service which supplementals will provide should be of great value to shippers of cargo by air.

Mr. Speaker, I urge my colleagues to support this legislation.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. ANDERSON) that the House suspend the rules and pass the bill H.R. 9851.

The question was taken.

Mr. ASHBROOK. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 403, nays 0, answered "present" 1, not voting 28, as follows:

Dent	Martin	Wydler
Diggs	Mollohan	

The Clerk announced the following pairs:

Mr. Bingham with Mr. McDonald.
Mrs. Burke of California with Mr. Wydler.
Mr. Lehman with Mr. Dornan.
Mr. Hightower with Mr. Skubitz.
Mr. Le Fante with Mr. Moorhead of California.
Mr. Jones of Tennessee with Mr. Roncalio.
Mr. Rangel with Mr. Ruppe.
Mr. John L. Burton with Mr. Teague.
Mr. Brown of California with Mr. Martin.
Mr. Dent with Mr. Mollohan.
Mr. Diggs with Mr. Moss.
Mr. Alexander with Mr Guyer.
Mr. Dellums with Mr. Kostmayer.

Mr. ERTEL and Mr. WEAVER changed their vote from "nay" to "yea."

So (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

OUTER CONTINENTAL SHELF LANDS ACT AMENDMENTS OF 1977

Mr. MURPHY of New York. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 1614) to establish a policy for the management of oil and natural gas in the Outer Continental Shelf; to protect the marine and coastal environment; to amend the Outer Continental Shelf Lands Act; and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 1614, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Thursday, January 26, 1978, title I was under consideration.

Are there any amendments to title I? If not, the Clerk will designate the next title of the bill.

The Clerk read as follows:

TITLE II—AMENDMENTS TO THE OUTER CONTINENTAL SHELF LANDS ACT

DEFINITIONS

SEC. 201. (a) Paragraph (c) of section 2 of the Outer Continental Shelf Lands Act (43 U.S.C. 1331(c)) is amended to read as follows:

"(c) The term 'lease' means any form of authorization which is issued under section 8 or maintained under section 6 of this Act and which authorizes exploration, development, or production (or a combination thereof as provided in section 8(b)(4) of this Act) of (1) deposits of oil, gas, or other minerals, or (2) geothermal steam;".

(b) Such section is further amended—

(1) in subsection (d), by striking out the period and inserting in lieu thereof a semicolon; and

(2) by adding at the end thereof the following new paragraphs:

"(e) The term 'coastal zone' means the coastal water (including the lands therein and thereunder) and the adjacent shorelands (including the waters therein and thereunder), strongly influenced by each other and in proximity to the shorelines of the several coastal States, and includes islands, transition and intertidal areas, salt marshes, wetlands, and beaches, which zone extends seaward to the outer limit of the United States territorial sea and extends inland from the shorelines to the extent necessary to control shorelands, the uses of which have a direct and significant impact on the coastal waters, and the inward boundaries of which may be identified by the several coastal States, pursuant to the authority of section 305(b)(1) of the Coastal Zone Management Act of 1972 (16 U.S.C. 1454(b)(1));

"(f) The term 'affected State' means, with respect to any program, plan, lease sale, or other activity proposed, conducted, or approved pursuant to the provisions of this Act, any State—

"(1) the laws of which are declared, pursuant to section 4(a)(2) of this Act, to be the law of the United States for the portion of the outer Continental Shelf on which such activity is, or is proposed to be, conducted;

"(2) which is or is proposed to be directly connected by transportation facilities to any artificial island, installation, or other device referred to in section 4(a)(1) of this Act;

"(3) which is receiving, or in accordance with the proposed activity will receive, oil for processing, refining, or transshipment which was extracted from the outer Continental Shelf and transported directly to such State by means of vessels or by a combination of means including vessels;

"(4) which is designated by the Secretary as a State in which there is a substantial probability of significant impact on or damage to the coastal, marine, or human environment, or a State in which there will be significant changes in the social, governmental, or economic infrastructure, resulting from the exploration, development, and production of oil and gas anywhere on the outer Continental Shelf; or

"(5) in which the Secretary finds that because of such activity there is, or will be, a significant risk of serious damage, due to factors such as prevailing winds and currents, to the marine or coastal environment in the event of any oilspill, blowout, or release of oil or gas from vessels, pipelines, or other transshipment facilities;

"(g) The term 'marine environment' means the physical, atmospheric, and biological components, conditions, and factors which interactively determine the productivity, state, condition, and quality of the marine ecosystem, including the waters of the high seas, the contiguous zone, transitional and intertidal areas, salt marshes, and wetlands within the coastal zone and on the outer Continental Shelf;

"(h) The term 'coastal environment' means the physical, atmospheric, and biological components, conditions, and factors which interactively determine the productivity, state, condition, and quality of the terrestrial ecosystem from the shoreline inward to the boundaries of the coastal zone;

"(i) The term 'human environment' means the physical, esthetic, social, and economic components, conditions, and factors which interactively determine the state, condition, and quality of living conditions, recreation, air and water, employment, and health of those affected, directly or indirectly, by activities occurring on the outer Continental Shelf;

"(j) The term 'Governor' means the Governor of a State, or the person or entity designated by, or pursuant to, State law to exercise the powers granted to such Governor pursuant to this Act;

"(k) The term 'exploration' means the process of searching for oil, natural gas, or other minerals, or geothermal steam, including (1) geophysical surveys where magnetic, gravity, seismic, or other systems are used to detect or imply the presence of such resources, and (2) any drilling, whether on or off known geological strucures, including the drilling of a well in which a discovery of oil or natural gas in paying quantities is made, the drilling of any additional delineation well after such discovery which is needed to delineate any reservoir and to enable the lessee to determine whether to proceed with development and production;

"(l) The term 'development' means those activities which take place following discovery of oil, natural gas, or other minerals, or geothermal steam, in paying quantities, including geophysical activity, drilling, platform construction, pipeline routing, and operation of all on-shore support facilities, and which are for the purpose of ultimately producing the resources discovered;

"(m) The term 'production' means those activities which take place after the successful completion of any means for the removal of resources, including such removal, field operations, transfer of oil, natural gas, or other minerals, or geothermal steam, to shore,

operation monitoring, maintenance, and work-over drilling;

"(n) The term 'antitrust law' means—

"(1) the Sherman Act (15 U.S.C. 1 et seq.);

"(2) the Clayton Act (15 U.S.C. 12 et seq.);

"(3) the Federal Trade Commission Act (15 U.S.C. 41 et seq.);

"(4) the Wilson Tariff Act (15 U.S.C. 8 et seq.); or

"(5) the Act of June 19, 1936, chapter 592 (15 U.S.C. 13, 13a, 13b, and 21a);

"(o) The term 'fair market value' means the value of any oil, gas, or other mineral, or geothermal steam (1) computed at a unit price equivalent to the average unit price at which such mineral or geothermal steam was sold pursuant to a lease during the period for which any royalty or net profit share is accrued or reserved to the United States pursuant to such lease, or (2) if there were no such sales, or if the Secretary finds that there were an insufficient number of such sales to equitably determine such value, computed at the average unit price at which such mineral or geothermal steam was sold pursuant to other leases in the same region of the outer Continental Shelf during such period, or (3) if there were no sales of such mineral or geothermal steam from such region during such period, or if the Secretary finds that there are an insufficient number of such sales to equitably determine such value, at an appropriate price determined by the Secretary;

"(p) The term 'major Federal action' means any action or proposal by the Secretary which is subject to the provisions of section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)); and

"(q) The term 'frontier area' means any area where there has been no development of oil and gas prior to October 1, 1975, and includes the outer Continental Shelf off Southern California, including the Santa Barbara Channel.".

NATIONAL POLICY FOR THE OUTER CONTINENTAL SHELF

SEC. 202. Section 3 of the Outer Continental Shelf Lands Act (43 U.S.C. 1332) is amended to read as follows:

"SEC. 3. NATIONAL POLICY FOR THE OUTER CONTINENTAL SHELF.—It is hereby declared to be the policy of the United States that—

"(1) the subsoil and seabed of the outer Continental Shelf appertain to the United States and are subject to its jurisdiction, control, and power of disposition as provided in this Act;

"(2) this Act shall be construed in such a manner that the character of the waters above the outer Continental Shelf as high seas and the right to navigation and fishing therein shall not be affected;

"(3) the outer Continental Shelf is a vital national resource reserve held by the Federal Government for the public, which should be made available for orderly development, subject to environmental safeguards, in a manner which is consistent with the maintenance of competition and other national needs;

"(4) since exploration, development, and production of the mineral resources and geothermal steam of the outer Continental Shelf will have significant impacts on coastal and noncoastal areas of the coastal States, and on other affected States, and, in recognition of the national interest in the effective management of the marine, coastal, and human environments—

"(A) such States and their affected local governments may require assistance in protecting their coastal zones and other affected areas from any temporary or permanent adverse effects of such impacts; and

"(B) such States, and through such States, affected local governments, are entitled to an opportunity to participate, to the extent consistent with the national interest, in the policy and planning decisions made by the Federal Government relating to exploration for, and development and production of, mineral resources and geothermal steam of the outer Continental Shelf;

"(5) the rights and responsibilities of all States and, where appropriate, local governments to preserve and protect their marine, human, and coastal environments through such means as regulation of land, air, and water uses, of safety, and of related development and activity should be considered and recognized; and

"(6) operations on the outer Continental Shelf should be conducted in a safe manner by well-trained personnel using technology, precautions, and techniques sufficient to prevent or minimize the likelihood of blowouts, loss of well control, fires, spillages, physical obstruction to other users of the waters or subsoil and seabed, or other occurrences which may cause damage to the environment or to property, or endanger life or health.".

LAWS APPLICABLE TO THE OUTER CONTINENTAL SHELF

SEC. 203. (a) Section 4(a) of the Outer Continental Shelf Lands Act (43 U.S.C. 1333(a)) is amended—

(1) in paragraph (1), by striking out "and fixed structures" and inserting in lieu thereof ", and all installations and other devices permanently or temporarily attached to the seabed,";

(2) in paragraph (1), by striking out "removing, and transporting resources therefrom" and inserting in lieu thereof "or producing resources therefrom, or any such installation or other device (other than a ship or vessel) for the purpose of transporting such resources"; and

(3) in paragraph (2), by striking out "artificial islands and fixed structures erected thereon" and inserting in lieu thereof "those artificial islands, installations, and other devices referred to in paragraph (1) of this subsection".

(b) Section 4(d) of such Act is amended to read as follows:

"(d) For the purposes the National Labor Relations Act, as amended, any unfair labor practice, as defined in such Act, occurring upon any artificial island, installation, or other device referred to in subsection (a) of this section shall be deemed to have occurred within the judicial district of the State, the laws of which apply to such artificial island, installation, or other device pursuant to such subsection, except that until the President determines the areas within which such State laws are applicable, the judicial district shall be that of the State nearest the place of location of such artificial island, installation, or other device.".

(c) Section 4 of such Act is amended—

(1) in paragraph (1) of subsection (e), by striking out "the islands and structures referred to in subsection (a)", and inserting in lieu thereof "the artificial islands, installations, and other devices referred to in subsection (a)";

(2) in subsection (f), by striking out "artificial islands and fixed structures located on the outer Continental Shelf" and inserting in lieu thereof "the artificial islands, installations, and other devices referred to in subsection (a)"; and

(3) in subsection (g), by striking out "the artificial islands and fixed structures referred to in subsection (a)" and inserting in lieu thereof "the artificial islands, installations, and other devices referred to in subsection (a)".

(d) Section 4(e)(1) of such Act is amended by striking out "head" and inserting in lieu thereof "Secretary".

(e) Section 4(e)(2) of such Act is amended to read as follows:

"(2) The Secretary of the Department in which the Coast Guard is operating may mark for the protection of navigation any artificial island, installation, or other device referred to in subsection (a) whenever the owner has failed suitably to mark such island, installation, or other device in accordance with regulations issued under this Act, and the owner shall pay the cost of such marking.".

(f) Section 4(e) of such Act is amended by adding at the end thereof the following new paragraph:

"(3)(A) Any answer or operator of a vessel which is not a vessel of the United States shall, prior to conducting any activity pursuant to this Act or in support of any activity pursuant to this Act within the fishery conservation zone or within fifty miles of any artificial island, installation, or other device referred to in subsection (a) of this section, enter into an agreement pursuant to this paragraph with the Secretary of the Department in which the Coast Guard is operating. Subject to the provisions of subparagraph (B) of this paragraph, such agreement shall provide that such vessel, while engaged in the conduct or support of such activities, shall be subject, in the same manner and to the same extent as a vessel of the United States, to the jurisdiction of such Secretary with respect to the laws of the United States relating to the operation, design, construction, and equipment of vessels, the training of the crews of vessels, and the control of discharges from vessels.

"(B) An agreement entered into between the owner or operator of a vessel and the Secretary of the Department in which the Coast Guard is operating pursuant to subparagraph (A) of this paragraph shall provide that such vessel shall not be subject to the jurisdiction of such Secretary with respect to laws relating to vessel design, construction, equipment, and similar matters—

"(i) if such vessel is engaged in making an emergency call (as defined by such Secretary) at any artificial island, installation, or other device referred to in subsection (a) of this section; or

"(ii) if such vessel is in compliance with standards relating to vessel design, construction, equipment, and similar matters imposed by the country in which such vessel is registered, and such standards are substantially comparable to the standards imposed by such Secretary.

"(C) As used in this paragraph—

"(i) the term 'vessel of the United States' means any vessel, whether or not self-propelled, which is documented under the laws of the United States or registered under the laws of any State;

"(ii) the term 'support of any activity' includes the transportation of resources from any artificial island, installation, or other devices referred to in subsection (a) of this section; and

"(iii) the term 'fishery conservation zone' means the zone described in section 101 of the Fishery Conservation and Management Act of 1976 (16 U.S.C. 1811).".

(g) Section 4 of such Act is further amended by striking out subsection (b) and relettering subsections (c), (d), (e), (f), and (g) as subsections (b), (c), (d), (e), and (f) respectively.

OUTER CONTINENTAL SHELF EXPLORATION AND DEVELOPMENT ADMINISTRATION

SEC. 204. Section 5 of the Outer Continental Shelf Lands Act (43 U.S.C. 1334) is amended to read as follows:

"SEC. 5. ADMINISTRATION OF LEASING OF THE OUTER CONTINENTAL SHELF.—(a) The Secretary shall administer the provisions of this Act relating to the leasing in the outer Continental Shelf and shall prescribe or retain such regulations as necessary to carry out such provisions. The Secretary may at any time prescribe and amend such rules and regulations as he determines to be necessary and proper in order to provide for the prevention of waste and conservation of the

natural resources of the outer Continental Shelf, and the protection of correlative rights therein. Except as provided in this subsection, such regulations shall, as of the date of their promulgation, apply to all operations conducted under any lease issued or maintained under the provisions of this Act and shall be in furtherance of the policies of this Act. No regulation promulgated under this Act affecting operations commenced on an existing lease before the effective date of such regulation shall impose any additional requirements which would result in undue delays in the exploration, development, or production of resources unless the Secretary makes a finding that such regulation is necessary to prevent serious or irreparable harm or damage to health, life, property, any mineral deposits or geothermal steam resources, or to the marine, coastal, or human environment. The finding shall be final and shall not be reviewable unless arbitrary or capricious. In the enforcement of safety, environmental, and conservation laws and regulations, the Secretary shall cooperate with the relevant departments and agencies of the Federal Government and of the affected States. In the formulation and promulgation of regulations, the Secretary shall request and give due consideration to the views of the Attorney General and the Federal Trade Commission with respect to matters which may affect competition. The regulations prescribed by the Secretary under this subsection shall include, but not be limited to, provisions—

"(1) for the suspension or temporary prohibition of any operation or activity, including production, pursuant to any lease or permit (A) at the request of a lessee, in the national interest, to facilitate proper development of a lease, or to allow for the unavailability of transportation facilities, or (B) if there is a threat of serious, irreparable, or immediate harm or damage to life (including fish and other aquatic life), to property, to any mineral deposits or geothermal steam resources (in areas leased or not leased), or to the marine, coastal, or human environment, and for the extension of any permit or lease affected by such suspension or prohibition by a period equivalent to the period of such suspension or prohibition, except that no permit or lease shall be so extended when such suspension or prohibition is the result of gross negligence or willful violation of such lease or permit, or of regulations issued concerning such lease or permit;

"(2) with respect to cancellation of any lease or permit—

"(A) that such cancellation may occur at any time, if the Secretary determines, after a hearing, that—

"(i) continued activity pursuant to such lease or permit would probably cause serious harm or damage to life (including fish and other aquatic life), to property, to any mineral deposits or geothermal steam resources (in areas leased or not leased), to the national security or defense, or to the marine, coastal, or human environments;

"(ii) the threat of harm or damage will not disappear or decrease to an acceptable extent within a reasonable period of time; and

"(iii) the advantages of cancellation outweigh the advantages of continuing such lease or permit in force;

"(B) that such cancellation shall—

"(i) not occur unless and until operations under such lease or permit have been under suspension or temporary prohibition by the Secretary (with due extension of any lease or permit term) for a total period of five years or for a lesser period, in the Secretary's discretion, upon request of the lessee or permittee;

"(ii) in the case of a lease issued after the date of the enactment of this paragraph (other than a lease cancelled for reasons of national security or defense), entitle the lessee to receive such compensation as he shows to the Secretary as being equal to the lesser of (I), the fair value of the cancelled rights as of the date of cancellation, taking account of both anticipated revenues from the lease and anticipated costs, including costs of compliance with all applicable regulations and operating orders, liability for cleanup costs or damages, or both, in the case of an oil spill, and all other costs reasonably anticipated on such lease, or (II) the excess, if any, over the lessee's revenues from the lease (plus interest thereon from the date of receipt to the date of reimbursement) of all consideration paid for the lease and all direct expenditures made by the lessee after the date of issuance of such lease and in connection with exploration or development, or both, pursuant to the lease (plus interest on such consideration and such expenditures from the date of payment to the date of reimbursement); and

"(iii) in the case of a lease issued before the date of the enactment of this paragraph, or a lease cancelled for reasons of national security or defense (whenever issued), entitle the lessee to receive fair value in accordance with subclause (I) of clause (ii) of this subparagraph;

"(3) for the assignment or relinquishment of a lease;

"(4) for unitization, pooling, and drilling agreements;

"(5) for the subsurface storage of oil and gas other than by the Federal Government;

"(6) for drilling or easements necessary for exploration, development, and production;

"(7) for the prompt and efficient exploration and development of a lease area;

"(8) for compliance with any standards established by a State pursuant to the Clean Air Act to the extent that activities authorized under this Act affect the air quality of such State; and

"(9) for the establishment of air quality standards for operations on the outer Continental Shelf under this Act.

"(b) The issuance and continuance in effect of any lease, or of any extension, renewal, or replacement of any lease, under the provisions of this Act shall be conditioned upon compliance with the regulations issued under this Act if the lease is issued under the provisions of section 8 hereof, or with the regulations issued under the provisions of section 6(b), clause (2), hereof, if the lease is maintained under the provisions of section 6 hereof.

"(c) Whenever the owner of a nonproducing lease fails to comply with any of the provisions of this Act, or of the lease, or of the regulations issued under this Act if the lease is issued under the provisions of section 8 hereof, or of the regulations issued under the provisions of section 6(b), clause (2), hereof, if the lease is maintained under the provisions of section 6 hereof, such lease may be canceled by the Secretary, subject to the right of judicial review as provided in this Act, if such default continues for the period of thirty days after mailing of notice by registered letter to the lease owner at his record post office address.

"(d) Whenever the owner of any producing lease fails to comply with any of the provisions of this Act, or of the lease, or of the regulations issued under this Act if the lease is issued under the provisions of section 8 hereof, or of the regulations issued under the provisions of section 6(b), clause (2), hereof, if the lease is maintained under the provisions of section 6 hereof, such lease may be forfeited and canceled by an appropriate proceeding in any United States district court having jurisdiction under the provisions of this Act.

"(e) Rights-of-way through the submerged lands of the outer Continental Shelf, whether or not such lands are included in a lease maintained or issued pursuant to this Act, may be granted by the Secretary for pipeline purposes for the transportation of oil, natural gas, sulfur, or other mineral, or geothermal steam, under such regulations and upon such conditions as may be prescribed by the Secretary, or where appropriate the Secretary of Transportation, including (as provided in section 21(b) of this Act) utilization of the best available and safest technology for pipeline burial, shrouding, and other procedures, and upon the express condition that such oil or gas pipelines shall transport or purchase without discrimination, oil or natural gas produced from such lands in the vicinity of the pipeline in such proportionate amounts as the Federal Power Commission, in the case of gas, and the Interstate Commerce Commission, in consultation with the Administrator of the Federal Energy Administration, in the case of oil, may, after a full hearing with due notice thereof to the interested parties, determine to be reasonable, taking into account, among other things, conservation and the prevention of waste. Failure to comply with the provisions of this section or the regulations and conditions prescribed under this section shall be ground for forfeiture of the grant in an appropriate judicial proceeding instituted by the United States in any district court of the United States having jurisdiction under the provisions of this Act.

"(f)(1) The lessee shall produce any oil or gas, or both, obtained pursuant to an approved development and production plan, at rates consistent with any rule or order issued by the President in accordance with any provision of law.

"(2) If no rule or order referred to in paragraph (1) has been issued, the lessee shall produce such oil or gas, or both, at rates consistent with any regulation promulgated by the Secretary which is to assure the maximum rate of production which may be sustained without loss of ultimate recovery of oil or gas, or both, under sound engineering and economic principles, and which is safe for the duration of the activity covered by the approved plan. The Secretary may permit the lessee to vary such rates if he finds that such variance is necessary.

"(g)(1) In administering the provisions of this Act, the Secretary shall coordinate the activities of any Federal department or agency having authority to issue any license, lease, or permit to engage in any activity related to the exploration, development, or production of oil or gas from the outer Continental Shelf for purposes of assuring that, to the maximum extent practicable, inconsistent or duplicative requirements are not imposed upon any applicant for, or holder of, any such license, lease, or permit.

"(2) The head of any Federal department or agency who takes any action which has a direct and significant effect on the outer Continental Shelf or its development shall promptly notify the Secretary of such action and the Secretary shall thereafter notify and consult with the Governor of any affected State and the Secretary may thereafter recommend such change or changes in such action as are considered appropriate.

"(h) After the date of enactment of this section, no holder of any oil and gas lease issued or maintained pursuant to this Act shall be permitted to flare natural gas from any well unless the Secretary finds that there is no practicable way to complete production of such gas, or that such flaring is necessary to alleviate a temporary emergency situation or to conduct testing or work-over operations.".

REVISION OF BIDDING AND LEASE ADMINISTRATION

SEC. 205. (a) Subsections (a) and (b) of section 8 of the Outer Continental Shelf Lands Act (43 U.S.C. 1337 (a) and (b)) are amended to read as follows:

"(a)(1) The Secretary is authorized to

grant to the highest responsible qualified bidder or bidders by competitive bidding, under regulations promulgated in advance, an oil and gas lease on submerged lands of the outer Continental Shelf which are not covered by leases meeting the requirements of subsection (a) of section 6 of this Act. The bidding shall be by sealed bid and, at the discretion of the Secretary, on the basis of—

"(A) cash bonus bid with a royalty at not less than 12½ per centum fixed by the Secretary in amount or value of the production saved, removed, or sold;

"(B) variable royalty bid based on a per centum of the production saved, removed, or sold, with a cash bonus as determined by the Secretary;

"(C) cash bonus bid with diminishing or sliding royalty based on such formulae as the Secretary shall determine as equitable to encourage continued production from the lease area as resources diminish, but not less than 12½ per centum at the beginning of the lease period in amount or value of the production saved, removed, or sold;

"(D) cash bonus bid with a fixed share of the net profits of not less than 30 per centum to be derived from the production of oil and gas from the lease area;

"(E) fixed cash bonus with the net profit share reserved as the bid variable;

"(F) cash bonus bid with a royalty at not less than 12½ per centum fixed by the Secretary in amount or value of the production saved, removed, or sold and a percentum share of net profits of not less than 30 per centum to be derived from the production of oil and gas from the lease area;

"(G) fixed cash bonus of not less than sixty-two dollars per hectare with a work commitment stated in a dollar amount as the bid variable;

"(H) a fixed royalty at not less than 12½ per centum in amount or value of the production saved, removed, or sold, or a fixed per centum share of net profits of not less than 30 per centum to be derived from the production of oil and gas from the lease area, with a work commitment stated in a dollar amount as the bid variable;

"(I) a fixed cash bonus of not less than sixty-two dollars per hectare, with a fixed royalty of not less than 12½ per centum in amount or value of the production saved, removed or sold, or a fixed per centum share of net profits of not less than 30 per centum to be derived from the production of oil and gas from the lease area with a work commitment stated in dollar amounts as the bid variable; or

"(J) any modification of bidding systems authorized in subparagraphs (A) through (I) of this paragraph and any other systems of bid variables, terms, and conditions which the Secretary determines to be useful to accomplish the purposes and policies of this section, including leasing systems in which exploration lessees share in the costs of exploration and the consideration received from sale of subsequent leases for development and production, notwithstanding any inconsistent provisions of sections 8(b)(4), 8(k), and 9 of this Act, except that any payment in connection with any bidding system authorized pursuant to this subparagraph shall not exceed amounts appropriated for that purpose by Congress.

"(2) The Secretary may, in his discretion, defer any part of the payment of the cash bonus, as authorized in paragraph (1) of this subsection, according to a schedule announced at the time of the announcement of the lease sale, but such payment shall be made in total no later than five years from the date of the lease sale.

"(3) The Secretary may, in order to promote increased production on the lease area, through direct, secondary, or tertiary recovery means, reduce or eliminate any royalty or net profit share set forth in the lease for such area.

"(4)(A) Before utilizing any bidding system authorized in subparagraphs (C) through (J) of paragraph (1), the Secretary shall establish such system in accordance with this paragraph.

"(B) The establishment by the Secretary of any bidding system pursuant to subparagraph (A) of this paragraph shall be by rule on the record after an opportunity for an agency hearing. Any modification by the Secretary of any such bidding system shall be by rule.

"(C) Not later than thirty days before the effective date of any rule prescribed under subparagraph (B) of this paragraph, the Secretary shall transmit such rule to Congress.

"(5)(A) The Secretary shall utilize the bidding alternatives from among those authorized by this subsection, in accordance with subparagraphs (B) and (C) of this paragraph so as to accomplish the purposes and policies of this Act, including (i) providing a fair return to the Federal Government, (ii) increasing competition, (iii) assuring competent and safe operations, (iv) avoiding undue speculation, (v) avoiding unnecessary delays in exploration, development, and production, (vi) discovering and recovering oil and gas, (vii) developing new oil and gas resources in an efficient and timely manner, and (viii) limiting administrative burdens on government and industry. In order to select a bid to accomplish these purposes and policies, the Secretary may, in his discretion, require each bidder to submit bids for any area of the outer Continental Shelf in accordance with more than one of the bidding alternatives set forth in paragraph (1) of this subsection.

"(B) During the five-year period commencing on the date of enactment of this subsection, the Secretary may, in order to obtain statistical information to determine which bidding alternatives will best accomplish the purposes and policies of this Act, require each bidder to submit bids for any area of the outer Continental Shelf in accordance with more than one of the bidding systems set forth in paragraph (1) of this subsection. For such statistical purposes, leases may be awarded using a bidding alternative selected at random or determined by the Secretary to be desirable for the acquisition of valid statistical data and otherwise consistent with the provisions of this Act.

"(C)(i) Except as provided in clause (ii), the bidding system authorized by subparagraph (A) of paragraph (1) of this subsection shall not be applied to more than 50 per centum of the total area offered for lease each year, during the five-year period beginning on the date of enactment of this subsection, in each region in a frontier area. The Secretary shall define such regions of the outer Continental Shelf. For purposes of this subparagraph, in calculating the total area offered for lease each year in accordance with the bidding system authorized by such paragraph (A), the Secretary shall not take into account any area offered for lease in accordance with such bidding system if the lease for such area is offered in accordance with terms set forth in subsection (b)(4)(B) of this section.

"(ii) If, during the first year following the date of enactment of this subsection, the Secretary finds that compliance with the limitation set forth in clause (i) would unduly delay development of the oil and gas resources of the outer Continental Shelf, he may exceed that limitation after he submits to the Senate and the House of Representatives a report stating his finding and the reasons therefor. If, in any other year following the date of enactment of this subsection, the Secretary finds that compliance with the limitation set forth in clause (i) would unduly delay efficient development of the oil and gas resources of the outer Continental Shelf, result in less than a fair return to the Federal Government, or result in a reduction of competition, he shall submit to the Senate and House of Representatives a report stating his specific findings and detailed reasons therefor. The Secretary may thereafter, for that year, exceed such limitations unless either the Senate or the House of Representatives passes a resolution of disapproval of the Secretary's finding within sixty days after receipt of such report (not including days when Congress is not in session).

"(iii) Clauses (iv) through (xi) of this subparagraph are enacted by Congress—

"(I) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such they are deemed a part of the Rules of each House, respectively, but they are applicable only with respect to the procedures to be followed in that House in the case of resolutions described by this subparagraph, and they supersede other Rules only to the extent that they are inconsistent therewith; and

"(II) with full recognition of the constitutional right of either House to change the Rules (so far as relating to the procedure of that House) at any time, in the same manner, and to the same extent as in the case of any other Rule of that House.

"(iv) A resolution disapproving a proposal of the Secretary shall immediately be referred to a committee (and all resolutions with respect to the same proposal shall be referred to the same committee) by the President of the Senate or the Speaker of the House of Representatives, as the case may be.

"(v) If the committee, to which has been referred any resolution disapproving a proposal of the Secretary has not reported the resolution at the end of ten calendar days after its referral, it shall be in order to move either to discharge the committee from further consideration of the resolution or to discharge the committee from further consideration of any other resolution with respect to the same proposal which has been referred to the committee.

"(vi) A motion to discharge may be made only by an individual favoring the resolution, shall be highly privileged (except that it may not be made after the committee has reported a resolution with respect to the same recommendation), and debate thereon shall be limited to not more than one hour, to be divided equally between those favoring and those opposing the resolution. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(vii) If the motion to discharge is agreed to, or disagreed to, the motion may not be renewed, nor may another motion to discharge the committee be made with respect to any other resolution with respect to the same proposal.

"(viii) When the committee has reported, or has been discharged from further consideration of, a resolution as provided, it shall be at any time thereafter in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion shall be highly privileged and shall not be debatable. An amendment to the motion shall not be in order, and it shall not be in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(ix) Debate, on the resolution is limited to not more than two hours, to be divided equally between those favoring and those opposing the resolution. A motion further to limit debate is not debatable. An amendment to, or motion to recommit, the resolution is not in order, and it is not in order to

move to reconsider the vote by which the resolution is agreed to or disagreed to.

"(x) Motions to postpone, made with respect to the discharge from committee, or the consideration of a resolution with respect to a proposal, and motions to proceed to the consideration of other business, shall be decided without debate.

"(xi) Appeals from the decisions of the Chair relating to the application of the Rules of the Senate or the House of Representatives, as the case may be, to the procedure relating to a resolution with respect to a request shall be decided without debate.

"(D) Within six months after the end of each fiscal year, the Secretary shall report to the Congress, as provided in section 15 of this Act, with respect to the use of the various bidding options provided for in this subsection. Such report shall include—

"(i) the schedule of all lease sales held during such year and the bidding system or systems utilized;

"(ii) the schedule of all lease sales to be held the following year and the bidding systems or systems to be utilized;

"(iii) the benefits and costs assoociated with conducting lease sales using the various bidding systems;

"(iv) if applicable, the reasons why a particular bidding system has not been or will not be utilized;

"(v) if applicable, the reasons why more than 50 per centum of the area leased in the past year, or to be offered for lease in the upcoming year, was or is to be leased under the bidding system authorized by subparagraph (A) of paragraph (1) of this subsection; and

"(vi) an analysis of the capability of each bidding system to accomplish the purposes and policies stated in subparagraph (A) of this paragraph.

"(6)(A) In any lease sale where the bidding system authorized by subparagraph (A) of paragraph (1) of this subsection and any one or more of the bidding systems authorized by subparagraphs (B) through (J) of paragraph (1) of this subsection are to be used, the Secretary shall publicly choose, by a random selection method, those tracts which are to be offered under the bidding system authorized by such subparagraph (A) and those which are to be offered under one or more of the bidding systems authorized by such subparagraphs (B) through (J).

"(B) The selection of tracts under this paragraph shall occur after receipt by the Secretary of public nominations of lease tracts to be included in a proposed lease sale, but before the initial announcement of the tracts selected for inclusion in such proposed lease sale.

"(C) Before selection of tracts for inclusion in the proposed lease sale the Secretary shall publish a notice in the Federal Register describing the random selection method to be used and shall, immediately after such selection, publish a notice in the Federal Register designating the lease tracts selected which are to be offered under the bidding system authorized by subparagraph (A) of paragraph (1) and the lease tracts selected which are to be offered under any one or more of the bidding systems authorized by subparagraphs (B) through (J) of paragraph (1).

"(D) The Secretary may exclude a tract from the use of a random selection technique under this paragraph if, after receipt by the Secretary of public nominations of lease tracts to be included in a proposed lease sale, the Secretary makes a finding that use of such technique would unduly delay or hinder exploration, development, and production of oil and gas, or prevent the receipt of fair return for the lease.

"(7) The Secretary may, by regulation, permit submission of bids made jointly by or on behalf of two or more persons for an oil and gas lease under this Act unless more than one of the joint bidders, directly or indirectly, controls or is chargeable worldwide with an average daily production of one million six hundred thousand barrels a day or more, or the equivalent, in crude oil, natural gas, and liquefied petroleum products.

"(b) An oil and gas lease issued pursuant to this section shall—

"(1) be for a tract consisting of a compact area not exceeding five thousand seven hundred and sixty acres, as the Secretary may determine, unless the Secretary finds that a larger area is necessary to comprise a reasonable economic production unit;

"(2) be for an initial period of—

"(A) five years; or

"(B) not to exceed ten years where the Secretary finds that such longer period is necessary to encourage exploration and development in areas of unusually deep water or unusually adverse weather conditions, and as long after such initial period as oil or gas may be produced from the area in paying quantities, or drilling or well reworking operations as approved by the Secretary are conducted thereon;

"(3) require the payment of amount or value as determined by one of the bidding systems set forth in subsection (a) of this section;

"(4)(A) entitle the lessee to explore, develop, and produce oil and gas resources contained within the lease area, conditioned upon due diligent requirements and the approval of the development and production plan required by this Act; or

"(B) entitle the lessee to explore, or develop and produce, the oil and gas resources within all or any part of the lease area, unless within sixty days after the date of the submission by the Secretary to the Congress of a proposal to award one or more leases in a specific lease sale in accordance with this subparagraph (not including days when Congress is not in session), the Senate and the House of Representatives pass a joint resolution disapproving such proposal, in accordance with the procedures described in clauses (iii) through (xi) of subsection (a)(5)(C) of this section;

"(5) provide for suspension or cancellation of the lease during the initial lease term or thereafter pursuant to section 5 of this Act;

"(6) contain such rental and other provisions as the Secretary may prescribe at the time of offering the area for lease; and

"(7) provide a requirement that the lessee offer 20 per centum of the crude oil, condensate, and natural gas liquids produced from such lease, at the market value and point of delivery applicable to Federal royalty oil, to small or independent refiners as defined in the Emergency Petroleum Allocation Act of 1973.".

(b) Section 8 of the Outer Continental Shelf Lands Act (43 U.S.C. 1337) is further amended by striking out subsection (j), by relettering subsection (c) through (i), and all references thereto, as subsections (h) through (n), respectively, and by inserting immediately after subsection (b) the following new subsections:

"(c) No lease may be issued if the Secretary finds that an applicant for a lease, or a lessee, is not meeting due diligence requirements on other leases. Innocent or nonnegligent parties to any joint lease which is cancelled due to the failure of one or more partners to exercise due diligence on other leases may seek damages for such loss from the responsible partner or partners.

"(d) No lease issued under this Act may be sold, exchanged, assigned, or otherwise transferred except with the approval of, and subject to renegotiation by, the Secretary. Prior to any such approval, the Secretary shall consult with and give due consideration to the views of the Attorney General and the Federal Trade Commission.

"(e) Nothing in this Act shall be deemed to convey to any person, association, corporation, or other business organization immunity from civil or criminal liability, or to create defenses to actions, under any antitrust law.

"(f)(1) At the time of soliciting nominations for the leasing of lands within three miles of the seaward boundary of any coastal State, the Secretary shall provide the Governor of any such State—

"(A) an identification and schedule of the areas and regions offered for leasing;

"(B) all information concerning the geographical, geological, and ecological characteristics of such regions;

"(C) an estimate of the oil and gas reserves in the areas proposed for leasing; and

"(D) an identification of any field, geological structure, or trap located within three miles of the seaward boundary of a coastal State.

"(2) After receipt of nominations for any area of the outer Continental Shelf within three miles of the seaward boundary of any coastal State, the Secretary shall inform the Governor of such coastal State of any such area which the Secretary believes should be given further consideration for leasing and which he concludes, in consultation with the Governor of such coastal State, may contain one or more oil or gas pools or fields underlying both the outer Continental Shelf and lands subject to the jurisdiction of such State. If, with respect to such area, the Secretary selects a tract or tracts which may contain one or more oil or gas pools or fields underlying both the outer Continental Shelf and submerged lands subject to the jurisdiction of such State, the Secretary shall offer the Governor of such coastal State the opportunity to enter into an agreement concerning the disposition of revenues which may be generated by a Federal lease within such area in order to permit their fair and equitable division between the State and Federal Government.

"(3) Within ninety days after the offer by the Secretary pursuant to paragraph (2) of this subsection, the Governor shall elect whether to enter into such agreement and shall notify the Secretary of his decision. If the Governor accepts the offer, the terms of any lease issued shall be consistent with the provisions of this Act, with applicable regulations, and, to the maximum extent practicable, with the applicable laws of the coastal State. If the Governor declines the offer, or if the parties cannot agree to terms concerning the disposition of revenues from such lease (by the time the Secretary determines to offer the area for lease), the Secretary may nevertheless proceed with the leasing of the area.

"(4) Notwithstanding any other provision of this Act, the Secretary shall deposit in a separate account in the Treasury of the United States all bonuses, royalties, and other revenues attributable to oil and gas pools underlying both the outer Continental Shelf and submerged lands subject to the jurisdiction of any coastal State until such time as the Secretary and the Governor of such coastal State agree on, or if the Secretary and the Governor of such coastal State cannot agree, as a district court of the United States determines, the fair and equitable disposition of such revenues and any interest which has accrued and the proper rate of payments to be deposited in the treasuries of the Federal Government and such coastal State.

"(g) Nothing contained in this section shall be construed to alter, limit, or modify any claim of any State to any jurisdiction over, or any right, title, or interest in, any submerged lands.".

(c) Section 8(j) of the Outer Continental Shelf Lands Act (43 U.S.C. 1337(j)), as relettered by subsection (b) of this section, is amended—

(1) by inserting "and leases of geothermal steam" immediately after "sulphur"; and

(2) by inserting "or geothermal steam" immediately after "such mineral".

OUTER CONTINENTAL SHELF OIL AND GAS EXPLORATION

SEC. 206. Section 11 of the Outer Continental Shelf Lands Act (43 U.S.C. 1340) is amended to read as follows:

"SEC. 11. OUTER CONTINENTAL SHELF OIL AND GAS EXPLORATION.—(a)(1) The Secretary or any other Federal department or agency, and any person whom the Secretary by permit or regulation may authorize, may conduct geological and geophysical explorations, including core and test drilling, in the outer Continental Shelf, which do not interfere with or endanger actual operations pursuant to any lease issued or maintained pursuant to this Act, and which are not unduly harmful to the marine environment.

"(2) The provisions of paragraph (1) of this subsection shall not apply to any person conducting explorations pursuant to an approved exploration plan on any area under lease to such person pursuant to the provisions of this Act.

"(b) Except as provided in subsection (f) of this section, beginning ninety days after the date of enactment of this subsection, no exploration pursuant to any oil and gas lease issued or maintained under this Act may be undertaken by the holder of such lease, except in accordance with the provisions of this section.

"(c)(1) Except as otherwise provided in this Act, prior to commencing exploration pursuant to any oil and gas lease issued or maintained under this Act, the holder thereof shall submit an exploration plan to the Secretary for approval. Such plan may apply to more than one lease held by a lessee in any one region of the outer Continental Shelf, or by a group of lessees acting under a unitization, pooling, or drilling agreement, and shall be approved by the Secretary if he finds that such plan is consistent with the provisions of this Act, regulations prescribed under this Act, and the provisions of such lease or leases. The Secretary shall require such modifications or remodifications of such plan as are necessary to achieve such consistency. The Secretary shall approve such plan, as submitted or modified, within thirty days of its submission or resubmission, except that if the Secretary determines that (A) any proposed activity under such plan would result in any condition which would permit him to suspend such activity pursuant to regulations prescribed under section 5(a)(1) of this Act, and (B) such proposed activity cannot be modified to avoid such condition, he may delay the approval of such plan.

"(2) An exploration plan submitted under this subsection shall include, in the degree of detail which the Secretary may by regulation require—

"(A) a schedule of anticipated exploration activities to be undertaken;

"(B) a description of equipment to be used for such activities;

"(C) the general location of each well to be drilled; and

"(D) such other information deemed pertinent by the Secretary.

"(3) The Secretary may, by regulation, require that such plan be accompanied by a general statement of anticipated onshore activity resulting from such exploration, the effects and impacts of such activity, and the development and production intentions, which shall be for planning purposes only and which shall not be binding on any party.

"(d) The Secretary may, by regulation, require any lessee operating under an approved exploration plan to obtain a permit prior to drilling any well in accordance with such plan.

"(e)(1) If a revision of an exploration plan approved under this subsection is submitted to the Secretary, the process to be used for the approval of such revision shall be the same as set forth in subsection (c) of this section.

"(2) Except as otherwise provided in this Act, all exploration activities pursuant to any lease shall be conducted in accordance with an approved exploration plan or an approved revision of such plan.

"(f)(1) Exploration activities pursuant to any lease on which a drilling permit had been issued prior to the date of enactment of this subsection shall be considered in compliance with this section, but the Secretary may require such activities to be described in an exploration plan, or require a revised exploration plan, and require any such plan to be accompanied by a general statement in accordance with subsection (c)(3) of this section.

"(2) In accordance with section 5(a) of this Act, the Secretary may require the submission of additional information or establish additional requirements on lessees conducting exploration activities pursuant to any lease issued prior to the date of enactment of this subsection.

"(g)(1) The Secretary may permit qualified applicants to conduct geological explorations, including core and test drilling, in those areas and subsurface geological structures of the outer Continental Shelf which the Secretary or the applicants believe contain significant hydrocarbon accumulations.

"(2) The Secretary shall, at least once during the two-year period beginning on the date of enactment of this subsection, offer persons wishing to conduct geological explorations pursuant to permits issued under paragraph (1) of this subsection an opportunity to apply for such permits.

"(3) The Secretary shall provide by regulation the length of time during which he will offer applicants the opportunity to obtain a permit pursuant to this subsection.

"(h) Any permit for geological explorations authorized by this section shall be issued only if the Secretary determines, in accordance with regulations issued by the Secretary, that—

"(1) the applicant for such permit is qualified;

"(2) the exploration will not interfere with or endanger operations under any lease issued or maintained pursuant to this Act; and

"(3) such exploration will not be unduly harmful to aquatic life in the area, result in pollution, create hazardous or unsafe conditions, unreasonably interfere with other uses of the area, or disturb any site, structure, or object of historical or archeological significance".

ANNUAL REPORT

SEC. 207. (a) Section 15 of the Outer Continental Shelf Lands Act (43 U.S.C. 1344) is amended to read as follows:

"SEC. 15. ANNUAL REPORT BY SECRETARY TO CONGRESS.—Within six months after the end of each fiscal year, the Secretary shall submit to the President of the Senate and the Speaker of the House of Representatives the following reports:

"(1) A report on the leasing and production program in the outer Continental Shelf during such fiscal year, which shall include—

"(A) a detailed accounting of all moneys received and expended;

"(B) a detailed accounting of all exploration, exploratory drilling, leasing, development, and production activities;

"(C) a summary of management, supervision, and enforcement activities;

"(D) a list of all shut-in and flaring wells; and

"(E) recommendations to the Congress (i) for improvements in management, safety, and amount of production from leasing and operations in the outer Continental Shelf, and (ii) for resolution of jurisdictional conflicts or ambiguities.

"(2) A report, prepared after consultation with the Attorney General, with recommendations for promoting competition in the leasing of outer Continental Shelf lands, which shall include any recommendations or findings by the Attorney General, any plans for implementing recommended administrative changes, and drafts of any proposed legislation, and which shall contain—

"(A) an evaluation of the competitive bidding systems permitted under the provisions of section 8 of this Act, and, if applicable, the reasons why a particular bidding system has not been utilized;

"(B) an evaluation of alternative bidding systems not permitted under section 8 of this Act, and why such system or systems should or should not be utilized;

"(C) an evaluation of the effectiveness of restrictions on joint bidding in promoting competition and, if applicable, any suggested administrative or legislative action on joint bidding;

"(D) an evaluation of present measures and a description of any additional measures to encourage entry of new competitors; and

"(E) an evaluation of present measures and a description of additional measures to insure an adequate supply of oil and gas to independent refiners and distributors.".

NEW SECTIONS OF THE OUTER CONTINENTAL SHELF LANDS ACT

SEC. 208. The Outer Continental Shelf Lands Act (43 U.S.C. 1331 et seq.) is amended by adding at the end thereof the following new sections:

"SEC. 18. OUTER CONTINENTAL SHELF LEASING PROGRAM.—(a) The Secretary, pursuant to procedures set forth in subsections (c) and (d), shall prepare, periodically revise, and maintain an oil and gas leasing program to implement the policies of this Act. The leasing program shall indicate as precisely as possible the size, timing, and location of leasing activity which he determines will best meet national energy needs for the five-year period following its approval or reapproval. Such leasing program shall be prepared and maintained in a manner consistent with the following principles:

"(1) Management of the outer Continental Shelf shall be conducted in a manner which considers economic, social, and environmental values of the renewable and nonrenewable resources contained in the outer Continental Shelf, and the potential impact of oil and gas exploration on other resource values of the outer Continental Shelf and the marine, coastal, and human environments.

"(2) Timing and location of exploration, development, and production of oil and gas among the oil- and gas-bearing physiographic regions of the outer Continental Shelf shall be based on a consideration of—

"(A) existing information concerning the geographical, geological, and ecological characteristics of such regions;

"(B) an equitable sharing of developmental benefits and environmental risks among the various regions;

"(C) the location of such regions with respect to, and the relative needs of, regional and national energy markets;

"(D) the location of such regions with respect to other uses of the sea and seabed, including fisheries, navigation, existing or proposed sealanes, potential sites of deepwater ports, and other anticipated uses of the resources and space of the outer Continental Shelf;

"(E) the interest of potential oil and gas producers in the development of oil and gas resources as indicated by exploration or nomination;

"(F) laws, goals, and policies of affected States which have been specifically identified by the Governors of such States as relevant matters for the Secretary's consideration;

"(G) programs promulgated by coastal States and approved pursuant to the Coastal

Zone Management Act of 1972 (16 U.S.C. 1451 et seq.);

"(H) whether the oil and gas producing industry will have sufficient resources, including equipment and capital, to bring about the exploration, development, and production of oil and gas in such regions in an expeditious manner;

"(I) the relative environmental sensitivity and marine productivity of different areas of the outer Continental Shelf; and

"(J) relevant baseline and predictive information for different areas of the outer Continental Shelf.

"(3) The Secretary shall select the timing and location of leasing, to the maximum extent practicable, so as to obtain a proper balance between the potential for environmental damage, the potential for the discovery of oil and gas, and the potential for adverse impact on the coastal zone.

"(4) Leasing activities shall be conducted to assure receipt of fair value for the lands leased and the rights conveyed by the Federal Government.

"(b) The leasing program shall include estimates of the appropriations and staff required to—

"(1) obtain resource information and any other information needed to prepare the leasing program required by this section;

"(2) analyze and interpret the exploratory data and any other information which may be compiled under the authority of this Act;

"(3) conduct environmental baseline studies and prepare any environmental impact statement required in accordance with this Act and with section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)); and

"(4) supervise operations conducted pursuant to each lease in the manner necessary to assure due diligence in the exploration and development of the lease area and compliance with the requirements of applicable law and regulations, and with the terms of the lease.

"(c)(1) During the preparation of any proposed leasing program under this section, the Attorney General and the Federal Trade Commission shall report to the Secretary with respect to the effect on competition of outer Continental Shelf exploration, development, and production. Such reports shall analyze competition and individual market shares within regional markets.

"(2) During the preparation of any proposed leasing program under this section, the Secretary shall invite and consider suggestions for such program from any interested Federal agency, from the Governor of any State which may become an affected State under such proposed program, and from the executive of any affected local government unit in such an affected State. The Secretary may also invite or consider suggestions from any other person.

"(3) After such preparation and at least sixty days prior to publication of a proposed leasing program in the Federal Register pursuant to paragraph (4) of this subsection, the Secretary shall transmit a copy of such proposed program to the Governor of each affected State for review and comment. The Governor shall solicit comments from the executives of local governments in his State affected by the proposed program. If any comment is received by the Secretary at least fifteen days prior to submission to the Congress pursuant to such paragraph (4) and includes a request for any modification of such proposed program, the Secretary shall reply in writing, granting or denying such request in whole or in part, or granting such request in such modified form as the Secretary considers appropriate, and stating his reasons therefor. All such correspondence between the Secretary and the Governor of any affected State, together with any additional information and data relating thereto, shall accompany such proposed program when it is submitted to the Congress.

"(4) Within nine months after the date of enactment of this section, the Secretary shall submit a proposed leasing program to the Congress, the Attorney General, the Federal Trade Commission, the Governors of affected States, and through the Governors, the executives of affected local governments, and shall publish such proposed program in the Federal Register.

"(d)(1) Within ninety days after the date of publication of a proposed leasing program, the Attorney General shall submit comments on the anticipated effects of such proposed program upon competition, and any State, local government, or other person may submit comments and recommendations as to any aspect of such proposed program.

"(2) At least sixty days prior to approving a proposed leasing program, the Secretary shall submit it to the President and the Congress, together with any comments received. Such submission shall indicate why any specific recommendation of the Attorney General or a State or a local government was not accepted.

"(3) After the leasing program has been approved by the Secretary, or after eighteen months following the date of enactment of this section, whichever first occurs, no lease shall be issued unless it is for an area included in the approved leasing program and unless it contains provisions consistent with the approved leasing program, except that leasing shall be permitted to continue until such program is approved and for so long thereafter as such program is under judicial or administrative review pursuant to the provisions of this Act.

"(e) The Secretary shall review the leasing program approved under this section at least once each year, and he may revise and reapprove such program, at any time, in the same manner as originally developed.

"(f) The Secretary shall, by regulation, establish procedures for—

"(1) receipt and consideration of nominations for any area to be offered for lease or to be excluded from leasing;

"(2) public notice of and participation in development of the leasing program;

"(3) review by State and local governments which may be impacted by the proposed leasing;

"(4) periodic consultation with State and local governments oil and gas lessees and permittees, and representatives of other individuals or organizations engaged in activity in or on the outer Continental Shelf, including those involved in fish and shellfish recovery, and recreational activities; and

"(5)(A) coordination of the program with the management program being developed by any State pursuant to section 305 of the Coastal Zone Management Act of 1972, and (B) assuring consistency, as provided by the Coastal Zone Management Act, with the program of any State which has been approved pursuant to section 306 of such Act, to the maximum extent practicable.

Such procedures shall be applicable to any revision or reapproval of the leasing program.

"(g) The Secretary may obtain from public sources, or purchase from private sources, any survey, data, report, or other information (including interpretations of such data, survey, report, or other information) which may be necessary to assist him in preparing any environmental impact statement and in making other evaluations required by this Act. Data of a classified nature provided to the Secretary under the provisions of this subsection shall remain confidential for such period of time as agreed to by the head of the department or agency from whom the information is requested. The Secretary shall maintain the confidentiality of all privileged data or information for such period of time as is provided for in this Act, established by regulation, or agreed to by the parties.

"(h) The heads of all Federal departments and agencies shall provide the Secretary with any nonprivileged information and may provide the Secretary with any privileged information he requests to assist him in preparing the leasing program. Privileged information provided to the Secretary under the provisions of this subsection shall remain confidential for such period of time as agreed to by the head of the department or agency from whom the information is requested. In addition, the Secretary shall utilize the existing capabilities and resources of such Federal departments and agencies by appropriate agreement.

"SEC. 19. COORDINATION AND CONSULTATION WITH AFFECTED STATES AND LOCAL GOVERNMENTS.—(a) Any Governor of any affected State or the executive of any affected local government in such State may submit recommendations to the Secretary regarding the size, timing, or location of a proposed lease sale or with respect to a proposed development and production plan.

"(b) Such recommendations shall be submitted within sixty days after notice of such proposed lease sale or ninety days after receipt of such development and production plan.

"(c) The Secretary shall accept recommendations of the Governor and may accept recommendations of the executive of any affected local government if he determines, after having provided the opportunity for full consultation, that they provide for a reasonable balance between the national interest and the well-being of the citizens of the affected State. For the purposes of this subsection, a determination of the national interest shall be based on the desirability of obtaining oil and gas supplies in a balanced manner and on the findings, purposes, and policies of this Act. The Secretary shall communicate to the Governor, in writing, the reasons for his determination to accept or reject such Governor's recommendations, or to implement any alternative means identified in consultation with the Governor to provide for a reasonable balance between the national interest and the well-being of the citizens of the affected State.

"(d) The Secretary's determination that recommendations are not consistent with the national interest shall be final and shall not, alone, be a basis for invalidation of a proposed lease sale or a proposed development and production plan in any suit or judicial review pursuant to section 23 of this Act, unless found to be arbitrary or capricious.

"(e) The Secretary is authorized to enter into cooperative agreements with affected States for purposes which are consistent with this Act and other applicable Federal law. Such agreements may include, but not be limited to, the sharing of information (in accordance with the provisions of section 26 of this Act), the joint utilization of available expertise, the facilitating of permitting procedures, joint planning and review, and the formation of joint surveillance and monitoring arrangements to carry out applicable Federal and State laws, regulations, and stipulations relevant to outer Continental Shelf operations both onshore and offshore.

"SEC. 20. BASELINE AND MONITORING STUDIES.—(a)(1) The Secretary shall conduct a study of any area or region included in any lease sale in order to establish baseline information concerning the status of the human, marine, and coastal environments of the outer Continental Shelf and the coastal areas which may be affected by oil and gas development in such area or region.

"(2) Each study required by paragraph (1) shall be commenced not later than six months after the date of enactment of this section with respect to any area or region where a lease sale has been held or scheduled before such date of enactment, and not later than six months prior to the holding of a lease sale with respect to any area or region where no lease sale has been held or scheduled before such date of enactment. The

Secretary may utilize information collected in any study prior to such date of enactment in conducting any such study.

"(3) In addition to developing baseline information, any study of an area or region, to the extent practicable, shall be designed to predict impacts on the marine biota which may result from chronic low level pollution or large spills associated with outer Continental Shelf production, from the introduction of drill cuttings and drilling muds in the area, and from the laying of pipe to serve the offshore production area, and the impacts of development offshore on the affected and coastal areas.

"(b) Subsequent to the leasing and developing of any area or region, the Secretary shall conduct such additional studies to establish baseline information as he deems necessary and shall monitor the human, marine, and coastal environments of such area or region in a manner designed to provide time-series and data trend information which can be used for comparison with any previously collected data for the purpose of identifying any significant changes in the quality and productivity of such environments, for establishing trends in the areas studied and monitored, and for designing experiments to identify the causes of such changes.

"(c) The Secretary shall, by regulation, establish procedures for carrying out his duties under this section, and shall plan and carry out such duties in full cooperation with affected States. To the extent that other Federal agencies have prepared environmental impact statements, are conducting studies, or are monitoring the affected human, marine, or coastal environment, the Secretary may utilize the information derived therefrom in lieu of directly conducting such activities. The Secretary may also utilize information obtained from any State or local government entity, or from any person, for the purposes of this section. For the purpose of carrying out his responsibilities under this section, the Secretary may by agreement utilize, with or without reimbursement, the services, personnel, or facilities of any Federal, State, or local government agency.

"(d) The Secretary shall consider available relevant baseline information in making decisions (including those relating to exploration plans, drilling permits, and development and production plans), in developing appropriate regulations and lease conditions, and in issuing operating orders.

"(e) As soon as practicable after the end of each fiscal year, the Secretary shall submit to the Congress and make available to the general public an assessment of the cumulative effect of activities conducted under this Act on the human, marine, and coastal environments.

"(f) In executing his responsibilities under this section, the Secretary shall, to the maximum extent practicable, enter into appropriate arrangements to utilize on a reimbursable basis the capabilities of the Department of Commerce. In carrying out such arrangements, the Secretary of Commerce is authorized to enter into contracts or grants with any person, organization, or entity with funds appropriated to the Secretary of the Interior pursuant to this Act.

"SEC. 21. SAFETY REGULATIONS.—(a) Upon the date of enactment of this section, the Secretary, the Secretary of Labor, and the Secretary of the Department in which the Coast Guard is operating shall, in consultation with each other and, as appropriate, with the heads of other Federal departments and agencies, promptly commence a joint study of the adequacy of existing safety regulations, and of the technology, equipment, and techniques available for the exploration, development, and production of the natural resources of the outer Continental Shelf. The results of this study shall be submitted to the President who shall submit a plan to Congress of his proposals to promote safety and health in the exploration, development, and production of the natural resources of the outer Continental Shelf.

"(b) In exercising their respective responsibilities for the artificial islands, installations, and other devices referred to in section 4(a)(1) of this Act, the Secretary, and the Secretary of the Department in which the Coast Guard is operating, shall require, on all new drilling and production operations and, wherever practicable, on existing operations, the use of the best available and safest technology which the Secretary determines to be economically achievable, wherever failure of equipment would have a significant effect on safety, health, or the environment, except where the Secretary determines that the incremental benefits are clearly insufficient to justify the incremental costs of utilizing such technology.

"(c)(1) Within sixty days after the date of enactment of this section, the Secretary of Labor shall promulgate interim regulations or standards pursuant to the Occupational Safety and Health Act of 1970 applying to diving activities in the waters above the outer Continental Shelf, and to other unregulated hazardous working conditions for which he, in consultation with the Secretary and the Secretary of the Department in which the Coast Guard is operating, determines such regulations or standards are necessary. Such regulations or standards may be modified from time to time as necessary, and shall remain in effect until final regulations or standards are promulgated.

"(2) Notwithstanding section 4(b)(1) of the Occupational Safety and Health Act of 1970, regulations for occupational safety and health shall be promulgated and enforced by the Department of Labor and the Department in which the Coast Guard is operating, in accordance with their respective statutory authority. The two Departments shall coordinate their activities in a manner which avoids duplication of effort and maximizes protection of employees.

"(d) Nothing in this section shall affect or duplicate any authority provided by law to the Secretary of Transportation to establish and enforce pipeline safety standards and regulations.

"(e)(1) In administering the provisions of this section, the Secretary shall consult and coordinate with the heads of other appropriate Federal departments and agencies for purposes of assuring that, to the maximum extent practicable, inconsistent or duplicative requirements are not imposed.

"(2) The Secretary shall make available to any interested person a compilation of all safety and other regulations which are prepared and promulgated by any Federal department or agency and applicable to activities on the outer Continental Shelf. Such compilation shall be revised and updated annually.

"SEC. 22. ENFORCEMENT.—(a) The applicable Federal officials shall strictly enforce safety and environmental regulations promulgated pursuant to this Act. Each Federal department and agency may by agreement utilize, with or without reimbursement, the services, personnel, or facilities of other Federal departments and agencies for the enforcement of their respective regulations.

"(b) It shall be the duty of any holder of a lease or permit under this Act to—

"(1) maintain all places of employment within such lease area or within the area covered by such permit in compliance with occupational safety and health standards and, in addition, free from recognized hazards to employees of the lease holder or permit holder or of any contractor or subcontractor operating within such lease area or within the area covered by such permit on the outer Continental Shelf;

"(2) maintain all operations within such lease area or within the area covered by such permit in compliance with regulations intended to protect persons, property, and the environment on the outer Continental Shelf; and

"(3) allow prompt access, at the site of any operation subject to safety regulations, to any inspector, and to provide such documents and records which are pertinent to occupational or public health, safety, or environmental protection, as may be requested.

"(c) The Secretary and the Secretary of the Department in which the Coast Guard is operating shall individually, or jointly if they so agree, promulgate regulations to provide for—

"(1) scheduled onsite inspection, at least once a year, of each facility on the outer Continental Shelf which is subject to any environmental or safety regulation promulgated pursuant to this Act, which inspection shall include all safety equipment designed to prevent or ameliorate blowouts, fires, spillages, or other major accidents; and

"(2) periodic onsite inspection, at least once a year, without advance notice to the operator of such facility to assure compliance with such environmental or safety regulations.

"(d)(1) The Secretary or the Secretary of the Department in which the Coast Guard is operating shall make an investigation and public report on each major fire and each major oil spillage occurring as a result of operations conducted pursuant to this Act, and may, in his discretion, make an investigation and report of lesser oil spillages. For purposes of this subsection, a major oil spillage is any spillage in one instance of more than two hundred barrels of oil over a period of thirty days. All holders of leases or permits issued or maintained under this Act shall cooperate with the appropriate Secretary in the course of any such investigation.

"(2) The Secretary or the Secretary of Labor shall make an investigation and public report on any death or serious injury occurring as a result of operations conducted pursuant to this Act, and may, in his discretion, make an investigation and report of any injury. For purposes of this subsection, a serious injury is one resulting in substantial impairment of any bodily unit or function. All holders of leases or permits issued or maintained under this Act shall cooperate with the appropriate Secretary in the course of any such investigation.

"(3) For purposes of carrying out their responsibilities under this section, the Secretary, the Secretary of Labor, and the Secretary of the Department in which the Coast Guard is operating may by agreement utilize, with or without reimbursement, the services, personnel, or facilities of any Federal department or agency.

"(e) The Secretary, or, in the case of occupational safety and health, the Secretary of Labor, shall consider any allegation from any person of the existence of a violation of a safety regulation issued under this Act. The respective Secretary shall answer such allegation no later than ninety days after receipt thereof, stating whether or not such alleged violation exists and if so, what action has been taken.

"(f) In any investigation conducted pursuant to this section, the Secretary, the Secretary of Labor, or the Secretary of the Department in which the Coast Guard is operating shall have power to summon witnesses and to require the production of books, papers, documents, and any other evidence. Attendance of witnesses or the production of books, papers, documents, or any other evidence shall be compelled by a similar process as in district courts of the United States. Such Secretary, or his designee, shall administer all necessary oaths to any witnesses summoned before such investigation.

"(g) The Secretary shall, after consultation with the Secretary of Labor and the Secretary of the Department in which the Coast Guard is operating, include in his annual report to Congress required by section 15 of this Act the number of violations of safety regulations reported or alleged, the investigations undertaken, the results of such investigations, and any administrative or judicial action taken as a result of such investigations.

"SEC. 23. CITIZEN SUITS, COURT JURISDICTION, AND JUDICIAL REVIEW.—(a)(1) Except as provided in this section, any person having a valid legal interest which is or may be adversely affected may commence a civil action on his own behalf to compel compliance with this Act against any person, including the United States, and any other government instrumentality or agency (to the extent permitted by the eleventh amendment to the Constitution) for any alleged violation of any provision of this Act or any regulation promulgated under this Act, or of the terms of any permit or lease issued by the Secretary under this Act.

"(2) Except as provided in paragraph (3) of this subsection, no action may be commence under subsection (a)(1) of this section—

"(A) prior to sixty days after the plaintiff has given notice of the alleged violation, in writing under oath, to the Secretary and any other appropriate Federal official, to the State in which the violation allegedly occurred or is occurring, and to any alleged violator; and

"(B) if the Secretary or his authorized representative, any other appropriate Federal official, or the Attorney General has commenced and is diligently prosecuting a civil action in a court of the United States or a State with respect to such matter, but in any such action any person having a legal interest which is or may be adversely affected or aggrieved may intervene as a matter or right.

"(3) An action may be brought under this subsection immediately after notification of the alleged violation in any case in which the alleged violation constitutes an imminent threat to the public health or safety or would immediately affect a legal interest of the plaintiff.

"(4) In any action commenced pursuant to this section, the Secretary, the Attorney General, or any other appropriate Federal official, if not a party, may intervene as a matter of right.

"(5) A court, in issuing any final order in any action brought pursuant to subsection (a)(1) or subsection (c) of this section, may award costs of litigation, including reasonable attorneys' and expert witness fees, to any party, whenever such court determines such award is appropriate. The court may, if a temporary restraining order or preliminary injunction is sought, require the filing of a bond or equivalent security in a sufficient amount to compensate for any loss or damage suffered, in accordance with the Federal Rules of Civil Procedure.

"(6) Except as provided in subsection (c) of this section, all suits challenging actions or decisions allegedly in violation of, or seeking enforcement of, the provisions of this Act, or any regulation promulgated under this Act, or the terms of any permit or lease issued by the Secretary under this Act, shall be undertaken in accordance with the procedures described in this subsection. Nothing in this section shall restrict any right which any person or class of persons may have under any other Act or common law to seek appropriate relief.

"(b) Except as provided in subsection (c) of this section, the district courts of the United States shall have jurisdiction of cases and controversies arising out of, or in connection with (1) any operation conducted on the outer Continental Shelf which involves exploration, development, or production of the natural resources of the subsoil and seabed of the outer Continental Shelf, or which involves rights to such natural resources, or (2) the cancellation, suspension, or termination of a lease or permit under this Act. Proceedings with respect to any such case or controversy may be instituted in the judicial district in which any defendant resides or may be found, or in the judicial district of the State nearest the place the cause of action arose.

"(c)(1) Any action of the Secretary to approve a leasing program pursuant to section 18 of this Act shall be subject to judicial review only in the United States Court of Appeals for the District of Columbia.

"(2) Any action of the Secretary to approve, require modification of, or disapprove any exploration plan or any development and production plan under this Act shall be subject to judicial review only in a United States court of appeals for a circuit in which an affected State is located.

"(3) The judicial review specified in paragraphs (1) and (2) of this subsection shall be available only to a person who (A) participated in the administrative proceedings related to the actions specified in such paragraphs, (B) is adversely affected or aggrieved by such action, (C) files a petition for review of the Secretary's action within sixty days after the date of such action, and (D) promptly transmits copies of the petition to the Secretary and the Attorney General.

"(4) Any action of the Secretary specified in paragraph (1) or (2) shall only be subject to review pursuant to the provisions of this subsection, and shall be specifically excluded from citizen suits which are permitted pursuant to subsection (a).

"(5) The Secretary shall file in the appropriate court the record of any public hearings required by this Act and any additional information upon which the Secretary based his decision, as required by section 2112 of title 28, United States Code. Specific objections to the action of the Secretary shall be considered by the court only if the issues upon which such objections are based have been submitted to the Secretary during the administrative proceedings related to the action involved.

"(6) The court of appeals conducting a proceeding pursuant to this subsection shall consider the matter under review solely on the record made before the Secretary. The findings of the Secretary, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify any order or decision or may remand the proceedings to the Secretary for such further action as it may direct.

"(7) Upon the filing of the record with the court pursuant to paragraph (5), the jurisdiction of the court shall be exclusive and its judgment shall be final, except that such judgment shall be subject to review by the Supreme Court of the United States upon writ of certiorari.

"SEC. 24. REMEDIES AND PENALTIES.—(a) At the request of the Secretary, the Attorney General or a United States attorney shall institute a civil action in the district court of the United States for the district in which the affected operation is located for a temporary restraining order, injunction, or other appropriate remedy to enforce any provision of this Act, any regulation or order issued under this Act, or any term of a lease, license, or permit issued pursuant to this Act.

"(b) If any person fails to comply with any provision of this Act, or any term of a lease, license, or permit issued pursuant to this Act, or any regulation or order issued under this Act, after notice of such failure and expiration of any reasonable period allowed for corrective action, such person shall be liable for a civil penalty of not more than $10,000 for each day of the continuance of such failure. The Secretary may assess, collect, and compromise any such penalty. No penalty shall be assessed until the person charged with a violation has been given an opportunity for a hearing.

"(c) Any person who knowingly and willfully (1) violates any provision of this Act, any term of a lease, license, or permit issued pursuant to this Act, or any regulation or order issued under the authority of this Act designed to protect health, safety, or the environment or conserve natural resources, (2) makes any false statement, representation, or certification in any application, record, report, or other document filed or required to be maintained under this Act, (3) falsifies, tampers with, or renders inaccurate any monitoring device or method of record required to be maintained under this Act, or (4) reveals any data or information required to be kept confidential by this Act shall, upon conviction, be punished by a fine of not more than $100,000, or by imprisonment for not more than ten years, or both. Each day that a violation under clause (1) of this subsection continues, or each day that any monitoring device or data recorder remains inoperative or inaccurate because of any activity described in clause (3) of this subsection, shall constitute a separate violation.

"(d) Whenever a corporation or other entity is subject to prosecution under subsection (c) of this section, any officer or agent of such corporation or entity who knowingly and willfully authorized, ordered, or carried out the proscribed activity shall be subject to the same fines or imprisonment, or both, as provided for under subsection (c) of this section.

"(e) The remedies and penalties prescribed in this section shall be concurrent and cumulative and the exercise of one shall not preclude the exercise of the others. Further, the remedies and penalties prescribed in this section shall be in addition to any other remedies and penalties afforded by any other law or regulation.

"SEC. 25. OIL AND GAS DEVELOPMENT AND PRODUCTION.—(a)(1) Prior to development and production pursuant to an oil and gas lease issued after the date of enactment of this section in a frontier area, or issued or maintained prior to such date of enactment with respect to which no oil or gas has been discovered in commercial quantities prior to such date of enactment, the lessee shall submit a development and production plan (hereinafter in this section referred to as a 'plan') to the Secretary, for approval pursuant to this section.

"(2) A plan shall be accompanied by a statement describing all facilities and operations, other than those on the outer Continental Shelf, proposed by the lessee and known by him (whether or not owned or operated by such lessee) which will be constructed or utilized in the development, production, transportation, processing, or refining of oil or gas from the lease area, including the location and site of such facilities and operations, the land, labor, material, and energy requirements associated with such facilities and operations, and all environmental and safety safeguards to be implemented.

"(3) Except for any privileged information (as such term is defined in regulations issued by the Secretary), the Secretary, within ten days after receipt of a plan and statement, shall (A) submit such plan and statement to the Governor of any affected State, and upon request, to the executive of any affected local government, and (B) make such plan and statement available to any other appropriate interstate regional entity and the public.

"(b) After the date of enactment of this section, no oil and gas lease may be issued pursuant to this Act in any frontier area, unless such lease requires that development

and production of reserves be carried out in accordance with a plan which complies with the requirements of this section.

"(c) A plan may apply to more than one oil and gas lease, and shall set forth, in the degree of detail established by regulations issued by the Secretary—

"(1) the specific work to be performed;

"(2) a description of all facilities and operations located on the outer Continental Shelf which are proposed by the lessee or known by him (whether or not owned or operated by such lessee) to be directly related to the proposed development, including the location and size of such facilities and operations, and the land, labor, material, and energy requirements associated with such facilities and operations;

"(3) the environmental safeguards to be implemented on the outer Continental Shelf and how such safeguards are to be implemented;

"(4) all safety standards to be met and how such standards are to be met;

"(5) an expected rate of development and production and a time schedule for performance; and

"(6) such other relevant information as the Secretary may by regulation require.

"(d)(1) The Secretary shall, at least once prior to approving a development and production plan in any frontier area, declare approval of a plan for a lease or set of leases to be a major Federal action. For the purposes of this section, such approval shall be deemed to be a major Federal action.

"(2) The Secretary may require lessees on adjacent or nearby leases to submit preliminary or final plans for their leases, prior to or immediately after a determination by the Secretary that the procedures under the National Environmental Policy Act of 1969 shall commence.

"(e) If approval of a development and production plan is found to be a major Federal action, the Secretary shall transmit the draft environmental impact statement to the Governor of any affected State, any appropriate interstate regional entity, and the executive of any affected local government area, for review and comment, and shall make such draft available to the general public.

"(f) If approval of a development and production plan is not found to be a major Federal action, the Governor of any affected State, and the executive of any affected local government area shall have ninety days from receipt of the plan from the Secretary to submit comments and recommendations. Such comments and recommendations shall be made available to the public upon request. In addition, any interested person may submit comments and recommendations.

"(g)(1) After reviewing the record of any public hearing held with respect to the approval of a plan pursuant to the National Environmental Policy Act of 1969 or the comments and recommendations submitted under subsection (f) of this section, the Secretary shall, within sixty days after the release of the final environmental impact statement prepared pursuant to the National Environmental Policy Act of 1969 in accordance with subsection (d) of this section, or sixty days after the period provided for comment under subsection (f) of this section, approve, disapprove, or require modifications of the plan. The Secretary shall require modification of a plan if he determines that the lessee has failed to make adequate provision in such plan for safe operations on the lease area or for protection of the human, marine, or coastal environment, including compliance with the regulations prescribed by the Secretary pursuant to paragraphs (8) and (9) of section 5(a) of this Act. Any modification required by the Secretary which affects land use and water use of the coastal zone of a State with a coastal zone management program approved pursuant to section 306 of the Coastal Zone Management Act of 1972 (16 U.S.C. 1455) shall be consistent with such program unless the Secretary of Commerce makes the finding authorized by section 307(c)(3)(B)(iii) of such Act. The Secretary shall disapprove a plan—

"(A) if the lessee fails to demonstrate that he can comply with the requirements of this Act or other applicable Federal law, including the regulations prescribed by the Secretary pursuant to paragraphs (8) and (9) of section 5(a) of this Act;

"(B) if those activities described in the plan which affect land use and water use of the coastal zone of a State with a coastal zone management program approved pursuant to section 306 of the Coastal Zone Management Act of 1972 (16 U.S.C. 1455) are not concurred with by such State pursuant to section 307(c) of such Act, and the Secretary of Commerce does not make the finding authorized by section 307(c)(3)(B)(iii) of such Act;

"(C) if operations threaten national security or national defense; or

"(D) if the Secretary determines, because of exceptional geological conditions in the lease area, exceptional resources values in the marine or coastal environment, or other exceptional circumstances, that (i) implementation of the plan would probably cause serious harm or damage to life (including fish and other aquatic life), to property, to any mineral deposits (in areas leased or not leased), to the national security or defense, or to the marine, coastal or human environments, (ii) the threat of harm or damage will not disappear or decrease to an acceptable extent within a reasonable period of time, and (iii) the advantages of disapproving the plan outweigh the advantages of development and production.

"(2)(A) If a plan is disapproved—

"(i) under subparagraph (A) of paragraph (1); or

"(ii) under subparagraph (B) of paragraph (1) with respect to a lease issued after approval of a coastal zone management program pursuant to the Coastal Zone Management Act of 1972 (16 U.S.C. 1455), the lessee shall not be entitled to compensation because of such disapproval.

"(B) If a plan is disapproved—

"(i) under subparagraph (C) or (D) of paragraph (1); or

"(ii) under subparagraph (B) of paragraph (1) with respect to a lease issued before approval of a coastal zone management program pursuant to the Coastal Zone Management Act of 1972, and such approval occurs after the lessee has submitted a plan to the Secretary,

the term of the lease shall be duly extended, and at any time within five years after such disapproval, the lessee may reapply for approval of the same or a modified plan, and the Secretary shall approve, disapprove or require modifications of a plan in accordance with this subsection.

"(C) Upon the expiration of the five-year period described in subparagraph (B) of this paragraph, or, in the Secretary's discretion, at an earlier time upon request of a lessee, if the Secretary has not approved a plan, the Secretary shall cancel the lease. In the case of any lease canceled after disapproval of a plan under such subparagraph (B) which was issued after the date of enactment of this section, the lessee shall be entitled to receive such compensation as he shows to the Secretary is equal to the lesser of—

"(i) the fair value of the canceled rights as of the date of cancellation taking account of both anticipated revenues from the lease and anticipated costs, including cost of compliance with all applicable regulations and operating orders, liability for cleanup costs or damages, or both, in the case of an oil spill, and all other costs reasonably anticipated with respect to the lease; or

"(ii) the excess, if any, over the lessee's revenues from the lease (plus interest thereon from date of receipt to date of reimbursement) of all consideration paid for the lease and all direct expenditures made by the lessee after the date of issuance of such lease, and in connection with exploration or development, or both, pursuant to the lease (plus interest on such consideration and such expenditures from the date of payment to the date of reimbursement).

In the case of any lease canceled after disapproval of a plan under subparagraph (B) of this paragraph which was issued before the date of enactment of this section, the lessee shall be entitled to receive fair value in accordance with clause (i) of this subparagraph. The Secretary may, at any time within the five-year period described in such subparagraph (B), require the lessee to submit a plan of development and production for approval, disapproval, or modification. If the lessee fails to submit a required plan expeditiously and in good faith, the Secretary shall find that the lessee has not been duly diligent in pursuing his obligations under the lease, and shall immediately cancel such lease, without compensation, under the provisions of section 5(c) of this Act.

"(3) The Secretary shall, from time to time, review each plan approved under this section. Such review shall be based upon changes in available information and other onshore or offshore conditions affecting or impacted by development and production pursuant to such plan. If the review indicates that the plan should be revised to meet the requirements of this subsection, the Secretary shall require such revision.

"(h) The Secretary may approve any revision of an approved plan proposed by the lessee if he determines that such revision will lead to greater recovery of oil and natural gas, improve the efficiency, safety, and environmental protection of the recovery operation, is the only means available to avoid substantial economic hardship to the lessee, or is otherwise not inconsistent with the provisions of this Act, to the extent such revision is consistent with the provisions of this Act, to the extent such revision is consistent with protection of the marine and coastal environments. Any revision of an approved plan which the Secretary determines is significant shall be reviewed in accordance with subsections (d) through (g) of this section.

"(i) Whenever the owner of any lease fails to submit a plan in accordance with regulations issued under this section, or fails to comply with an approved plan, the lease may, after notice to such owner of such failure and expiration of any reasonable period allowed for corrective action, and after an opportunity for a hearing, be forfeited, canceled, or terminated, subject to the right of judicial review, in accordance with the provisions of section 23(b) of this Act. Termination of a lease because of failure to comply with an approved plan, including required modifications or revisions, shall not entitle a lessee to any compensation.

"(j) If any development and production plan submitted to the Secretary pursuant to this section provides for the production and transportation of natural gas, the lessee shall contemporaneously submit to the Federal Power Commission that portion of such plan which relates to production of natural gas and the facilities for transportation of natural gas. The Secretary and the Federal Power Commission shall agree as to which of them shall prepare any environmental impact statement which may be required pursuant to the National Environmental Policy Act of 1969 applicable to such portion of such plan, or conduct studies as to the effect on the environment of implementing it. Thereafter, the findings and recommendations by the agency preparing such environmental impact statement or conducting any studies which they may deem desirable pursuant to that agreement shall be adopted by the other agency, and such other agency

shall not independently prepare another environmental impact statement or duplicate such studies with respect to such portion of such plan, but the Federal Power Commission, in connection with its review of an application for a certificate of public convenience and necessity applicable to such transportation facilities pursuant to section 7 of the Natural Gas Act (15 U.S.C. 717), may prepare such environmental studies or statement relevant to certification of such transportation facilities as have not been covered by an environmental impact statement or studies prepared by the Secretary. The Secretary, in consultation with the Federal Power Commission, shall promulgate rules to implement this subsection, but the Federal Power Commission shall retain sole authority with respect to rules and procedure applicable to the filing of any application with the Commission and to all aspects of the Commission's review of, and action on, any such application.

"(k) An oil and gas lease issued or maintained under this Act which is located in any area which is not a frontier area shall be subject to the provisions of this section if the Secretary determines, pursuant to regulations prescribed by the Secretary, that the likely environmental or onshore impacts of the development and production of such lease make the application of the provisions of this section in the public interest.

"SEC. 26. OUTER CONTINENTAL SHELF OIL AND GAS INFORMATION PROGRAM.—(a)(1)(A) Any lessee or permittee conducting any exploration for, or development or production of, oil or gas pursuant to this Act shall provide the Secretary access to all data obtained from such activity and shall provide copies of such specific data, and any interpretation of any such data, as the Secretary may request. Such data and interpretation shall be provided in accordance with regulations which the Secretary shall prescribe.

"(B) If an interpretation provided pursuant to subparagraph (A) of this paragraph is made in good faith by the lessee or permittee, such lessee or permittee shall not be held responsible for any consequence of the use of or reliance upon such interpretation.

"(C) Whenever any data is provided to the Secretary pursuant to subparagraph (A) of this paragraph—

"(i) by a lessee, in the form and manner of processing which is utilized by such lessee in the normal conduct of his business, the Secretary shall pay the reasonable cost of reproducing such data; and

"(ii) by a lessee, in such other form and manner of processing as the Secretary may request, or by a permittee, the Secretary shall pay the reasonable cost of processing and reproducing such data,

pursuant to such regulations as he may prescribe.

"(2) Each Federal department and agency shall provide the Secretary with any data obtained by such Federal department or agency conducting exploration pursuant to section 11 of this Act, and any other information which may be necessary or useful to assist him in carrying out the provisions of this Act.

"(b)(1) Information provided to the Secretary pursuant to subsection (a) of this section shall be processed, analyzed, and interpreted by the Secretary for purposes of carrying out his duties under this Act.

"(2) As soon as practicable after information provided to the Secretary pursuant to subsection (a) of this section is processed, analyzed, and interpreted, the Secretary shall make available to the affected States and to any requesting affected local government, a summary of data designed to assist them in planning for the onshore impacts of possible oil and gas development and production. Such summary shall include estimates of (A) the oil and gas reserves in areas leased or to be leased, (B) the size and timing of development if and when oil or gas, or both, is found, (C) the location of pipelines, and (D) the general location and nature of onshore facilities.

"(c) The Secretary shall prescribe regulations to (1) assure that the confidentiality of privileged information received by the Secretary under this section will be maintained, and (2) set forth the time periods and conditions which shall be applicable to the release of such information. Such regulations shall include a provision that no such information will be transmitted to any affected State unless the lessee, or the permittee and all persons to whom such permittee has sold such information under promise of confidentiality, agree to such transmittal.

"(d)(1) The Secretary shall transmit to any affected State—

"(A) a copy of all relevant actual or proposed programs, plans, reports, environmental impact statements, tract nominations (including negative nominations) and other lease sale information, any similar type of relevant information, and all modifications and revisions thereof and comments thereon, prepared or obtained by the Secretary pursuant to this Act;

"(B)(i) the summary of data prepared by the Secretary pursuant to subsection (b)(2) of this section, and (ii) any other processed, analyzed, or interpreted data prepared by the Secretary pursuant to subsection (b)(1) of this subsection, unless the Secretary determines that transmittal of such data prepared pursuant to subsection (b)(1) would unduly damage the competitive position of the lessee or permittee who provided the Secretary with the information which the Secretary had processed, analyzed, or interpreted; and

"(C) any relevant information received by the Secretary pursuant to subsection (a) of this section, subject to any applicable requirements as to confidentiality which are set forth in regulations prescribed under subsection (c) of this section.

"(2) Notwithstanding the provisions of any regulation required pursuant to the second sentence of subsection (c) of this section, the Governor of any affected State may designate an appropriate State official to inspect, at a regional location which the Secretary shall designate, any privileged information received by the Secretary regarding any activity adjacent to such State, except that no such inspection shall take place prior to the sale of a lease covering the area in which such activity was conducted. Knowledge obtained by such State during such inspection shall be subject to applicable requirements as to confidentiality which are set forth in regulations prescribed under subsection (c) of this section.

"(e) Prior to transmitting any privileged information to any State, or granting such State access to such information, the Secretary shall enter into a written agreement with the Governor of such State in which such State agrees, as a condition precedent to receiving or being granted access to such information, to waive the defenses set forth in subsection (f)(2) of this section.

"(f)(1) Whenever any employee of the Federal Government or of any State reveals information in violation of the regulations prescribed pursuant to subsection (c) of this section, the lessee or permittee who supplied such information to the Secretary or to any other Federal official, and any person to whom such lessee or permittee has sold such information under promise of confidentiality, may commence a civil action for damages in the appropriate district court of the United States against the Federal Government or such State, as the case may be.

"(2) In any action commenced against the Federal Government or a State pursuant to paragraph (1) of this subsection, the Federal Government or such State, as the case may be, may not raise as a defense (A) any claim of sovereign immunity, or (B) any claim that the employee who revealed the privileged information which is the basis of such suit was acting outside the scope of his employment in revealing such information.

"(g) Any provisions of State or local law which provides for public access to any privileged information received or obtained by any person pursuant to this Act is expressly preempted by the provisions of this section, to the extent that it applies to such information.

"(h) If the Secretary finds that any State cannot or does not comply with the regulations issued under subsection (c) of this section, he shall thereafter withhold transmittal and deny inspection of privileged information to such State until he finds that such State can and will comply with such regulations.

"(i) The regulations prescribed pursuant to subsection (c) of this section, and the provisions of subsection 552(b)(9) of title 5, United States Code, shall not apply to any information obtained in the conduct of geological or geophysical explorations by any Federal agency (or any person acting under a service contract with such agency) pursuant to section 11 of this Act.

"SEC. 27. FEDERAL PURCHASE AND DISPOSITION OF OIL AND GAS.—(a)(1) Except as may be necessary to comply with the provisions of sections 6 and 7 of this Act, all royalties or net profit shares, or both, accruing to the United States under any oil and gas lease or permit issued or maintained under this Act, shall, on demand of the Secretary, be paid in oil or gas.

"(2) Except as otherwise provided in section 12(b) of this Act, the United States shall have the right to purchase not to exceed 16⅔ per centum by volume of the oil and gas produced pursuant to a lease or permit issued under this Act, at the regulated price, or, if no regulated price applies, at the fair market value at the wellhead of the oil and gas saved, removed, or sold, except that any oil or gas obtained by the United States as royalty or net profit share shall be credited against the amount that may be purchased under this subsection.

"(3) Title to any royalty, net profit share, or purchased oil or gas may be transferred, upon request, by the Secretary to the Secretary of Defense, to the Administrator of the General Services Administration, or to the Administrator of the Federal Energy Administration, for disposal within the Federal Government.

"(b)(1) The Secretary, pursuant to such terms as he determines and in the absence of any provision of law which provides for the mandatory allocation of such oil in amounts and at prices determined by such provision, or regulations issued in accordance with such provision, may offer to the public and sell by competitive bidding for not more than its regulated price, or, if no regulated price applies, not less than its fair market value any part of the oil (A) obtained by the United States pursuant to any lease as royalty or net profit share, or (B) purchased by the United States pursuant to subsection (a)(2) of this section.

"(2) Whenever, after consultation with the Administrator of the Federal Energy Administration, the Secretary determines that small refiners do not have access to adequate supplies of oil at equitable prices, the Secretary may dispose of any oil which is taken as a royalty or net profit share accruing or reserved to the United States pursuant to any lease issued or maintained under this Act, or purchased by the United States pursuant to subsection (a)(2) of this section, by conducting a lottery for the sale of such oil, or may equitably allocate such oil among the competitors for the purchase of such oil, at the regulated price, or if no regulated

price applies, at its fair market value. The Secretary shall limit participation in any lottery or allocated sale to assure such access and shall publish notice of such sale, and the terms thereof, at least thirty days in advance of such sale. Such notice shall include qualifications for participation, the amount of oil to be sold, and any limitation in the amount of oil which any participant may be entitled to purchase.

"(3) Whenever a provision of law is in effect which provides for the mandatory allocation of such oil in amounts or at prices determined by such provision, or regulations issued in accordance with such provision, the Secretary may only sell such oil in accordance with such provision of law or regulations.

"(c)(1) Except as provided in paragraph (2) of this subsection, the Secretary, pursuant to such terms as he determines, may offer to the public and sell by competitive bidding for not more than its regulated price, or, if no regulated price applies, not less than its fair market value any part of this gas (A) obtained by the United States pursuant to a lease as royalty or net profit share, or (B) purchased by the United States pursuant to subsection (a)(2) of this section.

"(2) Whenever, after consultation with and advice from the Administrator of the Federal Energy Administration and the Chairman of the Federal Power Commission, the Secretary determines that an emergency shortage of natural gas is threatening to cause severe economic or social dislocation in any region of the United States and that such region can be serviced in a practical, feasible, and efficient manner by royalty, net profit share, or purchased gas obtained pursuant to the provisions of this subsection, the Secretary may allocate or conduct a lottery for the sale of such gas, and shall limit participation in any allocated or lottery sale of such gas to any person servicing such region, but he shall not sell any such gas for more than its regulated price, or, if no regulated price applies, less than its fair market value. Prior to allocating any gas pursuant to this paragraph, the Secretary shall consult with the Federal Power Commission.

"(d) The lessee shall take any Federal oil or gas for which no acceptable bids are received, as determined by the Secretary, and which is not transferred pursuant to subsection (a)(3) of this section, and shall pay to the United States a cash amount equal to the regulated price, or, if no regulated price applies, the fair market value of the oil or gas so obtained.

"(e) As used in this section—

"(1) the term 'regulated price' means the highest price—

"(A) at which Federal oil may be sold pursuant to the Emergency Petroleum Allocation Act of 1973 and any rule or order issued under such Act;

"(B) at which natural gas may be sold to natural-gas companies pursuant to the Natural Gas Act and any rule or order issued under such Act; or

"(C) at which either Federal oil or gas may be sold under any other provision of law or rule or order thereunder which sets a price (or manner for determining a price) for oil or gas produced pursuant to a lease or permit issued in accordance with this Act; and

"(2) the term 'small refiner' means an owner of an existing refinery or refineries, including refineries not in operation, who qualifies as a small business concern under the rules of the Small Business Administration and who is unable to purchase in the open market an adequate supply of crude oil to meet the needs of his existing refinery capacities.

"(f) Nothing in this section shall prohibit the right of the United States to purchase any oil or gas produced on the outer Continental Shelf, as provided in section 12(b) of this Act.

"SEC. 28. LIMITATIONS ON EXPORT.—(a) Except as provided in subsection (d), any oil or gas produced from the outer Continental Shelf shall be subject to the requirements and provisions of the Export Administration Act of 1969 (50 App. U.S.C. 2401 et seq.).

"(b) Before any oil or gas subject to this section may be exported under the requirements and provisions of the Export Administration Act of 1969, the President shall make and publish an express finding that such exports will not increase reliance on imported oil or gas, are in the national interest, and are in accordance with the provisions of the Export Administration Act of 1969.

"(c) The President shall submit reports to the Congress containing findings made under this section, and after the date of receipt of such report Congress shall have a period of sixty calendar days, thirty days of which Congress must have been in session, to consider whether exports under the terms of this section are in the national interest. If the Congress within such time period passes a concurrent resolution of disapproval stating disagreement with the President's finding concerning the national interest, further exports made pursuant to such Presidential findings shall cease.

"(d) The provisions of this section shall not apply to any oil or gas which is either exchanged in similar quantity for convenience or increased efficiency of transportation with persons or the government of a foreign state, or which is temporarily exported for convenience or increased efficiency of transportation across parts of an adjacent foreign state and reenters the United States.

SEC. 29. RESTRICTIONS OF EMPLOYMENT.—No full-time officer or employee of the Department of Interior who directly or indirectly discharged duties or responsibilities under this Act, and who was at any time during the twelve months preceding the termination of his employment with the Department compensated under the Executive Schedule or compensated at or above the annual rate of basic pay for grade GS–16 of the General Schedule, shall accept, for a period of two years after the date of termination of employment with the Department employment or compensation, directly or indirectly, from any person, persons, association, corporation, or other entity subject to regulation under this Act.

"SEC. 30. FISHERMEN'S GEAR COMPENSATION FUNDS.—(a) As used in this section, the term—

"(1) 'commerical fisherman' means any citizen of the United States whose primary source of income is derived from the harvesting of living marine resources for commercial purposes; and

"(2) 'fishing gear' means (A) any vessel, and (B) any equipment, whether or not attached to a vessel, which is used in the commercial handling or harvesting of living marine resources.

"(b)(1) The Secretary is authorized to establish and maintain a fishermen's gear compensation fund for any area of the outer Continental Shelf for the purpose of providing reasonable compensation for damages to fishing gear and any resulting economic loss to commercial fishermen due to activities related to oil and gas exploration, development, and production in such area. Such fund may sue or be sued in its own name.

"(2) After the date of enactment of this section, any lease issued by the Secretary to a lessee for a tract in an area of the outer Continental Shelf shall contain a condition that such lessee, upon request by the Secretary, shall pay the amount specified by the Secretary for the purpose of the establishment and maintenance of a fishermen's gear compensation fund for such area. No lessee shall be required by the Secretary to pay in any calendar year an amount in excess of $5,000 per lease.

"(3) For each fishermen's gear compensation fund established under paragraph (1) of this subsection there shall be established within the Treasury of the United States a revolving account, without fiscal year limitation, which shall be available to such fund to make payments pursuant to this section. Amounts collected by the Secretary under paragraph (2) of this subsection for use by such fund shall be deposited in such revolving account. Amounts in such revolving account shall be available for disbursement and shall be disbursed for only the following purposes:

"(A) Administrative and personnel expenses of such fund.

"(B) The payment of any claim in accordance with procedures established under this section for damages suffered in the area for which such fund was established.

"(4) Each fund established for an area of the outer Continental Shelf pursuant to this section shall be maintained at a level not to exceed $100,000 and, if depleted, shall be replenished by equal assessments by the Secretary of each lease holder in such area whose lease was issued after the date of enactment of this section.

"(5) Whenever the amount in a revolving account for a fund is not sufficient to pay obligations for which such fund is liable pursuant to this section, such fund may issue, in an amount not to exceed $1,000,000, notes or other obligations to the Secretary of the Treasury, in such forms and denominations, bearing such maturities, and subject to such terms and conditions as the Secretary of the Treasury may prescribe. Such notes or other obligations shall bear interest at a rate to be determined by the Secretary of the Treasury on the basis of the current average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of such notes or other obligations. Moneys obtained by such fund under this paragraph shall be deposited in the revolving account, and redemptions of any such notes or other obligations shall be made by such fund from the revolving account. The Secretary of the Treasury shall purchase any such notes or other obligations, and for such purpose he may use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act. The purposes for which securities may be issued under such Act are extended to include any purchase of notes or other obligations issued under this subsection. The Secretary of the Treasury may sell any such notes or other obligations at such times and prices and upon such terms and conditions as he shall determine in his discretion. All purchases, redemptions, and sales of such notes or other obligations by such Secretary of the Treasury shall be treated as public debt transactions of the United States.

"(c)(1) In carrying out this section, the Secretary may—

"(A) prescribe, and from time to time amend, regulations for the filing, processing, and the fair and expeditious settlement of claims pursuant to this section, including a time limitation on the filing of such claims;

"(B) establish and classify all potential hazards to commercial fishing caused by outer Continental Shelf oil and gas exploration, development, and production activities, including all obstructions on the bottom, throughout the water column, and on the surface; and

"(C) establish regulations for all materials, equipment, tools, containers, and all other items used on the outer Continental Shelf to be properly stamped or labeled, wherever practicable, with the owner's identification prior to actual use.

"(2)(A) Payments may be disbursed by the Secretary from the revolving account established for a fishermen's gear compensation fund for any area of the outer Continental Shelf to compensate commercial fishermen for actual and consequential damages, including loss of profits, due to the damage of fishing gear by materials, equipment, tools, containers, or other items associated with oil and gas exploration, development, or production activities in such area.

"(B) Notwithstanding the provisions of subparagraph (A) of this paragraph, no payment may be made by the Secretary from any revolving account established under this section—

"(i) when the damage set forth in a claim was caused by materials, equipment, tools, containers, or other items the ownership and responsibility for which is known;

"(ii) in an amount in excess of $10,000 per claimant for any incident; and

"(2) For the purposes of any hearing conducted pursuant to this section, the hearing examiner shall have the power to administer oaths and subpena the attendance and testimony of witnesses and the production of books, records, and other evidence relative or pertinent to the issues being presented for determination.

"(3) A hearing conducted under this section shall be conducted within the United States judicial district within which the matter giving rise to the claim occurred, or, if such matter occurred within two or more districts, in any of the affected districts, or, if such matter occurred outside of any district, in the nearest district.

"(4) Upon a decision by the hearing examiner and in the absence of a request for judicial review, any amount to be paid, subject to the limitations of this section, shall be certified to the Secretary, who shall promptly disburse the award. Such decision shall not be reviewable by the Secretary.

"(e) Any person who suffers legal wrong or who is adversely affected or aggrieved by the decision of a hearing examiner under this section may, no later than sixty days after such decision is made, seek judicial review of such decision in the United States court of appeals for the circuit in which the damage occurred outside of any circuit, in the United States court of appeals for the nearest circuit, or in the United States Court of Appeals for the District of Columbia.

"SEC. 31. DOCUMENTATION, REGISTRY, AND MANNING REQUIREMENTS.—Within six months after the date of enactment of this section, the Secretary of the Department in which the Coast Guard is operating shall by regulation require that any vessel, rig, platform, or other vehicle or structure—

"(1) which is used at any time after the one-year period beginning on the effective date of such regulation for activities pursuant to this Act shall be manned or crewed by citizens of the United States or aliens lawfully admitted to the United States for permanent residence, unless (A) specific contractual provisions or national registry manning requirements in effect on such date of enactment provide to the contrary, or (B) there are not a sufficient number of such citizens or aliens who are qualified and available for such work;

"(2) which is used at any time after the one-year period beginning on the effective date of such regulation for activities pursuant to this Act and which is built or rebuilt at any time after such one-year period, when required to be documented, shall be documented under the laws of the United States; and

"(3) which is used for activities pursuant to this Act, shall comply with such minimum standards of design, construction, alteration, and repair as the Secretary of the Department in which the Coast Guard is operating establishes.".

The CHAIRMAN. Are there any amendments to title II of the bill?

AMENDMENT OFFERED BY MR. TREEN

Mr. TREEN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TREEN: Page 135, strike out lines 1 through 4 and insert in lieu thereof: "of this Act and which authorizes exploration for, and development and production of (1) oil, gas, or other minerals, or (2) geothermal steam;"."

Page 158, strike out the comma on line 12 and all that follows down through "Congress" on line 21.

Page 161, line 6, strike out "For" and all that follows down through the period on line 12.

Page 168, line 10, strike out "(A)".

Page 168, line 14, strike out "or".

Page 168, strike out lines 15 through 25.

Mr. TREEN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. TREEN. Mr. Chairman, this is a very simple amendment in its impact. This would remove from H.R. 1614 the authority for a new concept for leasing on the Outer Continental Shelf. The concept is referred to as "dual leasing." It is a concept which the Secretary of the Interior recommended to the committee be included, and the committee did include it, in the bill. The Secretary of the Interior has had some difficulty defining this concept, and that is understandable because of the uncertain nature of it. Under our present system of leasing on the Outer Continental Shelf, after the Secretary of the Interior has satisfied himself that he has whatever information is needed, he will put up tracts for lease for exploration, development and production, a unitary lease for all three of these activities. Under the bill's provisions we would break these activities into two segments.

First, there would be an exploratory lease and then, later on, there would be a development and production lease. Thus, the term "dual leasing" rather than the unitary system which we have had since the inception of OCS activities.

There are lots of reasons why dual leasing is a disaster, but let me touch on four, very briefly.

First of all, a lease just for exploration is totally unworkable. The idea is, according to the Secretary of the Interior, as described on page 124 of the committee report, and I quote:

The bidders for these leases would bid to become partners with the Government, with the Government paying a share of the costs of exploration, and the bidder assuming the rest of the costs in return for a percentage of the bonus or other Government revenues received from the sale of subsequent leases which would allow the continued exploration, development and production.

The idea is that tracts would be put up for bid for an exploratory lease. It is not clear exactly what the bidder would be bidding on. Presumably the bid constant would be the performance of a certain amount of exploratory work. This would probably be a work commitment in terms of dollars. Then, in order to determine who would be the lowest bidder, the bid variable would be for a share of the resources that would ultimately be brought on stream by the subsequent production lease.

This is not workable because of the great uncertainties involved. The prospective exploratory lessee would not even know that the Federal Government would ever get around to leasing that tract for production. Certainly he would not know when that lease might bring about production. He would not know what type of lease there would be. He would not know whether, because of environmental suits or findings by the Secretary which could prevent him from going into production, there would ever be a production lease.

So I suggest that it is unworkable, because one would never really know if there would be any resource which would ultimately compensate for the exploration work.

Second, this system is anticompetitive. Because of these very uncertainties that I have talked about, the little fellow is not going to be able to get into the game of exploratory leases. What banker is going to lend to him if he has no control over the subsequent production whatsoever? Because of all these uncertainties, no one considering financing an exploration lease would lend any money. So it would be anticompetitive. Only the really big operators could gamble with an exploratory lease.

Third, the Government does become a partner under this concept. In the words of the Government itself, the Government becomes a partner in the exploration.

Now, if that is what the Members want then they should vote against my amendment. But if they are concerned about the Federal Government getting into exploration, then they should vote in favor of my amendment, because this is a surefire way, as I say, in the words of the Secretary himself, for the Government to become a partner in OCS exploration.

The CHAIRMAN. The time of the gentleman from Louisiana (Mr. TREEN) has expired.

(By unanimous consent, Mr. TREEN was allowed to proceed for 2 additional minutes.)

Mr. TREEN. Mr. Chairman, in my judgment, if my amendment is not adopted, the next step would be to propel us into Government exploration.

The fourth reason why I think the Members should support my amendment—and this is the most important one—has to do with the delay that would be involved in dual leasing, the delay in producing our OCS resources. We can have legitimate arguments about the overall effect of the bill insofar as delay is concerned, but I really do not think there can be any argument about the fact that this one item, dual leasing, will cause substantial delay in the production of OCS resources. That is something all of us want to avoid.

The reason for that is this: Under the

present system, when one gets a lease, he has obtained the right to explore, to develop, and to produce. That is one segment. When the lessee obtains a lease, he starts exploration, and as soon as he is convinced there is some economic justification for production, he starts producing; but he does not stop exploration; that goes on and on.

Now, if we segmentize this so that we have one lease under which all the exploration is to be done, and then we stop and prepare for another lease sale and go through all the rigmarole and put the tract up for production bids—if we have these two segments with all the interruptions in between—that is going to cause substantial delay—delays of up to 2 years. As I say, under the present unitary system exploration keeps gong on. That is in the interest of both the lessee and of the Federal Government.

Therefore, Mr. Chairman, I ask the Members to support this amendment. It is a very simple amendment. It removes the authority of the Secretary to utilize dual leasing. If, later on, he wants to come back and further define his ideas, then, of course, I am sure that this House and this Congress would consider amendments to the law; but I say it is a dangerous concept in terms of our energy needs—and that is the bottom line—we cannot afford to have this sort of delay.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Louisiana (Mr. TREEN).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. STUDDS

Mr. STUDDS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STUDDS: On page 173, strike lines 4 through 14, and insert in lieu thereof the following:

SEC. 206. Section 11 of the Outer Continental Shelf Lands Act (43 U.S.C. 1340) is amended by inserting "(a)(1)" before "Any", and by adding at the end thereof the following:

Mr. STUDDS. Mr. Chairman, this is an exceptionally simple amendment, which will probably come as a surprise to the gentleman from New York (Mr. FISH).

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. STUDDS. I yield to the gentleman from New York.

Mr. FISH. Mr. Chairman, I ask the gentleman, To what portion of the bill does this amendment apply?

Mr. STUDDS. It is on page 173.

Mr. Chairman, if the gentleman will permit, I think in two sentences I can make clear what the amendment does, when taken in conjunction with the amendment offered by the gentleman from Louisiana (Mr. TREEN), which was just adopted by the committee.

Mr. Chairman, my amendment, which I assume will be opposed by absolutely no one, with the possible exception of myself, will remove all mention or consideration of any kind of the possibility of Federal exploratory drilling.

What my amendment does is that in section 11 of the bill, page 173, the first paragraph of section 11, which includes those words which have become such a red flag in this debate, especially to the gentleman from Louisiana (Mr. BREAUX) and to members of this minority, it strikes the words "including core and test drilling" from the bill. That paragraph is replaced by the paragraph in the original law.

The effect really of this change is none other than to remove the words "including core and test drilling" from this bill. The original language in the statute, which has been in effect for over 20 years, as the committee knows, will be returned, too.

That is the only change made by this amendment. The original language in the statute appears on page 257 of the committee report, and it reads exactly as the paragraph contained in the bill, except that it does not have the words "including core and test drilling."

Therefore, Mr. Chairman, in sum, the only real effect of my amendment is to remove those highly controversial words, "including core and test drilling" from this bill.

Let me say again that it should be taken in concert with what has just been adopted when we agreed to the amendment of the gentleman from Louisiana (Mr. TREEN). The amendment of the gentleman from Louisiana removed the section on dual leasing from the bill. My amendment removes the only remaining language in the bill which has been construed by some as authorizing Federal exploratory drilling.

If and when this amendment is adopted, there cannot be, in the course of debate on this bill, any further discussion whatsoever with respect to the desirability of the Federal Government's undertaking exploratory drilling, because with the adoption of the Treen amendment and mine, all sections and all language in the bill referring to this subject will have been stricken.

Therefore, Mr. Chairman, it is my fond hope that those who have serious reservations about the legislation can now, upon the adoption of these two amendments, address themselves to the substantial issues contained in the bill, and thereby enable us to remove from our consideration what I can only refer to as the red herring which have been cast into this debate.

This was particularly the case in the series of extraordinary ads appearing last week in the Washington Post which focused again and again and again on the establishment of a Federal Government oil company, "FOGCO," doing Federal exploratory drilling and the Federal Government getting into this process.

Let me say once more that I happen to be a member of the minority of our committees, and I know a member of the minority of this House, who favors Federal exploratory drilling, but, Mr. Chairman, I can count, and I know, based on our experience in the last Congress and in this Congress that this is a minority position. Therefore, hopefully to clarify the remaining debate on this bill I am moving through this amendment to remove effectively once and for all this issue.

Mr. HUGHES. Mr. Chairman, will the gentleman yield?

Mr. STUDDS. I yield to the gentleman from New Jersey.

Mr. HUGHES. Mr. Chairman, I thank the gentleman for yielding. I wonder whether the gentleman from Massachusetts (Mr. STUDDS) would tell me—and I believe that I understand what the amendment does if what he is saying in effect is that the language in the legislation before us would not change the existing authority of the Department of the Interior or in trying to collect geological and geophysical and other data prior to a lease sale?

Mr. STUDDS. That is right.

Mr. HUGHES. So that in effect we are removing superfluous language from the bill?

Mr. STUDDS. We are removing language in the bill, language that the gentleman from Louisiana (Mr. BREAUX) has interpreted to go beyond existing law. That is what I want to remove, I want to remove all doubt about that. I want to remove that language.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. STUDDS. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, I want to congratulate the gentleman from Massachusetts (Mr. STUDDS) for his very astute analysis of what could be a stumbling block in the minds of people who are not as specifically acquainted with the legislation as is the gentleman from Massachusetts and others who are members of the committee.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BAUMAN. Mr. Chairman, I move to strike the last word.

The gentleman from Maryland has had as one of his major objections to this bill the section which the proposed amendment offered by the gentleman from Massachusetts (Mr. STUDDS) would modify. Mr. Chairman, I have had, as many other Members have had, the concern that this language, if left intact, would permit the Department of the Interior eventually to engage not only in exploration but in the production of oil and gas in the frontier and other areas. However, the rather cleverly worded belated amendment by the gentleman from Massachusetts (Mr. STUDDS) does not go the whole mile, as I see it.

The gentleman from Louisiana (Mr. TREEN) intended to offer an amendment that would in fact go further, and just a cursory reading of the language of the amendment offered by the gentleman from Massachusetts (Mr. STUDDS) insofar as its impact, would still leave in the geophysical and geological exploration which could be interpreted and used to guarantee adequate data. I would assume that authorization could be the basis for the Department of the Interior to justify Government exploration and production.

I would say, so far as the offering of this amendment, it indicates a massive retreat by the sponsors of this bill from a controversial section which they

claimed was absolutely essential in order to have a rational OCS policy. I have disagreed from the beginning with that idea, but it may well be that, as I suggested in the debate last Thursday, they have finally learned how to count, and that the votes are not here for one of the most controversial sections of the legislation. However, I do hope that in the haste of the offering of this amendment, and this suddenly dawning of light in the minds of my colleagues on the majority side, that we do not adopt an amendment that really does not do what they claim it is going to do, and that is to keep the Government out of the oil and gas business in the Outer Continental Shelf areas.

Mr. STUDDS. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Massachusetts.

Mr. STUDDS. I thank the gentleman for yielding. I want to thank the gentleman for his overwhelming praise for what he refers to as the "retreat" of this gentleman. I regret that he does not think the retreat has been either far enough or fast enough.

Mr. BAUMAN. I would not characterize it as a retreat. I think it is progress on the gentleman's part for a change.

Mr. STUDDS. I would call it something else, but, as I said to the gentleman, the gentleman knows my own feelings. Let me say that the gentleman has heard the supporters, those whose views are generally in accordance with those of the industry, and those who have serious reservations about the legislation argue that the existing statute which has been in effect for over two decades is perfectly fine and good enough for this business, and we ought not to tamper with it. The gentleman has heard of the phrase, "If it ain't broke, don't fix it."

All this does is return to the language which has been the law for 20 years. It makes no change of any kind.

Mr. BAUMAN. I appreciate the gentleman's assurances, but I must confess that there is some division of opinion, and since this is a case of first impression, that is to say, the gentleman from Massachusetts' withdrawing from his previously established position, our staff and Members on this side were so overwhelmed that we would like to check it out to make sure that the amendment's import is as the gentleman describes it.

Mr. STUDDS. If the gentleman will yield further, I apologize for being responsible for a trauma on the minority side.

Mr. BAUMAN. We have traumas going on over here all the time.

Mr. STUDDS. I can assure the gentleman that the sum total of my amendment is simply and purely nothing other than the restoration of existing statutory language.

Mr. BAUMAN. The gentleman understands our trepidation at any gentleman from Massachusetts bearing gifts.

Mr. STUDDS. Oh, yes.

Mr. BAUMAN. So I would hope that we can accomplish what the gentleman says he suddenly now seeks after 3 years of deliberations on this bill. I congratulate him if, indeed, it turns out that he is doing what he says he is doing. I congratulate him on his conversion.

Mr. Chairman, I yield back the remainder of my time.

Mr. BREAUX. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, as I read the amendment offered by the gentleman from Massachusetts, at first glance it is a definite improvement because I all along have very sincerely felt that that section of the bill was a specific and very clear authorization for the Federal Government to actually get in the business of drilling for oil and gas, and that is how I interpret it, including core and test drilling, to clearly mean. Those who support the Federal Government's ability to get into the business of drilling on the Outer Continental Shelf have always taken the position—and which I think the gentleman from New Jersey, my colleague on the committee has also clearly indicated that they already felt—that the Secretary has that authority and, therefore, it is not necessary to have it included in this legislation because they interpret the existing legislation to clearly give the Secretary the authority to go out and do drilling in the Outer Continental Shelf for oil and gas. They interpreted this section, at least it is my opinion, before they kind of put the clinching deal on the section, that it clearly says obviously you cannot go ahead and do off-structure oil and gas drilling. I would oppose those who support eliminating it while the gentleman from Massachusetts' amendment would indicate they can go ahead and do it, even without this authorization. So they figure if they take it out, it might add a few votes to the committee bill, because they would think that the Secretary can do it anyway. I would hope that is not their intent. I would hope that the intent is to eliminate core and test drilling. I am going to support the gentleman's amendment because I think it is better than the committee print at the present time; but I would remind my colleagues that at the proper time I will be offering an amendment in the nature of a substitute which will clearly, once and for all, set out the fact that if the Federal Government is going to be involved in any off-structure drilling, he is going to have to come to the Congress and ask the Congress for specific clear authorization for the funds to do that actual drilling. That is the major difference in the legislation and in the substitute that I am going to offer, because it clearly spells out that if the Secretary wants to do off-structure drilling, he is going to have to make his request to the Congress. He is going to have to ask us for the amount of money after he determines how much it is going to cost, and then he is going to have to go through the appropriation process to obtain those funds. I do not think we should give him a blank check and say, You can do off-structure drilling, which he can clearly do even if the gentleman from Massachusetts' amendment passes, without knowing how much it is going to cost, without knowing how it is going to be conducted, and without knowing everything that is completely involved in this program.

So I say let us support the gentleman from Massachusetts' amendment, but let us also at the proper time support my substitute, because I think it clearly, once and for all, nails down that if the Secretary is going to do any drilling off-structure or on-structure, he must come back to Congress and get that money appropriated. I think that is the proper procedure.

Mr. STUDDS. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Massachusetts.

Mr. STUDDS. Does the gentleman not see the possibility that if we keep the amendment in the bill, there might not be a need for a substitute amendment?

Mr. BREAUX. The gentleman's amendment is a good amendment, but it clearly does not go as far as the substitute I will offer at the proper time, my substitute that would eliminate core and test drilling, that says that the Secretary, if the Federal Government is going to do any drilling on-structure or off-structure, is going to have to come to Congress to get an appropriation for it.

If the gentleman would want to offer that amendment, I would gladly support it.

Mr. STUDDS. I would say to the gentleman from Louisiana, it is my understanding that is the case with existing law.

Mr. BREAUX. No, clearly it is not, in that it clearly does not require a specific authorization and line item authorization, which my substitute would require him to obtain.

Mr. STUDDS. Does the gentleman perceive this as the last moment of harmony for the next several hours?

Mr. BREAUX. No, I am just trying to get the gentleman to see the reasonableness of my position.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Chairman, as a tactical maneuver, which this obviously is, on the part of the opponents of the legislation, there is a possibility if the gentleman's substitute is not adopted later this afternoon that this bill could go to conference and be rewritten back into the form in which it now exists. That may be the desire of some, although I do not want to impugn the motives of anyone dealing with this legislation, but it might just be the better part of valor to have rollcalls on some of these amendments and nail them in so the other body understands now the bipartisan and broad support many of these changes have.

Mr. BREAUX. The gentleman is absolutely correct. What we see is not purely cosmetic but represents the position of the House.

Mr. FISH. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I hope there can be no accusation of prolonging the debate on this amendment. It is just that it took the minority a few minutes to get its composure back and rethink several amendments we did not know had been adopted verbatim by the majority.

If I can address some questions for purposes of clarification to the author, the gentleman from Massachusetts (Mr. STUDDS), his amendment purports to strike or does strike lines 4 through 14 in the committee bill, on page 173, and it also amends the existing law, section 11 of the Outer Continental Shelf oil and gas exploration law. I will read that section 11. It says:

[SEC. 11. GEOLOGICAL AND GEOPHYSICAL EXPLORATION.—Any agency of the United States and any person authorized by the Secretary may conduct geological and geophysical explorations in the outer Continental Shelf, which do not interfere with or endanger actual operations under any lease maintained or granted pursuant to this Act, and which are not unduly harmful to aquatic life in such area.]

It is my understanding that the gentleman's amendment would thereby eliminate the words "The Secretary or any other Federal department or agency, and". Is that correct?

Mr. STUDDS. Mr. Chairman, if the gentleman will yield, the amendment is drafted so it strikes that entire paragraph, lines 7 through 14, and replaces it with the paragraph which is in existing law, which I will be happy to read the gentleman if he likes. It is essentially the same, without the offending words "including core and test drilling."

Mr. FISH. Then I am not sure I understand. The amendment says:

SEC. 206. Section 11 of the Outer Continental Shelf Lands Act (43 U.S.C. 1340) is amended by inserting "(a)(1)" before "Any", . . .

And the first "any" we get to in the existing statute follows the words "The Secretary."

Mr. STUDDS. If the gentleman will yield, I can explain. The wording which the gentleman just read is highly technical and is only conforming, technical language. The word "any" is the first word of the paragraph which reads:

Any agency of the United States and any person authorized by the Secretary . . .

Mr. FISH. Is the gentleman looking at the section 11 which says:

Any agency of the United States and any person authorized by the Secretary may conduct geological and geophysical explorations in the Outer Continental Shelf . . .?

It says any person or agency so authorized.

Mr. STUDDS. That is correct.

Mr. FISH. So we will have in the law the fact that a Federal agency is still able to get a permit. That is not struck out.

Mr. STUDDS. If the gentleman will yield further, the existing section 11 of existing law, which has been law for a number of years, is one sentence long. It would remain the law.

Any agency of the United States and any person authorized by the Secretary may conduct geological and geophysical explorations in the Outer Continental Shelf, which do not interfere with or endanger actual operations under any lease maintained or granted pursuant to this Act, and which are not unduly harmful to aquatic life in such area.

That is in existing law. That is left in by this amendment I am offering.

Mr. FISH. I commend the gentleman for his statement in introducing his amendment, that he wants to avoid all chance of Federal exploration. I think nobody can argue with that. But I do think the way to lay this issue to rest is to be sure that a Federal agency may not get a permit to go in the Outer Continental Shelf.

I think that the gentleman from Louisiana (Mr. TREEN) will be recognized next and will have some proposed language changes in the gentleman's amendment that we can all agree to.

Mr. Chairman, let me ask the gentleman one more question. It is really more profitable for the gentleman to address the gentleman's own amendment. Assuming the gentleman's amendment passes, can we count on diligence, not only by the gentleman, but by the chairman of the Select Committee in conference, where we know we have a problem with the Durkin amendment on the Senate side?

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr FISH. I yield to the gentleman from New York.

Mr. MURPHY of New York. Well, the gentleman from New York knows from my last conference that the House side passed an amendment on which we disagreed but I sustained the House position.

The CHAIRMAN. The time of the gentleman from New York (Mr. FISH) has expired.

(By unanimous consent, Mr. FISH was allowed to proceed for 1 additional minute.)

Mr. MURPHY of New York. Mr. Chairman, if the gentleman will yield further, the House conferees are committed to keeping the House position and we succeeded in doing this in the last conference and I will make every endeavor to do the same, hopefully, in the forthcoming conference.

Mr. STUDDS. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield to the gentleman from Massachusetts.

Mr. STUDDS. Mr. Chairman, I would say to the gentleman that the logic used by myself, which the minority found somewhat overwhelming, namely my support of this bill and my desire to see it become law, regardless of this particular issue, would pertain to the conference report as well as to this bill in the House.

This Member would not like to see an amendment come back to the House that would jeopardize the entire bill.

Let me say to the gentleman, the existing law has been in effect over two decades and there has been no Federal exploratory drilling.

Mr. HUGHES. Mr. Chairman, I move to strike the requisite number of words.

First of all, I want to congratulate my colleague, the gentleman from Massachusetts, for offering an amendment that at least takes some of the firepower from the opponents of the bill.

I do not kid myself a bit that this is going to diffuse the propaganda that surrounds this legislation. I just think this is one of the handles that the oil industry has latched onto to try to defeat the bill in its entirety. I think what is significant about the amendment, and this is the essence of what a lot of us said right along, that existing law does permit the Secretary of the Interior to conduct such geophysical and other exploration on the Outer Continental Shelf as is necessary to enable the Secretary to discharge his responsibilities.

I would like to address a question to the chairman of the committee. It is my recollection that the Secretary came before our committee last year and testified that he believes that under existing law he had the authority, although he had not used it, to conduct such tests as are necessary to secure geological and other information.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. HUGHES. I yield to the gentleman from New York.

Mr. MURPHY of New York. Yes, he and his predecessor.

Mr. HUGHES. In essence, what we are doing is eliminating superfluous language in the bill.

Mr. MURPHY of New York. Mr. Chairman, if the gentleman will yield further, we are eliminating and allying the fears of those who feel somehow a Federal oil and gas company could possibly be formed and move into this area. This is, I think, a very legitimate concern and we are dispelling that problem for the rest of this debate and, hopefully, for the rest of the history of this bill.

Mr. HUGHES. It is interesting to me that the opponents of the legislation, on the one hand, suggest there is going to be delay after delay. It has been speculated that there will be a 6-year delay based on all kinds of mythical assumptions; yet my colleague, the gentleman from Louisiana, now indicates that he is going to offer an amendment that would hamper the Secretary's effort to secure more information about the lands that he holds in public trust. I do not understand the reasoning of that. We understand from the General Accounting Office report of June 1977, that in lease sale No. 40, the Baltimore Canyon sale, the Secretary of the Interior had no information whatsoever, no seismic, no geological information, on some 25 percent of the acreage in that sale.

And yet my colleagues on the minority side, in particular, and my colleague from Louisiana, would further tie the Secretary's hands in trying to determine, first of all, what is in the public interest as we sell those resources. We are not in the business of selling just land. We are in the business, I believe, of trying to properly manage our oil and gas resources. I hope the gentlemen are not suggesting that the Secretary should come to the Congress every time he wants to learn more about the resources contained within our public lands.

Mr. TREEN. Mr. Chairman, will the gentleman yield?

Mr. HUGHES. I yield to the gentleman from Louisiana.

Mr. TREEN. I am not sure I understand what the gentleman is saying, that some of us have suggested that the Sec-

retary come back to the Congress. During my explanation of my dual leasing amendment, I said it was a concept that was so indefinite that perhaps it should await new legislation later, but I do not know of anybody who suggested that the Secretary come back to Congress for these various authorities. In the sale the gentleman refers to, if the Secretary did not have sufficient information on which to lease these tracts, that is his fault. He should have had it. He has, it seems to me, under existing law, the right to get that information.

Mr. HUGHES. Perhaps my colleague is correct, but certainly the Secretary should have the wherewithal to get the seismic and geophysical and other information necessary to make an intelligent sale of our resources. I suggest to my colleague that if, in fact, we tie the Secretary's hands so that he does not have the tools necessary to get that information, where industry does not produce it, then I do not think we are comporting with our public duties in connection with these lands held in the public trust.

AMENDMENT OFFERED BY MR. TREEN AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. STUDDS

Mr. TREEN. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. TREEN as a substitute for the amendment offered by Mr. STUDDS: Page 173, line 7, strike "The" and all that follows through "and" on page 173, line 8.

Page 173, line 8, strike "any" and insert in lieu thereof "Any".

Page 173, lines 10 and 11 strike the words "including core and test drilling".

Mr. TREEN. Mr. Chairman, the amendment by my colleague from Massachusetts (Mr. STUDDS) would make one change, essentially, in the bill itself; and that is to take out the reference to core and test drilling and, in effect, would return us to the law as it exists.

Now, because of the debate that we have had about whether or not this bill would propel the Government into exploration, and in order that we might have a discussion of that, I have offered this substitute, which would do the same thing as that offered by Mr. STUDDS. But, in addition, it would, with respect to the existing statute, remove the words, "Any agency of the United States and . . ."

It would begin that section with the word, "any." So that if the substitute were adopted, any person authorized by the Secretary could conduct geological and geophysical explorations in the Outer Continental Shelf. In effect, what this substitute would do would be to take out that language of the law which says that any agency of the United States may conduct the geological and geophysical explorations.

This does not prevent the Secretary of the Interior from authorizing by permit geological and geophysical explorations on the OCS by others. But it does make clear that the Government itself would not be able to get into the business of exploration.

I appreciate that the gentleman from Massachusetts (Mr. STUDDS) says taking out core and test drilling would have that effect. But I am not at all sure that that would accomplish my purpose and apparently his purpose.

Mr. STUDDS. Mr. Chairman, would the gentleman yield?

Mr. TREEN. I yield to the gentleman from Massachusetts.

Mr. STUDDS. I thank the gentleman for yielding.

Mr. Chairman, while I am a bit surprised that the gentleman from Louisiana (Mr. TREEN) appears not to be as happy as he has contended that he has been for over two decades with the existing statute, for the purposes of expediting the procedure I, as author of the amendment to which the gentleman offered his substitute, am quite prepared to accept his amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Louisiana (Mr. TREEN) as a substitute for the amendment offered by the gentleman from Massachusetts (Mr. STUDDS).

The amendment offered as a substitute for the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. STUDDS), as amended.

The question was taken; and the Chairman announced that the ayes appeared to have it.

RECORDED VOTE

Mr. BAUMAN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 328, noes 77, not voting 27, as follows:

[Roll No. 21]

Messrs. PHILLIP BURTON, GORE, BONKER, Ms. OAKAR, Mr. CLAY, Mrs. COLLINS of Illinois, Messrs. D'AMOURS, HARRINGTON, ST GERMAIN, and ALLEN, changed their vote from "aye" to "no."

So the amendment, as amended, was agreed to.

The result of the vote was announced as above recorded.

PERSONAL EXPLANATION

Mr. RYAN. Mr. Speaker, I wish the record to show that I missed the vote on the Wiggins amendment to H.R. 1614, rollcall No. 22, and that if I had been present I would have voted "no."

Mr. Speaker, I was on the Senate floor at the time, assisting in the work on passage of the bill to expand the Redwoods National Park.

AMENDMENT OFFERED BY MR. JOHN L. BURTON

Mr. JOHN L. BURTON. Mr. Chairman, I offer an amendment.

The clerk read as follows:

Amendment offered by Mr. JOHN L. BURTON: On page 177, line 14, add new section (i) as follows:

"(i) The Secretary shall exclude from any lease or pre-lease exploratory drilling any tract lying within fifteen miles of the boundaries of any existing National Wilderness Area, except if a State conducts a leasing or development within its tidelands adjacent to such area."

Mr. JOHN L. BURTON (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. JOHN L. BURTON. Mr. Chairman, this is the same, this is the identical amendment that was adopted to the Breaux substitute that affects only that one existing wilderness area in northern California.

Mr. TREEN. Mr. Chairman, will the gentleman yield?

Mr. JOHN L. BURTON. I will be happy to yield to the gentleman. It is the same amendment exactly.

Mr. TREEN. I thank the gentleman for yielding.

Can the gentleman tell me that in taking this area out of possible exploration, off the coast of northern California, we are not precluding production in an area which is suspected to have good potential resource recovery?

Mr. JOHN L. BURTON. My answer can only be the answer I gave the last time.

Mr. TREEN. I just want it again.

Mr. JOHN L. BURTON. There is no evidence of a great deal of dinosaurs having been laid to rest off in the wilderness of California.

Mr. TREEN. I appreciate there may not be any dinosaurs, but there might be other resources. Can the gentleman say, or does he have any information one way or the other, as to whether or not we are taking out of possible production an area of potentially good resource recovery? By "resource" I mean the resource that this bill is concerned with, oil and gas.

Mr. JOHN L. BURTON. I cannot tell the gentleman that there are not a couple of barrels of oil, or whatever, to be found in that area. It is not a prime area for oil reserves. That is my understanding. It is the same amendment with the same facts that were presented to this body and unanimously adopted to the Breaux substitute.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. PHILLIP BURTON. I yield to the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Chairman, we discussed this amendment at the time the Breaux substitute was offered. The amendment was acceptable to the committee at that time and it is acceptable at this time.

Mr. JOHN L. BURTON. I thank the gentleman.

I ask for an "aye" vote.

The CHAIRMAN pro tempore (Mr. ROBERTS). The question is on the amendment offered by the gentleman from California (Mr. JOHN L. BURTON).

The amendment was agreed to.

AMENDMENTS OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer a series of amendments, and I ask unanimous consent that they be considered en bloc.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. DINGELL: Page 134, line 21, strike out "Paragraph (c)" and insert "Paragraphs (b) and (c)".

Page 134, line 22, strike out "is" and insert "are".

Page 134, after line 23, insert the following:

"(b) The term 'Secretary' means the Secretary of the Interior, except that with respect to functions under this Act transferred to, or vested in, the Secretary of Energy or the Federal Energy Regulatory Commission by or pursuant to the Department of Energy Organization Act (42 U.S.C. 7101 et seq.), the term 'Secretary' means the Secretary of Energy, or the Federal Energy Regulatory Commission, as the case may be.".

Mr. DINGELL (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendments be dispensed with and that they be printed in the RECORD.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Chairman, my colleagues on the committee have seen this amendment before, so I will take very little time. It was adopted by the committee to the amendment offered by our good friend and colleague, the gentleman from Texas (Mr. BROOKS).

I offer it on behalf of the ranking minority member of the Subcommittee on Energy and Power, Congressman BROWN of Ohio, and myself. It is supported by the administration.

Mr. Chairman, on August 2, 1977, Congress passed the conference report establishing the new Department of Energy. Seven days earlier, H.R. 1614 was ordered reported by the ad hoc committee. Quite clearly, the committee did not know to what extent the functions of the Secretary of the Interior would be transferred to the new Energy Department and the Federal Energy Regulatory Commission.

As we now know, Congress, in establishing the new Energy Department, transferred to the DOE, at the request of President Carter, certain functions concerning oil and gas leasing, including functions relating to competition, alternative bidding, and rates of production. Included in this transfer were certain provisions of the Energy Policy and Conservation Act that apply to the OCS. That act originated in the Committee on Interstate and Foreign Commerce and in the subcommittee which I chair.

However, H.R. 1614 is technically deficient because it fails to recognize this statutory transfer. It uses the term "Secretary" throughout the bill. That term is defined in the 1953 act to mean the Secretary of the Interior, and that definition is not changed by this bill. Taken literally, it might be construed to change the DOE Act. I am assured by Chairman MURPHY that this was not intended.

Also, I point out that section 707 of the DOE Act would appear to preclude such a construction. It states:

SEC. 707. With respect to any functions transferred by this Act and exercised after the effective date of this Act, reference in any other Federal law to any department, commission, or agency or any officer or officer the functions of which are so transferred shall be deemed to refer to the Secretary, the Federal Energy Regulatory Commission, or other official or component of the Department in which this Act vests such functions.

However, in order to be certain, we offer this amendment to redefine the term "Secretary" to mean, as appropriate, the Secretary of the Interior, the Secretary of Energy, and FERC. Each of these agencies currently has functions under the OCS Act and the DOE Act. We urge support for this technical amendment.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the chairman of the committee, the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Chairman, the committee is happy to accept this amendment. It is grateful to the chairman of the Subcommittee on Energy and Power for bringing it to the attention of the committee. We are happy to accept it.

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from New York.

Mr. FISH. Mr. Chairman, I want to thank the distinguished gentleman for bringing this matter before the committee and for persisting with this amendment in this legislation.

Mr. DINGELL. I thank the gentleman.

I yield back the balance of my time.

The CHAIRMAN pro tempore. The question is on the amendments offered by the gentleman from Michigan (Mr. DINGELL).

The amendments were agreed to.

AMENDMENT OFFERED BY MR. GOLDWATER

Mr. GOLDWATER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GOLDWATER: Page 40, line 13, after the word "California" insert the following new language: "including the Santa Barbara Channel, except for those tracts in the Channel in which leasing was begun prior to October 1, 1975, and on which exploration, or development, or production was begun prior to January 1, 1978."

Mr. GOLDWATER. Mr. Chairman, the purpose of my amendment is to better clarify the definition of frontier area as it pertains to the Santa Barbara Channel. In the language of the bill, frontier area means any area where there has been no development prior to October 1, 1975. I have no quarrel with that. In fact, I support the inclusion of those areas where there has been no development prior to a certain date. However, by inclusion further down in the definition of the Santa Barbara Channel we are including those areas where there are, in fact, leases let and developments underway under the term "frontier area."

The purpose of my amendment is to exclude from the definition of frontier area, those areas in the Santa Barbara Channel where there has been explorations, development or production begun prior to January 1, 1978. The rest of those areas that do not fall into that definition would be excluded and they would be considered frontier areas as defined in the act.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, I think my colleague, the gentleman from California, has correctly stated the situation. But it was the intent of the committee to make sure that, in designating frontier areas, we designate those areas of the channel where there had been no exploration, development or production.

I believe, speaking for the majority of the committee, that the amendment serves to clarify that situation and we thank the gentleman for his help. We will accept the amendment on this side.

Mr. GOLDWATER. Mr. Chairman, I thank the gentleman. I yield to the gentleman from California (Mr. LAGOMARSINO).

Mr. LAGOMARSINO. Mr. Chairman, I thank the gentleman for yielding.

I might say, within the hour I talked to the board of supervisors of Santa Barbara County. They are very concerned about what they thought was going to be an amendment exempting Santa Barbara from exploration; however, when I explained the amendment that I thought the gentleman was going to offer, they did not seem to have any concern. They were primarily concerned about the pending resale of lease No. 48. It is the understanding of the gentleman from California that the amendment will not in any way affect lease sale No. 48.

Mr. MILLER of California. Mr. Chairman, if the gentleman will yield further, I would say that the intent of the committee bill is to take into consideration not only the pending sale, but to protect those people who already have a vested right and investment in existing law. I think we have preserved the concern of the gentleman and the people of the area.

Mr. GOLDWATER. Mr. Chairman, the purpose of my amendment again would be to protect those areas where exploration and development had not begun prior to January 1, 1978; so those areas the gentleman has referred to would be included in the frontier areas.

Mr. Chairman, I thank the gentleman from California (Mr. MILLER) and I ask for an "aye" vote.

The CHAIRMAN pro tempore. The question is on the amendment offered by the gentleman from California (Mr. GOLDWATER).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. WIGGINS

Mr. WIGGINS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WIGGINS: Page 150, strike out line 4 and all that follows through line 18 on page 151 and insert in lieu thereof the following:

"(B) that such cancellation shall not foreclose any claim for compensation as may be required by the Constitution of the United States or any other law;"

Page 211, line 20, strike out "In the case" and all that follows through "this subparagraph." On line 20 on page 212 and insert in lieu thereof "Such cancellation shall not foreclose any claim for compensation as may be required by the Constitution of the United States or any other law."

Mr. WIGGINS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. WIGGINS. Mr. Chairman, if I may have the attention of the gentleman from New York, this is the cancellation amendment. It is identical in terms to the amendment which I offered to the Breaux amendment. At that time, the majority expressed no opposition, and I will ask the gentleman now if he intends to resist this amendment.

Mr. MURPHY of New York. The committee intends to oppose this amendment.

Mr. WIGGINS. In that event, I will use my 5 minutes.

Mr. Chairman, this section deals with cancellation of leases. It is to be understood that developing and producing oil in the Outer Continental Shelf is an expensive business. It would not be beyond the realm of reasonable contemplation that a lessee would have tens, and perhaps hundreds, of millions of dollars invested in the lease itself, in exploration, in production facilities, and in onshore facilities to receive and process the oil. That investment is subject to being canceled by the Secretary upon the payment of what is generally understood to be just compensation.

The formula in the bill provides that if the lease is canceled by reason of certain overriding national concerns such as threatened environmental damage, which were not within the contemplation of the parties at the time the lease was negotiated, the lessee in that event is entitled to recover his investment less the amount of money that he may have received in revenues on that investment. I believe it is clearly understood that under that formula it would be possible, and indeed likely, in the event of a profitable lease, that the lessee would receive nothing by reason of his very substantial investment.

My amendment proposes to change that formula. My amendment would authorize the lessee under those circumstances to receive that compensation to which he is entitled under the Constitution; namely, just compensation. The issue is, first, whether or not the conduct of the Secretary in canceling a lease is a taking in a fifth amendment sense. That question has been addressed by the courts heretofore, and in a case decided in the ninth circuit captioned, "Union Oil vs. Morton," the ninth circuit panel concluded that an absolute suspension of production was tantamount to a taking. Clearly, a cancellation is a permanent suspension and is a taking.

The next issue, then, is whether in the event of a taking the lessee is entitled to just compensation or to the lesser standard contained in the bill. The only argument known to me as to why a lessee would be denied his normal constitutional right to just compensation would be that he waived that right by executing a lease in which the lessor, the Secretary of the Interior, is given the right to give him less than full compensation.

That question, Mr. Chairman, raises a complicated legal issue as to the conditions which may be attached to the enjoyment of a Federal program, and indeed to the enjoyment of a constitutional right. I am mindful that the Secretary of the Interior, in dealing with Federal lands, has broad authority not unlike the authority of a landlord dealing with an ordinary tenant. But, I am also mindful that the Secretary of the Interior is more than a landowner. He is an agent of the United States of America. Our Government exists to secure constitutional rights, not to compel their waiver.

There is a line of cases, Mr. Chairman, which says that the Government cannot impose unconstitutional conditions upon its citizens who seek to participate in a Federal program. Here, without much question, the Government does impose that limitation upon a lessee, and I contend that it may do so only for overriding and compelling national reasons. The record of our ad hoc committee, and surely the debate thus far in this House, establishes no compelling reasons for refusing to pay a tenant his just compensation. The only reason that comes to mind is that we are frugal, and do not want to do so. That, I sugest, is not an overriding national interest which would

justify the denial to a lessee of constitutional rights.

I urge the adoption of my amendment.

Mr. MURPHY of New York. Mr. Chairman, I move to strike the last word.

Mr. Chairman, four times in the committee deliberations we considered this amendment offered by the very astute gentleman from California (Mr. WIGGINS) and we rejected his proposal. The amendment the gentleman has offered is to provide a very vague standard for compensation for the cancellation of any lease, and this would, initially, I believe, lead to many lawsuits and, of course, an extension of the time-span that will be needed as we move to develop the Outer Continental Shelf.

Under the gentleman's proposed amendment, the lessee and the public would not be aware of the amounts of money to be paid because of a cancellation until a claim is made for such compensation and a court determines what compensation is appropriate. As stated by the gentleman, his amendment would require a case by case determination whether a cancellation involves a "taking" and what would be the compensation for that "taking." To avoid such delays and to provide for more certainty for both industry and the Government, the administration suggested, and the committee accepted, a highly complex and fair provision providing for standards for compensation, upon a lease cancellation. Specifically, this provision would provide that a lessee would be entitled to the compensation for the value of the rights of which the lessee is deprived, or restitution of the excess of cost over revenues, whichever is less. This amount bears a closer relation to the values, for which a lessee is being deprived by cancellation, of the amount of just restitution for operations on a lease. To provide even more guarantees for the leases presently in existence, at the time of passage of this act, total compensation for the value for the right is provided for the cancellation for any existing lease.

By specifically detailing the amount of compensation upon cancellation, the bill allows all concerned to adequately evaluate the cost of continued activity, as against cancellation, so as to make a valid determination as to when cancellation should, or should not, be secured.

In addition it allows potential lessees to calculate, as part of their bid, the risk of cancellation and the compensation to be paid if such cancellation occurs.

Mr. WIGGINS. Mr. Chairman, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from California.

Mr. WIGGINS. Mr. Chairman, two points are clear, from the gentleman's statement, and should be in the minds of all of the Members when they vote on this amendment. First, it is true that my amendment would require a case by case adjudication of the value of the interest taken. And what is so novel about that? That is the way it is done. Second, we should all understand that the formula cranked into this bill in certain cases would entitle the lessee to nothing at all, notwithstanding an enormous investment. And that simply is not fair.

The CHAIRMAN pro tempore (Mr. MURTHA). The question is on the amendment offered by the gentleman from California (Mr. WIGGINS).

The question was taken; and on a division (demanded by Mr. WIGGINS) there were—ayes 20, noes 24.

RECORDED VOTE

Mr. WIGGINS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 208, noes 194, not voting 30, as follows:

[Roll No. 22]

Downey		

The Clerk announced the following pairs:

On this vote:

Mr. Jones of Tennessee for, with Mr. Le Fante against.

Mr. McDonald for, with Mr. Thompson against.

Mr. Hightower for, with Mr. Bingham against.

Mr. Brown of Ohio for, with Mr. Dent against.

Mr. Dornan for, with Mr. Hawkins against.

Mr. Guyer for, with Mr. Rogers against.

Mr. Martin for, with Mr. Diggs against.

Mr. Skubitz for, with Mr. Lehman against.

Mr. Wydler for, with Mrs. Burke of California against.

Mr. Moorhead of California for, with Mr. Charles H. Wilson of California against.

Mr. LUKEN changed his vote from "aye" to "no."

So the amendment was agreed to.

(The result of the vote was announced as above recorded.)

AMENDMENT OFFERED BY MR. MILLER OF CALIFORNIA

Mr. MILLER of California. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MILLER of California: On page 152, strike lines 5 through 8, and insert in lieu thereof:

"(8) For compliance with the national ambient air quality standards or requirements pursuant to the Clean Air Act, to the extent that activities authorized under this Act affect the air quality of any state; and"

Strike line 11, and insert in lieu thereof: "Act consistent with standards or requirements under the Clean Air Act."

The CHAIRMAN. The gentleman from California (Mr. MILLER) is recognized for 5 minutes in support of his amendment.

Mr. MILLER of California. Mr. Chairman, section 5 of the legislation deals with the administration of the leasing of the Outer Continental Shelf.

In the committee bill, the committee included an amendment which I sponsored to make sure that the development of the Outer Continental Shelf did not interfere with the air quality of onshore areas. We have a situation in California where prevailing winds take the emission from the Outer Continental Shelf and blow it on shore, thereby raising the air pollution on shore and prohibiting new development in the State of California.

I suspect this can also be the case in the east coast at some point.

What we have done, after some counsel with the gentleman from Florida (Mr. ROGERS) from the Committee on the Interstate and Foreign Commerce, and with industry, is to offer this amendment in order to clarify that we have the Secretary of the Interior administer this provision in accordance with the standards and requirements of the Clean Air Act. He would not simply promulgate standards for the OCS, and apply those standards in the development of the Outer Continental Shelf, so we do not have the strange situation where, 3 miles outside the jurisdiction of EPA, you cause pollution which does not allow for the development of onshore facilities you need to develop the Outer Continental Shelf. This is a clarifying amendment. It is a section already adopted by the committee.

Mr. Chairman, I ask for a "aye" vote.

Mr. MURPHY of New York. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the committee strongly supports the amendment of the gentlemon from California (Mr. MILLER) to revise the present OCS clean air requirements to make them more consistent with the present law.

The committee was concerned about the effects of OCS activities on the quality of air above the adjacent on-shore coastal areas, particularly in those areas in the State of the gentleman, where there are prevailing atmospheric conditions, that would have a very serious effect on the air in the shore areas. The gentleman's amendment would not modify section 5(a)(9) of the bill, dealing with regulations regarding OCS activities. It would simply make the Clean Air requirements, as to state impacts, consistent with the present Clean Air Act.

Mr. Chairman, I would urge support for the amendment.

Mr. Chairman, in our earlier colloquy with the distinguished gentleman from Florida (Mr. ROGERS), chairman of the Public Health Subcommittee, the gentleman clearly understood and supported the committee bill. The gentleman supported the Miller amendment, since it more clearly states the committee policy as indicated by the committee earlier.

We appreciate the support of the gentleman from Florida in this endeavor.

Mr. FISH. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to point out initially that a list of amendments by title was prepared and delivered to us last night by the majority. It brought to our attention for the first time the number of the majority amendments. This entire amending process could be expedited if we could be given a copy of these amendments before the sponsor of the amendments stands up and starts talking about it, since that gives us a very short time to consider the amendment on its merits.

Mr. Chairman, I would like to address a question to the gentleman from California, who I assume is far more familiar with the Clean Air Act than I am. Is it not true that under existing law, the Clean Air Act would not be applicable beyond the 3-mile limit?

Mr. MILLER of California. Mr. Chairman, that is my understanding.

Mr. FISH. In other words the gentleman's amendment is going to be an extension of the Clean Air Act, to the Outer Continental Shelf.

Mr. MILLER of California. Mr. Chairman, if the gentleman will yield, that I think, in fact, is true. What we are saying, it will require the operation of the development of the Outer Continental Shelf and give us the facts, so that we do not disturb the intent of the Clean Air Act; so, in fact, it is an extension, but only for the purpose of OCS development. We are not talking about shipping. We are not talking about the vessels that go in and out on the 200-mile limit or the 300-mile limit.

Mr. FISH. That was going to be my next question. What about a vessel that is directly involved in OCS activities, such as delivering foodstuffs or equipment to a rig, or indeed bringing in oil?

Mr. MILLER of California. I would answer the gentleman in this fashion: That they would have to be in compliance, certainly in our State, to operate out of a port in that State. If they were going in and out of Long Beach or Santa Barbara, they would have to comply with all of the standards as set out under the Clean Air Act. I do not see that as a problem. We are really talking about a leak outside the jurisdiction of both State and Federal Government in terms of the Clean Air Act.

Mr. FISH. I have one more question. I think the gentleman mentioned the name of the chairman of the subcommittee——

Mr. MILLER of California. Mr. ROGERS of Florida.

Mr. FISH. Has the gentleman discussed this issue with him?

Mr. MILLER of California. Yes, we have, and his concern was the gentleman's, whether or not we were expanding the Clean Air Act, the authority under the Clean Air Act. The fact is, no, we are taking the authority under the Clean Air Act and applying it to OCS.

Mr. FISH. I thank the gentleman. If I could address a question to the chairman of the ad hoc select committee, who is also chairman of the Committee on Merchant Marine and Fisheries, is it his understanding that the effect of this amendment would be in accordance with what the gentleman from California has said?

Mr. MURPHY of New York. Yes, I concur in the responses of the gentleman from California to the question of the gentleman from New York.

Mr. FISH. So that at no time will foreign flag vessels or U.S. vessels that navigate those waters not involved in OCS drilling activities, be subject to two standards?

Mr. MURPHY of New York. That is correct. As the gentleman from California stated, the State requirements in ports would certainly govern the operaof those vessels in port, but the point is it would not govern past the 3-mile limit.

Mr. FISH. Well, does not this bill extend those requirements to the OCS, beyond the 3-mile limit?

Mr. MURPHY of New York. It would not for vessels.

Mr. FISH. I thank the gentleman.

Mr. FORSYTHE. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield.

Mr. FORSYTHE. I would like to ask another question of the gentleman from California. I sympathize very greatly with the west coast situation, where prevailing winds and relatively near offshore operations can have impact on the coast very significantly. On the east coast we may have different situations where, at least off our coast, we are talking about 50 miles offshore and prevailing winds pretty much going the other way. Would this cover a situation regardless of its distance from the shoreline?

Mr. MILLLER of California. The amendment as drafted applies to OCS, whether it is in the gulf or the Northeast.

Mr. FORSYTHE. So it does not depend on the impact on land mass. It is the impact on the installation offshore.

Mr. MILLER of California. The amendment would allow, however, the Secretary to draw regulations that may be more stringent for the west coast than they are for the east coast.

Certainly, that is taken into account because the development of OCS in the Northeast may very well not have the impact that so concerns us on the west coast.

Mr. FORSYTHE. I think if there is that possibility, I cannot see any problem here.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent Mr. FISH was allowed to proceed for 3 additional minutes.)

Mr. FISH. If I could get further clarification, because, as I say, this is a matter of first impression for me. On the other hand, the gentleman from California, I am sure, has thought through some of the problems connected with his amendment. We have some pristine areas we are considering for leasing in the frontier areas; for example, in the Gulf of Alaska. Has the gentleman contemplated the fact that there may be an effect by requiring adherence to the Clean Air Act on the Secretary's ability to carry out frontier leasing where shipping is involved and drilling rigs and everything else that is involved in OCS development would add some new pollutants to the pristine areas? These things are going to have effects a few miles out on the OCS and they may even prevent new exploration and production?

Mr. MILLER of California. The gentleman is talking about the reverse. The amendment does not speak to that. Under the Clean Air Act the authority would already exist for the purpose of curtailing that pollution source. The authority is already there in existing law. The point is that on OCS the authority is not there.

Mr. FISH. The gentleman does not see a problem in relation to stopping any OCS activities in frontier areas?

Mr. MILLER of California. No, that is not the intent, and I do not believe the amendment speaks to that.

Mr. FISH. I thank the gentleman.

Mr. ROGERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to ask the chairman of the committee and the gentleman from California a couple of questions about the bill and the Miller amendment. First, it is my understanding that the basic purpose of paragraphs (8) and (9) on page 152 of the bill is to assure that actions authorized by this act will be consistent with, and comply with, the Clean Air Act. Is that a correct statement of the intended effect of these two paragraphs?

Mr. MURPHY of New York. Yes, it is.

Mr. ROGERS. I believe the intention of the Miller amendment is essentially the same. It is my understanding that it merely clarifies that the Secretary's regulations will assure compliance and consistency with national ambient air quality standards as well as all other Clean Air Act requirements. Am I correct in that belief and understanding?

Mr. MILLER of California. Yes, you are correct. Moreover, neither the committee bill, nor the Miller amendment would in any way restrict or limit any authority or requirement under the Clean Air Act.

Mr. ROGERS. I am pleased to hear that. It appears to me that the policy of the bill is basically the same as that of the Miller amendment. In either event, the intent is to assure compliance with national ambient air quality standards, nonattainment area tradeoff requirements, implementation plans, and all other standards and limits under the Clean Air Act. I assume that under the bill or the amendment, the Secretary will solicit and give due consideration to the views of the Administrator of the Environmental Protection Agency in developing his regulations for paragraphs (8) and (9).

Mr. MURPHY of New York. The gentleman from Florida is correct in both respects.

Mr. ROGERS. With this understanding, I can and do support the committee bill generally. I also support the Miller amendment, since it more clearly states the committee's policy, as indicated by the chairman and Representative MILLER.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. MILLER).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. MCKINNEY

Mr. McKINNEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McKINNEY: "Section 28 is struck in its entirety. Insert in lieu thereof the following:

"SEC. 28. LIMITATIONS ON EXPORTS.—(a) Except as provided in subsection (d), any oil or gas produced from the outer Continental Shelf shall be subject to the requirements and provisions of the Export Administration Act of 1969.

"(b) Before any oil or gas subject to this section may be exported under their requirements and provisions of the Export Administration Act of 1969, the President shall make and publish an express finding that such exports will not increase the number of barrels of oil or cubic feet of gas imported into this country, are in the national interest, and are in accordance with the provisions and requirements of the Export Administration Act of 1969.

"(c) The President shall submit reports to the Congress containing the findings made under this section, and after the date of receipt of such reports Congress shall have a period of sixty calendar days, thirty days of which Congress must have been in session, to consider whether exports under the terms of this section meet the requirements of subsection (b). If Congress within such time period passes a concurrent resolution of disapproval stating disagreement with any of the President's findings concerning the requirements of subsection (b), further exports made pursuant to such Presidential findings shall cease.

"(d) The provisions of this section shall not apply to any oil or gas which is either exchanged in similar quantity for convenience or increased efficiency of transportation with persons of the government of an adjacent foreign state, or which is temporarily exported for convenience or increased efficiency of transportation across parts of an adjacent foreign state and reenters the United States, or which is exchanged or exported pursuant to an existing international agreement.".

Mr. McKINNEY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. McKINNEY. Mr. Chairman, this is the same amendment adopted by the House twice already, reflecting our common belief that any OCS legislation must contain a firm and tightly drafted restriction on the exportation of our offshore resources. However, at the suggestion of the Departments of State and Energy, I have added one additional provision which exempts oil exchanged or exported pursuant to an existing international agreement from the export restrictions of the amendment. This is necessary, I am told, to ease the fears of our allies, mainly Israel, that the United States would be unable to respond in the event of an international emergency. Mr. Chairman, I think the history of that provision gives a valuable insight into our overall energy problem and further indicates why I think the amendment, in its augmented form, deserves the full support of the House one final time.

As many of you recall, this amendment is similar to one I offered to the Export Administration Act Amendments (H.R. 5840) to make it unmistakably clear that Alaskan crude would not be diverted to the "business as usual" energy picture which will contribute the lion's share of our greatest trade deficit ever—$26 billion. Just as that oil is a domestic resource for domestic use, Outer Continental Shelf resources are being extracted at a great environmental and governmental price. That investment by the American people in devoting large portions of public lands to energy production should not be discounted by vague export provisions which give the President the power to export OCS crude. It was this rationale which prompted my amendment and it was this rationale which I hope will prompt this House to reject proposed language to restrict only those transactions which significantly increase our dependence on foreign sources. This is the language originally proposed to me by State and DOE. Based on the President's call to arms, I was and remain under the impression that no increase in our dependence could be hereafter termed insignificant when every additional OPEC barrel destroys American jobs and economic strength.

Instead, I have added far more specific language to deal with our international commitments without clouding the bill with the hazy statutory adjectives and adverbs which are the repositories of so much executive power. The amendment places additional restrictions on the export of OCS oil—to complement the Export Administration Act—to reflect the price we are paying and the value of that energy to our national energy effort. It permits those exports, accompanied by the requisite Presidential findings, to proceed for 60 days while Congress has the opportunity to examine those findings and disapprove the transaction. Also, the new language allows petroleum and gas sharing in the event of an emergency without allowing that emergency

to be permanently extended to the detriment of our domestic energy program.

Frankly, Mr. Chairman, I have been mystified by the President's insistence on what he calls "flexibility" to meet international emergencies when our own severe energy emergency goes, for the most part, unattended. While well intended, I think the committee's export restrictions give the President far more flexibility than anyone so allegedly committed to solving our energy problems should want or need. I urge adoption of my amendment.

Basically, Mr. Chairman, the words that have been added to this amendment since the last two times the House passed it are, simply, in paragraph (d) to say, "or which is exchanged or exported pursuant to an existing international agreement."

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. McKINNEY. I yield to the gentleman from New York.

Mr. FISH. I thank the gentleman for yielding.

Mr. Chairman, I support this amendment. I support it even in its more revised form, as compared to the form in which the gentleman offered it last week.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. McKINNEY. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, the committee accepts the gentleman's amendment.

Mr. McKINNEY. I appreciate the gentleman's support.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Connecticut (Mr. McKINNEY).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. SEIBERLING

Mr. SEIBERLING. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SEIBERLING: On page 153, line 16, strike everything down through line 16 on page 154, and insert in lieu thereof the following:

"(e) Rights-of-way through the submerged lands of the outer Continental Shelf, whether or not such lands are included in a lease maintained or issued pursuant to this Act, may be granted by the Secretary for pipeline purposes for the transportation of minerals under such regulations and upon such conditions as may be prescribed by the Secretary, or where appropriate by the Secretary of Transportation, including utilization of the best available and safest technology in accordance with the standard established in section 21(b) of this Act. All pipelines constructed on rights-of-way or constructed pursuant to easements granted under this Act, except pipelines operated entirely within a single lease, shall (1) be subject to regulation under the Natural Gas Act, as amended, in the case of pipelines carrying natural gas, and under the Interstate Commerce Act, as amended, in the case of other pipelines, and shall (2) accept, convey, transport or purchase, without discrimination and at reasonable rates, minerals produced from submerged lands in the vicinity of the pipeline in such proportionate amounts as the Secretary of Energy in the case of energy minerals, and the Interstate Commerce Commission in the case of other minerals, may determine to be reasonable, taking into account, among other things, conservation of resources and the prevention of waste. Grants of rights-of-way or easements for such pipelines for energy minerals shall be subject to any other reasonable condition deemed necessary by the Secretary of Energy, after consideration of the views of the Attorney General, to promote competition, including, without limitation, conditions requiring open and non-discriminatory access to such pipelines, conditions requiring the construction and nondiscriminatory operation of oil storage facilities and any other facilities directly related to such pipelines, and conditions relating to the initial sizing or subsequent expansion of throughput capacity of such pipelines and facilities within technological limits and economic feasibility; *Provided*, That subsequent throughput capacity expansion may be ordered pursuant to this subsection only upon the specific request of one or more shippers, owners or non-owners able to provide a guaranteed level of throughput and on the condition that the person or persons requesting such expansion shall be responsible for bearing the costs and risks related to the requested expansion, except where the Secretary of Energy determines that an alternative allocation of the costs and risks is equitably required; *And provided further*, That authority to require throughout capacity expansion pursuant to this subsection shall not apply to any pipeline for which United States Government approvals have been obtained or construction begun, on or before the effective date of this subsection. After giving the Secretary of Energy and the Attorney General reasonable opportunity for comment, the Secretary may by order or regulation exempt from any or all requirements of the preceding two sentences any pipeline or class of pipelines which feeds into a facility where oil and gas are first collected or into a facility where oil and gas are first separated, dehydrated or otherwise processed. Failure to comply with the provisions of this subsection or the regulations and conditions prescribed under this subsection shall be grounds for forfeiture of the grant in an appropriate judicial proceeding instituted by the United States in any district court of the United States having jurisdiction under the provisions of this Act. For purposes of this subsection, the term 'energy minerals' shall incorporate those minerals listed in section 2 of the Department of Energy Organization Act. As to any authority or functions under this subsection which are exercised by the Federal Energy Regulatory Commission, or which are similar to those exercised by the Federal Energy Regulatory Commission with respect to onshore pipelines, the term 'Secretary of Energy' shall be deemed to mean the Federal Energy Regulatory Commission."

Mr. SEIBERLING (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SEIBERLING. Mr. Chairman, this is an administration-supported amendment with two principal purposes. The first purpose is to transfer the Interior Department's authority to regulate OCS oil pipelines—in such matters as rates and valuations—to the Department of Energy and specifically to the Federal Energy Regulatory Commission (FERC). The second major purpose is to promote transportation efficiency by giving appropriate government officials the authority to prevent OCS pipelines from becoming "bottleneck monopolies." A bottleneck monopoly occurs when a single company controls the only transportation system available to move its petroleum and all other companies' petroleum from the OCS to a point onshore. The amendment would help prevent a situation in which the owner of a pipeline refused to transport other companies' petroleum or a situation in which the pipeline was deliberately undersized and the other companies found themselves unable to transport as much petroleum as they wanted to produce.

Let me return to the first point for a moment. Right now, the Department of Energy and the Federal Regulatory Commission—which is the successor agency to the Interstate Commerce Commission with respect to oil pipelines—may regulate interstate oil pipelines. However, the Interstate Commerce Act's definition of "interstate" does not cover a pipeline from the OCS to a point onshore unless that pipeline is an integral part of an interstate system beginning at that point onshore. The result is that the ICC never had regulatory authority over OCS oil pipelines, except that granted in section 5(c) of the existing OCS Act, which gives the ICC authority to proration oil in OCS pipelines. All other regulatory authority over OCS pipelines is vested by section 5(c) in the Interior Department. What happened in fact is that neither the Interior Department nor the ICC ever actively regulated OCS oil pipelines. In fact, in the 25-year history of the OCS Act, only five OCS oil pipelines have ever filed tariffs with the ICC. Because we need to have OCS oil pipelines regulated effectively by some agency, and because the DOE Organization Act did not transfer Interior Department's regulatory authority to DOE or FERC, we should insist upon that transfer in this act. The administration agrees, and so do industry and consumer groups, that DOE and FERC should be regulating OCS oil pipelines.

You will note that my amendment also gives DOE and FERC authority to regulate OCS gas pipelines. In fact, they already have that authority because the Natural Gas Act's definition of interstate commerce reaches all OCS gas pipelines. The amendment does, however, eliminate what is now a concurrent regulatory jurisdiction resulting from the language in the current section 5(c) giving the Secretary of the Interior authority to regulate OCS gas pipelines.

The amendment states clearly that DOE and FERC will regulate OCS oil pipelines under the Interstate Commerce Act in the same manner as onshore interstate oil pipelines and that DOE and FERC will regulate OCS gas pipelines under the Natural Gas Act in the same manner as onshore interstate gas pipelines.

Turning to the second purpose, namely giving the Government the authority to prevent bottleneck monopolies, it should be clearly understood that bottleneck monopoly abuses have been illegal for over 65 years since the 1912 Supreme Court case United States against Terminal Railroad Association of St. Louis. The cases hold that a company with dominant power over a particular seg-

ment of an industry upon which all companies in the industry must rely has a duty to be fair and nondiscriminatory.

We faced a very similar situation in the 94th Congress when we considered the Alaska Natural Gas Transportation Act. Congress required that the Alaska natural gas pipeline accept all gas delivered to it and transport that gas without discriminating against companies that produced Alaska natural gas but that did not own the pipeline. In its report to Congress pursuant to the Seiberling amendment to the act, the Justice Department concluded that there was a danger that the owner of the new pipeline system would be able to limit throughout in an effort to maximize its profits. The Justice Department made several recommendations to the President on ways to prevent bottleneck monopolies. These were incorporated into the final contract with ALCAN. My amendment contains authority, then, for the Department of Energy to impose certain reasonable conditions needed to promote competition and specifically to prevent bottleneck monopolies. I would note that the problem of bottleneck monopolies is much more likely to exist in the transportation of OCS oil than in the transportation of OCS gas. However, as the Justice Department's report makes clear, the problems can exist in both industries, especially if there is ever a different form of oil and gas price regulation.

Mr. Chairman, this amendment must be read and understood in light of several key documents and reports, which explain the concerns which the amendment's supporters are addressing. These documents and reports explain the possibilities for abuses by pipeline owners, especially by the integrated oil companies which may have an incentive to limit production—particularly of domestic oil. The reports and documents to which I am referring are the 1973 FTC staff report of its investigation of the petroleum industry, the 1975 paper written by Richard Levy for the National Science Foundation entitled "The Regulation of Offshore Crude Oil Pipelines and the Consequences for Competition," the 1975 testimony of Dr. Walter Measday on OCS pipelines during the Senate Judiciary Subcommittee on Antitrust hearings on the petroleum industry, the reports of the FTC and Justice Department on deepwater ports, the 1977 report of the Attorney General on the transportation of Alaska natural gas, the 1977 letter from Assistant Attorney General Shenefield to OCS Chairman MURPHY outlining the problems relating to vertically integrated companies owning pipelines, and the 1978 report by the General Accounting Office entitled "Review of Outer Continental Shelf Pipeline Problems."

DOES THIS AMEND THE NATURAL GAS ACT?

No. It states that the Natural Gas Act shall apply to OCS gas pipelines.

Of course, the Natural Gas Act provides that the FPC—now the Federal Energy Regulatory Commission—may provide certificates of public convenience and necessity. What the amendment does, in essence, is to permit FERC to consider conditions needed to prevent OCS gas pipeline bottleneck monopolies. The right-of-way issued to a gas pipeline company would be contingent on the company's having a certificate of public convenience and necessity.

The amendment is not intended to broaden the authority in section 7(a) of the Natural Gas Act (15 U.S.C. 717f(a)) to require the extension of facilities related to gas pipelines.

The amendment simply gives FERC the authority to require conditions which are reasonable and which are needed to promote competition, and particularly to prevent bottleneck monopolies.

I would note that the language permitting these conditions is intended primarily to prevent oil pipeline bottleneck monopolies. Gas pipeline bottleneck monopolies are most likely to occur when the pipeline owner is the producer of the natural gas, since that is the situation which most likely gives the pipeline company the incentive and opportunity to limit throughput in order to maximize profits.

WHY NOT GIVE A STATUTORY EXEMPTION TO ALL GATHERING LINES?

The bill gives a statutory exemption to all pipelines operated within a single lease. This will cover most of the gathering lines, but obviously there will be gathering and operating lines which would be covered since they go beyond the borders of the lease.

The amendment contemplates that the Secretary of Interior, after consultation with the Secretary of Energy and the Attorney General, will by regulation exempt a class of gathering lines provided that exemption is not likely to create bottleneck monopoly situations. Obviously, the Secretary of the Interior will want to promulgate regulations rather than consider each application for an exemption on a case-by-case basis.

The fundamental problem with the administration of the OCS Act has been the issuance of pipeline easements by the USGS under section 5(a)(1). Some of these lines have been deemed gathering lines by USGS, even though they are probably trunk lines. Under the amendment, all pipelines issued under the act would be 5(e) pipelines subject to the provisions of the amendment, unless they fell into a category exempted by the statute, by new regulations, or by new orders.

Mr. Chairman, I understand that the gentleman from Michigan (Mr. DINGELL) desires to enter into a colloquy at this point.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. SEIBERLING. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I would like to ask the gentleman some questions about his amendment and the present provisions of section 5(e) in H.R. 1614. I note that the bill, which was drafted prior to enactment of the DOE Act, quite properly recognizes that the then Federal Power Commission, in the case of natural gas, and the Interstate Commerce Commission, in the case of oil, has certain responsibilities under existing law. Is that not correct?

Mr. SEIBERLING. The gentleman is correct.

Mr. DINGELL. As the gentleman knows, the recently enacted DOE Act transferred to the DOE, including the new Federal Energy Regulatory Commission, these functions. Included in this transfer to FERC was the authority of the ICC over the transportation of oil by pipeline. Is that not correct?

Mr. SEIBERLING. Again, I agree fully with the gentleman from Michigan.

Mr. DINGELL. It is my understanding that your amendment does not change, in any way, and that you do not intend to change, the responsibilities that the DOE has under the DOE Act or that FERC, as successor to the FPC, has traditionally had in regard to the natural gas developed on the OCS, or has acquired, in the case of oil, under the DOE Act. It is my further understanding, both under the bill as amended by the committee and under your amendment, that it is the clear intention of the ad hoc committee and you to preserve and recognize those responsibilities in those agencies without change. Is that your understanding?

Mr. SEIBERLING. Mr. Chairman, I am in full accord with the just mentioned understandings of the gentleman from Michigan. Indeed, I am advised by representatives of the DOE and FERC, that, immediately upon enactment, any ambiguities concerning those responsibilities will be resolved by clear delegation of all of them to FERC from the Secretary of Energy. I know the gentleman from Michigan and his subcommittee will insist that this be done promptly.

Mr. DINGELL. I thank the distinguished gentleman from Ohio and I support his amendment with these understandings. The gentleman is quite right regarding my intention to follow this matter quite closely.

Under the DOE Act and under FERC procedures, there is an opportunity for hearings in the case of matters contained in the amendment you are offering. Would you agree that those hearing provisions would apply here and that a hearing would be required under section 501(c)(1) of the DOE Act because such actions would most likely have a substantial impact or involve substantive questions of fact or law?

Mr. SEIBERLING. I certainly would agree with the gentleman's understanding, and that is certainly my intention.

Mr. DINGELL. I thank the gentleman from Ohio, and I support the amendment.

Mr. MURPHY of New York. Mr. Chairman, I move to strike the last word, and I rise in support of the gentleman's amendment, which is also supported by the administration. It would increase competition among energy suppliers by providing access to pipelines, and I think his language constitutes a worthy addition to the bill.

Mr. Chairman, again, I am happy to support the gentleman's amendment.

Mr. SEIBERLING. Mr. Chairman, I thank the gentleman.

Mr. BREAUX. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to take this time to ask the author of the amendment a couple of questions.

Most of the information that I have been hearing about the gentleman's amendment is that it makes no substantive changes in the existing law.

What I would like to ask the gentleman is, What, in effect, does it change? I am trying to pinpoint exactly what the amendment does which is apparently not already being done under existing provisions of law.

Mr. SEIBERLING. Mr. Chairman, if the gentleman will yield, that is a very good question.

I do not really think it changes existing law. However, it does change the way that the law has been interpreted and applied by the Secretary of the Interior in the past. For example, section 5(c) of the existing law in the Outer Continental Shelf Lands Act does require that "oil and gas pipelines shall transport or purchase without discrimination, oil or natural gas produced from said submerged lands in the vicinity of the pipeline * * *."

Mr. MURPHY of New York. That is existing law; is that correct?

Mr. SEIBERLING. That is existing law, but not existing law as applied by the Interior Department.

Early on, after the act was passed, the Secretary exempted so-called operating lines from the requirements of the statute; and these were originally defined as pipelines used in connection with any lease operation for moving production to a central point for purposes of gathering, treating, or storing.

The exemption did not apply to pipelines used for transporting oil, gas, or other production after it had been treated and measured. However, in 1969, the Secretary of the Interior broadened the exemptive language so that operating lines were defined so as to include delivery of production to a point of sale and delivery of production to a pipeline operated by a transportation company.

Obviously, that could mean that any pipeline which carries only the owner's oil is an operating line; and it is an operating line until the oil is sold or delivered to a transportation company, which could well be an onshore line; and that certainly is not what I think the original language of the act was intended to mean.

However, the only clear way to change that is to pass this amendment which makes the necessary changes in the language of the act so that that no longer would apply.

Mr. BREAUX. Mr. Chairman and members of the committee, I find at first glance, having just had the opportunity to look at the gentleman's amendment, that one section refers to grants of rights-of-way to pipelines for transportation of minerals, subject to any reasonable condition thought necessary by the Secretary of Energy, after consideration of the views of the Attorney General, to promote competition, including, without limitation, conditions requiring open and nondiscriminatory access to such pipelines.

One section says:

> Grants of rights-of-way . . . for energy minerals shall be subject to any other reasonable condition deemed necessary by the Secretary of Energy at the consideration of the views of the Attorney General, to promote competition, including, without limitation, conditions requiring open and nondiscriminatory access to such pipelines . . . .

What I am really concerned about is that what we are doing is that the Secretary can come up with any regulation he deems necessary, that we are giving him a broad blank check to come back and decide what conditions he would like to have without any congressional review whatsoever, and saying that he can impose any of these conditions as long as he determines they are reasonable conditions so far as granting pipeline rights-of-way are concerned.

I think this is much too broad a description to give to the Secretary of the Interior.

For that reason I would hope that the gentleman's amendment, although I think it will pass, that the gentleman from Ohio (Mr. SEIBERLING) fully understands my deep concern as to the very broad and very "blanket" conditions we are going to confer that he may impose any such conditions that he wants.

Mr. SEIBERLING. Certainly it is not my intention to do that and I do not think the language gives him such blanket permission to impose any unreasonable conditions he deems necessary, because they are all limited to conditions to promote competition. That is the way it is defined, and I do not believe that is defined without any limit so far as discretionary access to the common carrier aspect.

Mr. BREAUX. I would interpret that to give discretionary powers to the Secretary to promote competition but that in so doing he may only give the right to one of the major oil companies to build the pipeline. That will promote competition but not promote pipelines being built.

Mr. SEIBERLING. Let me say that that would not promote competition. It is certainly not my intention to promote any sort of condition as that.

Mr. BREAUX. The problem is what you and I on the floor of the House might not think that a reasonable condition, but the Secretary of the Interior in his terms considers it is, I do not think there is anything we can do except enact a statute that says they cannot do that.

Mr. SEIBERLING. It seems to me if we read the rest of that provision, it is spelled out in such detail as to the kinds of things we are dealing with, all of which relate to making access to the pipelines as common carriers more available. It seems to me also that to say certain companies could not build pipelines would have the opposite effect.

Mr. BREAUX. I am afraid that is already the existing law and we have gone too far.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FISH. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Ohio (Mr. SEIBERLING).

Mr. Chairman, this is an amendment which is similar to a concept which was rejected by the ad hoc committee during the markup. The net effect of this amendment would be that nonowners of pipelines would be allowed to force expansion of the throughput capacity of a pipeline while not being forced to bear the cost or the risks associated with such an expansion. However, the language of the amendment, as I interpret it, gives the Secretary of Energy the power to determine that only owners will pay if, and I quote:

> . . . alternative allocation of costs and risks is equitably required; . . .

This excessively vague language, Mr. Chairman, I submit offers no real guideline to the Secretary and is an open invitation to lawsuits. Should the Secretary make a determination that an allocation of costs is "equitably required," owners of an affected pipeline would surely sue in an attempt to have nonowners pay for the expansion of the pipeline that their actions have prompted. The converse is also true. If the Secretary requires nonowners to pay for the expansion of the pipeline's capacity, it is not difficult to imagine those nonowners bringing suit, claiming that the ownership should have, equitably, paid for the expansion.

Mr. Chairman, there is another glaring weakness in this amendment. In proposing this amendment, the administration stated that—

> . . . we do not believe, however, it is necessary to regulate purely proprietary gathering lines which do not cause bottlenecks in the transportation of oil and gas to the shore.

Unfortunately, the language of the amendment states clearly that such pipelines are to be regulated unless the Secretary specifically, by order or regulation, exempts them from overall regulation. The regulation of such pipelines was not advocated during the 2½ years of hearings held by the select committee, and I see no reason for the adoption of such regulations at this time.

I urge the defeat of this amendment.

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, I thought I understood the gentleman to say the administration is opposing this amendment.

Mr. FISH. It is proposing the amendment.

Mr. SEIBERLING. Of course, the administration supports this.

Mr. FISH. I understand that. This is a a Johnny-come-lately administration amendment that we did not have during the hearings when the committee was considering this.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. SEIBERLING).

The question was taken; and on a division (demanded by Mr. FISH) there were—ayes, 20, noes, 19.

So the amendment was agreed to.

AMENDMENT OFFERED BY MR. TREEN

Mr. TREEN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TREEN:

Page 156, line 22, insert "or" immediately after the semicolon.

Page 156, strike line 23 and all that follows down through line 12 on page 158 and insert in lieu thereof the following:

"(C) any modification of bidding systems authorized in subparagraphs (A) and (B) of this paragraph and any other system of bid variables, terms, and conditions which the Secretary determines to be useful to accomplish the purposes and policies of this section,

Page 159, line 8, strike out "in subparagraphs (C) through (J)" and insert in lieu thereof "by subparagraph (C)".

Page 159, line 21, strike out "subparagraphs (B) and (C)" and insert in lieu thereof "subparagraph (B)".

Page 160, strike out line 24 and all that follows through line 26 on page 164.

Page 165, line 1, strike out "(D)" and insert in lieu thereof "(C)".

Page 165, line 14, insert "and" immediately after the semicolon.

Page 165, strike out lines 15 through 20.

Page 165, line 21, strike out "(vi)" and insert in lieu thereof "(v)".

Page 166, line 2, strike out "subparagraphs (B) through (J)" and insert in lieu thereof "subparagraph (B) or (C)".

Page 166, beginning on line 7, strike out "subparagraphs (B) through (J)" and insert in lieu thereof "subparagraph (B) or (C)".

Page 166, beginning on line 22, strike out "subparagraphs (B) through (J)" and insert in lieu thereof "subparagraphs (B) or (C)".

Page 168, line 23, strike out "proposal" and all that follows through line 25 and insert in lieu thereof "proposal;".

Mr. TREEN (during the reading). Mr. Chairman, I ask unanimous consent that the reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. TREEN. Mr. Chairman, this is a very simple amendment which has a number of advantages, not the least of which is that it will take out a lot of material from this bill, a lot of excess baggage.

This amendment affects the section on new bidding systems. Under the present law there are two forms of bidding for OCS tracts. One is bidding with a fixed royalty with a variable bonus, and then the reverse of that is a fixed bonus with a variable royalty. In the bill we have approximately seven new forms of bidding systems, and then we also have a catchall provision that authorizes any other system of bidding, including terms, bid variables, that the Secretary by regulation may promulgate.

Then there is a long section in the bill, taking several pages, that has to do with congressional review of the provision in the bill that mandates that new bidding systems be used in at least 50 percent of the areas in the frontier. Under the bill, if the Secretary wishes after the first year to use the bonus bid system for more than 50 percent of the area, then he must file a report with the Congress saying that he wishes to do this, noting the reasons why. Then the Congress has 60 legislative days in which to disapprove that report by a one-House veto.

The bill provides that the 60 days shall not include days in which the House is not in session. So if a report were sent by the Secretary for the purpose of relieving him of that mandatory requirement, it is possible that up to 6 months could elapse before he could move on his request because of the fact that 60 days of continuous session would have to elapse. Counting weekends and holidays and the fact that we could be in recess for 3 months—say from the middle of October until the beginning of January—we could easily use up 6 months.

I would think this amendment would appeal very much to the proponents of this bill. Now what my amendment does is give the Secretary complete flexibility. He may propose any of the seven new bidding systems described in the committee bill, or any other new bidding system the Secretary wants to provide for. He may provide for these by regulation, but we do not mandate any particular new system.

The benefit of this is that it gives the Secretary complete flexibility. He can use 100 percent work commitment bidding if he wants; 100 percent profit sharing; 100 percent royalty bidding; 100 percent bonus bidding; he can use any system he wants to. Of course, with new bidding systems, he would establish them by regulation.

It eliminates all this ponderous business of congressional review. The main point is that it eliminates again the possibility of delay, because if the Secretary determines that he really needs to exceed 50 percent new frontier area bonus bidding, he can do so without the possibility of having a 6-month delay here in Congress.

I have faith that Secretary Andrus would utilize this flexible leasing provision in a proper way.

I would hope, as I say, this would appeal to the committee majority by adding a great deal of flexibility to the bidding system and eliminating a lot of baggage from this bill.

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. TREEN. I yield to the gentleman from New York.

Mr. FISH. Mr. Chairman, do I understand the gentleman's position here to be that the Secretary would not be restricted under the gentleman's amendment to any fixed percentage of any laundry list of existing known bidding systems or even the experimental ones that have not been tried to date? Would he be able in the course of exploration and development of the Outer Continental Shelf to use even a bidding system totally unknown to us today that he thought up? Would he have the authority under the amendment to proceed?

Mr. TREEN. Mr. Chairman, yes; but in fairness, he would have that authority under the bill, too.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

(By unanimous consent, Mr. TREEN was allowed to proceed for an additional 2 minutes.)

Mr. FISH. Mr. Chairman, if the gentleman will yield further, is the new part of the gentleman's amendment the question of rulemaking by the Secretary; will he be able to promulgate new systems by rule?

Mr. TREEN. That is correct; not only the Congress, but industry, environmentalists, all who would like to comment with respect to the new bidding systems would have that opportunity under the Administrative Procedures Act; but I think one of the main things is that we do eliminate the possibility of an additional 6 months' delay. If he finds in the national interest, or for some other reasons that we should be proceeding with bonus bidding in more than 50 percent of the tracts, he can do so and does not have to go through this congressional procedure.

Mr. FISH. On the other hand, if the bidding procedure would be appropriate at 10 or 20 percent, that would be all right?

Mr. TREEN. Yes; he can use net profit sharing, royalty bidding, or anything. He can use those in 100 percent of the cases. He does not have to use any of those systems at all. Under the Breaux substitute bonus bidding was mandated in at least in 50 percent of the tracts leased. Under my amendment the Secretary does not have to use bonus bidding at all if he does not want to.

Mr. MURPHY of New York. Mr. Chairman, I rise in opposition to the gentleman's amendment.

Mr. Chairman, this amendment strikes at the very heart of this bill—promotion of competition. During its almost 3 years of hearings, the committee heard repeatedly about the lack of competition in offshore leasing. In fact, the reason for this lack of competition is because of the present bidding system—the use of high front-end bonus bids which create a barrier for the entry of small- and medium-sized oil firms as well as other potential exploration and development companies. Even the larger oil companies, through their representatives, indicated that payment of high front-end bonus bids can lead to some capital formation problems, and thus to a decrease in the amounts available for rapid exploration. After much discussion, and much debate, the committee decided to include many new bidding options as part of the Outer Continental Shelf Lands Act.

In addition, because of the prior administration's reluctance to use new bidding systems, it included a provision providing that such new bidding systems must be used in at least 50 percent of the leases offered in frontier areas during the next 5 years. Selection of tracts for leasing under the various leasing systems is to be on a random selection method—thus allowing the collection of adequate information as to which bidding systems are appropriate for which kind of leases.

This mandate of use of new bidding systems is strongly supported by the present Carter administration. Recognizing the need to not only experiment but use new bidding systems, the Secretary of the Interior has repeatedly stated to our committee that he believes that having such a mandate will be a positive incentive to doing extensive and detailed background, experimentation, and followup on new bidding systems.

Recognizing that this mandate must maintain some flexibility, the committee included in the bill a provision that the Secretary can exceed the limitations the first year by merely reporting to Congress his findings and reasons why use of the new bidding systems would unduly delay the OCS development. In future years, he can use the existing bonus bid system in 50 percent or more of the lease areas offered if he can detail why use of the new bidding systems in the mandated amounts would unduly delay efficient development, result in a less than fair return to the Federal Government, or in a reduction to competition.

Congress would have 30 days to review this report and could disapprove the request by resolution of either House.

Mr. TREEN. Mr. Chairman, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from Louisiana.

Mr. TREEN. For the sake of accuracy, I think the bill provides 60 days. The gentleman just said 30 days.

Mr. MURPHY of New York. We adopted the gentleman's language in committee, to be 60 days.

The present provision therefore provides an incentive to use new bidding systems, and sufficient flexibility to the Secretary of Interior to experiment, study and finalize the use of the new bidding systems. In addition, while the committee and I personally have every confidence in the present Secretary of the Interior that he will keep his commitment to use new bidding systems, Congress has the duty to pass laws for whomever the Executive is—and as prior history has indicated, you cannot be absolutely assured that the present Secretary will remain in his position during the entire period of leasing of frontier areas.

Accordingly, we oppose this amendment.

Mr. FORSYTHE. Mr. Chairman, I move to strike the last word.

I rise to support the amendment offered by Mr. TREEN. It is true that we heard during the hearings about lack of competition. We did not hear that from industry members except in a very, very minor way. I think it is very, very evident that the present bidding system does produce competition. It produces a lot of competition for these bids. Small companies do gain access to the resources, and are developing them. As a matter of fact, most of the discoveries are made, not by the larger companies, but by the smaller companies.

I think to burden this whole operation with a mandate of these new bidding systems just must create delay. I think that this amendment, which does give the Secretary substantial freedom if, in his wisdom, he wants to proceed by rulemaking to develop new bids and systems, but who says that we have the wisdom to write what are the new bidding procedures in law, and to say that this is better than what is going to be developed in the years ahead?

So, I urge the committee to adopt the amendment.

Mr. TREEN. Mr. Chairman, will the gentleman yield?

Mr. FORSYTHE. Yes.

Mr. TREEN. I ask the gentleman to yield because I wanted to direct a question to the chairman of the committee. Does the chairman understand that the amendment gives complete flexibility? In other words, we are not mandating the use of any kind of bidding system to any extent whatsoever. We are giving the Secretary complete flexibility, complete freedom. There was an indication during committee hearings that the administration would appreciate having the flexibility. I realize it did not object to the mandating as written, but there seemed to be, throughout the testimony by Secretary Andrus and the Under Secretary of Energy Mr. O'Leary, the feeling that they would be happy to have the complete flexibility.

Does the chairman understand that we are not trying to mandate any kind of bidding with this amendment?

Mr. MURPHY of New York. The gentleman states the case fairly well, but I would object to the understanding of his amendment as he portrays it. Am I not correct in coming to the conclusion that the flexibility is so great in his amendment that 100 percent of the bidding could be bonus bidding.

Mr. TREEN. That is correct.

Mr. MURPHY of New York. That is correct. And that is a situation we would like to get away from, because we have watched it for 25 years. We want to have competition and, consequently, we are mandating the Secretary's use of alternative bidding systems.

Mr. TREEN. The chairman has indicated there can be a situation in which in the national interest the resort to more than 50-percent bonus bidding might occur. I think tne gentleman has alluded to that.

Mr. MURPHY of New York. Yes.

Mr. TREEN. One of the problems here with this bill is that if he decides the Secretary wants to go to more than 50-percent bonus bidding, then that could, depending upon whether we are in session or not, add another 6 months' delay, and I do not think that is in the national interest.

Mr. MILLER, of California. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to the amendment for, first of all, the reason included in the colloquy that has just taken place. While the amendment gives, as the author of the amendment would say, completes flexibility to continue the existing system and the practices of the past, which is to basically rely on all but 2 or 3 percent of the leases on the bonus bid system. I think it is very clear that in the past, while people make the claim that the bonus bid system has worked very well, it can also be clearly stated that the bonus bid system may fall under its own weight. Because as we embark on an accelerated lease program, with the passage of this bill, when we see a diminishing of the lawsuits, of the obstructions placed in the way of the Federal Government by the State and local governments by environmental groups, and we start leasing in an accelerated amount, there simply is no way that the major oil companies can continue to lay out the massive amounts of front-end capital for these sales. It was fine at one time they could lay out $600 or $900 million for Destin Dome and not find oil. But as the amount of acreage begins to expand, as we have already seen in the California sale, the amounts bid per tract will drop. We will see an increase in the single bid per tract, so that the oil companies will select the tracts they want to bid on. There will be no other bids. And, in fact, those bids will be low as a result of that. We have had testimony before the chairman of the subcommittee, the gentleman from Michigan (Mr. DINGELL), and others, who engaged in a colloquy with the president of Gulf Global Exploration, with the vice president of Standard Oil of California, with the vice president of Atlantic Richfield, in which this problem was discussed. It was said in 1974 hearings these tremendous capital outlays required by the front-end bonus bidding system would dampen the ability of the oil companies to go out to develop and to continue to explore, if they have to continue the layout. I have recited to the committee in the past the capital shortage this causes. These bonus payments have no relationship to the value, as we found out in Florida. We had one sale where the Government let go a lease for $112,000 and it turned out to be worth over $20 million. So I think it is very clear that, by mandating that at least 50 percent of the leases be offered in alternative systems, we are protecting ourselves against a policy that would be at the whim of the individual Secretary of the Interior. The committee position would be a policy that was written by the Congress based upon the evidence of the past. I think that is a rational way to do it. While the opposition to the committee bill can cite that this present Secretary wants this authority, wants this kind of flexibility, we have seen in the past—and in my short time here we have gone through a lot of Secretaries of the Interior, they have a short tenure in office—that they have not exercised that authority.

They have not exercised that flexibility, but have gone the way the major oil companies have preferred the system to continue.

I think we will see, with the increase in royalty bidding, with the increase in net profitsharing, and with sliding royalties, that for the first time we will have major competition. While statistics are

given out about the participation of the independent oil companies and the minor oil companies, as opposed to the majors, they are not participating in ownership, they are participating in a share of that ownership. They have been brought in, I suspect, for some of the capital reasons that other Members and I have cited, to participate in these leases, but in a minority capacity.

But now for the first time, under royalty systems, there will be competition from the gas companies, and there will be competition from the gas companies, and there will be competition, I suspect, even from utility companies which are seeking to acquire resources. There will truly be competition from the independents, and no longer will we have statements like that by Mr. Mull, who is president of the Mull Drilling Co., who said when questioned by the gentleman from Michigan (Mr. DINGELL), that—

In fact, the majors would just sort of laugh at us, I suppose, if we talked to them.

The CHAIRMAN. The time of the gentleman from California (Mr. MILLER) has expired.

(By unanimous consent, Mr. MILLER of California was allowed to proceed for 2 additional minutes.)

Mr. MILLER of California. Mr. Chairman, Mr. Mull said further:

There has been very little independent participation in the offshore for that one reason.

We cannot come up with the massive amounts of capital the front-end bonus bidding requires.

He also stated in his testimony before the Committee on Small Business that he thought that over half of the 10,000 independents were qualified to embark on exploration and development of the Outer Continental Shelf if the barrier of the bonus bid was removed and if they could share with the Government the risk and share with Government the profits.

So I think that is what the committee bill is designed to do, and I think it is rational. I do not believe that it is the duty of this Government to try to extract maximum amounts of money from the oil companies on the theory that we should get a windfall when they do not find any oil. That is not in the national interest in the middle of an energy crisis. Our goal is not to build up the Treasury of the United States at the expense of the oil companies. The national interest is to provide oil and remove the barriers for the exploration and development of that oil. I think the compromise that has been arrived at with the committee bill best suits that intent.

Mr. STUDDS. Mr. Chairman, will the gentleman yield?

Mr. MILLER of California. I yield to the gentleman from Massachusetts.

Mr. STUDDS. Mr. Chairman, may I say to the gentleman that I do not think the minority makes many points in arguing for this amendment on the grounds of the adequacy and sufficiency of the bonus system, about which the gentleman and many other Members have been highly critical—and, I think, quite rightly so.

I think somewhat seductive on the part of the minority in the offering of the amendment is the contention that this erodes selection or participation, and that in fact the current Secretary is inclined to use that flexibility, which is true.

Would the gentleman tell us, in the 24 or 25 years during which this section has been in effect, under his predecessors, just how many times the Secretary of the Interior has used, for example, the current system under bonus bidding, which he could use under the current law; namely, royalty bidding?

Mr. MILLER of California. Mr. Chairman, it is my understanding that until very recently, it had been used on just four occasions. If we are speaking of alternative systems which have been used, some would say they have been used on less than four occasions.

I would suggest to the gentleman that under current law, he does not have the flexibility to reduce the royalties in the future, so that we could make sure we completely strip those wells of the resources so vitally needed by this country. He does not have that flexibility now.

What the bill does is to supply all the flexibility the gentleman from Louisiana (Mr. TREEN) would have us have. If the Secretary chose to use an alternative system, which is not compatible with the development of the OCS in the national interest, when they come back and ask us for an increase in that percentage, we would refuse.

But the fear is that we go along and then after reforming this bill, after this legislation was written in 1953, we then today say, "You have the permission of the Congress to go along in the same old manner as we went along before." And I suspect that the "same old manner as we went along before" is not relevant to oil exploration today.

The CHAIRMAN. The time of the gentleman from California (Mr. MILLER) has again expired.

(On request of Mr. TREEN and by unanimous consent, Mr. MILLER of California was allowed to proceed for 1 additional minute.)

Mr. TREEN. Mr. Chairman, will the gentleman yield?

Mr. MILLER of California. I yield to the gentleman from Louisiana.

Mr. TREEN. Mr. Chairman, I just want to clear up one point.

Would the gentleman suggest that under my amendment the Secretary would not be able to provide for a bidding system in which the royalty would be diminished?

Mr. MILLER of California. No, I am not suggesting that that is the flaw. While some people would argue that, I did not say that in regard to the gentleman's amendment. Some people would argue that, but I would say that while he already has the flexibility I would suggest the existing law is not flexible enough, because it does not allow for sliding royalties below 12½ percent, and the gentleman's amendment would allow that.

Mr. TREEN. Mr. Chairman, I agree that the law does not allow that. It would not permit that, but under my amendment the same formula, in addition to other systems, including declining royalty systems, would be used.

Mr. MILLER of California. That is correct. The concern of the committee and of this gentleman is that that flexibility would allow the Secretary to continue to do business as he has done it during the last 25 years, and that is with almost total reliance on the bonus bidding system.

Let me say finally that this amendment in the committee bill only requires that the Secretary offer these alternative systems.

The CHAIRMAN. The time of the gentleman from California (Mr. MILLER) has again expired.

(On request of Mr. FISH and by unanimous consent, Mr. MILLER of California was allowed to proceed for 1 additional minute.)

Mr. MILLER of California. If the Secretary rejects the bid as being too low or if the oil companies do not bid on it, he has the power and can then go ahead and offer another system.

Mr. Chairman, let me tell this committee that in those cases where bids have been rejected, 3 months, 6 months, or 9 months later, when the tract was again offered for lease, strangely enough, the bid received was, on the average, 13 times higher than the original bid made on that tract.

Therefore, Mr. Chairman, I suggest that we do not know that much about the existing bid system and the actual return to the Federal Government. However, what I do know is that we cannot continue to rely on it, and we cannot give the ability to a future Secretary to continue to rely on the bonus bidding system exclusively. That is what the amendment by the gentleman from Louisiana (Mr. TREEN) would allow.

Mr. Chairman, I understand that he is trying to say his intent is to allow all of these other systems to come into play.

The CHAIRMAN. The time of the gentleman from California (Mr. MILLER) has expired.

(On request of Mr. FISH and by unanimous consent, Mr. MILLER of California was allowed to proceed for 2 additional minutes.)

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. MILLER of California. I yield to the gentleman from New York.

Mr. FISH. Mr. Chairman, I asked that the gentleman have this additional time because in the colloquy with the gentleman from Massachusets, I am afraid the House may have been misled.

The statement was made that in the last 25 years there has been no experimentation.

Mr. MILLER of California. No.

Mr. FISH. I think that the facts speak for themselves. Up to now, there have been only two systems available. That was the uncontroverted testimony before our committee, and I mention only one person, Mr. Meade of California, which was to the effect that the royalty system was a poor second of the two available

There has been no dispute between the majority and minority up to this point that alternative bidding systems were a good thing to bring into legislation as an option. We simply disagree as to the mandate provisions, as will become clearer as this debate develops and we have a substitute amendment to the pending amendment offered by the gentleman from Ohio (Mr. BROWN).

Mr. Chairman, I thank the gentleman for yielding.

Mr. MILLER of California. I would say to the gentleman, Mr. Chairman, that is one thing that makes sense.

Mr. ROUSSELOT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the Treen amendment.

Current bidding systems for the lease of the rights to extract energy resources on the OCS include the traditional bonus bid with a minimum royalty of 12½ percent, and the variable bonus, with a sliding royalty scale. These systems are proven and have returned enormous revenues to the Treasury estimated, along with taxes, to exceed 83 percent of the value to all energy extracted from the OCS.

However, during hearings, it was determined that perhaps alternative systems, would offer the opportunity for not only improving the already high level of competition but for returning larger revenues to the Treasury. For these reasons, H.R. 1614 creates seven new, unproven, experimental bidding systems, and gives the Secretary authority to establish his own systems.

While the traditional proven systems may turn out to be the best systems, the new untried systems should be used in some areas in order to properly make this determination. The problem lies in the fact that H.R. 1614 mandates their use in at least 50 percent of the areas for use (USGS has stated they plan to use the unknown system in 70 percent of the time). This is fiscally irresponsible, poor management practice, and could result in the wholesale giveaway of the public's energy resources on the OCS.

The Congressional Budget Office stated, in the report on H.R. 1614, that they could not properly estimate the revenues from the unknown systems, but that their use—50 percent of the time, not the 70 percent stated by USGS—would result in billions of dollars being lost to the Treasury. It was not until after the report was published that they could make a final determination, which was that there would be a $2.02 billion cost to the Government for using these experimental systems, in just the first 5 years of the program.

Once a lease is let, we cannot undo it. It takes approximately 8–12 years from the time exploration begins for production to take place. It would, therefore, take quite a while for us to determine what is the true worth of these systems while additional leases are being let under that system.

These experimental systems should be used but we should remember that they are just that—experimental. The Secretary should be mandated to use them in order to conduct experiments to determine their worth; however, the percentage of use should be smaller, in order that any detrimental impact will be minor, and not result in a giveaway of the public energy resources. No one has, or can, estimate what the return for these systems will be, and these unknown experimental systems should not be applied wholesale simply on the basis of the hope or faith that revenues might be increased in 1986–89.

The experimental alternative bidding should be tried, but the percentage of use by the Secretary should be limited to a much smaller percentage until we find out if the public will indeed benefit.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, first of all, the systems are not untried or untested.

Mr. ROUSSELOT. That is what the Congressional Budget Office says.

Mr. MILLER of California. Let me tell the gentleman that they are only untried and untested in one major country in the world, and that is the United States, because the same companies that are fighting this alternative are chomping at the bit to bid in the North Sea.

Mr. ROUSSELOT. No company has talked to me about this issue.

Mr. MILLER of California. If I could get oil at 16 percent royalty to the Government, I would certainly do it.

Mr. ROUSSELOT. I sit here and listen to the gentleman from California (Mr. MILLER) and listen to other Members of this committee discuss this issue. However, I did read what the Congressional Budget Office said to the committee on that issue; and I have some interest in that because I am a member of the Committee on the Budget.

The Budget Office tells me that you are going to give up revenues by this provision in the bill and therefore I stand up on the floor to ask questions about it. The gentleman is not arguing that it is going to potentially reduce revenues as the Congressional Budget Office says, is the gentleman? Is the gentleman going to argue with respect to that?

Mr. MILLER of California. Yes.

Mr. ROUSSELOT. Could the gentleman explain it?

Mr. MILLER of California. If the gentleman will yield further, I never cease to be amazed by the gentleman from California (Mr. ROUSSELOT). Let me say that if you take 1 year and 50 percent of the leases are offered under an alternative system, where you do not have bonus bidding, then you will lose 50 percent of the bonus.

Mr. ROUSSELOT. Correct. We are speaking about a proven and a tried system, is that not right?

Mr. MILLER of California. Like all the other systems were.

Mr. ROUSSELOT. And yet the gentleman wishes to give it up for something that is unproven, except for the ability to produce oil and gas in foreign countries at prices four times as high as we have in the United States.

Mr. FISH. Will the gentleman yield?

Mr. ROUSSELOT. I will yield to my colleague, the gentleman from New York (Mr. FISH) in a moment but first I will continue to yield to my colleague, the gentleman from California (Mr. MILLER).

Mr. MILLER of California. The point is that in many cases the revenues are only deferred, and they may even be greater than we realized out of the bonus bidding.

Mr. ROUSSELOT. But we do not know that, is that correct? We do not know that they will be better.

Mr. MILLER of California. They cannot be much worse.

Mr. ROUSSELOT. I see. The gentleman considers that it is a bad system.

Mr. MILLER of California. Time and time again it has been proved so. There have been cases that have proven that way. I believe the No. 1 case involved the situation where one company produced resources of great value through a very small bid. They bid $144,000, and the resources turned out to be $20 million. They should have bid $6 million instead of $144,000.

Mr. ROUSSELOT. All I know is that the Congressional Budget Office says that they set down the losses in billions of dollars, not in millions, being lost through the Treasury. That is what the Congressional Budget Office says. Is the gentleman from California saying that the Congressional Budget is totally useless?

Now I yield to my friend, the gentleman from New York (Mr. FISH).

Mr. FISH. There is one thing that interests me when we talk about this being only experimental.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. FISH, and by unanimous consent, Mr. ROUSSELOT was allowed to proceed for 2 additional minutes.)

Mr. FISH. If the gentleman will yield further, I believe the gentleman was being told by the other gentleman from California (Mr. MILLER) that the only thing experimental about these experimental bidding systems is the fact that they have not been used in the United States.

I wonder if my colleague, the gentleman from California (Mr. ROUSSELOT), would like to inquire of the other gentleman from California (Mr. MILLER) whether one of the countries that has used these experimental bidding systems is Indonesia? Because the last report we received is that the Indonesian National Oil Co. is in serious financial trouble. It might be because of the fact that there is such a long time lag until after production starts.

Mr. ROUSSELOT. I will be glad to yield to my colleague, the gentleman from California (Mr. MILLER) to answer that question.

Mr. MILLER of California. Mr. Chairman, first of all, I would like to hear the question.

Mr. FISH. I said that I wondered if Indonesia is one of the examples of a success in the gentleman's view of the foreign use of alternative systems, experimental systems?

Mr. MURPHY of New York. Mr. Chairman, if the gentleman will yield, I would be happy to respond to that question. The financial difficulty of the Indonesian National Oil Co. was not due to the bidding systems but it has been troubled by many programs, all of an extremely ambitious nature not relating to oil and gas recovery, and they did not occur at one period of time.

We had seen the problem of industries that get committed on large capital scales and without a steady cash flow. What happened in that instance was the barrels-per-day production decreased whereas Indonesia had expected it to increase. It therefore fell into a short cash position, and the problems of that company have nothing to do with the bidding for that type of lease.

Mr. STUDDS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I intend to give most of this time to the exasperated gentleman from California (Mr. MILLER), but first, since the other gentleman from California (Mr. ROUSSELOT) is so fond of quoting so often to us the assumptions of the Congressional Budget Office, I think it only appropriate that the record reflect the precise words of the Congressional Budget Office. The sentence the gentleman from California (Mr. ROUSSELOT) referred to is as follows:

> The assumption is made that the bidding experimentation would be implemented for the minimum 50 percent of the leases and that this would result in a decrease of approximately one-half for the bonus revenues of this 50 percent of the leases.

That is the sentence to which the gentleman from California referred, but the gentleman neglected to share with the House the following sentence which reads as follows:

> These experimental methods are designed to increase revenues in the production phase of OCS activity; however, these revenue increases would occur after fiscal year 1982, which is outside the scope of this estimate.

I would hope that would set the record clear.

I yield now, Mr. Chairman, to the gentleman from California (Mr. MILLER).

Mr. MILLER of California. Mr. Chairman, I thank the gentleman from Massachusetts (Mr. STUDDS) for yielding.

That is a very important point. I appreciate what the gentleman from California (Mr. ROUSSELOT) has advocated, which is money for the Treasury. What I am trying to suggest is, if we are trying to resolve the energy problem, that the issue is how to get production. We should remove the barriers from those people who are competent to speed up production and exploration. The way to do that is to remove the reliance on front end capital which requires a great deal of capital outlay at the beginning.

I suggest we give the Secretary the mandate to go out and use these alternative, not new and untried, systems, but alternative systems, so we can get the greatest amount of participation and also have the greatest chance of producing revenues.

I think it is wrong—I repeat, I think it is wrong to go around beating our chests and saying that we got $600 million from the oil companies when they did not find any oil. I suggest that is very damaging to a fundamental industry of this country. That $600 million could be put into exploration in areas where oil is promising or the frontier areas where it is more expensive to develop. We know from the North Sea experience that some of the rigs they are going to build go into the frontier areas will cost up to one-quarter of a billion dollars. For $900 million, I suggest we could build three or four of those rigs, and it would be more important to have that rig capacity than it would be for the Treasury to have the $900 million.

It is very convenient to have those moneys to be put into the Treasury. We saw President Ford try to balance his budget by saying we would get $8 billion off the Outer Continental Shelf. That is not the purpose of this bill. The purpose of this bill is to bring oil into production for an oil-short country. That is what we are trying to bring about.

The Congressional Budget Office study suggests that, in fact, the income to the Government will be deferred, not lost, because of the absence of the bonus bid. But if we can talk about a 30- or 40- or 50-percent sliding scale royalty and work product effort, we will perhaps increase royalties. But one thing is very sure: We will increase competition and the likelihood of immediate production.

They will not have to scramble around. Once they have laid their money on the table, as they say in the industry, they would not have to look for additional capital.

All the evidence from investigations by this Government, by people who have been involved—and very interestingly enough, the Republican administration prior to the introduction of this administration—advocate use of alternative systems, and doing away with these tremendous capital requirements. Now we find when the effort has come and the pressure is on the bill I suspect the majors want to keep that barrier for the major companies, and keep the independent oil companies away from participation. That is the question: How much oil are we going to have, and how fast will the exploration be? In my district I suspect some 15,000 people are involved in the oil industry.

The CHAIRMAN. The time of the gentleman from Massachusetts (Mr. STUDDS) has expired.

(At the request of Mr. MILLER of California, and by unanimous consent, Mr. STUDDS was allowed to proceed for 1 additional minute.)

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. STUDDS. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, it is very clear, I am told by representatives of the petroleum industry, and I have seven or eight major refineries in my district, that the passage of this bill and production in the OCS can mean up to 3,000 or 4,000 new jobs in that area. So I do not think this is offered as a smoke screen to kill the OCS leasing program or to hamper it.

I honestly believe this is the means by which we can get the most rapid development of the OCS without mandating huge capital requirements. As the president of Atlantic Richfield has stated, as the president of Standard Oil of California and the presidents of Gulf Global and Mobil Oil have testified, when we bring on these incredible amounts of acreage to be explored, the industry is not going to be able to sustain the exploration if we rely on this bonus system.

AMENDMENT OFFERED BY MR. BROWN OF OHIO AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. TREEN

Mr. BROWN of Ohio. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

> Amendment offered by Mr. BROWN of Ohio as a substitute for the amendment offered by Mr. TREEN: Page 160, strike out line 24 and all that follows down through and including line 23 on page 165 and insert in lieu thereof the following:
>
> "(C) The bidding systems authorized by subparagraphs (C) through (I) of paragraph (1) of this subsection shall be applied to not less than 10 per centum and not more than 30 per centum of the total area offered for lease each year during the five-year period beginning on the date of enactment of this subsection, unless the Secretary determines that the requirement set forth in this subparagraph is inconsistent with subparagraph (A) of this paragraph.
>
> "(D) Within six months after the end of each fiscal year, the Secretary shall report to the Congress with respect to the use of the various bidding options provided for in this subsection. Such report shall include—
>
> "(i) the schedule of all lease sales held during such year and the bidding system or systems utilized;
>
> "(ii) the schedule of all lease sales to be held the following year and the bidding system or systems to be utilized;
>
> "(iii) the benefits and costs associated with conducting lease sales using the various bidding systems;
>
> "(iv) if applicable, the reasons why a particular bidding system has not been or will not be utilized; and
>
> "(v) an analysis of the capability of each bidding system to accomplish the purposes and policies stated in subparagraph (A) of this paragraph.".

Mr. BROWN of Ohio (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. BROWN of Ohio. Mr. Chairman, I rise solemnlike in this moment of passion between the two gentlemen from California, in the hope of offering a compromise that perhaps will resolve this family fight between the gentleman from California (Mr. MILLER) and the gentleman from California (Mr. ROUSSELOT) and to try to bring to a conclusion this part of the debate. While we are debating this amendment we are importing more and more oil from the OPEC nations which is having more and more impact on our outflow of dollars and a deleterious effect on our balance of payments and our whole economy. I would like to have the issue resolved in a way

that we can get on with this legislation and go about our business.

Mr. Chairman, the amendment I am offering would modify those provisions of H.R. 1614 dealing with the mandatory use of alternative bidding systems.

Under present law, two systems are authorized (bonus bid and variable royalty), but the bonus bid system has been used almost exclusively. Under H.R. 1614, as now drafted, the bonus bid system shall not be used for more than 50 percent of the acreage leased in any one year. In the place of the bonus bid system, the legislation would require the Secretary of the Interior to experiment with seven new systems and in addition would allow the Secretary of the Interior to establish any other bid system at his discretion.

Although the proponents of these new systems have failed to prove the inadequacy of the bonus bid system, I have no objection to providing the Secretary of the Interior with the authority to utilize bidding systems other than those presently authorized under law. However, I do object to this Congress telling some future Secretary of the Interior that he must use certain enumerated systems despite the fact that these systems may be proven to be counterproductive. In my view, it makes no sense to impose absolute restrictions on the use of any bidding system before the facts on a particular system become known. Only by experimentation will the suitability of the various bidding systems become known.

The amendment I am offering would help alleviate some of the problems with the bidding provisions of H.R. 1614 by providing the Secretary of the Interior with the discretion to apply the alternative bidding systems authorized by this section to not less than 10 percent nor more than 30 percent of the total area offered for each year during the 5-year period beginning on the date of enactment of the section. In addition, my amendment would give the Congress an opportunity to review the results under the bidding system selected by the Secretary by providing that the Secretary shall report to the Congress with respect to the use of the various bidding systems provided under this bill within 6 months after the end of each fiscal year. This report shall include the schedule of all lease sales held during the year and the bidding system or systems utilized, the reasons why a particular system has not been utilized, and an analysis of the capability of each bidding system to accomplish the purposes and policies of this section.

Mr. Chairman, if there is an advantage to the use of any one of these new systems, then my amendment will permit the Secretary maximum flexibility in employing them where they are appropriate. I feel that this discretion is particularly important in view of the fact that many of these bidding systems provided for in H.R. 1614 are experimental and may indeed prove to be unsatisfactory under some, if not many, circumstances.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent Mr. BROWN of Ohio was allowed to proceed for 2 additional minutes.)

Mr. HUGHES. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. Yes.

Mr. HUGHES. I wonder if the gentleman will answer a question. As I examine his amendment it would appear that the Secretary would have to submit to the Congress within 6 months, a schedule of all lease sales held during the year and the bidding system or systems utilized; and under subsection (ii), a schedule of all lease sales to be held the following year and bidding system or systems to be utilized.

My question would be, suppose the Secretary during the early part of that year examined available data and determined that one particular lease system is not in the public interest, but that this particular system has been slated for that year; under the report that has to be submitted to the Congress it would appear that the gentleman's amendment would lock the Secretary into that system for that particular sale.

Mr. BROWN of Ohio. No, I do not think it would. I think that what we are asking the Secretary to do is to give us the results, and what he has scheduled up to that point, and then if the Congress finds that those results are not desirable, or if the system does not have the attractive qualities that the Secretary thought, and the Secretary had it scheduled for the next year, the Congress could come in and say, "Mr. Secretary, we are concerned about your using this system," or in the alternative, not using this system.

The Congress will have a chance to play a part. It does not say that the Secretary cannot alter the system he proposes for the next year.

Mr. HUGHES. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I will try not to take the full 5 minutes.

I think that my colleague's amendment is, indeed, flawed. In fact, I think it is more rigid than the language in the committee bill, in that the way I read the amendment offered by the gentleman from Ohio, the Secretary would be locked in under his amendment to the lease systems for the sales that are to take place in the ensuing year.

I do not see any flexibility in the amendment for the Secretary to change that, once a report has been submitted to Congress. But I do not think that is the major problem with this particular amendment. I think there is an even greater, basic danger with the effort to scuttle this section of the bill.

Let us face it, the opponents of H.R. 1614 have talked all around the major problems they see with the bill. We have finally got to the hub of why the major oil companies are opposed to H.R. 1614. It is because we are tampering with the bonus bid system. It is as simple as that. All the other is window dressing.

The arguments about Federal exploration and delays and the attack on the provisions which involve OSHA certainly have been made, and made well, in the media and elsewhere, for the 3 years I have served on the ad hoc committee. But their real objection to H.R. 1614 deals with our efforts to change the bid system. The major oil companies are alarmed at the possible erosion of the bonus bid system that has served them so well.

The frontier waters we are about to develop are the last virgin areas where we have a potential for sizable quantities of fossil fuels. It is in this area that it is so important that we bring in the independent oil companies as we try to identify and retrieve commercially extractable oil and gas resources.

It has been said time and again on and off the floor of this House that we are dealing with experimental bidding systems. It is ironic, because this country is the only country in the world that relies on the bonus bid system. The systems we are trying to encourage the Department of the Interior to utilize as alternative bidding systems have been tried and tested and found not to be wanting in other parts of the world. They are not experimental.

Mr. Chairman, we traveled, as part of the ad hoc select committee, to a number of different areas in the North Sea, where other systems are being utilized very successfully. So it just does not really hold water when it is suggested that these are experimental systems. Why we in this legislation directed the Secretary to utilize the alternative systems is because we want to give the alternative systems a fair chance, something they have not had in this country in the entire 25-year history of oil and gas development in America. We want to give these other systems a fair trial.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. HUGHES. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I want to try them too.

The gentleman characterizes my amendment improperly when he says I am trying to discourage it. I want to try it. I think it is important. But I want to say to the gentleman that I do not want to throw out the baby with the bath water.

I think we have a system, to some extent, and it has been proved to be successful in particular instances. Perhaps it is questionable in others. But I would like to see a minimum of 10 percent for systems used experimentally and a maximum of 30 percent, and then this Congress, where the responsibility ought to repose, can make a change in the system.

As to the Secretary being locked in, I wish to say to the gentleman that I voted for the sunshine-in-government legislation. I think we ought to know what the Secretary is going to do, and we ought to call him in and say, "Now, Mr. Secretary, justify your position." If we do not like it, we ought to tell him what he ought to do.

They work for us; right?

Mr. HUGHES. Mr. Chairman, the gentleman from Ohio (Mr. BROWN) makes a very persuasive case and, in fact, it was debated, I think, quite actively in our

committee before we decided upon the 50-percent formula contained in the bill.

However, our legislation contains all kinds of safeguards.

The CHAIRMAN. The time of the gentleman from New Jersey (Mr. HUGHES) has expired.

(On request of Mr. BROWN of Oho, and by unanimous consent, Mr. HUGHES was allowed to proceed for 4 additional minutes.)

Mr. HUGHES. Mr. Chairman, to continue, if in fact the Secretary finds that it is too rigid, that in fact it is not in the public interest, the Secretary does have the authority in this legislation to submit to the Congress a report indicating the difficulties with the different forms of alternative bidding and explaining why the 50 percent formula should not be followed.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. HUGHES. Mr. Chairman, let me just finish my statement, and then I will yield.

But I think the fact of the matter is that we need to send a clear signal to the Secretary of the Interior to utilize in a realistic fashion during the next 5 years systems other than the bonus bidding systems. We think the 50-percent formula will insure that the Secretary will give the alternative bidding systems a fair try.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. HUGHES. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I will say to the gentleman that I am a convert to what I think has been the gentleman's position over the last few years—and I believe it is still his position—and that is that the Congress ought to reassert itself not only in the responsibility of making these major decisions about where we are headed in our future but that we must not yield up all those decisions to Secretaries and bureaucrats, and that we also ought to exercise what is a fundamental responsibility of this Congress, and that is the oversight of these things that we undertake experimentally as they progress.

If the new systems are desirable and are more desirable than what we are now doing, I would say that we should come back and modify this proposal and go to 50 percent, 70 percent, or even 100 percent, if that is desirable.

All I want to do is to know where we are headed. These are some kind of fog lights. Let us try the 30-percent or 10-percent limit now instead of mandating a 50 percent and instead of just chopping in half what we are currently doing and insisting that the Secretary do so much and give him the option to do some more.

But we should stay on top of it so we know what he is doing is either squaring with what we think ought to be done, or, if it is not, we should come back and tell him. That is all there is to it. There is nothing sinister about it.

Mr. HUGHES. Mr. Chairman, I am happy to hear that the gentleman is a convert, and that the gentleman does understand fully the importance of mandating that a certain portion of the lease sales be under alternative bidding systems. That is inherent in the gentleman's amendment.

Some 10 percent is mandated as a minimum. I think that is a step in the right direction, but I still think the committee bill has arrived at a better solution. We have clearly stated the Congress wants the Secretary to try in a meaningful fashion the alternative bidding systems.

It is ironic that the industry on the one hand wants the Secretary to have the flexibility of the various alternative bidding systems but, on the other hand, the industry is challenging the Secretary's exercise of discretion at every turn, when, of course it benefits them.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield for one more point?

Mr. HUGHES. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I sit on the Committee on Interstate and Foreign Commerce, and we tried to resolve a problem similar to this one in that committee. That concerned our powerplants sited, and unfortunately we got into one of those three-way splits. One-third of the membership of the committee wanted one thing, another third wanted another thing, and the remaining third had a different position. As a result, we did not bring back powerplant sited legislation as yet.

All I am trying to do is to come to an understanding.

The CHAIRMAN. The time of the gentleman from New Jersey (Mr. HUGHES) has expired.

Mr. BREAUX. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I am not really sure whether any Member here has not yet decided on how he is going to vote on these two amendments that are pending, but I think some points should be made for the record to try to set this in perspective.

No. 1, since we have had leasing offshore since approximately 1953, we have used since that time basically two bidding systems: One, a cash bonus bid with a fixed royalty, and No. 2, a second system with a veritable royalty. Those are the two systems this country has used basically since 1953.

What are the results since 1953? One of the results is that the U.S. Treasury has received under those two systems 83 percent, and these are USGS figures.

That is, 83 percent of all of the revenues being derived from any OCS activity whatsoever. The Federal Government is getting 83 percent of all of those revenues.

Therefore, Mr. Chairman, anyone who argues that perhaps the Federal Treasury is not getting a fair shake under the existing system, in my opinion, is just not looking at the facts. The facts show that way over three-quarters of all of the money is coming back to the U.S. Treasury.

Therefore, to say, "You have to experiment and try some other systems to see if we are getting enough money," to me does not make any sense.

Mr. Chairman, the second argument is that we should try some experimental bid systems to bring in some smaller companies.

Let us look at the facts. In the last 20 years of OCS, some 150 oil companies, other than the 8 largest domestic producers, the so-called big oil companies, have acquired interests in something like 66 percent of all of the leases and have obtained something like 49 percent of the ownership.

Therefore, with respect to the two arguments which people are using, including saying that we need to try to experiment, if we look at the facts, No. 1, the Federal Treasury is getting a tremendously fair return; and No. 2, the smaller companies, the 150 companies I have just cited, have participated in the sales and have acquired ownership and interests in all of those sales. Consequently, the two systems we have are working.

Now, Mr. Chairman, the committee has come up with 10 new bid systems, basically 8 new ones, plus the old existing 2.

They say, "At least 50 percent of the time you are going to have to try these new experiments." My colleague, the gentleman from Louisiana (Mr. TREEN), has indicated that we should not have to try them at all. The gentleman from Ohio (Mr. BROWN) has taken the approach that it should be done at least 10 percent of the time but no more than 30 percent of the time.

Mr. Chairman, in the interest of coming up with a true compromise, the substitute which I will be offering after other amendments are presented, simply says that I will take the eight new bid systems plus the old two and that we will take the 10 bid systems and split them so as to enable the Secretary to experiment if he should decide to try to experiment. Let us try it, Mr. Chairman, but let us not go overboard in trying it. The Breaux compromise says that he can try it, try the new experimental bid systems in the frontier areas up to 50 percent of the time, anywhere from zero to 50 percent of the time, but no more than that.

Mr. Chairman, if we are going to experiment, I think that is a fair experiment. We do not know what the results of these experiments will be. We are not the only country that has tried these experimental bid systems. Let us look at the results in Europe and in other foreign countries which have tried these experimental bid systems. I do not think we want those results. They are paying $3 or $4 a gallon for gas in Europe. They tried the experimental bid systems. They are burning wood to heat their homes because they cannot afford to buy heating oil, and the government owns most of the companies over there, so that they are able to do what they want and decide how they want to do it.

Therefore, Mr. Chairman, I do not think that the results in areas which have tried it would mandate that this Congress say, "Go ahead and try it at least 50 percent of the time." I do not think those results are what our constituents or gas consumers would want when the price of heating oil is going out of sight in foreign countries and they have to ration gas because they cannot afford to buy it.

All of those results are from new-fangled experiments that are used overseas.

Mr. Chairman, I say no to that type of experiment. I say, let us take a moderate approach, a compromise approach; and that is what the Breaux compromise is going to do.

Mr. STUDDS. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Massachusetts.

Mr. STUDDS. Mr. Chairman, does the gentleman from Louisiana (Mr. BREAUX) support the two pending amendments?

Mr. BREAUX. I support the Breaux compromise but am not in favor of either one of those amendments.

If I had my preference, I would prefer both of them as against the committee bill. I am going to vote for them because I think they are much more preferable to what the committee bill has in it; but at the proper time, I will offer my compromise which, of course, would eliminate both of those amendments, because I think it is a middle-of-the-road approach.

Mr. FISH. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I do not think I will take the 5 minutes.

In looking across the aisle here, Mr. Chairman, I see some faces of Members who, I am sure, have heard what I have had to say before.

H.R. 1614, we have heard over and over again today, is bringing up untried systems that must be used in 50 percent of the areas offered for lease.

I think one missing link in all our discussion has been, Where did this come from, this 50 percent? Suddenly 50 percent becomes holy; but, Mr. Chairman, I remember 3 years ago when the chairman, the gentleman from New York (Mr. MURPHY), introduced the bill. What was the percentage mandated? It was 10 percent, the 10 percent that is now the bottom of the range in the Brown amendment; and suddenly it is such an awful thing.

Mr. Chairman, I remember when the committee voted to increase the 10 percent to the one-third, the 33 percent. It was not until markup in 1977, following a recommittal of this bill, that, by a vote in committee of—guess what?—10 to 9, we suddenly went up to that 50 percent.

Mr. Chairman, I suggest that this is one of the fundamental problems with this bill. We have gotten tremendous cooperation from the majority today in terms of just compensation and in terms of dual leasing. This is a major issue.

The safety regulations are one.

Mr. Chairman, I would not be at all surprised if when we complete this matter today or tomorrow, we will come out with a pretty good bill. But this, as I think my colleagues on both sides know perfectly well, is one of the central issues. I just hope that what I have alluded to here and showing the progression of how we arrived at having 50 percent in the bill, causes all kinds of problems. It ties the hands of the Secretary by its very language, even if he thinks the systems are detrimental he must then come to the Congress for approval. In the amendment offered by the gentleman from Ohio (Mr. BROWN) that is not the case.

The same untried systems are contained in the substitute if the Secretary wants to use them. The authority is also granted for the new systems that are contained in (j) of H.R. 1614, but we do not require that he await action by one House of Congress for approval, before he can deviate from use of alternative systems.

These experimental systems should be used. There is, once again, no dispute between the minority and the majority on that subject, but we should remember the new alternative, experimental systems are just that—experimental. The Secretary should be mandated to use them in order to conduct experiments but the percentage must be smaller than is proposed in the committee bill in order that the detrimental impact will be as minor as possible and we will not be responsible for a wholesale giving-away of our public energy resources.

I think that is the simple issue. We do not know what these experimental systems will do. We have never been told what can be expected from them. In spite of the fact that there is apparently some use of these alternative systems in some of the foreign nations, it is not apparently known how they have worked by those who have alluded to them. We do know that the authorities say it will be 8 or 10 to 12 years before there is production, and before there is revenue received from these systems. So we should not stand here running a risk to our energy resources through untried systems, by not taking the prudent course offered to us in the amendment offered by the gentleman from Ohio (Mr. BROWN).

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Chairman, when the original report was filed on this bill in 1976, the gentleman from Delaware, our former colleague Mr. DuPont and I filed supplemental views. One of the points we found attractive in those minority views, and I still find attractive, is that this legislation introduces alternative bidding systems which it is hoped will open up these frontier areas to some of the smaller companies giving them the possibility of being able to enter into the Outer Continental Shelf development. I think it is a pretty good way to move. We deal so often in imponderables in this chamber in many areas of legislation, and I believe that one of the largest risks so far as the energy needs of a majority of the country is concerned is in the mandating that 50 percent of the OCS bidding be by new alternate systems.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. BAUMAN, and by unanimous consent, Mr. FISH was allowed to proceed for 2 additional minutes.)

Mr. BAUMAN. Mr. Chairman, if the gentleman will yield still further, let me repeat that, one of the largest risks or imponderables in this debate is that we do not know what these alternative systems will produce in the way of revenues. It is not an imponderable, however, that the Congressional Budget Office which is charged by statute to give us the estimated cost of legislation has told us that the cost will be at least $2.2 billion over a 5-year period, if this legislation goes through as it is now written, because of the losses these new systems will produce.

We have been told by the Geological Survey that 70 percent of all bidding at least will be under these new experimental systems. So what they are telling us—and this is not a disputed fact; it has never been disputed; I asked the chairman of the committee last week to dispute it and he never did; no one ever has—is that the taxpayers are going to lose $2 billion as this bill now stands. It appears to me that prudence would dictate that we at least reduce this loss by a 10 to 30 percent minimum and maximum on these alternate bidding systems used. If they work out—I hope they work out—let us come back and amend the law and mandate that they all 100 percent be under alternate systems. But to blunder into this thing on the blind faith of a figure picked out of the air to the detriment of oil and gas production and to the detriment of the U.S. Treasury is doing a favor to the oil companies and it is doing a disfavor to the people of the United States.

So I hope the amendment of the gentleman from Ohio is adopted. This is a middle ground between complete discretion or the 50 to 70 percent mandated position, the rigid position of the bill. It is something from which I think Americans will benefit.

Mr. FISH. I thank the gentleman. He is absolutely right. I would like to repeat that really the Brown amendment and the language in the committee bill are not that far apart. The same bidding systems are encouraged.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. BROWN of Ohio, and by unanimous consent, Mr. FISH was allowed to proceed for 2 additional minutes.)

Mr. FISH. It is a percentage use of these systems that I think the vast majority of the Congress and the American people are interested in more than the fact that a percentage is mandated in the committee bill.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I thank the gentleman for yielding.

It may be, Mr. Chairman, a little bit peculiar for a member of the Energy Conference Committee to speak of the importance of compromise in this Chamber, but it seems to me that one of the problems that we have had with our energy program over the last 2 or 3 or 4 years is its unpredictability because of the unwillingness of elements in this body and in the other body to compromise, to sort of chart our course of mod-

erate change slowly so that people will know what they can expect in the future.

What concerns me about this is that we have an issue here that was resolved in the position of the committee on a 10-to-9 basis, and we are going to force that through, except that what people outside really read of the Congress is that we may get a bill that has a very close vote on it and then they are not sure but what we may be changing the game in the future. I think we would be much better off to try to get a piece of legislation—and I think that some of the progress we have made today is in that vein; it looks to me as if there is a spirit of taking some of the untoward things out of this bill—so that we can get a fairly good majority in support of it. I would like to see us be able to get a piece of legislation out in the energy field that did not come out by a gnat's eyelash but rather came out with a good strong majority supporting it. I think that the compromise I have offered can help accomplish that. It was certainly offered in that spirit. It was not meant to do anything harmful to the bill, but rather to see that we take a slight step down the road of innovation without vacillating to the point that people would not be in favor of the bill.

Mr. TREEN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I will not take the 5 minutes. There has been, it seems to me, a suggestion in the Chamber by some who insist on mandated experimental bidding, that somehow those of us who do not think that is a good idea are taking that position because that is what big oil wants. I do not give a hoot about big oil in that connection. My motivation—and I sincerely believe the motivation of others who oppose the mandate of experiments—is our concern for energy production and our concern for delay.

My amendment, to which Mr. BROWN of Ohio has offered an amendment, would provide complete flexibility with the Secretary of the Interior so that he could move to 100 percent experimental bids such as work commitment bidding or work profit share bidding. In other words, he would not have to do any bonus bidding whatsoever. And if the "big oil" is in favor of mandating a certain amount of bonus bidding, it would not support this type of amendment.

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. TREEN. I yield to the gentleman from New York (Mr. FISH).

Mr. FISH. Mr. Chairman, one of the matters here the members of the Committee should be aware of is this: The provision in the committee bill is identical to the provision in the Senate-passed bill. The 50 percent is there. This is it. This is the one chance we have to correct this situation, because the issue will not be conferenceable if the committee provision prevails at the end of the consideration of this bill.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. BROWN) as a substitute for the amendment offered by the gentleman from Louisiana (Mr. TREEN).

The question was taken; and on a division (demanded by Mr. BAUMAN) there were—ayes 17, noes 19.

Mr. FISH. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. The chair will count. Fifty-seven Members are present, not a quorum.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

RECORDED VOTE

The pending business is the demand of the gentleman from New York (Mr. FISH) for a recorded vote.

Does the gentleman insist upon his request?

Mr. FISH. I do, Mr. Chairman.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 196, noes 207, not voting 29, as follows:

NOT VOTING—29

Armstrong	Harrington	Moorhead, Calif.
Bingham	Hightower	Moss
Brown, Calif.	Horton	Mottl
Burke, Calif.	Jones, Tenn.	Pattison
Conable	LeFante	Poage
Dent	Lehman	Roncalio
Dornan	Lent	Skubitz
Downey	McDonald	Teague
Flood	Martin	Waxman
Guyer	Mineta	

The Clerk announced the following pairs:

On this vote:

Mr. Jones of Tennessee for, with Mr. Le Fante against.

Mr. McDonald for, with Mr. Dent against.

Mr. Hightower for, with Mr. Mineta against.

Mr. Teague for, with Mrs. Burke of California against.

Mr. Conable for, with Mr. Bingham against.

Mr. Dornan for, with Mr. Mottl against.

Mr. Martin for, with Mr. Lehman against.

Mr. Moorhead of California for, with Mr. Waxman against.

Mr. Skubitz for, with Mr. Harrington against.

Mr. Guyer for, with Mr. Flood against.

Messrs. VANIK, ROSTENKOWSKI, STAGGERS, and ULLMAN changed their vote from "aye" to "no."

Mr. PRESSLER and Mr. CONTE changed their vote from "no" to "aye."

So the amendment offered as a substitute for the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Louisiana (Mr. TREEN).

PARLIAMENTARY INQUIRY

Mr. TREEN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. TREEN. Mr. Chairman, my parliamentary inquiry is this: The next vote will be on the Treen amendment?

The CHAIRMAN (Mr. NATCHER). The gentleman is correct.

Mr. TREEN. Is that open to amendment?

The CHAIRMAN. The gentleman is correct, it is open for amendment at this point.

Mr. TREEN. I thank the Chairman.

Mr. BAUMAN. Mr. Chairman, I move to strike the requisite number of words, and I yield to the author of the pending amendment, the gentleman from Louisiana (Mr. TREEN).

Mr. TREEN. Mr. Chairman, I thank my colleague, the gentleman from Maryland, for yielding in order to give me an opportunity to explain to the Members what the pending amendment is now.

Mr. Chairman, the Brown amendment to my amendment having failed, a vote will occur on my amendment. Let me explain briefly what my amendment does. Under existing law there are two forms of bidding that are permitted for OCS tracts: bonus bidding and royalty bidding. Under the committee bill seven additional forms of bidding that we have never used before are set forth. In addition to that, there is a catchall provision which would permit the Secretary of the Interior to devise any other form of lease, including its terms and conditions, and so forth, of that lease.

The bill as written also provides that the Secretary of the Interior in the frontier areas must use, for at least 50 percent of the tracts, bids other than bonus bidding. Royalty bidding, or one of these new experimental-type bids, or some other bid arrangement that he would promulgate by regulation would have to be used for 50 percent of the tracts. My amendment goes to that question of mandating. My amendment would take out the detailed description of additional experimental bids, but it would preserve—and let me emphasize this—the Secretary's right to devise any form of bidding system that he wished to. He could devise any terms, any conditions, a work commitment bid, a profit-sharing bid, employing any variables, any type of bid that he wanted to. He could use experimental bidding for 100 percent of the tracts, or for 80 percent of the cases. He could use bonus bidding in 100 percent or in zero percent. In other words, this gives the Secretary of the Interior complete flexibility, and it avoids the dangers inherent in our mandating the Secretary that he must use new and untried bidding systems on at least 50 percent of the tracts.

This amendment also takes a lot of garbage out of this bill. Under the reported bill, if the Secretary decides that he cannot go to experimental bidding with respect to 50 percent of the tracts after the first year, he must come to the Congress and make a report. We have 60 days while we are in session to act on that report. If we are not in session, those days would not be counted. It could take as much as 6 months for this Congress to act on a request to be relieved of the mandate for 50 percent experimental bidding, and that could cause additional delay.

Please bear in mind my amendment does not preserve bonus bidding. The Secretary does not have to let 1 acre through bonus bidding. What we are doing is giving him flexibility, while also insuring that we are not going to have these long delays in implementation of the leasing schedule that could come about as a result of the committee bill.

I urge an aye vote on this amendment.

Mr. DODD. Mr. Chairman, I move to strike the last word.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. DODD. I yield to the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Chairman, I thank my colleague, the gentleman from Connecticut, for yielding.

I would like to capsulize in as short a period of time as I can the opposition of the committee to the language offered by the gentleman from Louisiana (Mr. TREEN). The language in the bill at the present time requires competition in the leasing arrangements on the Continental Shelf. What the present language calls for is a 5-year period during which the Secretary must use alternative types of bidding procedures in 50 percent of the lease sales. At the present time we find almost 100 percent of the bidding is the bonus-bid, up-front, big-cash-expenditure type of bidding that dominates the sale of tracts in the Outer Continental Shelf.

The purpose of the committee saying that the Secretary should utilize alternate forms of bidding for only 5 years is that after 5 years the Secretary will have made his analysis as to which are the most cost-effective methods of bidding on the public lands.

This amendment is a flexible amendment. It is so flexible that we could go back under another Secretary to 100-percent bonus bidding—something we do not want to do. We have seen the problems related to the current system: the total domination by major interests of the Continental Shelf.

Please reject this amendment and let us have the flexibility wherein the requirement is that 50 percent of the bids will be experimental for only 5 years. At that time the Secretary will have had the experience as to which would be the most proper and effective way of leasing on the Outer Continental Shelf.

Mr. BREAUX. Mr. Chairman, I move to strike the requisite number of words.

Mr. TREEN. Mr. Chairman, will the gentleman yield for a moment?

Mr. BREAUX. I yield to the gentleman from Louisiana (Mr. TREEN).

Mr. TREEN. Mr. Chairman, I appreciate the gentleman yielding.

I just want to make this response to the chairman of the committee: that is, the energy crisis is in the country now. It will be here over the next 3 years. We know we will have this Secretary of the Interior or one appointed by this administration over the next 3 years. These are the critical years. These are the years when we should not hamper ourselves by mandating the Secretary try something we do not know will work or not.

Mr. BREAUX. Mr. Chairman, it seems that all afternoon when we debated this bill today on the OCS, the committee have been debating the bill among themselves. We have been doing that for the past 3 years. I think that this gives me an opportunity to share with those who are not members of the OCS Committee some of my concerns about the present situation with regard to the committee on these mandated experimental lease systems.

The committee bill very clearly says that at least in one-half of all the new leases that are going to be granted we have to use new, untried, experimental bid systems. Those who argue for that position say, "Well, we should try something else."

We have been operating under a system since 1953 which has given back to the U.S. Treasury something like 83 percent of all the revenues coming from the OCS. That has gone to the U.S. Treasury under the existing system. I think that is better than a fair return to the Federal Government.

For those who use the argument that, "Well, we ought to try something else to see if we cannot get more revenues," I think they are not realistic in looking at what the situation is today. Some say that we should try new experimental systems so we can bring in other companies. The surveys we have had in the committee say in the last 20 OCS sales we have had something like 150 companies other than the largest eight major companies that have acquired an interest in something like 66 percent of all leases given. They have gone to 150 companies in this country, so the small companies are participating in OCS.

That is why the IPAA (the Independent Petroleum Association of America) opposes this committee bill in its present form.

But some say: "Other countries are trying new experimental bid systems."

That is true. They are trying that in Europe. And what are they paying for gas in Europe? They are paying $3 and $4 per gallon for gas in Europe.

I repeat, they are paying $3 and $4 a gallon for gas in Europe. They tried the experimental bid business and look at what has happened. Look at what they pay for heating oil that is being rationed. They are burning wood because they cannot get heating oil but they are trying these experimental systems.

Mr. Chairman, at the proper time when all the amendments will be completed, I have a compromise that we plan to offer. On this particular issue my compromise says yes, let us try the experimental bid system the committee has set out. I have all 10 in my compromise; but instead of saying let us do it 50 percent of the time or 100 percent of the time, if we are going to experiment, let us try it up to 50 percent of the time.

The Office of Budget and Management estimates we will lose $1.325 billion in U.S. revenues as the result of this legislation over the life of the bill. That is too much of a price tag to pay for experiments, particularly when experiments are not necessary.

Mr. Chairman, I support the Treen amendment, but if the Treen amendment is not passed, at the proper time I hope we can see fit to take the middle ground, the compromise position that I have, that says, let us try it, but only up to 50 percent of the time.

AMENDMENT OFFERED BY MR. EMERY AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. TREEN

Mr. EMERY. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. EMERY as a substitute for the amendment offered by Mr. TREEN: Page 160, strike out line 24 and all that follows down through and including line 23 on page 165 and insert in lieu thereof the following:

"(C) The bidding systems authorized by subparagraphs (C) through (I) of paragraph (1) of this subsection shall be applied to not less than 20 per centum and not more than 50 per centum of the total area offered for lease each year during the five-year period beginning on the date of enactment of this subsection, unless the Secretary determines that the requirement set forth in this subparagraph is inconsistent with subparagraph (A) of this paragraph.

"(D) Within six months after the end of each fiscal year, the Secretary shall report to the Congress with respect to the use of the various bidding options provided for in this subsection. Such report shall include—

"(i) the schedule of all lease sales held during such year and the bidding system or systems utilized;

"(ii) the schedule of all lease sales to be held the following year and the bidding system or systems to be utilized;

"(iii) the benefits and costs associated with conducting lease sales using the various bidding systems;

"(iv) if applicable, the reasons why a particular bidding system has not been or will not be utilized; and

"(v) an analysis of the capability of each bidding system to accomplish the purposes and policies stated in subparagraph (A) of this paragraph.

Mr. EMERY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Maine?

There was no objection.

Mr. EMERY. Mr. Chairman, as one of the Members from the Northeast States, I could not help but be impressed by the logic of the compromise that was proposed by the gentleman from Ohio (Mr. BROWN).

Many of us who represent the New England area and the Northeast are very often looked upon as being anti-energy, antidevelopment, anti-industry, and in some cases, I have to admit, it has been true, but nevertheless, we have a responsibility to help resolve our national energy problems. If we are looking at leasing operations on the Outer Continental Shelf, and on the Georges Bank east of New England especially, we should create whatever system will provide energy resources, if those energy resources exist.

We have been discussing various leasing alternatives here today and we very nearly reached a compromise a few minutes ago wherein a minimum of 10 percent of the new leasing would be under new experimental systems. A maximum of 30 percent would be allowed under that same provision in the bill.

My amendment makes one change to the substitute offered a few minutes ago by the gentleman from Ohio (Mr. BROWN). It changes the 10-percent minimum experimental leasing figure to 20 percent, and it changes the maximum from 30 to 50 percent, so under my substitute a minimum of 20 percent of all leasing would be under new experimental techniques and the maximum would be 50 percent, which is equivalent to the provision in the committee bill.

Mr. Chairman, I urge a positive vote for the amendment.

Mr. FISH. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I hope not to take the full 5 minutes, because we are scheduled to rise in half an hour, and I would like to put this issue of the mandates cranked into the committee bill, having to do with these bidding systems, to rest this afternoon so that we can hope for early completion of this bill when we resume tomorrow, because the issues left will not be that great.

There is no dispute about the validity and usefulness of untried systems—all sides agree to that. The committee bill says, however, that they must be used in 50 percent of the areas offered for lease, whether or not the Secretary of the Interior in his judgment thinks that they are effective, or even detrimental. His hands are tied if he so thinks. He must then come back to the Congress for approval to exceed that figure.

Like Mr. BROWN'S amendment, the pending amendment by Mr. EMERY removes that. The Secretary can do this by rule, and does not have to come back to the House and not have his hands tied. Like the previous amendment, there is the authority in the section to create new systems if, indeed, our experience in the Outer Continental Shelf over the next few years shows that a bidding system we have not even dreamed of is a good idea, he has the authority to proceed.

But, it is clear by the very close vote on the Brown amendment that the House is deeply troubled. There was a spread of only 10 votes, and the Members are deeply troubled by the issue of mandating 50 percent of the leases. Maybe the slender majority thought that the range of 10 to 30 percent of a ceiling on alternative systems was too low, inasmuch as our expression of support for alternative systems. Here we are with an amendment that goes from 20 to 50 percent. The very effect of the committee bill could be carried out without us deciding for the Secretary but by allowing him to make that judgment himself.

Let me tell the Members the story of how we got to this 50 percent. If for some reasons Members think the 50 percent in the committee bill has some great sanction, some magic behind it, let me tell the Members that when this bill came before this committee 3 years ago, in the original draft the figure was 10 percent. It was only in the committee deliberations and on the floor that it went to 33 percent, and it was only after the 1976 consideration of this measure by this body, in the markup in 1977, by a vote of what—a vote of 10 to 9—did we reach that 50 percent.

Ladies and gentleman, this 50-percent provision is identical to that in the Senate bill. It will mean that we have no conferenceable issue if we do not pass the Emery amendment right now, and failing that, the Treen proposal.

These experimental systems should be used, but we should remember that they are just that, experimental. While we mandate the Secretary to use them in the future to conduct experiments, the percentage of use should certainly not be mandated as it is in the committee bill, which could easily result in a give-away of the public energy resources. I sincerely hope that this amendment will be adopted.

Mr. MURPHY of New York. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the Treen amendment in its total flexibility would be so flexible as to be able to mandate 100 percent of the bidding to be bonus bids. The various substitutes that we now see being proposed to it—first, the Brown substitute, which the committee in its wisdom defeated—mandated 10 percent, and went to 30 percent. That was clearly anti-competitive in comparison with the 50 percent which resulted from the deliberations and the recommendations of the ad hoc committee.

Now we see a further anticompetitive move, perhaps a shade less, of mandating 20 percent to 50 percent. But what we are doing is, we are mandating this for a Secretary. The committee felt that we should have 50 percent of the leases experimental to guarantee competition and a valid test of their viability. I would clearly ask for the committee to reject the amendment offered by the gentleman from Maine and to support the committee.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Maine (Mr. EMERY) as a substitute for the amendment offered by the gentleman from Louisiana (Mr. TREEN).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. EMERY. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 219, noes 188, not voting 25, as follows:

[Roll No. 24]

NOT VOTING—25

Anderson, Calif.	Downey	Mineta
Armstrong	Guyer	Moorhead, Calif.
Bingham	Harrington	Moss
Brown, Calif.	Hightower	Motti
Burke, Calif.	Jones, Tenn.	Roncalio
Conable	Le Fante	Skubitz
Dent	Lehman	Teague
Dornan	McDonald	Wilson, C. H.
	Martin	

The Clerk announced the following pairs:

On this vote:

Mr. Jones of Tennessee for, with Mr. Le Fante against.

Mr. McDonald for, with Mr. Motti against.

Mr. Hightower for, with Mrs. Burke of California against.

Mr. Teague for, with Mr. Harrington against.

Mr. Conable for, with Mr. Dent against.

Mr. Dornan for, with Mr. Bingham against.

Mr. Guyer for, with Mr. Lehman against.

Mr. Martin for, with Mr. Charles H. Wilson of California against.

Mr. Moorhead of California for, with Mr. Mineta against.

Mr. Skubitz for, with Mr. Anderson of California against.

Mrs. HECKLER, Mr. FOWLER, and Mr. WALGREN changed their vote from "no" to "aye."

So the amendment offered as a substitute for the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Louisiana (Mr. TREEN) as amended.

The amendment, as amended, was agreed to.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Page 159, strike out lines 13 through 15 and insert the following: "shall be by rule, after an opportunity for a hearing, in accordance with section 501 of the Department of Energy Organization Act (42 U.S.C. 7191). Any modification of any such bidding system shall be by rule in accordance with such section 501."

Mr. DINGELL (during the reading). Mr. Chairman, I ask unanimous consent that the reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

Mr. BAUMAN. Mr. Chairman, reserving the right to object, I might state to the gentleman from Michigan that we do not know what the amendment is.

Mr. DINGELL. Mr. Chairman, I will explain the amendment. I would advise my good friend, the gentleman from Maryland (Mr. BAUMAN) that he has seen the amendment before. It is printed in the RECORD and it had been accepted at a time earlier.

Mr. BAUMAN. Is this the "on the record" amendment?

Mr. DINGELL. It is.

Mr. BAUMAN. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Chairman, this amendment had been offered earlier to the Breaux amendment and was accepted by the committee. It is, as referred to by my friend, the gentleman from Maryland (Mr. BAUMAN), the "on the record" amendment. I offer it on behalf of the ranking minority member of the Subcommittee on Energy and Power, the gentleman from Ohio (Mr. BROWN) and myself.

Mr. Chairman, H.R. 1614 provides for the establishment of several types of bidding systems. In establishing any such system, the bill requires that it be "by rule on the record after an opportunity for an agency hearing." There is a technical problem with these "magic" words.

Under the DOE Act, the functions concerning competitive bidding were transferred to the Secretary of Energy. However, section 402(d) of the DOE Act provides that FERC, not the Secretary, "shall have jurisdiction to hear and determine" any matter "required by law to be made on the record after an opportunity for an agency hearing." H.R. 1614 would be such a law. FERC is under our subcommittee's jurisdiction. It is understaffed and underfunded. It has no expertise in this area. It should not carry out this function. I am sure Chairman MURPHY and the committee did not intend this result. Indeed, they were unaware of this provision in the DOE Act when H.R. 1614 was reported. Our amendment makes it clear that the Secretary of Energy, not FERC, will estab-

lish these bidding systems. At the same time, we retain the provision for a public hearing and require that the procedures adopted by the House in the DOE Act, pursuant to a floor amendment by Congressmen Moss and BROWN and myself be followed.

I urge my colleagues to support our technical amendment. It is supported by the administration.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from New York.

Mr. MURPHY of New York. Mr. Chairman, I thank the gentleman for yielding.

The amendment offered by the gentleman from Michigan (Mr. DINGELL), would provide that the existing procedures applicable with respect to OCS hearings would be applicable to all other regulations.

We accept the amendment.

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from New York.

Mr. FISH. Mr. Chairman, I just want to say that the minority are very happy that the gentleman from Michigan (Mr. DINGELL) has presented this amendment to the committee, as he did in the past, and I am very happy to accept the amendment.

Mr. DINGELL. I thank both of the gentlemen from New York, Mr. MURPHY and Mr. FISH.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. DINGELL).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. GOLDWATER

Mr. GOLDWATER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GOLDWATER: Page 223, immediately after the period on line 8, insert the following new sentence: "Any oil sold or allocated to small refiners under this paragraph shall be credited against the amount required to be offered to small refiners under section 8(b)(7) of this Act.".

Mr. GOLDWATER. Mr. Chairman, this amendment has a simple, clear purpose. Under the small business set-aside provision the Secretary of Interior is directed to reserve from leases 20 percent of the oil and gas produced.

Later in the bill the Secretary is authorized—actually directed—to reserve an additional 16⅔ percent of purchase oil for small business.

The total federally controlled aspect of OCS oil production therefore comes to 36⅔ percent.

Not only is the result a requirement that the Federal Government control over ⅓ of production distribution, but it is required to do so whether or not small business needs the allocation or can accommodate it.

The natural operation of the marketplace has directed as estimated 26 percent to small businesses already and there is no evidence that this sector either needs more or can at this time accommodate it.

Thus, my amendment simply credits the purchase oil against the royalty lease allocation. Nothing more.

This amendment does not work against the interests of small businesses or developers and it does get the Federal Government out of a dominant allocation role.

Mr. MURPHY of New York. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the chairman of the ad hoc committee, the gentleman from New York.

Mr. MURPHY of New York. I thank the gentleman for yielding. The committee has studied the amendment of the gentleman from California. In an earlier provision, we provided for a set-aside for small refiners. We also provided in this section that royalty is to go to such refiners. The gentleman's amendment can provide that such requirements—are cumulative—be allocated under one credit to the other. I have no opposition to this amendment.

Mr. GOLDWATER. I thank the gentleman.

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. GOLDWATER. I yield to the gentleman from New York.

Mr. FISH. I thank the gentleman for yielding.

Because of the noise in the House, I would just like to clarify that this is the amendment that deletes the 20 percent set-aside for small refineries; is that correct?

Mr. GOLDWATER. Yes, that is correct.

Mr. FISH. I am very happy to accept it on the minority side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. GOLDWATER).

The amendment was agreed to.

PERMISSION TO MAKE TECHNICAL CORRECTIONS TO CONFORM WITH RULES OF THE HOUSE

Mr. GOLDWATER. Mr. Chairman, pending a vote on this amendment, I would ask unanimous consent that I may make technical corrections to an amendment that I offered earlier involving the Santa Barbara Channel just to correspond with the rules of the House.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. DRINAN. Mr. Chairman, I rise in support of the Outer Continental Shelf Lands Act Amendments of 1978, H.R. 1614. This bill would make changes in the Outer Continental Shelf Lands Act of 1953 which are needed to allow the efficient and equitable development of those lands—development which is crucial to America's energy future, but which must be controlled in order to preserve our environmental heritage.

Official Geological Survey estimates indicate that one-third of our recoverable oil reserves and 22 percent of gas deposits are located offshore. However, these reserves account for only 17 percent of current domestic production. It is clear that the energy crisis requires responsible, yet accelerated development of these lands. H.R. 1614, the culmination of nearly 2 years of effort in the Congress, expands upon the general guidelines in the existing act in a way which will allow orderly development while protecting the environment, the health and safety of workers, and the rights of States and localities, while maximizing competitiveness in development by the oil and gas industry.

A key provisions of the bill would require the Interior Department to prepare a 5-year leasing program, in consultation with State and local governments and the Attorney General. The program would include a study of ecological conditions in the affected areas and the possible environmental impact of development. The bill would also increase Federal financial assistance to coastal States provided under the Coastal Zone Management Act of 1976.

In addition, new systems of bidding for leases would be instituted. The Secretary of the Interior would be able to choose among these systems in order to insure safety, efficiency, and fair competition. This provision would allow participation in offshore development by smaller independent concerns, including many based in New England, rather than leaving the field under the domination of the major oil companies.

The leasing systems themselves would also be revised to allow separation of the leases for exploration from those for production and development. The Government would participate and share costs in the exploration phase. Production and development lessees operating in previously undeveloped "frontier" areas, including the Atlantic Shelf, would be required to submit development plans to the Interior Department. State and local governments affected by the plan would then have the opportunity to submit comments and recommendations. The Secretary of the Interior would have the authority if necessary to reject a plan or to suspend, cancel, or adjust the terms of a lease.

The bill provides for the Interior, Labor, and Transportation Departments to cooperate in studying existing safety regulations and making recommendations to promote safety and health in the development of the Outer Continental Shelf. It also would require use of the best available and safest technology on all new operations, and important existing ones, and authorizes regulations to control air pollution caused by offshore development. These occupational and environmental safety standards would be strictly enforced under this bill.

H.R. 1614 also establishes an offshore oil pollution fund in order to pay damages for an oil spill beyond a maximum liability of the owner or operator. The bill defines recoverable damages and fixes the level of maximum private liability. The money in the fund could also be used in the immediate cleanup of

an oil spill and later be recovered, up to the limit of liability, from the owner or operator.

Another provision would allow compensation to commercial fishermen for equipment damage caused by oil and gas exploration and development, thus protecting this important industry against possible harm. The bill would also insure that U.S. citizens and permanent residents be given priority in employment relating to leasing activities on the Outer Continental Shelf.

Coming from New England, with its above-average energy costs, I am acutely aware of the need to further develop all available energy resources. But protection of coastal and ocean ecosystems, such as the Georges Bank area off New England, is also a vital concern, for the impact of fishing and tourism on the region's economy runs into the billions of dollars. In addition, we all share an interest in the safety and health of workers and the maintenance of fair industrial competition.

I am convinced that H.R. 1614 adequately considers these factors and strikes an effective and reasonable balance among them. I urge my colleagues to support this legislation, which will form a vital part of our Nation's energy policy.

Mr. SIKES. Mr. Chairman, many of us supported the Breaux substitute which was before us during the consideration of H.R. 1614 last week. It was narrowly defeated. The revised Breaux substitute meets many of the objectives which were offered to the original substitute last week. I believe it is a better bill than the committee bill. It is identical to the version reported by the committee insofar as is concerned amendments to the Coastal Zone Management Act. The revised Breaux substitute does not disrupt in any way Federal funds made available to States via the coastal impact fund. It increases such funds in the same measure as does the committee bill.

The revised Breaux substitute also includes, as does the committee bill, authority for the Secretary of the Interior to promulgate regulations to improve air quality over the Outer Continental Shelf.

Many of us are disturbed by the fact that the committee bill will cost U.S. taxpayers $1.325 billion in lost OCS revenues according to the Congressional Budget Office. This is because of mandated 50 percent experimental bidding systems. The Breaux substitute, on the other hand, will increase Federal OCS revenues.

Backers of the committee bill say that the oil companies have been ripping off the U.S. Treasury by obtaining OCS leases and then making windfall profits on the oil and gas produced from them. But there are provisions in the committee bill mandating experimental bidding which almost literally give OCS leases away for peanuts and only require lessees to pay the Government for leases if they produce oil and gas. The Breaux substitute, on the other hand, mandates no giveaways.

The backers of the committee reported bill also say that they are opposed to the Government getting into the offshore oil and gas business. But they include provisions in the bill authorizing Government drilling and include dual leasing as one of the new experimental bidding forms.

Dual leasing means that the Government gets drilling contractors to bid on exploration leases for a share of the benefits from subsequent production leases. Under the exploration lease phase of dual leasing the Government literally hires companies to drill when, where, and how the Government tells them to and pays them with OCS revenues which otherwise would go to the U.S. Treasury. Under the core and test drilling section of the committee bill the Government would be authorized to drill for oil and gas itself or otherwise hire companies to do it. That is getting the Government into the offshore oil and gas business.

The Breaux substitute, on the contrary, eliminates dual leasing and only allows the Government to contract for offshore drilling after the Secretary offers private industry the opportunity to do the drilling at no cost to the Government and the industry refuses to do it.

Next the backers of the committee reported bill say that they are opposed to delays in offshore oil and gas development. Then they include provisions in the committee reported bill which would add over 50 new Federal regulations to the already highly regulated OCS program and on top of that they invite citizen suits in sections 23 and 25 which would cause even further delays.

The Breaux substitute cuts down significantly on new Federal regulations while still improving environmental protection. The Breaux substitute allows, but does not encourage, citizen suits.

Finally, backers of the committee reported bill say that in their bill they regulate the majors while protecting the little companies that want to get into, or stay in, the offshore oil and gas business. Then they add provisions to the committee bill which make it nearly impossible for the small operator to survive in the offshore oil and gas business.

The delays inflate the cost of doing business offshore. Second, the delays can stretch out the time—as much as 3 to 6 years—required to deliver to consumers oil and gas produced on the OCS.

Until the oil and gas is delivered the producers do not get paid for it. Until they get paid for it they do not earn a dime on their investment.

The delays also hurt the smaller offshore service companies who—under contract to OCS lessees—do about 95% of the work that goes on offshore. The delays slow down business for the offshore service companies causing them to lay off employees.

Now the major oil companies doing business offshore can afford these inflated costs and the long delays before they start earning a return on their investment.

The independent producers and the smaller offshore service companies can not afford these delays. Because they can not afford the delays, they can not afford to do much business offshore.

That leaves the big oil companies as the only ones who have a large enough stack of chips to play in the OCS poker game. The little companies just do not have the chips.

The Breaux substitute was designed specifically to cut down on offshore delays so that the little people could afford to play. That is why some of the major oil companies are opposed to it.

The Breaux substitute also calls for experimental bidding systems to be used to help independent producers and calls for a set-aside of up to 20 percent of offshore oil production to be made available to independent refineries.

I think it is undeniable that the Breaux substitute provides a better break for the small producer. I feel that it will help in many ways to bring about increased energy supplies from the OCS. I am convinced that the Breaux substitute is a better bill for our country than the committee bill.

This is why I am going to vote for it and why I hope that a solid majority of my colleagues will join me in supporting the Breaux substitute.

MAKING IN ORDER DURING CONSIDERATION OF TITLE IV THE CONSIDERATION OF AMENDMENTS TO TITLE II

Mr. MURPHY of New York. Mr. Chairman, I ask unanimous consent that it may be in order during consideration of title IV of the bill for amendment to consider amendments which insert in title II of the bill amendments to section 9 of the Outer Continental Shelf Lands Act, notwithstanding completion of consideration of title II.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. BAUMAN. Reserving the right to object, I wonder if the gentleman can explain the necessity for the request and what the amendments are.

Mr. MURPHY of New York. If the gentleman will yield, in title IV we will consider the question of revenue sharing, and the question is to bring all of those into title IV, notwithstanding that some could be offered under title II under section 9 of the OCS Lands Act of 1953.

Mr. BAUMAN. With that explanation I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. FISH. Reserving the right to object, Mr. Chairman, I am sorry. The Chairman had not discussed it with me, and I am not sure I understand it. Mr. Chairman, may I ask my chairman of my committee about the urgency. I thought he was rising to move that the Committee do now rise. Could not this request be made at the opening of our deliberations tomorrow?

Mr. MURPHY of New York. If the gentleman will yield, it would be at the convenience of the minority. This request was simply a unanimous-consent request so that we could consolidate all revenue sharing matters under title IV rather than title II, and our counsel had discussed this with the minority.

Mr. FISH. Mr. Chairman, I further reserve the right to object.

Mr. TREEN. Mr. Chairman, will the gentleman yield?

Mr. FISH. I yield to the gentleman from Louisiana.

Mr. TREEN. I thank the gentleman for yielding.

As I understand, there are a couple of amendments that have to do with revenue sharing that would fall in title II, and what the chairman is requesting is that those amendments be in order when we are considering title IV, as I understand the request. We are still on title II, and we will be on title II when we convene tomorrow.

Mr. MURPHY of New York. Yes. That is correct.

Mr. FISH. So I have an offer of one of the amendments and also the gentleman from New Jersey (Mr. HUGHES) is offering another amendment that this affects. We have no objection to the request.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. MURPHY of New York. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. WRIGHT) having assumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 1614) to establish a policy for the management of oil and natural gas in the Outer Continental Shelf; to protect the marine and coastal environment; to amend the Outer Continental Shelf Lands Act; and for other purposes, had come to no resolution thereon.

REQUEST THAT JOINT ECONOMIC COMMITTEE BE GRANTED EXTENSION OF TIME TO FILE A REPORT

Mr. BOLLING. Mr. Speaker, I ask unanimous consent that the Joint Economic Committee be granted an extension of time from March 1, 1978, to March 31, 1978, to file a report of its findings and recommendations with respect to the economic report of the President, as required by section 5(b)(3) of Public Law 79-304.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, why do we need an extra month?

Mr. BOLLING. Mr. Speaker, if the gentleman will yield, we need an extra month not, I think, because we are going to have to take the month, but because we need the time to be sure that the Members will have an opportunity to examine the report after it is developed. We did not want to have a deadline of the 15th of March. We thought the end of March would be better for the Members.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, obviously if it is that complicated and that extensive, we need that extra month.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

CONFERENCE REPORT ON H.R. 3454, DESIGNATING CERTAIN ENDANGERED PUBLIC LANDS AS WILDERNESS

Mr. MEEDS. I ask unanimous consent on behalf of the gentleman from Arizona, Mr. UDALL to file a conference report and statement on the bill (H.R. 3454) to designate certain endangered public lands for preservation as wilderness, to provide for the study of additional endangered public lands for such designation, to further the purposes of the Wilderness Act of 1964, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Washington (Mr. MEEDS)?

There was no objection.

(The conference report and statement follow:)

CONFERENCE REPORT (H. REPT. No. 95-861)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3454) to designate certain endangered public lands for preservation as wilderness, to provide for the study of additional endangered public lands for such designation, to further the purposes of the Wilderness Act of 1964, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

That this Act may be cited as the "Endangered American Wilderness Act of 1978".

STATEMENT OF FINDINGS AND POLICY

SECTION 1. (a) The Congress finds that—

(1) many areas of underdeveloped national forest land possess and exhibit outstanding natural characteristics giving them high value as wilderness and will, if properly preserved, contribute as an enduring resource of wilderness for the benefit of the American people;

(2) certain of these undeveloped national forest lands meet all statutory criteria for suitability as wilderness as established by subsection 2(c) of the Wilderness Act (78 Stat. 890), but are not adequately protected and lack statutory designation pursuant to the Wilderness Act as units of the National Wilderness Preservation System;

(3) these and other undeveloped national forest lands exhibiting wilderness values are immediately threatened by pressures of a growing and more mobile population, large-scale industrial and economic growth, and development and uses inconsistent with the protection, maintenance, restoration, and enhancement of their wilderness character; and

(4) among such immediately threatened areas are lands not being adequately protected or fully studied for wilderness suitability by the agency responsible for their administration.

(b) Therefore, the Congress finds and declares that it is in the national interest that certain of these endangered areas be promptly designated as wilderness within the National Wilderness Preservation System, in order to preserve such areas as an enduring resource of wilderness which shall be managed to promote and perpetuate the wilderness character of the land and its specific multiple values for watershed preservation, wildlife habitat protection, scenic and historic preservation, scientific research and educational use, primitive recreation, solitude, physical and mental challenge, and inspiration for the benefit of all of the American people of present and future generations.

DESIGNATION OF WILDERNESS AREAS

SEC. 2. In furtherance of the purposes of the Wilderness Act, the following lands (hereinafter referred to as "wilderness areas"), as generally depicted on maps appropriately referenced, dated January 1978, are hereby designated as wilderness and, therefore, as components of the National Wilderness Preservation System—

(a) certain lands in the Coronado National Forest, Arizona, which comprise about fifty-six thousand four hundred and thirty acres, are generally depicted on a map entitled "Pusch Ridge Wilderness Area—Proposed", and shall be known as the Pusch Ridge Wilderness;

(b) certain lands in the Inyo and Sequoia National Forests, California, which comprise about three hundred and six thousand acres, are generally depicted on a map entitled "Golden Trout Wilderness Area—Proposed", and shall be known as the Golden Trout Wilderness;

(c) certain lands in and adjacent to the Los Padres National Forest, California, which comprise about twenty-one thousand two hundred and fifty acres, are generally depicted on a map entitled "Santa Lucia Wilderness Area—Proposed", and shall be known as the Santa Lucia Wilderness: *Provided*, That the tract identified on said map as "Wilderness Reserve" is designated as wilderness, subject only to the removal of the existing and temporary nonconforming improvement, at which time the Secretary of Agriculture (hereinafter referred to as the "Secretary") is directed to publish notice thereof in the Federal Register. Pending such notice, and subject only to the maintenance of the existing nonconforming improvement, said tract shall be managed as wilderness in accordance with section 5 of this Act. In order to guarantee the continued viability of the Santa Lucia watershed and to insure the continued health and safety of the communities serviced by such watershed, the management plan for the Santa Lucia area to be prepared following designation as wilderness shall authorize the Forest Service to take whatever appropriate actions are necessary for fire prevention and watershed protection including, but not limited to, acceptable fire presuppression and fire suppression measures and techniques. Any special provisions contained in the management plan for the Santa Lucia Wilderness area shall be incorporated in the planning for the Los Padres National Forest: *Provided*, That the Forest Service is authorized to continue fire presuppression, fire suppression measures and techniques, and watershed maintenance pending completion of the management plan for the Santa Lucia area;

(d) certain lands in the Los Padres National Forest, California, which comprise about sixty-one thousand acres, are generally depicted on a map entitled "Ventana Wilderness Additions—Proposed", and which are hereby incorporated in, and shall be deemed to be a part of, the Ventana Wilderness as designated by Public Law 91-58. In order to guarantee the continued viability of the Ventana watershed and to insure the continued health and safety of the com-

munities serviced by such watershed, the management plan for the Ventana area to be prepared following designation as wilderness shall authorize the Forest Service to take whatever appropriate actions are necessary for fire prevention and watershed protection including, but not limited to, acceptable fire presuppression and fire suppression measures and techniques. Any special provisions contained in the management plan for the Ventana Wilderness area shall be incorporated in the planning for the Los Padres National Forest:

(e) certain lands in the White River National Forest, Colorado, which comprise approximately seventy-four thousand four hundred and fifty acres, are generally depicted as area "A" on a map entitled "Hunter-Fryingpan Wilderness Area—Proposed", and shall be known as the Hunter-Fryingpan Wilderness. The area commonly known as the "Spruce Creek Addition", depicted as area "B" on said map and comprising approximately eight thousand acres, shall, in accordance with the provisions of subsection 3(d) of the Wilderness Act, be reviewed by the Secretary as to its suitability or nonsuitability for preservation as wilderness. The Secretary shall complete his review and report his findings to the President and the President shall submit to the United States Senate and the House of Representatives his recommendation with respect to the designation of the Spruce Creek area as wilderness not later than two years from the date of enactment of this Act. Subject to valid existing rights, the wilderness study area designated by this subsection shall, until Congress determines otherwise, be administered by the Secretary so as to maintain presently existing wilderness character and potential for inclusion in the National Wilderness Preservation System. No right, or claim of right, to the diversion and use of the waters of Hunter Creek, the Fryingpan or Roaring Fork Rivers, or any tributaries of said creeks or rivers, by the Fryingpan-Arkansas Project, Public Law 87–590, Eighty-seventh Congress, and the reauthorization thereof by Public Law 93–493, Ninety-third Congress, under the laws of the State of Colorado, shall be prejudiced, expanded, diminished, altered, or affected by this Act. Nothing in this Act shall be construed to expand, abate, impair, impede, or interfere with the construction, maintenance, or repair of said Fryingpan-Arkansas Project facilities, nor the operation thereof, pursuant to the Operating Principles, House Document Numbered 130, Eighty-seventh Congress, and pursuant to the water laws of the State of Colorado;

(f) certain lands in the Cibola National Forest, New Mexico, which comprise about thirty-seven thousand acres, are generally depicted on a map entitled "Manzano Mountain Wilderness Area—Proposed", and shall be known as the Manzano Mountain Wilderness;

(g) certain lands in Cibola National Forest, New Mexico, which comprise about thirty thousand nine hundred and thirty acres, are generally depicted on a map entitled "Sandia Mountain Wilderness Area (North and South Units)—Proposed", and shall be known as the Sandia Mountain Wilderness;

(h) certain lands in the Santa Fe and Carson National Forests, New Mexico, which comprise approximately fifty thousand three hundred acres, are generally depicted on a map entitled "Chama River Canyon Wilderness Area—Proposed", and shall be known as the Chama River Canyon Wilderness;

(i) certain lands in Wasatch and Unita National Forests, Utah, which comprise about twenty-nine thousand five hundred and sixty-seven acres, are generally depicted on a map entitled "Lone Peak Wilderness Area—Proposed", and shall be known as the Lone Peak Wilderness: *Provided*, That the Forest Service is directed to utilize whatever sanitary facilities are necessary (including but not limited to vault toilets, which may require service by helicopter) to insure the continued health and safety of the communities serviced by the Lone Peak watershed; furthermore, nothing in this Act shall be construed to limit motorized access and road maintenance by local municipalities for those minimum maintenance activities necessary to guarantee the continued viability of whatsoever watershed facilities currently exist, or which may be necessary in the future to prevent the degradation of the water supply in the Lone Peak area;

(j) certain lands in the Medicine Bow National Forest, Wyoming, which comprise about fourteen thousand nine hundred and forty acres, are generally depicted on a map entitled "Savage Run Wilderness Area—Proposed", and shall be known as the Savage Run Wilderness; and

(k) certain lands in Lolo National Forest, Montana, which comprise approximately twenty-eight thousand four hundred and forty acres are generally depicted on a map entitled "Welcome Creek Wilderness Area—Proposed", and shall be known as the Welcome Creek Wilderness.

OREGON OMNIBUS WILDERNESS ACT OF 1978

SEC. 3. In furtherance of the purposes of the Wilderness Act, the following lands (hereinafter referred to as "wilderness areas") as generally depicted on maps appropriately referenced, dated January 1978, are hereby designated as wilderness and, therefore, as components of the National Wilderness Preservation System—

(a) certain lands in the Siskiyou National Forest, Oregon, which comprise about ninety-two thousand acres, are generally depicted on a map entitled "Kalmiopsis Wilderness Additions—Proposed", and which are hereby incorporated in and shall be deemed to be a part of the Kalmiopsis Wilderness as designated by Public Law 88–577;

(b) certain lands in the Siskiyou National Forest, Oregon, which comprise about thirty-six thousand seven hundred acres, are generally depicted on a map entitled "Wild Rogue Wilderness—Proposed", and shall be known as the Wild Rogue Wilderness: *Provided*, That the portion of the segment of the Rogue River designated as a component of the National Wild and Scenic Rivers System by section 3(a)(5) of the Wild and Scenic River Act (82 Stat. 906, as amended) which lies within the Wild Rogue Wilderness shall be managed as a wild river notwithstanding section 10(b) of that Act or any provisions of the Wilderness Act to the contrary:

(c) certain lands in the Umatilla National Forest, Oregon and Washington, which comprise about one hundred and eighty thousand acres, are generally depicted on a map entitled "Wenaha-Tucannon Wilderness—Proposed", and shall be known as the Wenaha-Tucannon Wilderness;

(d) certain lands in the Mount Hood National Forest, Oregon, which comprise about thirty-three thousand acres, are generally depicted on a map entitled "Mount Hood (Zig Zag) Proposed Wilderness Additions", and which are hereby incorporated in, and shall be deemed to be a part of the Mount Hood Wilderness as designated by Public Law 88–577; and

(e) certain lands in the Willamette National Forest, Oregon, which comprise about forty-five thousand four hundred acres, are generally depicted on a map entitled "French Pete Creek and Other Proposed Additions, Three Sisters Wilderness", and which are hereby incorporated in, and shall be deemed to be a part of, the Three Sisters Wilderness as designated by Public Law 88–577.

GOSPEL-HUMP AREA

SEC. 4. (a)(1) In furtherance of the purposes of the Wilderness Act, certain lands in the Nezperce National Forest, Idaho, which comprise about two hundred and six thousand acres, as generally depicted under the category "Wilderness" on a map entitled "Gospel-Hump Planning Unit" and dated January 1978, are hereby designated as wilderness and therefore, as components of the National Wilderness Preservation System.

(2) Certain other contiguous roadless lands which comprise about ninety-two thousand acres, as generally depicted on said map as "Management Areas" shall be managed in accordance with the multipurpose resource development plan required by this section.

(3) Certain other contiguous roadless lands which comprise about forty-five thousand acres, as generally depicted on said map as "Development Areas" shall be immediately available for resource utilization under the existing applicable Forest Service land management plans.

(b)(1) Within ninety days after enactment of this Act, the Secretary shall appoint a seven-member Advisory Committee (hereinafter referred to as the "Committee") on the management of the Gospel-Hump Area who shall advise the Secretary as to the progress of the fish and game research program, and the multipurpose resource development plan required by this section, and who shall evaluate the results of the research program and development plan on an ongoing basis.

(2) The Committee shall be comprised of two members of the timber industry who purchase timber from the Nezperce National Forest, two members from organizations who are actively engaged in seeking the preservation of wilderness lands, and three members from the general public who otherwise have a significant interest in the resources and management of the Gospel-Hump Area.

(3) Committee members shall serve without pay except that while away from their homes or regular places of business in performance of services for the Committee, members of the Committee shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed under section 5703(b) of title 5 of the United States Code.

(4) The Secretary shall provide that the Committee shall meet as soon as practicable after all the members are appointed, but in no case later than one hundred and fifty days after the enactment of this Act. Subsequently, the Committee shall meet every one hundred and eighty days, or as often as the Secretary deems necessary.

(5) The Committee shall terminate one hundred and fifty days after transmittal of the completed multipurpose resource development plan required under this section.

(c)(1) The Secretary shall cooperate with agencies and institutions of the State of Idaho, and with the Secretary of the Interior, in conducting a comprehensive fish and game research program within the Gospel-Hump Area and surrounding Federal lands in north-central Idaho. The Secretary shall assure that this research program includes detailed investigations concerning resident and anadromous fisheries resources (including water quality relationships) and the status, distribution, movements, and management of game populations, in order to provide findings and recommendations concerning integration of land management and development with the protection and enhancement of these fish and game resources.

(2) To carry out the comprehensive fish and game research program, the Secretary is authorized to make grants of funds to agencies and institutions of the State of Idaho and to provide the assistance of personnel from agencies under his jurisdiction.

(3) The Secretary shall assure that the comprehensive fish and game research program is scheduled and progressing on a timely basis so that findings and recommendations are fully integrated in preparation of the multipurpose resource development plan required by this section.

(d)(1) Within four years after enactment of this Act, the Secretary shall implement a multipurpose resource development plan for development of the Federal lands identified on the map referenced in this section as "Management Areas".

(2) The multipurpose resource development plan shall comply with the provisions of the Multiple-Use Sustained-Yield Act of 1960 (74 Stat. 215; 16 U.S.C. 528) and the Forest and Rangeland Renewable Resources Planning Act of 1974 (88 Stat. 476; 16 U.S.C. 1601) as amended, and shall conform in all respects to the provisions of the National Forest Management Act of 1976 (90 Stat. 2949; 16 U.S.C. 1600), including the regulations, guidelines, and standards promulgated pursuant to those Acts. In preparing the multipurpose resource development plan, the Secretary shall take particular care to gather and integrate detailed field data on soil types and soil hazards, and to consider timber volumes, timber site classes, and productivity. The current findings and recommendations of the comprehensive fish and game research program and other available information shall be integrated into the preparation of the multipurpose resource development plan. The multipurpose resource development plan may be periodically revised to accommodate new information as it becomes available.

(3) In preparing the multipurpose resource development plan, the Secretary shall assure adequate public involvement, and he shall make full use of the recommendations of the Committee established by this section.

(4) One year after the date of enactment of this Act and every year thereafter, the Secretary shall review the multipurpose resource development plan being prepared in accordance with this section to determine which lands, if any, might be scheduled for development prior to the completion of the final multipurpose resource development plan.

(5) The Secretary shall publish a notice of the completion of the multipurpose resource development plan or a portion thereof in the Federal Register and shall transmit it to the President and to the Senate and House of Representatives. The completed multipurpose resource development plan or relevant portions thereof shall be implemented by the Secretary no earlier than ninety days and no later than one hundred and fifty calendar days from the date of such transmittal.

(e) The Secretary shall prepare a wilderness management plan for the Gospel-Hump Wilderness designated pursuant to this section, taking into account the findings of the comprehensive fish and game research program.

(f) Within thirty days after the date of enactment of this Act, the Secretary shall include the timber resources on the lands identified on the map referenced in this section as "Development Areas" and "Management Areas" within the annual allowable timber harvest level for the Nezperce National Forest.

(g) Nothing in this Act shall prevent within the Gospel-Hump Wilderness Area any activity, including prospecting, for the purpose of gathering information about mineral or other resources, if such activity is carried on in a manner compatible with the preservation of the wilderness environment. Furthermore, in accordance with such program as the Secretary of the Interior shall develop and conduct in consultation with the Secretary, the Gospel-Hump Wilderness Area shall be surveyed on a planned recurring basis consistent with the concept of wilderness preservation by the Geological Survey and the Bureau of Mines to determine the mineral values, if any, that may be present, and the results of such surveys shall be made available to the public and submitted to the President and the Congress.

(h) There are hereby authorized to be appropriated after October 1, 1978, such funds as may be necessary to carry out the comprehensive fish and game research program and the multipurpose resource development plan authorized under this section. Appropriations requests by the President to implement the multipurpose resource development plan shall express in qualitative and quantitative terms the most rapid and judicious manner and methods to achieve the purposes of this Act. Amounts appropriated to carry out this Act shall be expended in accordance with the Budget Reform and Impoundment Control Act of 1974 (88 Stat. 297).

ADMINISTRATION OF WILDERNESS AREAS

SEC. 5. Subject to valid existing rights, each wilderness area designated by this Act shall be administered by the Secretary in accordance with the provisions of the Wilderness Act: *Provided*, That any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act: *Provided further*, That with respect to the Gospel-Hump Wilderness Area designated by section 4(a)(1) of this Act, all references under section 4(d)(3) of the Wilderness Act of 1964 to December 31, 1983, shall be deemed to be December 31, 1988, and any reference to January 1, 1984, shall be deemed to be January 1, 1989: *Provided, however*, That all activities resulting from the exercise of valid existing mineral rights on patented or unpatented mining claims within the Gospel-Hump Wilderness Area shall be subject to regulations prescribed by the Secretary as he deems necessary or desirable for the preservation and management of this area.

FILING OF MAPS AND DESCRIPTIONS

SEC. 6. As soon as practicable after enactment of this Act, a map and a legal description of each wilderness area shall be filed with the Committee on Energy and Natural Resources of the United States Senate and the Committee on Interior and Insular Affairs of the House of Representatives, and each such map and description shall have the same force and effect as if included in this Act: *Provided*, That correction of clerical and typographical errors in each such legal description and map may be made. Each such map and legal description shall be on file and available for public inspection in the Office of the Chief of the Forest Service, Department of Agriculture.

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3454) to designate certain endangered public lands for preservation as wilderness, to provide for the study of additional endangered public lands for such designation, to further the purposes of the Wilderness Act of 1964, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

1. FINDINGS

Both the House bill and the Senate amendment contain a section setting out congressional findings relative to the need to add lands to the National Wilderness Preservation System. Differences between the two versions are very minor and the conferees agreed to adopt the Senate language.

2. DESIGNATION OF WILDERNESS AREAS

A. Pusch Ridge, Ariz.

Both the House bill and the Senate amendment designate a 56,530 acre Pusch Ridge Wilderness.

B. Golden Trout, Calif.

The House bill designates a 179,625 acre wilderness while the Senate amendment would designate a 333,100 acre area as wilderness. The conference substitute adopts the Senate acreage with two exclusions. The deletions include some 6,100 acres in the Burro Creek/North Alder Creek area and approximately 21,000 acres south of Soda Creek including Bonita Flats and the Rattlesnake Creek drainage. The final Golden Trout wilderness agreed to by the conferees totals approximately 306,000 acres.

Prior to the first meeting of the conferees, the city of Los Angeles raised several questions with regard to the eastern boundary of the proposed Golden Trout wilderness. Specifically, there was some concern expressed that the eastern boundary of the wilderness proposed by the Senate amendment extended in to the Los Angeles Aqueduct and incorporated a related intake facility. Upon careful examination of a more accurate map of the area, it is clear that the boundary does not extend into the aqueduct nor does it encompass the intake facility. A similar concern was raised by the city of Los Angeles with regard to the Owens George power transmission line. However, the eastern boundary of the wilderness as proposed in the Senate amendment and adopted in the conference substitute does not interfere with the power line. It is the view of the conferees that these facilities will not be affected in any way by wilderness designation for the Golden Trout area.

The city of Los Angeles also requested that the access road to the Horseshoe Meadows area be excluded from the wilderness. The conferees noted that the Senate, in approving the 333,100 acre wilderness, made minor boundary adjustments in the Horseshoe Meadows area especially to exclude the access road and right-of-way to the Meadows. These adjustments were adopted in the conference substitute.

Although the issue is discussed on page 7 of House Report 95–540, accompanying H.R. 3454, the conferees would again stress that the snow pillow facilities operated by the city of Los Angeles within the proposed Golden Trout Wilderness are compatible with wilderness designations and may be monitored and maintained in accordance with past practices.

In agreeing to the approximate 21,000-acre deletion in the Rattlesnake Creek drainage area, the conference committee noted that some 21 million board feet of timber located in roadless lands in the vicinity of Bonita Flat, Lion Meadows, and Beach Meadows has been recently burned over. In the view of the conferees, the Forest Service should make every effort to offer this timber in a salvage sale as soon as feasible, if such a sale is found to be in the interest of sound multiple-use management.

During the hearings in both bodies on H.R. 3454, some concern was expressed that wilderness designation for the Golden Trout area might place constraints on the efforts of Federal and State officials to protect and

propagate the rare golden trout (especially the Little Kern Golden Trout) which inhabits the area. The conferees agree with the language of page 7 of House Report 95–540 which states:

Fisheries enhancement activities and facilities are permissible and often highly desirable in wilderness areas to aid in achieving the goal of "preserving the wilderness character of the area" as stated in section 4(b) of the Wilderness Act. Such activities and facilities include fish traps, stream barriers, aerial stocking, and the protection and propagation of rare species.

C. Santa Lucia, Calif.

Both the House bill and the Senate amendment would designate a 21,250 acre Santa Lucia wilderness.

The conferees emphasized the fact that the 115 KV transmission line which bisects the proposed wilderness may be maintained in a manner consistent with past practices. The conferees also agree that when the permit for this 115 KV facility expires in the year 2001, the language of the bill does not require the Secretary to refuse to renew the utility's easement, and in no way constrains him from exercising his authority to renew the easement at that time if he feels it is appropriate to do so. The wilderness "reserve" delineated in the bill will be automatically included in the wilderness if the transmission line is ever removed.

D. Ventana Additions, Calif.

The House bill would add 61,080 acres to the existing Ventana Wilderness while the Senate amendment adds 61,000 acres.

The Senate amendment excluded 75 acres including the summit of Junipero Sierra Peak plus a corridor for an access road in order to allow for the possible future construction of an astronomical observatory on this site. An additional exclusion of 5 acres was approved by the Senate amendment in order to permit vehicular access over a route of one-half to one mile long to the property of Dr. Gerald Petkins who is in the process of establishing a modest facility for treating and sheltering injured wildlife.

The conference substitute adopts the provisions of the Senate amendment.

E. Hunter-Fryingpan, Colo.

The House bill would designate a 68,000 acre Hunter-Fryingpan Wilderness while the Senate amendment made two additions to the proposed wilderness totaling approximately 14,000 acres.

The conference substitute designates an area of approximately 74,150 acres as wilderness and provides for a wilderness study of the 8,000-acre Spruce Creek area. The Secretary is directed to complete his review and the President is to submit his recommendation with respect to designation of the Spruce Creek area as wilderness not later than two years from the date of enactment of this Act. Subject to valid existing rights, and until Congress determines otherwise, the wilderness study area is to be administered by the Secretary so as to maintain presently existing wilderness character and potential for inclusion in the National Wilderness Preservation System.

F. Manzano Mountain, N. Mex.

Both the House bill and the Senate amendment would designate a 37,000 acre Manzano Mountain Wilderness.

G. Sandia Mountain, N. Mex.

Both the House bill and the Senate amendment would designate a 30,930 acre Sandia Mountain Wilderness.

H. Chama River Canyon, N. Mex.

Both the House bill and the Senate amendment would designate a 50,300 acre Chama River Canyon Wilderness.

I. Lone Peak, Utah

Both the House bill and the Senate amendment would designate a 29,567 acre Lone Peak Wilderness.

J. Galiuro Additions, Ariz.

The House bill would designate a 55,210 acre addition to the existing Galiuro wilderness. The Senate amendment contains no such provision.

The conference committee agreed to accept the Senate position and delete the proposed additions from the bill. In so doing, the conferees recognize that the administration has recommended that the area be added to the wilderness, and stress that its deletion from H.R. 3454 should in no way be construed as prejudicing the possible future inclusion of the 55,210 acre area, and/or any contiguous roadless areas, in the Wilderness System. However, in order to allow for a reconsideration of precise boundaries and possible conflicting uses in portions of the area, the conference committee requests that the Forest Service initiate a study, with local public input, to expeditiously reevaluate its wilderness recommendation with a view toward determining whether certain boundary adjustments might be appropriate.

Of course, as with all roadless areas under wilderness study and review, the conferees expect that area will be managed so as to preserve presently existing wilderness characteristics and thereby protect Congress prerogative to make the final wilderness boundary determinations.

K. Welcome Creek, Mont.

The House bill designates a 28,400-acre wilderness. The Senate amendment has no Welcome Creek provision.

The conference substitute adopts the House provision and includes the area.

L. Savage Run, Wyo.

The House bill designates a 14,940-acre Savage Run Wilderness. The Senate amendment has no Savage Run provision.

The conference substitute adopts the House provision and includes the area. Descriptions of both the Welcome Creek and Savage Run areas can be found in House Report 95–540.

3. OREGON OMNIBUS WILDERNESS ACT

On June 20, 1977, the Senate passed S. 658, the Oregon Omnibus Wilderness Act. The Senate amendment to H.R. 3454 incorporates several provisions of S. 658 and retains the title of the Senate passed bill.

The House passed bill does not make specific reference to the Oregon Omnibus Wilderness Act.

The conference substitute adopts the Senate approach and incorporates the various proposed Oregon wilderness areas in a separate Oregon section.

A. Kalmiopsis Additions, Oreg.

The House bill designates a 280,000 acre addition to the existing Kalmiopsis Wilderness. The Senate amendment would increase the present wilderness by approximately 82,400 acres.

The conference substitute designates an area of approximately 92,000 acres for addition to the existing Kalmiopsis Wilderness. This area consists of the 82,400 acres contained in the Senate amendment and an additional area comprising some 10,000 acres south of the proposed Senate addition.

In agreeing to enlarge the Kalmiopsis Wilderness by 92,000 acres, the conferees recognize that additional acreage of roadless land surrounds this area. Much of this contiguous land was included in the House-passed bill and should be considered by the Forest Service in its Roadless Area Review and Evaluation program (RARE II).

In excluding the additional lands in the House-passed bill from the present wilderness additions, the conference committee stresses that it does not intend to prejudice further consideration of the wilderness suitability of these lands nor to prejudge in any way the possibility that some additional acreage may be proposed at a later time for addition to the enlarged Kalmiopsis Wilderness. The conferees direct that these lands be considered in the RARE II program.

B. Wild Rogue, Oreg.

The House bill designates a 38,200 acre Wild Rogue Wilderness. The Senate amendment contains no comparable provision.

The conference substitute designates a Wild Rogue Wilderness comprising approximately 36,700 acres. The conferees agreed to delete some 1,500 acres from the House proposal to exclude several areas which have recently been timbered.

The conferees also agreed to adopt a provision making it clear that the portion of the Wild Rogue wild and scenic river which flows through the proposed wilderness will continue to be managed as a wild river in accordance with the provisions of the Wild and Scenic Rivers Act, not withstanding any provisions of that act or the Wilderness Act to the contrary.

The conferees noted that the Wild Rogue Wilderness Area and the additions to the Kalmiopsis Wilderness Area as proposed in the conference substitute include certain acreages of Oregon and California revested grant lands that are congressionally dedicated to commercial forest production and are managed by the Bureau of Land Management and the U.S. Forest Service. The fact that these special act lands which are intermingled with national forest lands are now designated as wilderness should not be considered as precedent setting. They are included because of their own unique wilderness qualities when combined with other Federal lands.

C. Wenaha-Tucannon, Oreg./Wash.

The House bill designates a 175,000 acre Wenaha-Tucannon Wilderness while the Senate amendment proposes a 185,000 acre wilderness.

The conference substitute designates a 180,000 acre wilderness, deleting approximately 5,700 acres from the Senate amendment and adding approximately 700 acres. The deletion consists of 3 parcels; the approximately 3,300 acre Bear Canyon area and two portions of the Wenaha Breaks area totalling approximately 2,400 acres. The addition eliminates an error in the Senate map and adopts the House boundary which adds approximately 700 acres to the wilderness by correctly placing the boundary line in the northwest portion of the proposed wilderness along Big Turkey Tail Ridge rather than along the Turkey Creek stream bottom.

During congressional consideration of possible wilderness designation in the Wenaha-Tucannon area of the Umatilla National Forest, it has become clear that this portion of the forest contains a multitude of resources. Not only do the lands contiguous to the proposed Wenaha-Tucannon Wilderness, as approved by the conference committee, embrace many merchantable stands of timber, but these lands are important habitat for Rocky Mountain Elk as well.

The conference, after some deliberation, felt that it was possible to allow some logging in those portions of the Upper Tucannon Roadless Area of the Oregon Butte Planning Unit (as referenced in the U.S.D.A. Forest Service Final Environmental Statement for the Oregon Butte Planning Unit, dated April 22, 1977), lying outside of the boundaries of the Wenaha-Tucannon Wilderness proposed in H.R. 3454, if certain prescriptions were followed to minimize the effects of such

logging activities on the region's resident and migratory elk populations. Thus, the Secretary of Agriculture is directed to manage the above-mentioned areas for multiple-use purposes and to allow such logging activities provided that:

1. All roads built into these areas for the purpose of timber harvesting are to be designed and built to minimize soil disturbance and the possible adverse effects of these roads on fish and wildlife populations, including but not limited to:

a. constructing and maintaining such roads at the minimum widths necessary to safely accommodate logging trucks, but in no case wider than 12 feet on the running surface;

b. maintaining standards of alignment, and grade that will allow these roads to follow, as nearly as possible, the contours of the land with a minimum of excavation and earth movement to accomplish the construction; and

c. installing the types and quantities of drainage structures associated with these roads which will continue to function properly for several years without periodic maintenance.

2. Roads built into timber harvest areas shall be closed to all motorized use during the interim period between each harvesting or reforesting operation, unless needed in emergency situations for the protection of life or property. During the closure periods, measures shall be taken to ensure that motorized vehicles cannot enter onto or travel upon these roads. These measures are to include steel gates with suitable locks. In addition, roads shall be treated in these closure periods so as to minimize the danger of soil erosion. Erosion control measures to be taken might include, but need not be limited to:

a. revegetation of the roadbed with herbaceous species,

b. outsloping,

c. crossditching,

d. covering with logging slash, and

e. hand maintenance of drainage structures.

3. Timber harvest activities are not to be permitted in these areas during the months of October and November, or during the elk calving season in the spring.

4. The roads built into timber harvest areas be permanently closed at the conclusion of logging and reforestation activities and suitable measures shall be taken to assure their revegetation, and continued closure to motorized vehicle use.

5. No clearcuts shall be permitted within these areas.

Both the House and Senate recognized and approved of the long established use of much of the Wenaha-Tucannon area for hunting. Although wilderness designation does not affect hunting activity per se, the conferees want to emphasize the importance of this use in the Wenaha-Tucannon area and make clear that congressional intent is that Forest Service management policies, when at all possible, should make allowance for and not conflict with this activity. Established rustic shelters or structures, in particular, should not be disturbed. The use and some limited maintenance of these existing structures should be allowed to continue until their presence creates a clear conflict with the area's wilderness values. Of course, the use of motorized vehicles and chain saws in connection with hunting activities in the proposed wildernes, will not be allowed under wildernes designation.

D. Zig Zag (Mt. Hood Additions), Oreg.

The Senate amendment to H.R. 3454 designates a 33,000-acre addition to the existing Mt. Hood Wilderness. The House bill contains no such provision.

The conference substitute adopts the Senate provision and includes the area. A description of the proposed Mt. Hood additions can be found in Senate Report 95-329.

E. French Pete, Oreg.

Both the House bill and the Senate amendment would designate a 45,400 acre French Pete Wilderness.

4. GOSPEL-HUMP AREA, IDAHO

The Senate amendment to H.R. 3454 contains a section detailing wilderness designation and additional management direction for the Gospel-Hump area in north-central Idaho. Under the provisions of the Senate amendment, a 206,000 acre Gospel-Hump wilderness would be designated. An additional 92,000 acres of contiguous land classified by map reference as "management areas" are to be managed in accordance with a multipurpose/resource development plan for the area also required by the Senate amendment. Finally, an additional 45,000 acres of land contiguous to the proposed wilderness area are classified by map reference as "development areas" and are to be available for immediate resource utilization in accordance with existing applicable Forest Service land management plans.

The Senate amendment also provides for a seven-member advisory committee on the management of the Gospel-Hump area and directs the Secretary of Agriculture to conduct, in addition to the multipurpose resource plan, a comprehensive fish and game research program for the Gospel-Hump area and surrounding Federal lands in north-central Idaho.

The House bill does not include a Gospel-Hump provision.

The conference substitute adopts the Senate language concerning Gospel-Hump with one exception. The conferees agreed to delete those portions of subsection 4(e) of the Senate amendment giving the Secretary the authority to permit, under certain very limited conditions, the use of snowmobiles along a single trail across the northern portion of the proposed Gospel-Hump Wilderness. While the conferees recognized the fact that this use was to be extremely limited, it was felt that such a provision could establish a precedent for more extensive snowmobile or other motorized vehicular use within other units of the National Wilderness Preservation System; and, that such a precedent should not be established.

In this context, it is the intent of the conferees that the three established roads (outside the proposed 206,000-acre Wilderness) which currently provide access to the high country—the Gospel Peak-Square Mountain Road on the west; the Wild Horse Lake Road on the east; and the Sourdough Peak Road on the north will continue to serve this important function and remain open for their traditional uses—including snowmobile use. These roads are to be marked for snowmobile travel during the winter months. The maintenance of these three roads during other times of the year is to be specifically provided for in the wilderness management plan to be developed by the Forest Service for the proposed Gospel-Hump Wilderness.

5. ADMINISTRATION OF WILDERNESS AREAS

Both the House bill and the Senate amendment contain sections regarding the management of the proposed wilderness areas. Although both versions are very similar, the conference substitute adopts the Senate language as it extends the deadline for location of mining claims contained in the Wilderness Act for a 5-year period with regard to Gospel-Hump. The Senate language also extends for 5 years the date on which minerals in the Gospel-Hump area are no longer available for appropriation under the mining laws.

6. FILING OF MAPS AND LEGAL DESCRIPTIONS

Both the House bill and the Senate amendment contain identical language with regard to the filing of official maps and descriptions of the various areas and the authority of the Secretary to correct typographical errors that may be present in such maps.

It is with deep sadness that the conferees note the passing of our colleague and friend Senator Lee Metcalf, who, at the time of his death was a member of this conference. He was one of the sponsors of the original wilderness bill in 1956 and played a leading role in enactment of the Wilderness Act in 1964. Senate Metcalf's long-time dedication to the protection of our precious wildernes areas will be long remembered.

PAYMENT OF OPERATION AND MAINTENANCE CHARGES ON CERTAIN PUEBLO INDIAN LANDS

Mr. MEEDS. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 2719) to authorize the Secretary of the Interior to contract with the Middle Rio Grande Conservancy District of New Mexico for the payment of operation and maintenance charges on certain Pueblo Indian lands, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 1, line 3, after "That" insert "(a)".

Page 1, line 3, strike out "(49 Stat. 887)" and insert "(Ch. 745, 49 Stat. 887)".

Page 1, line 4, strike out "(52 Stat. 779)" and insert "(Ch. 525, 52 Stat. 779)".

Page 1, line 5, strike out "(60 Stat. 121)" and insert "(Ch. 219, 60 Stat. 121)".

Page 1, line 6, strike out "(70 Stat. 221)" and insert "(Public Law 546, 70 Stat. 221)".

Page 1, lines 6 and 7, strike out "(79 Stat. 285)" and insert "(Public Law 89-94, 79 Stat. 285)".

Page 1, after line 8, insert:

"(b) The Secretary of the Treasury is authorized and directed to make payments under the authority of the Act amended by Subsection (a) of this Act for all such periods between the date of expiration or lapse of such Act and the date of enactment of this Act."

Mr. MEEDS (during the reading). Mr. Speaker, I ask unanimous consent that the Senate amendments be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. MEEDS. Mr. Speaker, I will be pleased to explain the amendment of the Senate. As my colleagues will remember the purpose of H.R. 2719 is to provide continuing authority for the Secretary of the Interior to reimburse the Middle Rio Grande Conservancy District of New Mexico for actual costs incurred in operating and maintaining its irrigation delivery system for service to Indian-owned lands. This is a practice that goes back to the beginning of the project in the 1940's.

The Secretary's previous authority to make this reimbursement expired on December 31, 1974, and there was no legislative authorization for the required appropriations for fiscal years 1975 through 1977. Despite this lack of authority, the Congress appropriated the funds for the reimbursement in each of those fiscal years and they are available for disbursement in the account of the Bureau of Indian Affairs. Realizing that such funds had, indeed, been appropriated and no further legislative authority was needed with respect to them, the bill as passed in the House made no reference to the prior 3 fiscal years.

For some reason, not completely clear, the Senate saw fit to amend H.R. 2719 to specifically direct the Secretary of the Treasury to disburse these funds. This is a harmless amendment, albeit an unnecessary one, and I recommend that it be agreed to.

It should also be noted that the Senate amendment also amended the statutory citations found in the House bill by adding the chapter number in each instance. I likewise recommend that this aspect of the amendment be agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

A motion to reconsider was laid on the table.

B–1 AIRCRAFT NO. 5 AND NO. 6; PRESERVING A NECESSARY OPTION

(Mr. CHARLES H. WILSON of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CHARLES H. WILSON of California. Mr. Speaker, later this week, the Senate is expected to resume consideration of the supplemental appropriations bill and their amendment proposing "deappropriation" of fiscal year 1977 moneys for production of B–1 aircraft No. 5 and No. 6.

In December, the House rejected a motion to accept the Senate deappropriation measure. I believe it essential that the House maintain its position. B–1 aircraft No. 5 and No. 6 must be built if the United States is to have at least an option to someday produce an advanced manned bomber.

Proponents of the Senate deappropriation amendment offer the misleading assertion that this amendment affects the entire B–1 program, and that their amendment amounts to a yes or no decision on the program. This is not true. The simple issue is whether the United States will proceed with, to completion, two aircraft put into production in fiscal year 1977, which are presently approximately one-third completed.

Completing aircraft No. 5 and No. 6 will provide, through 1979, some B–1 production capability. Why do we need any production capability; has not the administration determined that the United States does not need an advanced manned bomber? Well, while the administration has no present plans to begin production of the B–1, it is important that some option for possible production be maintained. In an October letter to several Members of this body, President Carter stated:

> The penetrating bomber continues to be part of our strategic triad. While I hope that it will not be necessary to produce a new aircraft, it is conceivable, though not likely, that future developments would necessitate such action.

The important point here is that even President Carter refuses to slam shut, the door on the B–1. If problems develop in the cruise missile program, or there are difficulties in maintaining the B–52's, it may be necessary to produce an advanced manned bomber. It is logical, that if such production is necessary the aircraft developed be the B–1. No other strategic system on the drafting board, or in the inventory, is as advanced as the B–1 program.

Even while the United States decides whether to build two B–1 aircraft, the Central Intelligence Agency reports that the Soviet Union continues to exceed U.S. spending for defense. Last week, a CIA research paper on U.S./U.S.S.R. defense spending was made public. The conclusion of their report was that for the period 1967–77, the Soviets had an average of about 3 percent compound growth each year, while U.S. outlays has steadily declined.

Perhaps as important as over-all defense spending, is money invested in research, design, testing, and evaluation. While U.S. outlays for R.D.T. & E. have declined steadily, Soviet expenditures in this area are described as "large and growing," by the CIA.

Somewhere up in the frozen tundra of the Canadian wilderness, a search team has discovered fragments, radioactive pieces, of a Soviet reconnaissance satellite. The crashing to Earth of this device, makes very clear, our vulnerability to any missile returning from space. American and Canadian authorities had known for weeks that the orbit of the Soviet vehicle was decaying, and that the satellite would be returning.

Yet, even though the authorities knew that the satellite would be returning to Earth, there was no defense or effective way to prevent its fall. Were it a warhead, instead of a reconnaissance satellite, persons in the northwestern section of North America would have been vulnerable.

The only means presently available to us, to prevent the initiation of hostilities is through the establishment of a creditable strategic deterrent. Unfortunately, in not proceeding with the B–1, while the Soviet continue to spend their spending for R.D.T. & E., general force levels, and strategic systems, one of the most essential components in our strategic deterrent has been removed from our inventory.

Building B–1 aircraft No. 5 and No. 6 simply provides another option available to our country, should a determination be made that an advanced manned bomber is necessary.

Another area of concern to me, is the manner in which this fiscal year 1977 deappropriation has been pursued. When this matter is finally resolved, one casualty will most certainly be the Budget Impoundment Control Act.

The Senate amendment in question has been referred to, incorrectly, as a rescission. While a rescission is always a deappropriation, a deappropriation is not always a rescission.

Under the Budget Impoundment Control Act of 1974 (Public Law 93–344) a very specific and clear procedure has been established for the rescission of budget authority. Section 1012(B) of the Impoundment Act states:

> Any amount of budget authority proposed to be rescinded or that is to be reserved as set forth in a special message shall be made available unless, within the prescribed 45-day period, the Congress has completed action on a rescission bill rescinding all or part of the amount proposed to be rescinded or that is to be reserved.

The language is clear enough, the President presents a special rescission message to the Congress requesting that a rescission of existing budget authority be made. Congress then has a 45-day period, during which they can agree to the rescission by approving a rescission bill. They may reject the proposed rescission by voting down a rescission bill, or by simply not acting on the rescission message. In either case, the law is quite specific. The money shall be made available "unless, within the prescribed 45-day period, the Congress has completed action on a rescission bill."

On June 30, 1977, President Carter announced that he would not proceed with production of the B–1, and that afternoon, the Air Force issued "stop-work" orders to the major contractors. On July 6, 1977, the Air Force formally terminated all B–1 contracts.

Now, as I understand the Impoundment Act, a rescission bill should have been presented to Congress the moment the Air Force terminated the B–1 contracts. Instead, the President did not present his rescission message until almost 2 weeks later, on July 19, when he requested rescission of $462 million for unobligated budget authority remaining from the fiscal year 1977 B–1 appropriation.

With the rescission message submitted on July 19, 1977, the 45-day period of continuous congressional session, during which a rescission bill could be considered and enacted, expired on October 4, 1977.

During the prescribed 45-day period, the House Appropriations Committee rejected the proposed B–1 rescission. By a vote of 34 to 21, the committee voted down the requested rescission. On a subsequent vote they also rejected a motion to report the rescission bill unfavorably.

Thus, we reached October 4, 1977, without passage of the necessary legislation. Now one of the first questions to arise is, has the Air Force been complying with the Impoundment Act since the October 4 rescission milestone? I think the answer is no. The Air Force, the Office of Management and Budget have violated both the spirit and letter of the

Impoundment Act by not providing sufficient funds to resume work on aircraft No. 5 and No. 6.

In the period between the awarding of the contract for aircraft No. 5 and No. 6 and No. 7, in December 1976, and the President's termination decision in July 1977, the Air Force made $160 million in B–1 contract payments for work on those three aircraft.

After the October 4 milestone, B–1 expenditures were: $88,000 for October 1977; $100,000 for November 1977; $1.8 million for December 1977; and, for January 1978, $3.5 million.

The Air Force maintains that the obligation of this money is preparatory to resuming B–1 production. However, the General Accounting Office has stated that the contractors needed at least $10 million in the first 30 days following the rescission milestone to reinstitute production, and another $15 million during the next 30-day period. Had this funding level been met, B–1 contractors would have received at least $25 million. Instead they have received less than $6 million. Hardly a trickle.

Instead of resolving this matter under the existing statutes, the administration has succeeded only in compromising the legitimacy of the Impoundment Act.

After all this confusion, the only reasonable decision is to complete B–1 aircraft No. 5 and No. 6.

ECONOMIC PLIGHT OF THE AMERICAN FARMER

(Mr. NICHOLS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NICHOLS. Mr. Speaker, today the economic plight of the American farmer is at its lowest level since the depth of the depression. Every week hundreds of farms across this country go out of business—driven out of business because of disastrously low farm prices coupled with the high cost of production.

I am concerned, Mr. Speaker, lest the Washington Post and some members of Congress misinterpret the purpose which has brought thousands of farmers to Washington in recent days. The American farmer is not in Washington seeking Government handouts. They are not here seeking unreasonable Government support prices nor are they seeking that they be guaranteed a profit in their farming operations.

They seek only redress from the Congress and from this administration in attaining price levels for farm products at a rate sufficient so they may continue to produce food and fiber for this nation and I do not view this request as in any way being unreasonable.

This morning, Mr. Speaker I have met with several of the leaders in the American Agriculture Movement from Alabama who advise me that this movement is attempting to solidify a nationwide volunteer agreement to reduce their planted acreage in cotton, in corn, in wheat, and in feed grains to reflect substantially less than was planted last year. I commend this policy to farmers in my State and throughout the Nation and would further suggest to the House Committee on Agriculture that our colleague from Georgia, the Honorable DAWSON MATHIS, has introduced legislation which would effect a mandatory 20-percent reduction in planted acreage on the above crops.

Mr. Speaker, I support such a program believing that it represents a sensible approach tailored along the lines of supply and demand which would serve to strengthen the farmers' position in the marketplace.

A healthy America, and ultimately the social fabric of the Nation, depends on the well-being of our family farms. The requests which the American farmer are making are reasonable and deserve the concern and support of this Congress.

EMERGENCY INTERIM CONSUMER PRODUCT SAFETY RULE ACT

(Mr. MOFFETT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MOFFETT. Mr. Speaker, I am today introducing the Emergency Interim Consumer Safety Rule Act of 1978. This act, designed to protect consumers from the dangers of flammability and corrosiveness characterizing some cellulose insulation products, has already been passed by the Senate on January 23, 1978.

We are presently experiencing a national home insulation boom, spurred on by rising fuel costs and the President's energy program. Last April, President Carter went on national television and asked Americans to insulate their homes. Encouraging them to do so with the promise of a tax credit on insulation, already passed by the House-Senate energy conference. This national home insulation boom has created a shortage of fiberglass insulation, the preferred insulating material. This means more and more people will be turning to cellulose insulation, basically shredded paper treated with a chemical to make it flame-resistant.

The root of the present crisis is that there are no national and few State standards to govern the safety and performance of cellulose insulation. This means that consumers are virtually unprotected from health and safety hazards associated with the use of insulation.

When cellulose insulation is produced with quality control, the end product can be an effective, comparatively low cost insulator. However, cellulose, as with each of the major insulation materials holds a potential for harm and fraud when marketed by unscrupulous sellers, installed by untrained personnel, or handled by unknowing do-it-yourself consumers. Largely because of relatively small startup costs and an uncomplicated production technology, the number of cellulosic manufacturers has tripled over the last 2 years. While some are highly competent, many are inexperienced and a good number are simply "fly-by-night" con men hoping to cash in on the home insulation boom.

Many Federal agencies, including the Department of Energy, the FTC and HUD are now working to develop such guidelines and appropriate enforcement programs. However, the problem is time, these agencies will need many months, and possibly more that a year, to issue permanent regulations.

The Federal agency with the broadest legal jurisdiction in this area is the Consumer Product Safety Commission. The CPSC has been aware of the fire hazard presented by improperly treated cellulose insulation since June of 1975 when it was alerted to the danger by its Denver district office. Yet, today, 2½ years later the CPSC has done virtually nothing, despite vocal support from the industry itself for the establishment of minimum standards.

I have been in contact with the governors of the 50 States, and received dozens of letters expressing concern and noting the immediate need for Government safety and enforcements. The Commissioner of the Connecticut Department of Consumer Protection has written both to me and the Commissioner of the CPSC expressing her conviction that national standards are necessary.

The legislation I have introduced would help to protect the public from the unnecessary risks they now face. First, the act directs the CPSC to adopt, within 120 days, an interim mandatory consumer product safety standard for the flammability and corrosiveness of cellulose insulation. Second, it directs the CPSC to conduct an interagency study on the various safety aspects of all forms of insulation, to provide Congress with an interim report within 6 months, and to make a final report and recommendations within a year.

The President has set a goal of insulating 90 percent of all homes in the United States by 1985. We cannot afford to reach that goal, only to find that we have allowed the public to buy insulation which has exposed their homes to fire and flood and endangered their health and safety. It is the responsibility of Congress to see that consumers who purchase home insulation, at our encouragement, can be reasonably certain that it is safe.

Mr. Speaker, I hope that my colleagues will join me in urging that this vital legislation be passed as soon as possible.

A BILL TO INCREASE TO 15 PERCENT THE INVESTMENT TAX CREDIT FOR QUALIFIED FARM PROPERTY

(Mr. THORNTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. THORNTON. Mr. Speaker, our Nation's serious farm problems require action now to make it possible for family farms to produce the food and fiber on which this Nation depends. Farmers are faced with ever increasing costs, declining farm income, enlarged surpluses, while our Nation is experiencing a worsening balance of trade and continuing inflation.

The fastest way to help is by a strong export policy, accomplished by divorcing agricultural exports from foreign policy, while developing intermediate term

credit programs and better use of the Public Law 480 program.

Improvements are needed in Farmers Home Administration loans to increase limits and provide emergency loans with extended repayment terms. The Small Business Administration's economic injury loans should be expanded, and consumers must be protected from imports of products which do not meet U.S. health standards.

In addition to these measures for immediate relief, I believe long-term revisions of agriculture policy must be considered. On December 6 before the Arkansas Farm Bureau meeting in Hot Springs, Ark., I suggested that the Internal Revenue Code of 1954 should be amended to increase the investment tax credit for qualified farm property to 15 percent.

Today I am introducing such a measure. It would have the effect of rescuing farmers from the destructive effects of inflation while giving them hope for the future. Under the present law, an investment tax credit is made available for most types of property used in a trade or business, including the trade or business of farming. This investment credit enables a farmer to recover, through a reduction in his income tax liabilities, a percentage of his investment in equipment and other property used in his farming business. The rate of the investment credit is presently 10 percent.

My bill would increase the rate of the investment credit for farm property to 15 percent. This increased rate would be available for equipment and other qualifying property placed in service for farming purposes. Farming for this purpose includes agricultural, horticultural, animal husbandry, and timber raising activities. The increased investment credit under this bill would be effective for tax years after December 31, 1975.

I have been concerned about the prices paid by farmers which have continued to climb at a rapid rate. This is particularly true for farm machinery and related costs which have skyrocketed in the past few years. In 1971 a farmer paid $18,000 for a large capacity, self-propelled combine. By 1977 this cost had more than doubled to $45,000. Tractor prices have also doubled. The increase in the amount of machinery sold has also increased significantly. The total value of shipments from manufacturers of farm machinery in use in the United States has gone from $2.9 billion in 1970 to $7.5 billion in 1976.

While we must establish emergency programs to address today's needs, we should also think of ways to improve farm economics in a longer term, through research programs such as the development of gasohol, through set-asides and diversions of production, and through tax relief such as is proposed by this bill.

OLD MATH, NEW MATH, CARTER MATH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. MICHEL) is recognized for 30 minutes.

Mr. MICHEL. Mr. Speaker, during the last week or so we have been going over the finer points of President Jimmy Carter's budget and tax message. Pack your bags, my fellow Americans, the President is taking us for a ride.

The budget and the tax package are difficult to unravel. The computations are not based on the old math and they are not based on the new math. They are derived from the Carter math and it goes something like this: 2 plus 2 equals 1 if you are spending, and 2 plus 2 equals 5 if you are saving. Minuses are sometimes pluses and pluses are sometimes minuses. If he gives you three apples and takes away one you are left with two oranges.

Simply put, both the budget and tax plan are fraudulent political documents designed to deceive.

We have found that the Carter administration misrepresented the scheduled increases in the social security tax so it could be shown that families with an income as high as $40,000 would still benefit from the Carter tax reductions. That is not true and the administration knows it. What is true is that families with an income in excess of $20,000, especially those with two breadwinners, will be burdened with a tax increase.

We found that the projections of a $500 billion budget with a $60 billion deficit are thoroughly misleading.

The budget will be much, much higher and the deficit could exceed a staggering $100 billion.

The President ought to be a circus performer. His sleight of hand is flawless. His juggling is breathtaking and his fast-talking sales spiel rivals the best of them.

The tragedy is that the American people are the ones who will be left holding the bag, an empty one I might add, should the Congress accept any or all of the administration's handiwork. He proposes to cut veterans' benefits by nearly $1 billion. He proposes to cut conservation and land management by $650 million and he proposes to slash the Small Business Administration by more than $700 million. He proposes to cut such popular legislative programs as impact aid, nursing education, community mental health centers, payments to schools of medicine, and water projects. He has seriously understimated the cost of farm price supports and disaster relief, assuming that the 12 months of fiscal 1979 are going to be among Mother Nature's finest. This Democrat-controlled Congress is not going to make these cuts. You know that Mr. Speaker, the Congress knows that and the President knows that. The people are being deceived and the people are the ones who will be hurt.

The President has reduced health care cost by $1 billion under the assumption that Congress will pass his hospital cost containment program and that it will work. He has cut another $600 million on the assumption Congress is going to reform social security and that that will work. He has underestimated the actual spending of the Government by more than $20 billion, and that was not a typographical error or an accidental slip-up.

He is taking initial steps to undermine the stability of the Commodity Credit Corporation by cheating it out of about $4 billion.

He is undermining agricultural research in a budget he sent to Congress only days after telling the Nation's farmers in the state of the Union address that as a humble peanut farmer he understood their plight.

I understand what the President is trying to do. He is trying to hold together the divergent coalition which elected him. He is trying to maintain a broad base of support in all segments of society. In order to do that he has to deal in terms of confusion and contradiction. The President said economic recovery depends upon the private sector and then he reiterated his support for massive public service employment. He said he was a fervent believer in limited government and now he is in the process of molding three new major agencies of Government—energy, education, and consumer protection. He proposed a $2 billion increase in spending for his new welfare scheme and then he added $12 billion in the budget for it. The same thread is woven through everything he does.

The Congress is faced with an awesome task this session. The President has given us an economic Rube Goldberg machine. The Congress will have to make sense out of it and the Congress will get the blame when the public finally realizes that all those promises cannot be translated into legislative action.

PRODUCTIVITY AND LABOR-MANAGEMENT COOPERATION IN 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CORCORAN) is recognized for 5 minutes.

Mr. CORCORAN of Illinois. Mr. Speaker, the declining rate of productivity growth in the United States is of great concern to me, as it should be to the entire citizenry of our Nation. The rate of U.S. productivity growth was only 1.5 percent a year between 1967 and 1977, compared with an annual growth rate of 3.2 percent between 1947 and 1966. These trends are even more alarming when compared with the far greater increase in productivity growth in other advanced industrial nations.

These and many other facts on productivity trends were included in the annual report of the National Center for Productivity and Quality of Working Life for fiscal year 1977 which was sent to Members of Congress earlier this month. The report points out that the decline in the rate of growth in productivity has contributed to increased unemployment and inflation as well as a lower gross national product than we could have otherwise achieved.

I would call your attention to the use-

fulness of the annual report in reminding us the problem of productivity and highlighting developments of substantive interest to the Congress.

Included with the report was an index of highlights, listing Federal agency programs for improving productivity within their own organizations, and programs designed to improve productivity within the private sector, as well as in State and local agencies of Government. Geographical areas involved in the text of the report are cited in the index of highlights, enabling Members and their staffs to quickly discern matters of specific interest.

For example, as a member of the Post Office and Civil Service Committee's Subcommittee on Employee Ethics and Ultilization, I was interested in the reports of the extension of flexible working hours in a growing number of Federal Government agencies, such as the Social Security Administration, as well as private concerns. "Flexitime" legislation has recently been the subject of hearings before our subcommittee and the full Post Office Committee reported out this legislation on January 25. Legislation which authorizes the creation of part-time employment in the Federal Government was also reported out of my committee. I was pleased to be a cosponsor of this bill.

As a Member from Illinois, I was pleased to see the numerous references to projects of interest to Illinois.

Fully convinced that labor-management cooperation is a key element in productivity improvement, I sponsored a labor-management seminar on productivity in Aurora, Ill., last summer. The National Center for Productivity and Quality of Working Life, which the Congress created in 1975 as an independent Federal agency, assisted me in organizing this seminar. The center, and particularly its Chicago regional office, was most helpful in this effort. This provided an opportunity for labor and management leaders in my district to learn more of the benefits of labor-management cooperation.

While I feel that the primary effort of improving productivity and quality of working life must come from the private sector, I was impressed with the many areas where the National Center has been able to stimulate and aid improvement in productivity in both the private and public sectors.

Mr. Speaker, it is reassuring to know that there is such an independent agency created to support improved productivity and cooperation in the United States, with the full knowledge that the effort is crucial to our economy.

I urge my colleagues to note the work of the National Center and particularly urge Members and appropriate staff to review the agency's 1977 annual report.

CARTER CAPITULATION TO UNITED NATIONS POINTS TO NEED FOR BRICKER AMENDMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. ASHBROOK) is recognized for 30 minutes.

Mr. ASHBROOK. Mr. Speaker, we have seen all too many unfortunate examples of the Carter administration's tendency to ratify U.N. actions and arrogate its questionable policies to a position over the best interests of American sovereignty and our taxpayers. Just last month, in the waning moments of the 1st session of the 95th Congress, the administration move behind the scenes to gut my amendment which would have prohibited "direct or indirect" aid to Communist Vietnam, Cambodia, or Cuba. They could live with the word "direct" but they could not live with the word "indirect." Why? Very simply. Administration bureaucrats funnel American tax dollars to that "Ship of Fools" in New York City, the United Nations, and that erstwhile organization in turn directs our money, repeat our money, to those same Communist tyrannical regimes, thus accomplishing indirectly what the public would never stand for directly .

It happened and the UNDP (United Nations Development Program) now channels our money to Vietnam and other Red nations. The World Bank will do the same thing later this year.

American sovereignty should in no way be diminished, threatened, or transferred by these back-door liaisons with the United Nations. President Carter has already indicated that he wants more of our foreign aid channeled through multilateral agencies. This is bad. As terrible as foreign aid is and as bad a travesty as it has been to the American taxpayers when administered by our own citizens, it would be far worse to take our money and let some multilateral world bank or foreign agency with no restraint and no necessity to answer to the American people, dispense our eroding largess to the beggar nations of the world, friend and foe alike, Communist and non-Communist alike.

Since I first came to the Congress, I have introduced at the start of each session the famous Bricker amendment. It bears the name of that great patriot and Senator from my State of Ohio, John W. Bricker. Incidentally, it was my privilege to be present at a meeting of the United Conservatives of Ohio in Columbus last Wednesday night and to introduce Senator Bricker and Senator Lausche when they received the well-deserved recognition the UCO bestowed upon them. Both men are in their eighties but there are few now serving in the U.S. Senate who could match their intelligence, understanding of the issues, clarity of thought and speech and, even more important, patriotism and commitment to American principles. The Senate knows few John Brickers and Frank Lausches today.

I pointed out last Wednesday night that it was a day that will live in infamy, February 25, 1954, when the Senate by a vote of 60–31 fell one vote short of passing the Bricker amendment. Simply stated, the Bricker amendment made clear as does my House Joint Resolution 32, that no treaty shall take precedent over the law of the land as embodied in our Constitution, and the laws and decisions handed down in this country pursuant to that Constitution.

At this point in the RECORD, I include the full text of the Bricker amendment as it has endured through this quarter century from 1954 to now, embodied in my House Joint Resolution 32:

H.J. SES. CB

Joint Resolution proposing an amendment to the Constitution of the United States relative to force and effect of treaties

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as a part of the Constitution only if ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"ARTICLE —

"SECTION 1. A provision of a treaty which denies or abridges any right enumerated in this Constitution shall not be of any force or effect.

"SEC. 2. No treaty shall authorize or permit any foreign power or any international organization to supervise, control, or adjudicate rights of citizens of the United States within the United States enumerated in this Constitution or any other matter essentially within the domestic jurisdiction of the United States.

"SEC. 3. A treaty shall become effective as internal law in the United States only through the enactment of appropriate legislation by the Congress.

"SEC. 4. All executive or other agreements, between the President or any international organization, foreign power, or official thereof shall be made only in the manner and to the extent to be prescribed by law. Such agreements shall be subject to the limitations imposed on treaties, or the making of treaties, by this article.

"SEC. 5. The Congress shall have power to enforce this article by appropriate legislation.

"SEC. 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission.".

NEW DANGER IN UN COVENANTS

Mr. Speaker, it was completely predictable, because President Carter is surrounded by one-worlders who are bent on giving up major portions of American sovereignty to the United Nations, in SALT disarmament talks and in the Panama Canal treaty, that he would quickly and quietly move to urge the Senate to ratify two dangerous UN covenants, the U.N. Covenant on Civil and Political Rights and the U.N. Covenant on Economic, Social, and Cultural Rights. Both sound innocuous on their face but they are the cutting edge of the efforts of our enemies to thrust world courts, the United Nations and other "outside forces" into our everyday life and restructure our constitutional system. Carter signed both of them as our elected leader although he was not speaking or acting for the overwhelming majority of patriotic Americans who do not want foreigners to guide the internal destiny of this Republic.

The Founding Fathers foresaw what might happen in the future and while they did not write a Bricker amendment into the original Constitution, they undoubtedly would support it now. Take one basic right threatened by these dangerous covenants, the right of property. Few people in the world really have any property rights. The framers of our Constitution had the benefit of dictatorial rule by King George fresh in their minds. They knew what rights needed to be clearly spelled out in their written document, to be protected. They had seen the seizure of property arbitrarily ordered by distant tyrants and they wanted none of it here.

Our Constitution in the fifth amendment, specifically guarantees:

> No person shall be . . . deprived of life, liberty or property without due process of law; nor shall private property be taken for public use without just compensation.

The problem now is that "due process" could be legally met in the liberal one worldism of this administration by acceding to the orders, regulations, and fiat of a United Nations or World Court decree. That is why the Bricker amendment is so important and, even before that, the defeat of these dangerous covenants.

By contrast to our Constitution and our 200-year history, the United Nations from year one has shown no real concern for property rights. On the list of basic human rights, you can look but you will not see the right to own property and to be protected from arbitrary seizure without compensation as worthy of mention. An oversight? Hardly. Communists have had a guiding hand in the affairs of the U.N. from the beginning and you know what property rights amount to in the U.S.S.R. The so-called Third World looks at property rights in only one way, the right to take away your property, or to redistribute it, or to get their "fair share" by expropriation or give-away, not by hard work as Americans have. The Third World runs the United Nations and you do not have to be a Phi Beta Kappa to know what they would do with these covenants if the Senate ever approves them. Also, the ravings of our United Nations Ambassador, Mr. Young, can give you little cause for comfort. He is the leading bombthrower among the Third World forces, again a Carter appointee with a Carter approach to these matters.

Moreover, in 1966, there was an effort to amend these covenants and add property rights to the human rights declarations. This move was roundly defeated.

This is the basic reason why six previous Presidents—Truman, Eisenhower, Kennedy, Johnson, Nixon, and Ford—all refrained, properly I believe, from signing these terrible and mischievous covenants. That line of correct, pro-American leadership stopped with Carter. The signal has gone out in many, many ways—this being the worst of them all—that the U.N. is a higher body of law and morality to which the United States should succumb.

You can well imagine what would happen if some world body like the U.N. could legally and constitutionally become involved in our American judicial system whenever terrorists, radicals, or leftists cry that they are political prisoners. Or that they are "victims" of racial oppression. It could happen. Think of the Wilmington 10 or Bobby Seale or Communist Angela Davis having an outside, non-American tribunal, outside of our constitutional system, to take their radical grievances for redress. There has been a problem of justice in this country but not the type that they argue. The problem, from the point of view of the average American who obeys the law, is that radicals like Joan Little, Bobby Seale, Mark Rudd, Angela Davis, and others all too often seem to get off scot free. Juries are radicalized. Millions are spent to sway public opinion. The left mobilizes behind its showcase radicals and the scene is repeated, over and over.

We need the Bricker amendment now as never before. Patriotic groups must rally behind this cause. The preservation of American sovereignty, once never in doubt, once never questioned, is now imperiled. We must rally the American people to defeat these dangerous Carter-backed covenants which would move the U.N. one step closer to world domination. Our future and, I might add, your constitutional right to own property, might well hinge on the outcome of this historic struggle.

SMALL BUSINESS TAX REFORM ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maine (Mr. COHEN) is recognized for 10 minutes.

Mr. COHEN. Mr. Speaker, last week, I reintroduced legislation to establish a graduated corporate income tax to provide much-needed tax relief to small businesses.

My bill would replace the present system with a progressive, six-step corporate income tax. The Small Business Tax Reform Act would tax corporate income according to the following schedule:

[In percent]

Corporate Taxable Income:	Tax rate
$0 to $20,000	12
$20,001 to $40,000	16
$40.001 to $60,000	20
$60,001 to $80,000	26
$80,001 to $100,000	32
$100,000 and over	48

In his recent tax message to Congress, President Carter also recommended revisions in the corporate tax structure. To facilitate comparison between the President's proposed corporate tax deductions and my own, I am inserting into the RECORD a chart illustrating the impact of both proposals on business taxes. Although both proposals would reduce corporate taxes, smaller businesses would benefit more under the provisions of my legislation, while larger corporations would pay less tax under the President's plan.

For example, a corporation with taxable income of $40,000 would pay taxes of $7,500 under the President's proposal, but only $5,600 under my legislation. Conversely, a corporation with taxable income of $1,000,000 would pay $453,200 according to my proposed rates but considerably less under the Carter plan. Large corporations would have their taxes reduced still further in 1980 when the President's proposal would reduce the top corporate rate by another point from 45 percent to 44 percent. Corporations with taxable income of under $50,000 would not benefit from this further reduction.

Not only would the legislation I have introduced benefit small businesses more than would the Carter proposal, but it is also far less costly. The Treasury Department estimates the revenue loss for the administration's proposal to be $6 billion for 1979. For my legislation, the cost would be $3.5 billion. For 1980, when the President proposes to reduce the top corporate rate by another point, the revenue loss would increase to $8.52 billion. By contrast, the revenue loss for 1980 under my legislation would be less than half that amount, $4.1 billion.

I am pleased to announce that the following list of Members have joined me in cosponsoring this legislation:

1. Congressman Mark Andrews, Republican of North Dakota.
2. Congressman Blanchard, Democrat of Michigan.
3. Congressman Carr, Democrat of Michigan.
4. Congressman Cochran, Republican of Mississippi.
5. Congressman Corcoran, Republican of Illinois.
6. Congressman Emery, Republican of Maine.
7. Congressman Eilberg, Democrat of Pennsylvania.
8. Congressman Fish, Republican of New York.
9. Congressman Frey, Republican of Florida.
10. Congressman Goodling, Republican of Pennsylvania.
11. Congressman Grassley, Republican of Iowa.
12. Congressman Gudger, Democrat of North Carolina.
13. Congressman Hughes, Democrat of New Jersey.
14. Congressman Lagomarsino, Republican of California.
15. Congressman Le Fante, Democrat of New Jersey.
16. Congressman Jim Lloyd, Democrat of California.
17. Congresswoman Marilyn Lloyd, Democrat of Tennessee.
18. Congressman Mathis, Democrat of Georgia.
19. Congressman McDade, Republican of Pennsylvania.
20. Congresswoman Meyner, Democrat of New Jersey.
21. Congressman Milford, Democrat of Texas.
22. Congressman Pattison, Democrat of New York.
23. Congressman Quie, Republican of Minnesota.
24. Congressman Rinaldo, Republican of New Jersey.
25. Congressman Simon, Democrat of Illinois.
26. Congressman Spence, Republican of South Carolina.
27. Congressman Trible, Republican of Virginia.

28. Congressman Yatron, Democrat of Pennsylvania.
29. Congressman Baucus, Democrat of Montana.
30. Congressman Cornwell, Democrat of Indiana.
31. Congressman Pursell, Republican of Michigan.

The Small Business Tax Reform Act would achieve the goals of tax reform legislation. The graduated corporate tax would be a simple, fair, and progressive means of stimulating our economy and of providing relief to our Nation's small businesses. I am convinced that a healthy small business community is the key to a prosperous economy, and reducing corporate taxes is the most direct way to help small businesses survive and compete in today's marketplace. And in helping small businesses grow, we create job opportunities for millions of unemployed Americans.

The comparison chart follows:

IMPACT OF PROPOSED CORPORATE TAX REDUCTIONS

[In percent]

CURRENT LAW	
$0 to $25,000	20
$25,001 to $50,000	22
$50,001 and over	48
PRESIDENT'S PLAN	
$0 to $25,000	18
$25,001 to $50,000	20
$50,001 and over	**45
COHEN'S PLAN	
$0 to $20,000	12
$20,001 to $40,000	16
$40,001 to $60,000	20
$60,001 to $80,000	26
$80,001 to $100,000	32
$100,001 and over	48

**January 1, 1980, this rate would decrease to 44%.

The revenue loss for 1979 for the Carter proposal is $6 billion. For the Cohen proposal, it is $3.5 billion. For 1980, when Carter proposes to reduce the corporate tax rate by another point from 45 per cent to 44 per cent, the revenue loss rises to $8.52 billion. The revenue loss for 1980 under the Cohen proposal is $4.1 billion.

Selected examples: a comparison among present law, the President's proposal, and the Cohen legislation

1. For a corporation with taxable income of $20,000:
Current taxes: $4,000 (20% of $20,000).
President's plan: $3,600 (18% of $20,000).
Cohen's plan: $2,400 (12% of $20,000).

2. For a corporation with taxable income of $40,000:
Current taxes: $8,300 (20% of $25,000 +22% of $15,000).
President's plan: $7,500 (18% of $25,000 +20% of $15,000).
Cohen's plan: $5,600 (12% of $20,000 +16% of $40,000).

3. For a corporation with taxable income of $80,000:
Current taxes: $24,900 (20% of $25,000 +22% of $25,000+48% of $30,000).
President's plan: $23,000/$22,700 (the second figure would represent the 1980 tax reduction from 45% to 44% on taxable income in excess of $50,000).
Cohen's plan: $14,800 (12% of $20,000 +16% of $20,000+20% of $20,000+26% of $20,000).

4. For a corporation with taxable income of $100,000:
Current taxes: $34,500.
President's plan: $32,000 ($31,500 in 1980).
Cohen's plan: $21,200.

5. For a corporation with taxable income of $300,000:
Current taxes: $130,500.
President's plan: $122,000 ($119,500 in 1980).
Cohen's plan: $117,200.

6. For a corporation with taxable income of $500,000:
Current taxes: $226,500.
President's plan: $212,000 ($207,500 in 1980).
Cohen's plan: $213,200.

7. For a corporation with taxable income of $1,000,000:
Current taxes: $466,500.
President's plan: $437,000 ($427,500 in 1980).
Cohen's plan: $453,200.

CONCLUSIONS

Corporate income taxes would be reduced by either the Cohen or the President's proposal. However, Cohen's legislation would benefit corporations with taxable income of less than $400,000 more than would the President's proposal. Conversely, corporations with taxable income in excess of $400,000 would benefit more under the President's schedule. Large corporations will have their taxes reduced further in 1980 when the Carter proposal would reduce the top corporate rate by another point.

In general, the Cohen legislation would cost about half of the President's proposal.

NATIONAL SCIENCE FOUNDATION COMMENDED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. HOLLENBECK) is recognized for 10 minutes.

Mr. HOLLENBECK. Mr. Speaker, the National Science Foundation is to be commended for its record of support for basic research and for innovative science education in our universities, community colleges, and schools. I am confident that this support will continue with the encouragement of the Subcommittee on Science, Research and Technology.

I note, for instance, that funding for educational resources at our 2 and 4 year colleges will be increased by 9 percent, which represent a modest real growth. However, I am particularly pleased by the study initiatives in science education and science education research which Dr. Rutherford described in his testimony to the subcommittee last week. In that testimony he identified a new mission when he stated:

We need to broaden the opportunity for participation in Science and this includes much more than career development alone. It is also a matter of sharing scientific knowledge and scientific thinking with all persons, not with those who are also scientists not just those who go to college . . .

While it is essential that bright young people are attracted to careers in science, it is equally important that we, as a nation, develop greater appreciation for the discoveries of science and for the humility of the process of scientific inquiry. Only if both coordinates are fulfilled can we face the tremendous changes brought about by growing populations by shortages of material and energy resources and by man's impact or his natural and social environment.

Dr. Rutherford's program to improve science teaching at the junior high school level, where it appears many students, particularly women and minorities, lose interest in science serves both objectives. At an even earlier age his proposal to produce a science equivalent of "Sesame Street" is intriguing. It is at the very youngest ages that the greatest opportunities exist to instill a feeling for the process of scientific research even if the child cannot comprehend the exciting discoveries which our generation of scientists are making.

And these discoveries are truly amazing. From the theoretical reconstruction of the first 3 minutes of the cosmic explosion which began the universe, to the deciphering of the genitic code, to magnetic tracing of continental evolution, and to trails of the clinical basis of emotions, we are living thrivingly our unparalleled explosion of scientific knowledge. You and I, Mr. Speaker, are truly fortunate to be living now—to bear witness to the extraordinary expansion of man's consciousness of this place on Earth and in the universe.

Will our children grow up to enjoy the benefits of our discoveries and more important, will their education enable them to make their own? That depends on our degree of support for basic research and for science education of future scientists and citizens alike. Thus, I am disappointed by the President's requested budget for basic research.

Close examination reveals that it represents incrementalism camouflaged by inflation. The President calls for an 11-percent increase in funds for basic research. But, after discounting for inflation at 6 percent, the real growth is only around 4 to 5 percent, exactly paralleling the projected real growth of the economy under the economic policies which the President proposes. The National Science Foundation's budget would grow by 4 percent on real terms and members of our subcommittee last week suggested that the Foundation have proposed stronger programs in their fields, like astronomy where scientists are eager to work because the challenges are so great. These budgets do not indicate an awareness of the great importance of basic research. And of the tremendous possibilities which lie ahead.

It is history that in 1944 President Roosevelt instructed Dr. Vannivar Bush, then director of the Office of Scientific Research and Development, to find a way for the Nation to benefit in peacetime from the wartime experience of Dr. Bush's office and to assure U.S. scientific strength. But the questions which face basic research and the reasons for the support of science and science education now do not grow out of a wartime experience, they grow out of one of the longest periods of prosperity that this country has enjoyed. They grow out of an unparalleled quarter century of economic development and growth—a quarter century whose assumptions are now challenged by limits to natural resources by growing populations, and by man's impact on the environment.

Why do we support basic research and science education? Perhaps partly to lay the foundations for increasing the stock of technical knowledge with which to assure continued prosperity in an era of

limited resources; partly, to assist in the achievement of national security and partly because like art and music, they are cultural activities essential to mans identity—an identity without which we are little more than Diogenes' plucked chicken—the cynics version of Plato's man.

Our temporary chairman, Mr. HARKIN, in his opening remarks last week observed that:

Basic research is an important cultural activity without which the spirit of man would be unpoverished regardless of material consequences. It is unfortunate that last fact by itself is insufficient to win strong support for basic research.

I would concur and further add that the material consequence of famished spirits will be unpoverishment for it will require a great leap of imagination to see the possibilities beyond the problems of energy, population, and environment.

PANAMA CANAL TREATIES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. METCALFE) is recognized for 10 minutes.

Mr. METCALFE. Mr. Speaker, recently the National Black Caucus of State Legislators and the National Black Caucus of Local Elected Officials endorsed the proposed Panama Canal treaties.

The National Black Caucus of State Legislators was formed in August of 1977 and represents 294 black State legislators in the United States.

The National Black Caucus of Local Elected Officials was formed 7 years ago and represents more than 2,000 black local elected officials.

The resolutions adopted by these organizations follow:

NATIONAL BLACK CAUCUS OF STATE LEGISLATORS

PANAMA CANAL TREATY

Whereas, our capability to defend the Panama Canal will be enhanced under the new treaty through cooperation with the government of Panama; and

Whereas, no country large or small should agree to another nation holding parts of its territory in perpetuity as we do under the 1903 Treaty; and

Whereas, these new treaties protect the vital commerce and security interest of the U.S.A.; and

Whereas, the 1903 Treaty represents a U.S.A. foreign policy philosophy of the early 1900's, not the 1970's; and

Whereas, the new treaties are in the national interest of the U.S.A. and consistent with the traditional U.S.A. support for self determination and respect for the dignity of all nations great and small; and

Whereas, the new treaties assure a peaceful, prosperous and secure international waterway for the commerce of all nations; and

Whereas, the new treaties are firmly supported by all the nations of the hemisphere; and

Whereas, approval of these treaties will say to the world that the U.S.A. is true to its word about dealing on a fair and equitable basis with all nations.

Now, therefore, be it resolved that the National Black Caucus of State Legislators supports the President's proposed Panama Canal Treaties.

Adopted November 20, 1977.

NATIONAL BLACK CAUCUS OF LOCAL ELECTED OFFICIALS

PANAMA CANAL TREATY

Whereas, our capability to defend the canal will be enhanced under the new treaty through cooperation with the government of Panama; and

Whereas, no country large or small should agree to another nation holding parts of its territory in perpetuity as we do under the 1903 Treaty; and

Whereas, these new treaties protect the vital commerce and security interest of the U.S.A.; and

Whereas, the 1903 Treaty represents a U.S.A. foreign policy philosophy of the early 1900's, not the 1970's; and

Whereas, the new treaties are in the national interest of the U.S.A. and consistent with the traditional U.S.A. support for self determination and respect for the dignity of all nations great and small; and

Whereas, the new treaties assure a peaceful, prosperous and secure international waterway for the commerce of all nations; and

Whereas, the new treaties are firmly supported by all the nations of the hemisphere; and

Whereas, approval of these treaties will say to the world that the U.S.A. is true to its word about dealing on a fair and equitable basis with all nations.

Now, therefore, be it resolved that the National Black Caucus of Local Elected Officials supports the President's proposed Panama Canal Treaties.

Adopted December 6, 1977.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Rhode Island (Mr. BEARD) is recognized for 5 minutes.

Mr. BEARD of Rhode Island. Mr. Speaker, my absence from this Chamber on Monday, January 30, was caused by my attendance at a congressional hearing held in Boston where I joined Hon. JOHN BRADEMAS, chairman of the Select Subcommittee on Education, in hearing testimony on legislation calling for a White House Conference on the Arts and the Humanities.

If I had been present yesterday, my votes would have followed administration recommendations.

MORE RESEARCH, LESS PROPAGANDA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. NEAL) is recognized for 5 minutes.

Mr. NEAL. Mr. Speaker, I am today reintroducing—with the entire North Carolina delegation as cosponsors—a bill which would prevent the Department of Health, Education, and Welfare from going ahead with Secretary Joseph Califano's crusade against smoking.

The legislation would prevent HEW from reshuffling funds to pay for a program which, in our judgment, would be a waste of the taxpayers' money.

Lest my colleagues come to the erroneous conclusion that I am not interested in public health, but concerned only with an industry that is vital to the economy of my district and the State of North Carolina, I want to point out that my bill would direct HEW to make a far more productive use of the money Mr. Califano proposes to spend on an information and education program.

However well intended, we all know that the program Mr. Califano has proposed would constitute little more than a media blitz and classroom instruction based on the Surgeon General's warnings. Surely the American people have received that message by now. For the past 14 years, it has appeared on every package of cigarettes, in all cigarette advertising, and has been the subject of widespread conversation and debate. I doubt that there are many parents who have not counseled their children not to smoke. Now, it becomes necessary for reasonable people to ask: "Is it necessary to spend large amounts of taxpayers' money to plow over this unfertile ground again and again?"

Instead of wasting money on such a program, my bill would prohibit HEW from reshuffling any funds "projected" for use in the new antismoking program. Instead, the money it proposes to reprogram would be used for research to identify the potentially harmful properties of tobacco and to determine in what manner they affect human health. The importance of such information should be obvious:

First. It would go far beyond the surgeon general's warmed over statistical data, upon which the present warning label and Secretary Califano's proposals are based.

Second. It would be of incalculable value to medical science in the treatment and prevention of diseases which may have been proven to be related to smoking.

Third. It would provide new information upon which the individual might base the personal choice of whether to smoke or not to smoke.

Fourth. It would enable cigarette manufacturers to remove or neutralize the substances which would have been identified in the studies as casual or contributory to human illness.

Mr. Speaker, I believe my colleagues who are cosponsoring this bill will affirm that the people who grow tobacco, the cigarette manufacturers, and the hundreds of thousands of people who depend economically on tobacco have no desire to "poison" the Nation or wreck the public health. But because tobacco is the lifeblood of their economy—and has been for more than two centuries—they do not want to see the industry destroyed for less than compelling reasons. They have witnessed other crusaders. Many of them are old enough to remember prohibition, so they understand the futility of the Califano approach. I personally believe that many Americans will choose to

smoke, no matter what the Government does to try to prevent or persuade them. I further believe that they have the right to make that choice of their personal lives, and that Government must beware intruding upon that right.

Mr. Califano's proposals come perilously close to such an infringement. His program would cast the smoker in the role of a social outcast, worthy of the scorn of nonsmokers. His "back of the bus" approach would only inflame the growing friction between smokers and nonsmokers, blocking the way to reasonable accommodation of the rights of both groups. He would encourage the States to limit the movements and restrict the public access of persons who smoke. He has publicly applauded an employment policy (in the Alexandria Fire Department) which denies jobs to people who smoke. He would encourage insurance companies to penalize people who smoke, and to take punitive tax measures against people who smoke. One is bound to wonder what further steps he would contemplate should these initial efforts succeed.

Mr. Speaker, I recognize full well Mr. Califano's responsibilities in public health. I also know that the Congress has an overriding responsibility in this area, and an equal, if not superior, responsibility to the protection of individual freedom. We, far more than Mr. Califano, must weigh both these responsibilities before we permit HEW to send another pack of hounds barking down the trail of a rabbit it has been chasing for 14 years.

Mr. Speaker, the text of my bill follows and I commend it to the attention of my colleagues.

H.R. 10638

A bill to provide that funds projected to be expended for a new program on smoking and health, announced by the Secretary of Health, Education, and Welfare on January 11, 1978, be redirected on any potentially harmful properties of tobacco

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) notwithstanding any provision of law which does not expressly make this Act inapplicable, none of the funds appropriated for expenditure by any officer or employee of the Department of Health, Education, and Welfare may be used during fiscal years 1978 or 1979 to carry out any activity included in the program on smoking and health described by the Secretary of such department of January 11, 1978, in his address before the National Interagency Council on Smoking and Health, except for any activity described in subsection (b)(2) of this section.

(b)(1) Notwithstanding any provision of law which does not expressly make this Act inapplicable, during each of the fiscal years 1978 and 1979, no funds in excess of the amounts requested before October 1, 1977, for expenditure in fiscal year 1978 by the Department of Health, Education, and Welfare for the activities described in paragraph (2) of this subsection may be used for such activities.

(2) The activities referred to in paragraph (1) of this subsection are the activities which are included in the program on smoking and health described in subsection (a) of this section and were conducted by the Department of Health, Education, and Welfare at any time during the period beginning October 1, 1977, and ending January 10, 1978.

SEC. 2. Any funds which were projected (based on the most recent projection made for the Secretary of Health, Education, and Welfare on or before January 11, 1978) for expenditure to carry out any activity included in the program on smoking and health described in subsection (a) of the first section of this Act, except for funds which may be obligated for the activities described in subsection (b)(2) of such first section, shall be obligated during fiscal year 1978 or 1979 (as the case may be) for additional research to identify the potentially harmful properties of tobacco and determine the manner in which they affect human health.

HIGHWAY SAFETY ACT OF 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. JOHNSON) is recognized for 5 minutes.

Mr. JOHNSON of California. Mr. Speaker, I am today introducing the Highway Safety Act of 1978 on behalf of Mr. HARSHA and myself at the request of the administration.

The Committee on Public Works and Transportation will shortly consider this legislation in depth. This is a major part of our transportation program and will eventually be considered in a larger package that will include authorizations for both highway and mass transportation programs.

Under leave to extend my remarks, I include the letter from the Secretary of Transportation, the Honorable Brock Adams, to the Speaker of the House, the Honorable THOMAS P. O'NEILL, transmitted with the legislation I am introducing today.

SECRETARY OF TRANSPORTATION,
Washington, D.C., January 30, 1978.

Hon. THOMAS P. O'NEILL,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: The Department of Transportation is submitting for your consideration and appropriate reference a draft bill to amend the Highway Safety Act of 1966 to authorize appropriations, and for other purposes.

The bill represents the last stage in a process that began with the passage of the Highway Safety Act of 1976. In response to the directive in that Act to study and report on the adequacy and appropriateness of the highway safety program standards, the Department undertook what was to become the most comprehensive review ever made of the highway safety program. In reporting the results of its review to Congress on July 1, 1977, the Department recommended a number of changes in the highway safety program that could be accomplished only through legislation. The draft bill reflects the recommended changes.

The Department has gone to great lengths to insure the meaningful involvement of the highway safety community in its review of the program. The views of the community have been solicited continually, both in the preparation of the report and in the development of this legislative proposal. Throughout, the agencies and organizations concerned with highway safety have responded with useful ideas and perceptive criticism. Although there is not unanimity on all issues, the Department is confident that the draft bill reflects a solid consensus on the basic direction of the program.

Of the first importance among the changes proposed in the bill is a shift away from reliance on mandatory standards as the nucleus of the highway safety program. The Department found the prevailing opinion to be that the initial standards had achieved their purpose, and that the States were now able to draw on their own experience to frame priorities for their programs. Accordingly, the draft bill proposes to replace the standards-oriented provisions of the Act with a new section that places greater emphasis on the States' obligation to identify their own problems, devise remedies, and evaluate the results. There would still be a role for uniform requirements, but confined to requirements designed to promote uniformity in the collection and analysis of data and to facilitate safe interstate travel.

Enactment of the draft bill would be followed by a period of adjustment in which the old standards would be retired and the new requirements would be shaped. The content of the new requirements would be drawn from the recommendations in the July 1977 report, and would be developed in close coordination with the States, local subdivisions, and other interested agencies and organizations. It should be emphasized that a program area that is no longer covered by a standard would by no means be consigned to an inferior role. The Department expects that the States will continue to find such programs as police traffic services and emergency medical services to be essential to their highway safety programs.

The draft bill effects a greater separation between the highway-related requirements administered by the Federal Highway Administration and the requirements administered by the National Highway Traffic Safety Administration. Although the bill includes traffic control devices and highway design, construction and maintenance as subjects for the new requirements, all funding for the implementation of these requirements would be provided through authorizations under a proposed new section 151 in title 23. The new section, contained in the Department's proposed Highway and Public Transportation Improvement Act of 1978, would permit better coordination between the highway safety requirements under Chapter 4 and the safety construction program under Chapter 1. As a consequence, this bill proposes to incorporate those provisions of Chapter 1 that are applicable to the highway safety program into the new Chapter 4 and to delete the former cross-references to Chapter 1.

A third noteworthy change proposed in the bill is the abandonment of the sanction affecting the apportionment of highway safety authorizations. The 1976 amendments have already gone some distance in this direction, by deleting the 10 percent sanction on the Federal-aid construction funds and increasing the flexibility of the sanction of highway safety funds. It was, however, the consensus of the highway safety community that sanctions had outlived their usefulness and should be abandoned altogether. The bill accordingly omits the apportionment sanction, leaving in its place only an explicit statement of the conventional authority to disapprove unsatisfactory programs.

The Highway Safety Act of 1973 (P.L. 93–87) established a program of incentive awards for States that enacted safety belt use laws or that achieved significant reductions in their highway fatality rates. The Highway Safety Act of 1976 (P.L. 94–280) added a third incentive, for actual reductions in fatalities. In the process of reviewing the program pursuant to the mandate of the 1976 Act, the Department was impressed by

the widespread opinion among the States that none of the incentives was acting to foster improved highway safety programs. The awards were commonly viewed as a reward for historical events which might or might not be attributable to programs initiated by the States. After considerable discussion with representatives of the highway safety community, the Department has concluded that the approach most likely to act as a true incentive would be one in which innovation is specifically encouraged by being made the principal basis for an award. The attached bill would therefore establish a program of innovative project grants, under which the Secretary would be directed to work with the States, local subdivisions, and other highway safety organizations to devise appropriate criteria for the selection and award of grants. The process of devising such criteria would begin immediately to allow time for an orderly review before the award of the first grants in fiscal year 1980.

Among the other changes proposed by the bill would be a more explicit direction to the State highway safety agencies to help the political subdivisions to identify and correct their highway safety problems. In keeping with the Department's desire to have the State highway safety agencies seen as integral parts of State government rather than as Federal grant management offices, the bill proposes to require the States to provide a hard match for Federal funds expended to support the planning and administrative functions of the State highway safety agencies.

The bill would continue the highway safety research and development program without major change. Two study provisions, relating to administrative adjudication and to the effectiveness of driver education, would be deleted. Significant progress has been made under each of these studies and the work now in progress would be continued under the general research and development authority.

The National Highway Safety Advisory Committee would be continued as presently constituted. Although the bill would replace chapter 4 in its entirety with a new chapter 4, the replacement would be instantaneous, and the members of the existing Committee would continue to serve the terms of their present appointments.

The bill proposes to shift the period of authorization from two years to four years, and therefore requests authorizations through fiscal year 1982. It is the Department's view that the longer authorization cycle will promote greater stability within the program. The authorization would begin at $135 million for fiscal year 1979 and increase to $200 million for fiscal years 1981 and 1982. The bill proposes that of the funds to be apportioned to the States, up to 25 percent would be separately apportioned for high priority safety projects, thereby providing almost $200 million over the life of the authorizations for programs such as the expansion of the 55 mph speed limit enforcement program. The proposed amount thus provides for modest growth in both the basic program and in high priority areas. It is contemplated that the high priority funds would be devoted at first almost entirely to expansion of the States' 55 mph enforcement programs. The provision of funds for speed limit enforcement responds to the urgent and repeated requests of the States for assistance in this critical program.

In addition to the proposed amendment of chapter 4, the proposed bill would amend the national maximum speed limit program in significant respects. Currently, section 154 of title 23, United States Code, provides that the Secretary shall not approve any project under section 106 of that title in any State which has a maximum speed limit in excess of 55 miles per hour on any public highway within its jurisdiction. Section 141 of title 23 provides that each State shall certify that it is enforcing the speed limit and directs the Secretary to withhold approval of all projects under section 106 in any State that does not so certify.

The proposed bill would retain the current sanctions intact, but would supplement the current sanction of section 141 for failure to certify enforcement with a new provision focused on the actual speeds traveled by motorists. The penalty applicable to enforcement would be strengthened by a 5 to 10 percent penalty applicable to compliance. A schedule is proposed to be established for the States to bring their speeds below certain levels in successive years beginning in calendar year 1978. For fiscal years 1980–1982, it is proposed to withhold up to 5 per centum of a State's Federal-aid highway apportionments, other than Interstate and safety construction apportionments, in any year for which the State's speeds do not fall below the specified level. The apportionments would be withheld until such time as the State's speeds fall to the level specified for the year for which the apportionments were withheld. The penalty would increase to 10 percent in subsequent years. It is the Department's view that such sanctions provide a strong inducement to the States to improve their speed limit enforcement programs. Although the penalty would be less severe than the total withholding of project approvals provided by section 141, the basis for the penalty would be much more clearly stated and its imposition therefore more certain in the event a State failed to meet a specified level. The compliance levels proposed in the bill begin at the existing level of compliance and require steady improvement in each succeeding year.

Additional details concerning these proposals and a discussion of several other, largely technical proposals are contained in the attached combined section-by-section analysis and justification.

It is the judgment of this Department, based on available information, that no significant environmental or inflationary impact would result from the implementation of this bill.

The Office of Management and Budget advises that this proposed bill is in accord with the Administration's objectives.

Sincerely,

BROCK ADAMS.

SOUTHERN WEST VIRGINIA NEEDS A DAM, NOT MORE STUDIES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from West Virginia (Mr. RAHALL) is recognized for 5 minutes.

Mr. RAHALL. Mr. Speaker, I rise today to again inform my colleagues that the Fourth Congressional District of West Virginia, which I represent, has again been hit by substantial flooding. As some of you may recall, over $150 million in damages were the result of the massive flood which occurred last April.

Recently, a committee appointed by Governor Rockefeller concluded that the best form of long-term flood protection for the residents of the Tug Fork Valley, would be the construction of brick and mortar flood projects. However, the U.S. Army Corps of Engineers have informed me that the cost of such a project would be astronomical.

Now, I am sure many of my colleagues have had some experience with the Corps of Engineers, and I would like to say that a flood dam could be constructed in southern West Virginia from the tons and tons of reports and studies that the Corps keeps spitting out just like every other Federal agency. Southern West Virginia residents do not need more studies, they need a dam.

The Federal Government's second rate recovery effort that took place last April cost over $104 million If the proper steps had been taken a few years back, that $104 million could have provided the beginning for the dam that is desperately needed.

In the recent Federal budget presented to this body last week, $7.7 billion is outlayed for assistance to foreign countries. I want to know why cannot American citizens have a few million for a worthwhile project that will protect their homes and families? It is absolutely ridiculous, and I am going to make it very clear, Mr. Speaker, that I will continue to stand up and speak for the people that elected me, because I believe our American taxpayers deserve whatever this Nation can possibly do to help them when they need help.

STATUS OF THE CONGRESSIONAL BUDGET FOR FISCAL YEAR 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. GIAIMO) is recognized for 5 minutes.

Mr. GIAIMO. Mr. Speaker, as called for in the Congressional Budget Act, the House Budget Committee has notified the Speaker of the House on the status of the fiscal year 1978 congressional budget. A copy of my letter to the Speaker and the committee's report are attached at the end of these remarks. I would like to inform my colleagues of the House how Congress stands with regard to the budget resolution it adopted on September 15 as we begin this 2d session of the 95th Congress.

Since my last report to the House on November 29, the Congress has enacted into law H.R. 9346—Social Security financing amendments, as well as several other spending measures. The current level also reflects the enactment of House Joint Resolution 662, further continuing appropriations for the Departments of Labor and HEW, the District of Columbia and the Small Business Administration disaster loan program, in addition to the 11 regular appropriation bills which have been previously enacted. Therefore, within the spending ceilings adopted by the Congress last session, $15 billion remains in budget authority and $4 billion in outlays for the remainder of fiscal year 1978.

Other major legislation on the schedule for this session such as the energy package and welfare reform, may have a spending or revenue impact in fiscal year 1978. And as my colleagues are aware, the President has transmitted the fiscal year 1979 budget to the Congress. To the extent that any new legislation is enacted, or revisions to spending estimates for fiscal year 1978 take place, adjustments will be made to the current level for spending and revenues.

Thank you, Mr. Speaker.

The material follows:

COMMITTEE ON THE BUDGET,
Washington, D.C., January 31, 1978.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: On January 30, 1976, the Committee on the Budget outlined the procedures which it had adopted in connection with its responsibilities under Sec. 311 of the Congressional Budget Act of 1974 to provide estimates of the current level of revenues and spending. I am herewith transmitting the status report under H. Con. Res. 341, the Second Budget Resolution for FY 1978. This report reflects the resolution of September 15, 1977, and estimates of budget authority, outlays and revenues based on all completed action on spending and revenue measures as of close of legislative business, December 15, 1977.

Sincerely,

ROBERT N. GIAIMO,
Chairman.

REPORT TO THE SPEAKER OF THE U.S. HOUSE OF REPRESENTATIVES FROM THE COMMITTEE ON THE BUDGET ON THE STATUS OF THE FISCAL YEAR 1978 CONGRESSIONAL BUDGET, ADOPTED IN HOUSE CONCURRENT RESOLUTION 341

(Reflecting completed action as of December 15, 1977.)

[In millions of dollars]

	Budget authority	Outlays	Revenues
Appropriate level	$500,100	$458,250	$397,000
Current level	485,065	454,315	398,067
Amount remaining	15,035	3,936	1,067

BUDGET AUTHORITY

Any measure providing budget or entitlement authority which is not included in the current level estimate and which exceeds $15,035 million for fiscal year 1978, if adopted and enacted, would cause the appropriate level of budget authority for that year as set forth in H. Con. Res. 341 to be exceeded.

OUTLAYS

Any measure providing budget or entitlement authority which is not included in the current level estimate and which would result in outlays exceeding $3,936 million for fiscal year 1978, if adopted and enacted, would cause the appropriate level of outlays for that year as set forth in H. Con. Res. 341 to be exceeded.

REVENUES

Any measure that would result in a revenue loss exceeding $1,067 million for fiscal year 1978, if adopted and enacted, would cause revenues to be less than the appropriate level for that year as set forth in H. Con. Res. 341.

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., January 19, 1978.

Hon. ROBERT N. GIAIMO,
Chairman,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to section 308(b) and in aid of section 311(b) of the Congressional Budget Act, this letter and supporting detail provide an up-to-date tabulation of the current levels of new budget authority, estimated outlays and estimated revenues in comparison with the appropriate levels for these items contained in the most recently agreed to concurrent resolution on the 1978 budget. The current level estimates are as of the beginning of the second session of the 95th Congress, January 19, 1978.

There is no change in the totals as shown in my previous report. This report consolidates all action completed in the 1st session of the 95th Congress.

(In millions of dollars)

	Budget authority	Outlays	Revenues

Sincerely,

ALICE M. RIVLIN,
Director.

Parliamentarian status report supporting detail, fiscal year 1978, as of close of business, January 18, 1978

[In millions]

	Budget authority	Outlays
I. Enacted:		
Permanent appropriations and trust funds	234,727	219,555
Offsetting receipts	−61,020	−61,020
Enacted last session	305,981	290,435
Total, enacted	479,689	448,970
II. Entitlement authority and other mandatory items requiring further appropriation action:		
Function 050:		
Retired pay (anticipated supplemental)	93	93
Department of Defense, civilian and military pay (anticipated supplemental)	2,673	2,593
Function 350:		
Federal Crop Insurance Corporation authority (P.L. 95–181) (anticipated supplemental)	22	22
Function 500:		
Child care services (P.L. 95–171) (anticipated supplemental)	200	200
Function 600:		
Child nutrition (P.L. 95–171) (anticipated supplemental)	28	25
Public assistance changes (H.R. 9346) (anticipated supplemental	186	186
Function 700:		
Veterans Disability and Survivor Benefits Act (P.L. 95–117) (anticipated supplemental)	363	335
Veterans pension benefits increase (P.L. 95–204) (anticipated supplemental)	129	114
Veterans education benefits (P.L. 95–202) (anticipated supplemental)	546	546
Veterans automobile adaptive assistance (P.L. 95–116)	1	1
Veterans' Administration physician and dentist pay comparability (P.L. 95–201)	4	4
Function 800:		
Payment to Civil Service Retirement and Disability Trust Fund (anticipated supplemental)	319	319
Offsetting receipts	−319	−319
Function 920:		
Civilian agency pay raise (anticipated supplemental)	1,131	1,224
Total, entitlement authority	5,376	5,344
III. Continuing resolution authority	(1)	(1)
IV. Conference agreements ratified by both Houses	-------	-------
Total current level, as of January 18, 1978	485,065	454,315
Current resolution of September 15, 1977	500,100	458,250
Amount remaining:		
Over ceiling	-------	-------
Under ceiling	15,035	3,936

[1] Continuing Resolution (P.L. 95–205) authority provides funding through September 30, 1978 for: Labor-HEW appropriations, at level of conference agreement on H.R. 7555; District of Columbia appropriations, at 1977 rate; and SBA disaster loans, at level of conference agreement on H.R. 9375. Amounts are shown in the enacted category above.

DISARMAMENT: THE ECONOMIC ADJUSTMENT ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. WEISS) is recognized for 5 minutes.

Mr. WEISS. Mr. Speaker, one of the most formidable obstacles facing those of us who want to reduce unnecessary military spending is the adverse effect this reduction could have on our Nation's economy. The gains we make toward world peace through disarmament should not be made at the expense of abandoning the workers in our Nation's defense plants. If our defense-related industries are to convert to more peaceful purposes, they need incentive and support.

That is why I am introducing S. 2279, the Defense Economic Adjustment Act, in the House today. The bill, introduced in the Senate last November by Senator MCGOVERN, provides for economic assistance to those communities, industries and workers affected by reductions in defense expenditures. The act authorizes appropriations for a Defense Economic Adjustment Council in the Executive Office of the President, alternative use committees to undertake economic conversion planning, an economic adjustment reserve trust fund, economic assistance for workers displaced by cuts in defense spending, and research into projects for the nondefense sector. In this way, disarmament will not only have international benefits, but domestic ones as well.

I believe this bill will help the defense industry make a smooth and economically painless transition to more peaceful production.

COMPANY'S RESPONSE TO "DISTORTIONS IN MOBIL OIL CORP. ADVERTISING CAMPAIGN"

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, on October 20 I addressed this body concerning certain distortions of fact by Mobil Oil Corp. in advertisements on the energy bill. Mobil has replied to my statement and in the interest of preserving debate on this important issue I am entering a copy of the corporation's remarks in today's RECORD. I want to emphasize that I do not concur with or endorse Mobil's remarks.

MOBIL OIL CORPORATION,
New York, N.Y., November 3, 1977.

Hon. JAMES M. HANLEY,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN HANLEY: We were deeply concerned to read your remarks entitled "Distortions in Mobil Oil Corp. Advertising Campaign" in the October 20 CONGRESSIONAL RECORD. Your comments on several issues are seriously misleading and we would like to set the record straight.

Your central criticism of Mobil is that Mobil spent less on "exploration" in 1973–76 than on acquisition of Marcor, and you draw conclusions that "Mobil's hyprocrisy is transparent" etc. In reply, I suggest we review the figures.

Mobil's capital and exploration expenditures for the years 1973 through 1976 were as follows:

[In millions of dollars]

	1973	1974	1975	1976
U.S. PETROLEUM OPERATIONS				
Exploration expenses	67.7	91.0	118.0	116.1
Producing:				
Offshore lease bonuses	384.4	479.1	13.1	147.3
Other [1]	113.6	140.5	209.3	231.4
Total	529.7	710.6	340.4	494.8
FOREIGN PETROLEUM OPERATIONS				
Exploration expenses	80.3	98.7	124.8	91.4
Producing	97.3	132.8	243.6	188.0
Total	177.6	231.5	368.4	279.4
Total worldwide capital and exploration outlays for petroleum operations	707.3	942.1	708.8	774.2

[1] Includes development drilling, offshore platforms, equipment and construction for improved recovery, gas processing plants and capital equipment including gathering lines.

As you will see from the above table, your own statement gives only a fraction of Mobil's total expenditure for exploration and producing operations within the United States and overseas. Not only do we conduct "exploration" but we pay tremendous sums in lease bonuses to the U.S. government just for the privilege of looking (and no guarantee of finding anything). Once we find oil in commercial quantities, we must still pay out huge sums for further drilling, for offshore platforms if the wells are in deep water, and for all kinds of other equipment. And as the search for oil has moved increasingly into the new frontier areas—Alaska and the Outer Continental Shelf—expenditures have skyrocketed.

We have spent more than *$3 billion* in 1973–76, rather than the $725 million you credit us with, for these operations. We would, indeed, have spent more if Federal lease sales had not been delayed (and our future spending would be severely restricted if the proposed OCS legislation goes through.) From these considerations, I think you will agree that Mobil has nothing to apologize for when it comes to making maximum efforts to find oil and gas for the American consumer. In this connection, I would like to make two points:

One, oil companies should not be blamed for spending more or less on foreign as against domestic exploration in any given year. International oil companies look for oil wherever they have the opportunity. And, while the United States is dependent on foreign oil, the *U.S. consumer* benefits from foreign exploration as the supply and variety of source of foreign oil expand.

Second, exploration and producing of oil in the United States is limited by price controls, by a maze of red tape, and by lawsuits and other delays which prevent us from developing new reserves. In addition, Congress is constantly threatening to break up the oil industry or otherwise penalize it. Is there any wonder that companies seek to diversify their operations? To do otherwise, I suggest, would be to neglect the legitimate interests of our stockholders, without whose money and trust we would be unable to carry on our petroleum operations.

Let me make some other comments on your statement, going through it in order.

Mobil's "new advertising campaign" is not designed "to enhance the media image Mobil has been pursuing since the Arab oil embargo." Our concern was to make it clear to the American public that the House-passed energy bill contained serious deficiencies—a fact since recognized by the Senate. Incidentally, we began to take advertising space to explain the energy facts to the American people long before the Arab embargo.

The House-passed version of the energy bill will not, as you state, give the oil industry "substantial additional revenues", if by this you mean funds adequate to do the job. The petroleum production goals on which the House bill is based would require a substantial increase in capital investment for exploration and development. Over the three years, 1973–75, oil companies' annual expenditures for exploration and development in the U.S. averaged about $10 billion. By way of comparison, oil companies would have to spend an estimated average of $23.3 billion per year (in 1976 dollars) between 1977 and 1982 in order to meet the 1985 production goals for oil and natural gas implicit in the House-passed omnibus energy bill. This average spending level would be more than double the petroleum industry's 1973–1975 average for exploration and development and 94 percent higher than 1976's $12 billion. Yet the House-passed bill could actually have the effect of reducing the amount of capital currently available to oil companies.

As for natural gas, the House decision to extend Federal controls to intrastate markets, which up to now have been free not only of controls but of serious shortages, would result in a net decrease in funds available for exploration and development, according to a study for the industry's Natural Gas Supply Committee. The House's proposed control price of $1.75 Mcf would therefore have the effect of increasing the need for imports of foreign crude oil and of natural gas in liquefied form, both at much higher prices.

Your comments on coal suggest that Mobil is unwilling to do its part in restoring the environment after strip-mining operations. This is emphatically not the case. But we *were* concerned that legislation could result in cancellation of our permit processing and force us to reapply under a new permit system. Even more significant, we were and are concerned about the myriad of permits which must be obtained, and the lengthy procedures involved in satisfying state, local and federal requirements, all of which delay the start of actual mining.

A final comment. On rereading your letter, I was struck by your use of highly emotional terms—"highway robbery", "unbridled profits", etc. Frankly, I do not think the use of such terms contributes to the national debate on energy. I hope we can get away from such terms, get rid of prejudices, and look at facts—*all* the facts. If we do this, we have a chance together to get this country on the road to a sounder national energy position.

I am enclosing copies of Mobil's 1976 Annual Report and Financial and Operating statistics. I hope you will agree that this letter should be placed in the *Congressional Record* to set that record straight on this important issue.

Sincerely,

HERBERT SCHMERTZ.

SEATTLE SUPPORT FOR ALASKA NATIONAL INTEREST LANDS CONSERVATION ACT

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEIBERLING. Mr. Speaker, the Committee on Interior and Insular Affairs' Subcommittee on General Oversight and Alaska Lands is continuing its markup of H.R. 39, the Alaska National Interest Lands Conservation Act, sponsored by numerous Members, and authored by Mr. UDALL, the distinguished

chairman of our Committee on Interior and Insular Affairs.

Yesterday, the subcommittee adopted a revised title VIII of the bill, dealing with the problem of protecting the subsistence lifestyle of the rural residents of Alaska, many of whom—especially the Natives—are almost totally dependent on the fish and game that they can catch or kill. While this was a subject whose importance was stressed during our many months of hearings on this legislation, there were great differences of opinion as to how subsistence uses could be protected, and to what extent. Many people doubted that a provision could be drafted that would be acceptable to all concerned. However, through continuing collaboration between the subcommittee's majority and minority staff, the State of Alaska's Government, representatives of the Alaskan Natives and rural residents, and the Department of Interior, and with the continued insight and participation of our colleagues, Don Young and Lloyd Meeds and other members of the subcommittee, a consensus title on subsistence was agreed to. I consider this to be one of the miracles of the day.

On October 16, 1977, the Seattle Post-Intelligencer took editorial notice of the importance of the Alaskan lands legislation and the recommendations of the Carter administration concerning it. The editorial urges timely action on this legislation to safeguard the "crown jewels of Alaska." Such action, it appears, is on the way.

The text of the editorial follows these remarks:

[From the Seattle Post-Intelligencer, Oct. 16, 1977]

A GREAT LAND

Interior Secretary Cecil Andrus said recently that Alaska park legislation now before Congress is "the most important land conservation program in the history of this country."

The Aleut word "Alaska" means "the Great Land," and no phrase better describes lands that Congress is being asked to set aside as national parks, national wildlife refuges, wilderness areas and links in the National Wild and Scenic Rivers System.

Added together, these federal lands are equal in size to California and total a quarter of the "Great Land." Congress has already provided other lands for Alaska's development. The Alaska Statehood Law presented the state with 103 million acres of public land—more land, actually and by percentage, than any state has ever received—and the Alaska Native Claims Settlement Act provided for conveyence of another 40 million acres (with a cash payment of about $1 billion) to native peoples.

It is now time to claim, for all Americans and generations to come, what Secretary Andrus calls "the crown jewels of Alaska."

No existing American park lands can match the peaks and glaciers of the St. Elias Mountains, the lakes and trout streams of the "Alaska Alps" near Lake Clark, nor the wildlife habitats, austere mountains and epic rafting rivers of the Brooks Range.

These places aren't household names now, and probably won't become much-visited Yosemites tomorrow. But as national park planner John Kauffman points out: "The park proposals up here are for the future, as Yellowstone was . . . We're talking about 50 and more years hence, when there may be nowhere else to go to a place that is avoid and unexplored."

Some Alaska politicians say their state's wilderness is rough enough to protect itself. They want wildlands left open to mineral exploration and whatever commercial development is possible on the fringes.

But Alaska's rapid, sometimes poorly planned growth—with already-seen consequences such as the decline of wildlife populations—makes it necessary that the state's wonderlands get immediate federal protection.

The big issue is how much protection. Conservation groups have lined up behind a 114-million acre plan sponsored by U.S. Rep. Morris Udall. Secretary Andrus has proposed a 91.7-million acre plan.

Alaska's U.S. Sen. Ted Stevens and U.S. Rep. Don Young initially wanted no new parklands before the year 2000. They've now come up with a 25-million acre plan that creates national parks consisting mainly of rocks and ice.

The Andrus plan appears to be the best alternative for protecting the world's most spectacular unspoiled wilderness while accommodating recreational and resource use.

The proposal has made adjustments to Alaskan's lifestyles. Standards of the 1964 Wilderness Act are modified where necessary to guarantee access. Seaplanes would be allowed on some remote lakes. Wilderness cabins would be permissible in some of North America's most rained on places.

Limited hunting would take place in park-bordering "national preserves" accounting for one-third of the 41.7-million acres to be managed by the National Park Service. Strictly regulated oil, gas and mineral leasing would be allowed in national wildlife refuges.

This last matter is of utmost concern and Congress must pay close attention to it.

The wildlife preserves are absolutely necessary to maintain caribou, moose, bear and other animals under pressures working against their survival. At the same time, the nation is in desperate need of new energy supplies of its own. Most of those supplies are actually in or thought to be in Alaska.

A balance has to be struck that maintains the wildlife populations without precluding all future oil and gas exploration and developments in wildlife areas, particularly in the arctic, where huge oil and gas deposits have been found and where development impacts have been great.

Alaska Gov. Jay Hammond, officially a backer of the Stevens-Young plan, has praised the Andrus bill as a "responsible and constructive balancing of interests."

Secretary Andrus's compromise should help Congress to act with all deliberate speed. Congressman Udall, who has scaled down his own proposals, says he hopes to have a bill on President Carter's desk "in five or six months."

That kind of timetable is needed to safeguard the crown jewels of Alaska.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. HIGHTOWER (at the request of Mr. WRIGHT), for today, on account of illness.

Mr. BINGHAM (at the request of Mr. WRIGHT), for January 31 and February 1, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. EMERY) to revise and extend their remarks and include extraneous material:)

Mr. MICHEL, for 30 minutes, today.

Mr. CORCORAN of Illinois, for 5 minutes, today.

Mr. KEMP, for 5 minutes, today.

Mr. ASHBROOK, for 30 minutes, today.

Mr. COHEN, for 10 minutes, today.

Mr. HOLLENBECK, for 10 minutes, today.

(The following Members (at the request of Mr. CAVANAUGH) to revise and extend their remarks and include extraneous material:)

Mr. METCALFE, for 10 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. BEARD of Rhode Island, for 5 minutes, today.

Mr. NEAL, for 5 minutes, today.

Mr. JOHNSON of California, for 5 minutes, today.

Mr. RAHALL, for 5 minutes, today.

Mr. GIAIMO, for 5 minutes, today.

Mr. WEISS, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. EMERY) and to include extraneous material:)

Mr. DICKINSON.

Mr. YOUNG of Florida.

Mr. KEMP in four instances.

Mr. CRANE.

Mr. KETCHUM.

Mr. HAGEDORN.

Mr. LAGOMARSINO in two instances.

Mr. WHALEN in two instances.

Mr. ASHBROOK in three instances.

Mr. SCHULZE.

Mr. PURSELL.

Mr. SYMMS.

Mr. MCCLOSKEY in three instances.

Mr. CUNNINGHAM.

Mr. COHEN.

Mr. GILMAN.

Mr. HOLLENBECK.

Mr. EVANS of Delaware.

Mr. ABDNOR in two instances.

(The following Members (at the request of Mr. CAVANAUGH) and to include extraneous matter:)

Mr. GONZALEZ in three instances.

Mr. ANDERSON of California in three instances.

Mr. FLIPPO.

Mr. MAZZOLI in two instances.

Mr. EILBERG.

Mrs. KEYS.

Mr. IRELAND.

Mr. ROE in two instances.

Mr. MURPHY of Illinois.

Mr. CLAY in 10 instances.

Mr. CARNEY in two instances.

Mr. PEASE in two instances.

Mr. ROSTENKOWSKI.

Mr. EDWARDS of California in two instances.

Mr. PEPPER.

Mr. HOWARD.

Mr. WON PAT.

Mr. MILFORD.

Mr. BAUCUS.

Mr. CONYERS in two instances.

Mr. HARKIN.

Mr. JOHNSON of California.
Mr. MOORHEAD of Pennsylvania in 10 instances.
Mr. BALDUS.
Mr. BRECKINRIDGE.
Mr. BONKER.
Mr. RUSSO.
Mr. WAXMAN.
Mrs. SCHROEDER.
Mr. MATHIS in two instances.

ADJOURNMENT

Mr. CAVANAUGH. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to: accordingly (at 5 o'clock and 45 minutes p.m.) the House adjourned until tomorrow, Wednesday, February 1, 1978, at 3 o'clock p.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3111. A letter from the Secretary of Agriculture, transmitting a draft of proposed legislation to repeal the statutes relating to the publishing of cotton price predictions in Government reports and the issuance of cotton crop reports; to the Committee on Agriculture.

3112. A letter from the Secretary of Defense, transmitting the fourth annual report on rationalization standardization within NATO, pursuant to section 302(c) of Public Law 93–365, as amended, and section 814(b) of Public Law 94–106, as amended; to the Committee on Armed Services.

3113. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–133. "To establish a hazardous waste management program for the District of Columbia," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

3114. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting a proposed final regulation amending the family contribution schedules for use during the 1978–79 academic year under the basic educational opportunity grant program, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

3115. A letter from the Staff Secretary, National Security Council, transmitting the Council's annual report for calendar year 1977 on its activities under the Freedom of Information Act, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

3116. A letter from the General Counsel, Copyright Office, Library of Congress, transmitting notice of a proposed new records system, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

3117. A letter from the Director, Office of Administrative Services and Procurement, Department of Commerce, transmitting the annual report for fiscal year 1977 on the Department's disposal of foreign excess property, pussuant to section 404(d) of the Federal Property and Administrative Services Act of 1949, as amended; to the Committee on Government Operations.

3118. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to authorize additional appropriations for the Department of State for fiscal year 1978; to the Committee on International Relations.

3119. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to authorize appropriations for the Department of State for fiscal years 1979, 1980 and for other purposes; to the Committee on International Relations.

3120. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the State Department's intention to consent to a request by the Government of Morocco for permission to transfer certain U.S.-origin military equipment to Iran, pursuant to section 3(a) of the Arms Export Control Act; to the Committee on International Relations.

3121. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of a proposed license for the export of certain defense equipment sold commercially to the Philippines (MC–2–78), pursuant to section 36(c) of the Arms Export Control Act; to the Committee on International Relations.

3122. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a report on political contributions made by Ambassador-designate Robert W. Buchheim and by members of his family, pursuant to section 6 of Public Law 93–126 to the Committee on International Relations.

3123. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a report on political contributions made by Ambassador-designate William E. Schaufele, Jr., and by members of his family, pursuant to section 6 of Public Law 93–126; to the Committee on International Relations.

3124. A letter from the Assistant Secretary of State for Congressional Relations, transmitting reports on political contributions made by Ambassadors-designate Arthur T. Tienken and Richard J. Bloomfield, and by members of their families, pursuant to section 6 of Public Law 93–126; to the Committee on International Relations.

3125. A letter from the Chairman, U.S. Consumer Product Safety Commission, transmitting the Commission's recommended authorization levels for its programs during fiscal years 1979, 1980, and 1981, pursuant to section 27(k)(1) of Public Law 92–573; to the Committee on Interstate and Foreign Commerce.

3126. A letter from the Administrator of Veterans' Affairs, transmitting a report on the study analyzing and evaluating the non-service-connected pension program pursuant to section 404(b) of Public Law 94–432; to the Committee on Veterans' Affairs.

3127. A letter from the Special Representative for Trade Negotiations, Executive Office of the President, transmitting a report covering the 6 months ended December 31, 1977, on reviews and hearings arising from complaints of unfair trade practices by foreign governments, pursuant to section 301(d)(2) of the Trade Act of 1974; to the Committee on Ways and Means.

3128. A letter from the Comptroller General of the United States, transmitting a report on practices in the Office of the Secretary of Defense in managing major weapon system acquisition programs (PSAD–78–14, January 30, 1978); jointly, to the Committees on Government Operations, and Armed Services.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. RODINO: Committee on the Judiciary. H.R. 7843. A bill to provide for the appointment of additional district and circuit judges, and for other purposes; with amendment (Rept. No. 95–858). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 9757. A bill entitled "Grazing Fee Moratorium of 1977" (Rept. No. 95–859). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. Senate Joint Resolution 4. Joint resolution establishing the Aboriginal Hawaiian Claims Settlement Study Commission, and for other purposes; with amendment (Rept. No. 95–860). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee of conference. Conference report on H.R. 3454 (Rept. No. 95–861). Ordered to be printed.

SUBSEQUENT ACTION ON BILLS SEQUENTIALLY REFERRED

Under clause 5 of rule X,

Referral of H.R. 3350. A bill to promote the orderly development of hard mineral resources in the deep seabed pending adoption of an international regime; which was referred to the Committee on International Relations, extended for an additional period ending not later than February 17, 1978.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BREAUX:

H.R. 10621. A bill to amend the Federal Food, Drug and Cosmetic Act; to the Committee on Interstate and Foreign Commerce.

H.R. 10622. A bill to amend the Shipping Act, 1916, as amended, to provide for the prompt and effective implementation of certain equal access, pooling, rationalization, apportionment, and related reciprocal ocean transportation agreements entered into between carriers of the flags of the United States and of the nations with which we trade and to provide immunity for such agreements from the application of the antitrust laws; to the Committee on Merchant Marine and Fisheries.

By Mr. BREAUX (for himself and Mr. PRITCHARD):

H.R. 10623. A bill to improve operations of the national sea grant program, to authorize appropriations to carry out such program for fiscal years 1979 and 1980, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. BURLESON of Texas (for himself, Mr. WRIGHT, Mr. FITHIAN, Mr. GAMMAGE, Mrs. LLOYD of Tennessee, Mr. MILFORD, and Mr. WHITE):

H.R. 10624. A bill to repeal the carryover basis provisions added by the Tax Reform Act of 1976; to the Committee on Ways and Means.

By Mr. BURLESON of Texas (for himself and Mr. POAGE):

H.R. 10625. A bill to suspend the duty on natural graphite until the close of June 30, 1981; to the Committee on Ways and Means.

By Mr. CRANE (for himself, Mr. BEVILL, Mr. DEVINE, Mr. EVANS of Delaware, Mr. HALL, Mr. HUBBARD, Mr. HUCKABY, Mr. LIVINGSTON, Mr. MCEWEN, Mr. MANN, Mr. MARRIOTT, Mr. QUIE, Mr. REGULA, Ms. SPELLMAN, Mr. YOUNG of Alaska, and Mr. ZEFERETTI):

H.R. 10626. A bill to provide that in civil actions where the United States is a plaintiff, a prevailing defendant may recover a reasonable attorney's fee and other reasonable litigation costs; to the Committee on the Judiciary.

By Mr. DRINAN:

H.R. 10627. A bill to amend the Office of Federal Procurement Policy Act to require

the payment of interest by Federal agencies on overdue payments to small business concerns; jointly, to the Committees on Government Operations and Small Business.

By Mr. FINDLEY (for himself, Mr. ERLENBORN, Mr. MCCLORY, and Mr. SIMON):

H.R. 10628. A bill to amend the Internal Revenue Code of 1954 to allow any State taxing authority which receives Federal tax return information to disclose such information to a State auditing agency for the purpose of auditing the activities of the taxing authority; to the Committee on Ways and Means.

By Mr. FORD of Michigan (for himself, Mr. QUIE, Mr. VENTO, Mr. OBERSTAR, Mr. FRASER, Mr. NOLAN, and Mr. SIMON):

H.R. 10629. A bill to authorize funds for the Hubert H. Humphrey Institute of Public Affairs; to the Committee on Education and Labor.

By Mr. GLICKMAN (for himself, Mr. NOLAN, Mr. MOFFETT, and Mr. PATTERSON of California):

H.R. 10630. A bill to encourage the use of alcohol in motor vehicle fuels by requiring certain retailers to make alcohol-blended fuels available for sale, by allowing the rapid amortization of facilities producing alcohol for use in motor vehicle fuels, and by exempting alcohol-blended fuels from certain requirements of the Clean Air Act; jointly, to the Committees on Interstate and Foreign Commerce, and Ways and Means.

By Mr. IRELAND:

H.R. 10631. A bill to amend the Farm Labor Contractor Registration Act of 1963, as amended, and for other purposes; to the Committee on Education and Labor.

H.R. 10632. A bill to amend the Small Business Act to provide regulatory flexibility for small business in certain instances so that the effect of regulation matches the size of business regulated; to the Committee on Small Business.

By Mr. JENRETTE:

H.R. 10633. A bill to amend title 5, United States Code, to provide that certain air traffic specialists be considered as air traffic controllers for retirement and certain other purposes; to the Committee on Post Office and Civil Service.

By Mr. KEMP:

H.R. 10634. A bill to provide for the issuance of a commemorative postage stamp in observance of the 30th anniversary of the founding of the modern state of Israel; to the Committee on Post Office and Civil Service.

H.R. 10635. A bill to amend the Tariff Schedules of the United States to provide duty-free treatment for horses; to the Committee on Ways and Means.

By Ms. KEYS:

H.R. 10636. A bill to amend the Internal Revenue Code of 1954 to make certain changes in the carryover basis provisions which were added by the Tax Reform Act of 1976 and for other purposes; to the Committee on Ways and Means.

By Mr. MOFFETT:

H.R. 10637. A bill to amend the Consumer Product Safety Act to establish an interim consumer product safety rule relating to the standards for flame resistance and corrosiveness of certain insulation, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. NEAL (for himself, Mr. FOUNTAIN, Mr. BROYHILL, Mr. JONES of North Carolina, Mr. PREYER, Mr. ANDREWS of North Carolina, Mr. MARTIN, Mr. ROSE, Mr. HEFNER, Mr. GUDGER, and Mr. WHITLEY):

H.R. 10638. A bill to provide that funds projected to be expended for a new program on smoking and health, announced by the Secretary of Health, Education, and Welfare on January 11, 1978, be redirected for research on any potentially harmful properties of tobacco; to the Committee on Interstate and Foreign Commerce.

By Mr. QUILLEN:

H.R. 10639. A bill to amend title 38, United States Code, to improve the pension programs for veterans, and survivors of veterans, of the Mexican border period, World War I, World War II, the Korean conflict, and the Vietnam era, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. RINALDO:

H.R. 10640. A bill to amend the Internal Revenue Code of 1954 to provide graduated corporate income tax rates; to the Committee on Ways and Means.

By Mr. RISENHOOVER:

H.R. 10641. A bill to amend the Consolidated Farm and Rural Development Act to provide an alternate method of financing the land, equipment, and operating expenses of qualified farm families, including young farmers, and shall help provide the farm family with adequate standards of living and the consumer with reasonable prices for agricultural products, and for other purposes; to the Committee on Agriculture.

By Mr. ROE:

H.R. 10642. A bill to encourage participation by children whose language is English in bilingual education programs under the Bilingual Education Act; to the Committee on Education and Labor.

H.R. 10643. A bill to amend title 38, United States Code, to establish a court of veterans' appeals and to prescribe its jurisdiction and functions; to the Committee on Veterans' Affairs.

By Mr. SHIPLEY:

H.R. 10644. A bill to authorize the Secretary of Agriculture to provide 100-percent parity to farmers; to the Committee on Agriculture.

H.R. 10645. A bill to amend the Internal Revenue Code of 1954 to eliminate the adjusted gross income limitation on the credit for the elderly, to increase the amount of such credit, and for other purposes; to the Committee on Ways and Means.

By Mr. SIKES:

H.R. 10646. A bill to provide a voluntary self-help program which is designed to assist producers of agricultural products to protect themselves against loss of cost of production when natural or uncontrollable conditions adversely affect production and which will assure consumers that producers will be able to continue to produce food and fiber; to the Committee on Agriculture.

By Mr. UDALL (for himself, Mr. SIMON, Mr. STEERS, Mr. BAUCUS, Mr. STARK, Mr. KOSTMAYER, Mr. WALGREN, Mr. GLICKMAN, Mr. HANLEY, Mr. SOLARZ, Mr. PRITCHARD, Mr. AKAKA, Mr. MOAKLEY, Mr. VAN DEERLIN, Mr. LLOYD of California, Mr. ROE, Mr. PRICE, Mr. NEAL, Mr. BENNETT, Mr. VENTO, Mr. BALDUS, Mr. HAGEDORN, Mrs. MEYNER, Mr. EDGAR, and Mr. DRINAN):

H.R. 10647. A bill to amend title 5, United States Code, to promote proper and efficient activities of the Government, and to protect Federal employees disclosing situations in which such activities are not proper or efficient; to the Committee on Post Office and Civil Service.

By Mr. WEISS:

H.R. 10648. A bill to facilitate the economic adjustment of communities, industries, and workers to civilian-oriented initiatives, projects, and commitments when they have been substantially and seriously affected by reductions in defense contracts, military facilities, and arms export which have occurred as a result of the Nation's efforts to pursue an international arms control policy and to realine defense expenditures according to changing national security requirements, and to prevent the ensuing dislocations from contributing to or exacerbating recessionary effects; jointly, to the Committees on Armed Services, Banking, Finance and Urban Affairs, Education and Labor, Government Operations, and Ways and Means.

By Mr. WHALEN (for himself, Mr. BEDELL, Mr. BROWN of Ohio, Mr. HUCKABY, Mr. MARKS and Mr. QUIE):

H.R. 10649. A bill to amend the Internal Revenue Code of 1954 to provide that trusts established for the payment of product liability claims and related expenses shall be exempt from income tax, and that a deduction shall be allowed for contributions to such trusts; to the Committee on Ways and Means.

By Mr. WRIGHT (for himself and Mrs. SPELLMAN):

H.R. 10650. A bill to amend title 5, United States Code, to provide survivor annuities to subsequent spouses of certain additional classes of deceased annuitants who died after making available survivor annuities for previous spouses at the time of retirement, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BALDUS:

H.R. 10651. A bill to amend the Small Business Act to define certain small business concerns as family enterprises; to the Committee on Small Business.

By Mr. BONKER:

H.R. 10652. A bill to amend the Social Security Act to require the issuance of social security cards designed to reveal any unauthorized alteration, to require that alien employment restrictions be marked on such cards and that such cards be presented to employers by prospective employees, to limit the use of such cards as identification cards, and for other purposes; to the Committee on Ways and Means.

By Mr. COTTER:

H.R. 10653. A bill to amend the Internal Revenue Code of 1954 with respect to the redemption of United States Railway Association certificates of value issued to railroads in reorganization; to the Committee on Ways and Means.

By Mr. DAN DANIEL:

H.R. 10654. A bill to provide for the removal of a barricade on abandoned Virginia Route 776 at Philpott Lake, Va.; to the Committee on Public Works and Transportation.

By Mr. HOLLENBECK (for himself, Mr. JONES of North Carolina, Mr. MOAKLEY, Mr. LAGOMARSINO, Mr. PRICE, Mr. EDWARDS of Oklahoma, Mr. STEERS, Mr. ERTEL, Mr. HUGHES, Mr. ROE, Mr. KOSTMAYER, and Mr. MARRIOTT):

H.R. 10655. A bill to amend the Internal Revenue Code of 1954 to permit individuals to deduct qualified smoke detector expenses; to the Committee on Ways and Means.

By Mr. JOHNSON of California (for himself, and Mr. HARSHA) (by request):

H.R. 10656. A bill to amend the Highway Safety Act of 1966 to authorize appropriations, and for other purposes; to the Committee on Public Works and Transportation.

By Mr. HARRIS (for himself, Mr. UDALL, and Mrs. SCHROEDER):

H.R. 10657. A bill to clarify the authority for employment of personnel in the White House Office and the Executive Residence at the White House, to clarify the authority for employment of personnel by the President to meet unanticipated needs, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. McCLOSKEY:

H.R. 10658. A bill to amend the Shipping Act, 1916, to authorize closed conferences and shippers councils; to the Committee on Merchant Marine and Fisheries.

By Mr. McKINNEY:

H.R. 10659. A bill to amend the District of Columbia Election Act to remove the prohibition on certain officeholders in the District

of Columbia being candidates for certain other offices, to amend the District of Columbia Self-Government and Governmental Reorganization Act to increase the authority of the government of the District of Columbia with respect to political activities of District of Columbia employees, and for other purposes; to the Committee on the District of Columbia.

By Mr. MATHIS (for himself, Mr. POAGE, Mr. WAMPLER, Mr. KREBS, Mr. GLICKMAN, Mr. COLEMAN, Mr. MARLENEE, Mr. GRASSLEY, Mr. MOORE, Mr. BURLESON of Texas, Mr. ANDREWS of North Dakota, Mr. QUIE, Mr. BRINKLEY, Mr. EVANS of Georgia, Mr. KRUEGER, and Mr. HUCKABY):

H.R. 10660. A bill to strengthen the economy of the United States through increased sales abroad of American farm products; jointly, to the Committees on Agriculture, and International Relations.

By Mr. MURPHY of New York (for himself, Mr. BREAUX, Mr. RUPPE, Mr. LEGGETT, Mr. BIAGGI, Mr. FORSYTHE, Mr. DE LA GARZA, Mr. STUDDS, Mr. PRITCHARD, Mr. BOWEN, Mr. DE LUGO, Mr. EMERY, Mr. HUBBARD, Mr. BONKER, Mr. EVANS of Delaware, Mr. AUCOIN, Mr. ZEFERETTI, Mr. HUGHES, Ms. MIKULSKI, Mr. BONIOR, Mr. AKAKA, and Mr. MCCLOSKEY):

H.R. 10661. A bill to amend the Marine Protection, Research, and Sanctuaries Act of 1972 to authorize appropriations to carry out the provisions of such act for fiscal years 1979 and 1980; jointly, to the Committees on Merchant Marine and Fisheries, and Science and Technology.

By Mr. PURSELL (for himself, Mr. CARR, Mr. EILBERG, Mrs. FENWICK, Mr. FISH, Mr. GLICKMAN, Mr. HAGEDORN, Mr. HARRINGTON, Mrs. HECKLER, Mr. HUGHES, Mr. LAGOMARSINO, Mr. MOAKLEY, Mr. STOCKMAN, Mr. TRAXLER, Mr. WALKER, and Mr. WEISS):

H.R. 10662. A bill to amend section 1304 of the Internal Revenue Code of 1954 relating to income tax returns of married individuals; to the Committee on Ways and Means.

By Mr. ROONEY (for himself and Mr. STAGGERS):

H.R. 10663. A bill to amend part I of the Interstate Commerce Act to grant access over railroad rights-of-way; to the Committee on Interstate and Foreign Commerce.

By Mr. TEAGUE (by request):

H.R. 10664. A bill to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes; to the Committee on Science and Technology.

By Mr. THORNTON:

H.R. 10665. A bill to amend the Internal Revenue Code of 1954 to increase the investment tax credit for qualified farm property to 15 percent, effective as of January 1, 1976; to the Committee on Ways and Means.

By Mr. THORNTON (for himself, Mr. BYRON, Mr. WAMPLER, Mr. MANN, Mr. ANDREWS of North Carolina, and Mr. SKELTON):

H.R. 10666. A bill to amend the Packers and Stockyards Act of 1921; to the Committee on Agriculture.

By Mr. CORNELL:

H.J. Res. 697. Joint resolution proposing an amendment to the Constitution of the United States to provide for 4-year staggered terms for Members of the House of Representatives, to provide that no person may be elected as Representative or Senator for more than three consecutive terms, and for other purposes; to the Committee on the Judiciary.

By Mr. FAUNTROY (for himself, Mr. EDWARDS of California, Mr. MCCLORY, Mr. BALDUS, Mr. BEILENSON, Mr. BEDELL, Mr. BENJAMIN, Mr. BLOUIN, Mr. BLANCHARD, Mr. BOLLING, Mr. BONIOR, Mr. BRODHEAD, Mr. BRADEMAS, Mr. BUCHANAN, Mrs. BURKE of California, Mrs. CHISHOLM, Mr. CLAY, Mrs. COLLINS of Illinois, Mr. CONYERS, Mr. CORRADA, Mr. COTTER, Mr. D'AMOURS, Mr. DAVIS, Mr. DELLUMS, and Mr. DE LUGO):

H.J. Res. 698. Joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress; to the Committee on the Judiciary.

By Mr. FAUNTROY (for himself, Mr. EDWARDS of California, Mr. MCCLORY, Mr. DERRICK, Mr. DIGGS, Mr. DRINAN, Mr. EDGAR, Mr. EILBERG, Mr. EMERY, Mr. FASCELL, Mr. FLOOD, Mr. FORD of Tennessee, Mr. FRASER, Mr. GRADISON, Mr. HANLEY, Mr. HAMILTON, Mr. HARRINGTON, Mr. HARRIS, Mr. HAWKINS, Mrs. HECKLER, Mr. JACOBS, Miss JORDAN, Mr. KASTENMEIER, Mrs. KEYS, and Mr. KILDEE):

H.J. Res. 699. Joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress; to the Committee on the Judiciary.

By Mr. FAUNTROY (for himself, Mr. EDWARDS of California, Mr. MCCLORY, Mr. HUGHES, Mr. AUCOIN, Mr. CARR, Mr. PEASE, Mr. VAN DEERLIN, Mr. JOHNSON of California, Mr. ROSE, Mr. JOHN L. BURTON, Mr. BROWN of California, Mr. CORMAN, and Mr. MURPHY of Illinois):

H.J. Res. 700. Joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress; to the Committee on the Judiciary.

By Mr. FAUNTROY (for himself, Mr. EDWARDS of California, Mr. MCCLORY, Mr. MCHUGH, Mr. MCKINNEY, Mr. MAGUIRE, Mr. MAZZOLI, Mr. METCALFE, Mrs. MEYNER, Mr. MIKVA, Ms. MIKULSKI, Mr. MINETA, Mr. MITCHELL of Maryland, Mr. MOAKLEY Mr. MOFFETT, Mr. MOSS, Mr. NIX, Mr. NOLAN, Mr. OTTINGER, Mr. PANETTA, Mr. PATTISON of New York, Mr. PEPPER, Mr. PRICE, Mr. PRITCHARD, and Mr. RANGEL):

H.J. Res. 701. Joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress; to the Committee on the Judiciary.

By Mr. FAUNTROY (for himself, Mr. EDWARDS of California, Mr. MCCLORY, Mr. RAHALL, Mr. RICHMOND, Mr. RODINO, Mr. ROSENTHAL, Mr. REUSS, Mr. Mr. SCHEUER, Mr. SEIBERLING, Mr. SIMON, Mrs. SPELLMAN, Mr. STARK, Mr. STEERS, Mr. STOKES, Mr. STUDDS, Mr. THOMPSON, Mr. TRAXLER, Mr. TSONGAS, Mr. UDALL, Mr. VENTO, Mr. WAXMAN, Mr. WON PAT, Mr. WOLFF, and Mr. BRINKLEY):

H.J. Res. 702. Joint resolution to amend the Constitution to provide for representation of the District of Columbia in the Congress; to the Committee on the Judiciary.

By Mr. FUQUA:

H.J. Res. 703. Joint resolution to provide for the designation of the week of February 12 to 18, 1978, as National Vocational Education Week; to the Committee on Post Office and Civil Service.

By Mr. MAHON (for himself, Mrs. BOGGS, and Mr. CEDERBERG):

H.J. Res. 704. Joint resolution to provide for the appointment of Anne Legendre Armstrong as a citizen regent of the Board of Regents of the Smithsonian Institution; to the Committee on House Administration.

H.J. Res. 705. Joint resolution to provide for the reappointment of John Paul Austin as a citizen regent of the Board of Regents of the Smithsonian Institution; to the Committee on House Administration.

H.J. Res. 706. Joint resolution to provide for the reappointment of A. Leon Higginbotham, Jr. as a citizen regent of the Board of Regents of the Smithsonian Institution; to the Committee on House Administration.

By Mr. ROE (for himself, Mr. HOWARD, and Mr. THOMPSON):

H.J. Res. 707. Joint resolution authorizing the President to proclaim September 8 of each year as National Cancer Day; to the Committee on Post Office and Civil Service.

By Mr. THONE:

H.J. Res. 708. Joint resolution proclaiming May 3, 1978, Sun Day; to the Committee on Post Office and Civil Service.

By Mr. HANSEN (for himself, Mr. MURPHY of New York, Mr. COCHRAN of Mississippi, Mr. MINISH, Mr. LONG of Maryland, Mr. FLIPPO, Mr. FOUNTAIN, Mr. HOLLAND, Mr. JENRETTE, Mr. TEAGUE, Mr. MILFORD, Mr. HUGHES, Mr. EILBERG, Mr. GINN, Mr. RAHALL, Mr. BENNETT, Mr. SLACK, Mr. BENJAMIN, Mr. BUCHANAN, Mr. ARCHER, Mr. THORNTON, Mr. FUQUA, Mr. WHITTEN, Mr. DON H. CLAUSEN, and Mr. FORSYTHE):

H. Con. Res. 462. Concurrent resolution expressing the sense of the Congress with regard to the disposition by the United States of any right to, title to, or interest in the property of Canal Zone agencies and any real property located in the Canal Zone; to the Committee on Merchant Marine and Fisheries.

By Mr. ROE:

H. Con. Res. 463. Concurrent resolution directing the Congress and the executive agencies to determine how they may aid in achieving national goals in outer space; to the Committee on Science and Technology.

By Mr. HOLLENBECK:

H. Res. 987. Resolution relating to the future telecommunications policy of the Nation; to the Committee on Interstate and Foreign Commerce.

By Mr. ROE:

H. Res. 988. Resolution to amend the Rules of the House of Representatives to establish the Committee on Internal Security, and for other purposes; to the Committee on Rules.

By Mr. SCHEUER:

H. Res. 989. Resolution to provide for the expenses of investigations and studies to be conducted by the Select Committee on Population; to the Committee on House Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

288. By the SPEAKER: Memorial of the House of Representatives of the State of Georgia, relative to funding for Amtrak service from Chicago to Florida through Atlanta and Savannah; to the Committee on Appropriations.

289. Also, memorial of the Legislature of the State of Delaware, requesting that Congress call a convention for the purpose of proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. RAHALL introduced a bill (H.R. 10667) for the relief of Kumarlal Khemchand

Nichani, which was referred to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

387. By the SPEAKER: Petition of the Texas and Southwestern Cattle Raisers Association, Fort Worth, Tex., relative to proposed reorganization of the Department of Agriculture; to the Committee on Agriculture.

388. Also petition of Mission Hiring Hall, Inc., San Francisco, Calif., relative to extending the period of eligibility for a Vietnam-era veteran's readjustment appointment within the Federal Government; to the Committee on Veterans' Affairs.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 8336

By Mr. SEBELIUS:

Page 3, line 3, after the word "exchange", replace the period with a colon and add the following: "*Provided*, That no Federal funds shall be appropriated until the Governor of the State of Georgia executes a written agreement on behalf of the State, suitable to the Secretary, which provides for (1) the acceptance by the State of the transfer by donation of all Federally owned lands, waters, and developments thereon, and interests therein, within the recreation area and (2) the acceptance by the State of the obligation of continued operation and maintenance of those federally transferred lands within the recreation area in accordance with the objectives of this Act, such transfer and acceptance to occur by no later than September 30, 1980. All ownership and operation of the area by the Secretary under terms of this Act shall terminate by no later than September 30, 1980, except that the Secretary and the Governor may mutually agree to limited continued Federal operations for a reasonable period beyond that date in order to provide for an orderly transition. Any transfer of lands and interests therein by the Secretary to the State shall assure provision that such lands or interests therein shall revert to the property of the United States at any time that such lands or interests may be subjected to uses substantially contrary to the uses intended by this Act."

Page 8, line 20, add the following at the end of subsection 105(a):

"It is the express intent of the Congress that the Secretary should substantially complete, by September 30, 1980, no less than 60% (in terms of authorization dollars) of the land acquisition program contemplated by this Act, whereafter such date no further appropriations may be made under terms of this Act."

In all places where it appears, relative to the name of the area, delete the word "national".

Page 2, line 11, delete "CHAT–20,000" and insert "CHAT–20,000–B", and delete "July 1976" and insert "February 1978".

Page 8, line 12, delete subsection 104(c).

H.R. 9214

By Mr. HARKIN:

(1) The United States Executive Director on the Executive Board of the International Monetary Fund shall initiate a wide consultation with the Managing Director of the Fund and other member country Executive Directors with regard to encouraging the IMF staff to formulate stabilization programs which, to the maximum feasible extent, foster a broader base of productive investment and employment, especially in those productive activities which are designed to meet basic human needs.

(2) In accordance with the unique character of the International Monetary Fund, the U.S. Executive Director shall take all necessary steps to insure that all Fund transactions, including economic programs developed in connection with the utilization of Fund resources, do not contribute to the deprivation of basic human needs, nor to the violation of basic human rights, such as torture, cruel or inhumane treatment or degrading punishment, prolonged detention without charge, or other flagrant denials of life, liberty and the security of person; and shall oppose all such transactions which would contribute to such deprivations or violations.

(3) In order to gain a better understanding of the social, political and economic impact of the Fund's stabilization programs on borrowing countries, especially as it relates to the poor majority within those countries, the Executive Director representing the United States to the Fund shall prepare and submit, not later than 60 days after the close of each calendar year, a report to the Congress. Such report shall evaluate, with respect to countries to which loans are made by the Fund during such year, the effects of fiscal and monetary policies of those countries which result from the standby agreement(s), on the ability of the poor in such countries to obtain:

(1) an adequate supply of food with sufficient value to avoid the debilitating effects of malnutrition;

(2) shelter and clothing;

(3) public services, including health care, education, clean water, energy resources, and transportation;

(4) productive employment that provides a reasonable and adequate wage.

By Mr. MATHIS:

Amend the title to read "To amend the Bretton Woods Agreements Act to authorize the United States to participate in the Supplementary Financing Facility of the International Monetary Fund, and for other purposes.

Add the following new section:

"SEC. . The Bretton Woods Agreements Act (22 U.S.C. 286 et seq.) is further amended by adding at the end thereof the following new sections:

"SEC. . The President shall, in implementing the authority granted under this Act, insure that the United States Government opposes and votes against any loan or other financial assistance for the production of palm oil, sugar, or citrus.

" 'SEC. . The President shall, in implementing the authority granted under this Act, insure that the United States Government opposes and votes against any loan or other financial assistance for projects that would tend to increase exports of any agricultural commodity that competes with agricultural commodities produced in the United States, unless United States producers of any such agricultural commodity are receiving average prices of at least one hundred percent of parity as determined by the Secretary of Agriculture at the time such loan or assistance is authorized.'."

Amend the title to read "To amend the Bretton Woods Agreements Act to authorize the United States to participate in the Supplementary Financing Facility of the International Monetary Fund, and for other purposes."

Add the following new section:

"SEC. . The Bretton Woods Agreements Act (22 U.S.C. 286 et seq.) is further amended by adding at the end thereof the following new section:

" 'SEC. . All authorities granted under this Act shall terminate on October 1, 1979.' "

Amend the title to read "To mend the Bretton Woods Agreements Act to authorize the United States to participate in the Supplementary Financing Facility of the International Monetary Fund, and for other purposes."

Add the following new section:

"SEC. . The Bretton Woods Agreements Act (22 U.S.C. 286 et seq.) is further amended by adding at the end thereof the following new section:

" 'SEC. . All authorities granted under this Act authorizing and governing United States membership in the Fund shall terminate on October 1, 1979.'."

EXTENSIONS OF REMARKS

SERVICE ACADEMY?

HON. WILLIAM S. COHEN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. COHEN. Mr. Speaker, I want to bring the following article from Parade magazine concerning service academies to the attention of my colleagues. I feel it discusses some of the day-to-day activities at the academies that are not always brought to light before one enters, and could have a bearing on a youngsters' final decision:

SHOULD YOUR SON OR DAUGHTER GO TO A SERVICE ACADEMY

(By Peter J. Ognibene)

If you are a parent with children in college, no one needs to tell you about the skyrocketing costs of higher education.

There are, however, some 15,000 students at five schools who receive free tuition, housing and meals. In addition, students at four of the schools get a salary of some $4000 a year. Uncle Same picks up the tab, which can run from $40,000 to $100,000 per graduate.

These are, of course, the cadets and midshipmen of the nation's five service academies. The Department of Defense is responsible for three: the Air Force Academy near Colorado Springs, Col.; the Military Academy at West Point, N.Y., and the Naval Academy here in Annapolis.

The Department of Transportation is responsible for the Coast Guard Academy at New London, Conn., and the Department of Commerce oversees the Merchant Marine Academy at Kings Point, N.Y.

At the end of four years, graduates are awarded bachelor of science degrees and launched into well-paid careers. Most alumni of Kings Point are hired by American shipping firms. Graduates of the other four academies become second lieutenants or ensigns in their services and are obliged to put in a five-year tour of active duty.

Cadets and midshipmen find nearly every aspect of their lives minutely regulated. They must be up at dawn; their academic, athletic

and military duties usually keep them busy until late at night. They need permission to leave the campus even for a few hours; that permission, however, is rarely accorded freshmen.

Because the work is hard, generally one of every three quits before graduation. Some flunk out, but most leave of their own volition.

"Probably the biggest problem is parental pressure on a son or daughter to go to the academy," says Arthur Athens, a senior who commands Annapolis' Brigade of Midshipmen. "This place is not for everybody. It's a tough program, and you have to want to do it."

Rear Adm. Kinnaird R. McKee, Superintendent of the Naval Academy, told PARADE: "The guy that we want, or the girl, has to have both the talent and the inclination to handle the core program in math, science and engineering. . . . They also have to be pretty independent. We want to teach them how to live in this environment and yet keep that spark of independence.

"LOOK ELSEWHERE"

"The kind of guy we don't want is the one who doesn't want to be a line officer in the Navy or Marine Corps. We don't expect every young person at age 17 to have made up his mind, but the guy who's already made up his mind that he wants to be a doctor, lawyer, or veterinarian would do well to look elsewhere."

The admiral's remarks apply in general to the other academies.

Summer training of freshman year is as tough as any "boot camp." The Air Force Academy frankly warns prospective cadets what to expect:

"For each of the 42 days, there are about 15 hours of scheduled activity. Basic cadets have very little time to call their own. . . . [It] starts with lines. There's a line for everything: turning in money and personal possessions, filling out all sorts of forms, picking up uniforms, shoes and boots, and a rifle. There are more lines for physical examinations, weighing, haircuts, and shots. . . . Each new basic cadet is assigned to one of the [training] squadrons and is given a room with one or two cadets, probably total strangers. . . . The room is clean and well-equipped, but it's stark and with it come many rules on how to keep it looking spotless and military. . . . Tremendous physical exertion will be required of you. . . . Physical conditioning exercises, devised by officers and administered by the upper-class, increase in difficulty every day, pushing new cadets hard for maximum development. . . . Basic cadets run or march everywhere they go. You must undergo an obstacle course and a confidence course which are very tough and demanding physically. The academy is well over a mile above sea level and the air is thin and dry, which also takes a toll of your energy. Sometimes you may be so tired you hurt all over. . . ."

Entering freshmen at West Point, Annapolis and the Coast Guard Academy face a similarly tough summer of basic training. New midshipmen at the Merchant Marine Academy have a two-week "orientation period" that is considerably less rigorous; they receive no pay except on cruises.

HONOR CODES DIFFER

All the service schools have honor codes. At Annapolis, New London and Kings Point, the concept is simply stated: midshipmen or cadets will not lie, cheat or steal. Cadets at the Military and Air Force academies have an additional requirement: they must report the honor code violations of their fellow cadets. Thus, the student who sees another cheating but fails to report it is considered to have breached the code himself. If caught, both would probably be expelled.

Lt. Gen. Andrew J. Goodpaster, the Superintendent of West Point, explains the rationale: "The honor code is not an all-inclusive prescription for moral behavior, but it does contain a hard core of irreducible standards central to honorable behavior—cadets will not lie, cheat or steal. Additionally, the code includes the fundamental tenet of self-enforcement—the requirement that cadets not tolerate actions of those who fail to adhere to the fundamental standards of conduct embodied in the honor code."

West Point suffered a cheating scandal in 1976 in which 152 cadets were found to have either cheated on a take-home exam or failed to report classmates who had. A national controversy arose not so much over the dismissal of those who cheated but over those who did not turn in the violators. Breaking with precedent, the Secretary of the Army permitted those dismissed for honor violations in 1976 to return to West Point last September; 98 accepted this second chance.

Rep. Thomas J. Downey (D., N.Y.), at 28 the second youngest member of Congress, has been serving on the Board of Visitors to West Point, which oversees the school's operation. He finds the differences between honor codes troubling. "Honor is not divisible," he says. "It is an ethic that must mean the same thing to the officers of each branch of the service. Disparate views about the nature of honor should not be nurtured at our academies."

In 1974, the Merchant Marine Academy admitted female students; the first will graduate next June. An act of Congress opened the other academies to women in 1976. So far, they seem to be doing every bit as well as their male counterparts. Academic standards are exactly the same for both sexes, but women are not permitted to play contact sports such as football or wrestling. They do compete with men in marksmanship, sailing and other sports. They are also developing their own intercollegiate teams to challenge other college women in volleyball, basketball, etc.

4,000 GUYS, 80 GIRLS

Kathy Walsh of Corry, Pa., is a "youngster" (academy slang for sophomore) and a member of the first class of women to enter Annapolis. She says, "I didn't come here for the guys, even though my friends back home said, 'Wow—4000 mids and only 80 women!' " In her first year Walsh proved to be an outstanding athlete ("the brigade jock," cracked one of her male classmates) on the women's volleyball and basketball teams. Her academic major is oceanography.

Sara Franke, a freshman or "plebe" from Santa Ana, Cal., has an older brother who was graduated from Annapolis last June. His experience convinced her to apply, and she is glad she did. "Being here you feel just like one of them," she says of her classmates, male and female.

Were there any differences in the treatment accorded male and female midshipmen? Franke thought for a moment and replied: "For the dances here, they import girls from the surrounding schools but not guys."

The service academies have much in common: a military atmosphere, a vigorous athletic program and a limited amount of freedom to choose academic courses. Curricula differ considerably.

Competition for academy appointments is keen, but students in the upper 40 percent of their high school class who enjoy sports and extra-curricula activities stand a good chance. Political pull is not important. Although Congressional appointments are the primary means of gaining admission to all but the Coast Guard Academy, in practice most Senators and Representatives turn over the actual selection to the academies. (The Coast Guard Academy runs its own selection system.)

Should your son or daughter go to a service academy? That is, ultimately, a question that only he or she should answer. Everyone I spoke with about the academies stressed the importance of an individual's commitment to succeed; the young person pushed by parents to go to an academy runs a high risk of becoming disillusioned and dropping out.

A FAIRNESS DOCTRINE?

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. EVANS of Delaware. Mr. Speaker, the Board for International Broadcasting, which supervises Radio Free Europe and Radio Liberty, has recently proposed allowing officials of the Soviet Union and other Eastern European dictatorships free air time on these U.S. taxpayer-supported stations. The purpose of this generous action, according to the Board, would be to allow Communist officials to respond to material carried on RFE and RL, in return for keeping our broadcasts free from jamming.

As a former chairman of Radio Free Europe in Delaware, I find this recommendation incredible. In reading this report, one would think that the Communist regimes did not have the opportunity to air their views. Of course, nothing could be further from the truth. The Communist governments bombard their people continuously with propaganda which often has little basis in truth. Radio Free Europe and Radio Liberty are but a small attempt to counteract these overwhelming distortions. The mere fact that the Soviets feel the need to jam these broadcasts is the best tribute I know of to their effectiveness.

When our Government gets equal time on Radio Moscow, then we can talk about equal time for the Communists on Radio Free Europe and Radio Liberty. But not before.

I ask unanimous consent that an editorial from the Wall Street Journal of January 24, 1978, entitled "A Fairness Doctrine?" be included in the RECORD.

[From the Wall Street Journal, January 24, 1978]

A FAIRNESS DOCTRINE?

Radio Free Europe and Radio Liberty, which broadcast Western news and information to East bloc nations, typically respond to "jamming" by increasing signal power.

But now the Board for International Broadcasting, which supervises the two stations on the U.S. behalf, has come up with what the administration calls "a civilized alternative" to the spiral of increased jamming and increased broadcasting volume. The idea is to "make air time available to officials of the Soviet Union and East Europe for responses to those specific complaints that have merit."

As the report says, "No radio enterprise broadcasting 980 hours a week can avoid committing an occasional inaccuracy." So, behaving with a modesty and objectivity that would do any journalist proud, the

board is offering to give the opposition time to air its views.

But ths admirable attempt at fairness may be a little misplaced. For one thing, it's not as if our radio stations were really depriving the Communist regimes of their chance to make their views known to their populations: These governments, after all, do have just about total control of the indigenous media in their countries and so plenty of opportunity to get their perspective across. More important, it's a pretty dangerous thing to try to strike a bargain that trades on-the-air corrections for freedom from jamming.

It's not likely, after all, that the Eastern governments are going to be satisfied with making sure that the stations are reporting correct crop-yield figures. The pressures for access to air time are likely to keep growing, and the pressures on the broadcasters to mitigate their views or face jamming are liable to grow as well.

By all testimony, these radio stations have wide audiences in Communist nations. The board should think twice before doing something that might compromise that impact without really being able to insure the safety it's designed to buy.

UKRAINIAN SITUATION

HON. HAROLD C. HOLLENBECK

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. HOLLENBECK. Mr. Speaker, on January 22 Ukrainians throughout the world reflected on the ruthless tactics which made their homeland part of the Soviet Union, and renewed their commitment to preserve their unique cultural identity.

Sixty years ago, the Ukrainian Parliament declared the Ukraine to be an independent republic. This measure was possible only after decades of staunch commitment by Ukrainians who share a recognition of their heritage and yearned for the day when they could live in an independent nation.

However, independence was short lived. Bolsheviks and counterrevolutionary White Russians invaded the Ukraine from all sides. Under Soviet rule, the Ukraine was devastated by the revolution and civil war that swept Russia. It also suffered great loss of life during the famine of 1921–22.

As a concession to strong Ukrainian nationalism, the Ukrainian Soviet Republic was established within the U.S.S.R. in 1922. Today, the Ukraine represents the largest non-Russian republic in the U.S.S.R. with a population of 50 million and a land area of 232,000 square miles. It is richly endowed with natural resources and comprises a major segment of the Soviet power base.

Despite the Great Purge under Joseph Stalin, the Ukraine has never become Russianized. The Ukrainians have not sacrificed or compromised their staunch commitment to their cultural heritage. Soviet propaganda might lead the uninformed to believe that the Ukrainians are a people wholly committed to the U.S.S.R. I firmly believe that this is not the case, for the Ukrainians have a tradition of national independence that emerged in early history and continues unimpaired to the present.

It might be easy to conclude that the present situation is hopeless. However, the patient determination of Ukrainians throughout the world proves otherwise. I only hope for the day when, rather than reflect on their nation's short lived independence, they can celebrate the unthreatened freedom of their homeland.

PROHIBIT SOUTH AFRICAN TENNIS TEAM FROM DAVIS CUP PLAY IN TENNESSEE

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mrs. CHISHOLM. Mr. Speaker, the racist policies of the South African regime are well documented and must be condemned at every turn. We in this country in government cannot speak in lofty prose of the violation of human rights in South Africa and then permit representatives of that country's policies to come here and compete in a sporting event.

Such an event is in the offing this March. The U.S. Tennis Association (USTA) has invited the South African Davis Cup tennis team to participate in the Davis Cup competition on the grounds of Vanderbilt University, in Nashville, Tenn., on March 17, 18, and 19.

The invitation should be withdrawn There is no room for politics and racism in sports. The former Ambassador to Ghana, Franklin H. Williams, who is currently president of the Phelps-Stokes Fund, has documented this travesty of human rights.

Here are the facts: South African athletics are strictly regulated by apartheid, which separates the races in virtually every aspect of life. International team competition is open only to the white minority (20 percent of the population) by law.

Nearly every major international sports body has barred South African membership, including the International Olympic Committee. The one, outstanding exception is the International Tennis Federation (ITF).

South African racial policies violate the cardinal principle of all sports competition—that excellence alone must be the criterion for participation.

The United States is the only team in the American zone which has agreed to compete with South Africa. Canada, Mexico, Venezuela, and the Caribbean nations have withdrawn from the Davis Cup rather than play South Africa, while the Colombian Government has refused visas to their team.

The U.S. Tennis Association (USTA), which has a weighted voting advantage in the ITF, has consistently prevented the majority of ITF member countries from excluding South Africa.

The USTA's position has been that only through sports contacts with South Africa will apartheid in sports be changed. This is ridiculuos, reverse logic and flaunts numerous resolutions of the United Nations and the Organization of African Unity mandating an end to such sports contacts.

The South African team is clearly not representative of the country and should be barred from competing in this country with our team.

It is my hope that my colleagues in this body will join me and millions of other Americans who are concerned with violations of human rights in protesting this scheduled event in Nashville, Tenn.

H.R. 8615—TAX AVERAGING EQUITY ACT

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. PURSELL. Mr. Speaker, today I am reintroducing the Tax Averaging Equity Act, a bill designed to ease some of the financial burden which many women—and some men—face with regard to income taxes in the area of tax averaging. This bill would amend the Internal Revenue Code to allow qualified individuals to disregard the income of a former spouse—whether divorced or widowed—in the computation of base period income for income averaging purposes.

Since I first introduced this bill in July, 1977, 11 national organizations have endorsed it. These organizations include: The American Physical Society; the Business and Professional Women's Clubs, Inc.; the Center for Women Policy Studies; the Commission on the Status of Women—Adult Education Association of the United States; the National Association for Female Executives; the National Association of Women in Construction; the National Organization for Women; the Princeton Center for Alternative Futures, Inc.; the American Institute of Chemists, Inc.; the Women's Caucus for Art; and the Women's Caucus of the Population Association of America. In addition, 15 of my colleagues have joined me in cosponsorship of this bill.

I think the reintroduction of this legislation is most timely as the Ways and Means Committee is about to begin its deliberations on the administration's tax package. I would hope that we could include the provisions of the Tax Averaging Equity Act in the tax reform bill which finally emerges from the committee, as I believe it is a very important change which should be made in our tax laws. I urge all of my colleagues to support this legislation, as it would bring us a step closer to equal justice for all.

TRIBUTE TO E. MANNING SELTZER

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. JOHNSON of California. Mr. Speaker, after 39 years of dedicated public service, Mr. E. Manning Seltzer, chief counsel of the Corps of Engineers, U.S. Army, retired at the end of December 1977.

On behalf of the Committee on Public Works and Transportation, I wish to express my appreciation for the almost four decades of outstanding service that Mr. Seltzer has provided to the Nation.

Mr. Seltzer, a native of Philadelphia, Pa., received his B.S. degree from Villanova University in 1934 and his law degree from Harvard Law School in 1937. He is admitted to practice law in Pennsylvania and the District of Columbia.

In 1938, after a short period performing tax research for a private law firm, Mr. Seltzer began his distinguished legal career in Federal service with his appointment to the legal staff of the Public Works Administration in Washington, D.C. With the abolishment of that agency in 1940, Mr. Seltzer joined the staff of Legal Counsel, Army Quartermaster, Construction Division, under the command of General Summerville. In December 1941, this component was transferred to the Army Corps of Engineers, Contract and Claims Branch. As chief of the Tax Unit, he was responsible for all tax questions arising out of War Department military and civil construction programs and the engineer supply procurement program. During the Second World War, Mr. Seltzer volunteered to serve in the Army and was assigned with the Corps of Engineers as a corps officer. His legal service to the corps specifically related to contract administration, claims and litigation, taxes, and terminations. He was also legal adviser on labor relations and special counsel to the Army Lumber Agency in the Office of the Chief of Engineers.

After the war, Mr. Seltzer, although returning to civilian life, continued on with the Corps of Engineers, achieving the position of chief, Contracts Branch, Legal Division, Office of the Chief of Engineers in 1946 and, in 1949, assistant chief, Legal Division. In the latter position he advised the chief of engineers on all legal matters pertaining to contractual matters. Mr. Seltzer represented the chief in negotiations with industry, officials of other agencies, and other technical services. He was particularly involved in negotiations on construction in overseas areas involving special agreements with foreign nations.

In 1956, Mr. Seltzer was the first civilian appointed chief of the Legal Division of the Office of the Chief of Engineers, and in 1959 he was appointed chief counsel of the Corps of Engineers. Mr. Seltzer was responsible for the legal system of the corps and for its varied legal activities which are carried out worldwide with a staff of approximately 460 attorneys.

Mr. Seltzer has chaired numerous boards and committees concerned with developing and modernizing construction contracting methods and types of contracts. He has been actively involved with the Interdepartmental Committee for the Revision of the Construction Contract prescribed for use by all Federal agencies concerned with construction. The changes, differing site conditions, and suspension of work clauses for construction contracts are the result of the efforts of this committee. He has been instrumental in developing the cost-plus fixed-fee—CPFF—construction and architect-engineer contract forms used by the Department of the Army. He had a major role in writing the manuals for negotiation methods and fee determinations for CPFF contracts.

Because of his organization's involvement worldwide in construction, he has served as a member of U.S. teams in drafting and negotiating diplomatic and technical agreements for carrying out construction in foreign countries. He is the author of several articles dealing with many of the major problems facing the construction industry.

Throughout his distinguished career, Mr. Seltzer has been of invaluable assistance to the Congress in shaping legislation for the development and conservation of the water and related land resources of the United States and in his agency's implementation of its responsibilities in this extremely important area.

Mr. Seltzer is the recipient of the Army Commendation Medal for his military service. He has also received the Meritorious Civilian Service Award from the Chief of Engineers and two decorations for Exceptional Civilian Service presented by the Secretary of the Army.

Mr. Seltzer is married to Grace Brown Seltzer, his wife of 41 years. They live in Washington, D.C. He has two daughters, Mrs. Sue Ellen Hersh and Mrs. Carol Rosen, both residing in the Washington, D.C. area.

I am sure that my colleagues join with me in this expression of respect and appreciation, with the knowledge and expectation that Mr. Seltzer's wise counsel and advice will still be available to the Congress and the Nation.

AMERICAN AGRICULTURE'S TRIBUTE TO BOB POAGE

HON. DAWSON MATHIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. MATHIS. Mr. Speaker, on March 14 a committee of about 70 agriculture related organizations, chaired by Mr. Ed Jaenke of E. A. Jaenke & Associates, is sponsoring a banquet for Congressman BOB POAGE in recognition of his 42 years of service in Congress. The committee has asked me to serve as master of ceremonies for this event and I have gladly accepted.

The members of the committee who have worked and contributed to making the banquet a success are to be commended for honoring a person who has done more for American agriculture than anyone in history. The committee has received 100 percent cooperation from the agricultural community and from everyone who has known and worked with BOB POAGE over the years, demonstrating the deep respect and widespread admiration he has earned.

Sponsors of the BOB POAGE appreciation banquet are inviting a number of other persons to the function, including the present and former Secretaries of Agriculture, Presidents Carter and Ford, Members of Congress, and many others. It promises to be one of the largest gatherings of persons with an interest in agriculture to be held in a long time.

I personally look forward to joining this tribute to BOB POAGE, and I am sure my colleagues will want to extend the committee their best wishes for a very successful banquet.

UPON THE REINTRODUCTION OF LEGAL COMPENSATION LEGISLATION

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. CRANE. Mr. Speaker, with the reintroduction of this bill today, and the addition of 15 cosponsors, I am proud to say I now have 101 Members who share in my sentiment that successful defendants in suits brought against them by the Federal Government should be reimbursed for the legal fees incurred. I intend to urge the Judiciary Subcommittee on Courts, Civil Liberties and the Administration of Justice to resume hearings on attorney's fees at the earliest possible date so that enactment of this bill can take place early in 1978.

To enlighten the rest of my colleagues as to the reasoning behind this concept, the following scenario should be ample demonstration of the need for legal compensation. In the face of strong evidence to the contrary, the Equal Employment Opportunity Commission filed a racial discrimination case against the Mail-O-Graph Co. in Kewanee, Ill. The EEOC's investigator's notes alleged that four black employees at Mail-O-Graph had been discriminated against for racial reasons. Yet, in testimony, all but one stated they had experienced no racial discrimination. Testimony from all witnesses, including one from the Government, substantiated Mail-O-Graph's contention that the fourth employee in question was incompetent and unqualified for promotion. Statistical data introduced by Mail-O-Graph proved that, when compared with whites, black employees were receiving a higher percentage of promotions. Moreover, the overall statistics reflect that the percentage of black employees at Mail-O-Graph is more than twice the percentage of black residents in the community. Yet the EEOC continued to press their case, in-

troducing erroneous data which was later thrown out by the court due to errors in compilation resulting in gross distortion of the hiring and promotion data. The court found for Mail-O-Graph and against the EEOC as well as the fourth defendant with an award of $4,000.

In defending the obviously erroneous charges filed by the EEOC, Mail-O-Graph incurred approximately $6,000 in legal fees. Even to a successful firm such as Mail-O-Graph, $6,000 is a staggering bill—a large price to pay to clear the firm's name of outrightly questionable allegations. Obviously, many small businesses and individual citizens are reluctant to take on the Government, even against trumped-up charges, when faced with whopping attorney's fees at the end of the line. The award of the costs of litigation to a successful defendant is thus emminently justifiable, in order to assure every American his or her right to due process under the law.

In fact, just last week, the Supreme Court ruled similarily in the case of Christiansburg Garment Co. against EEOC. Although this particular suit involved the awarding of attorney's fees in title VII of the Civil Rights Act of 1964 litigation, the court's comments offer substantive precedent for application in similar attorney's fee award cases. The court pointed out that:

> It cannot be lightly assumed that in enacting § 706(k) (Civil Rights Act of '64), Congress intended to distort that process by giving the private plaintiff substantial incentives to use, while foreclosing to the defendant the possibility of recovering his expenses in resisting even a groundless action unless he can show that it was brought in bad faith.

Thus, the court found that attorney's fees may be awarded to a successful defendant, in a title VII case, "upon a finding that the plaintiff's action was frivolous, unreasonable or without foundation, even though not brought in subjective bad faith." Pointing to the legislative history of the Civil Rights Act, the court notes that several Senators explained on the floor that allowance of awards to defendants "would serve 'to deter the bringing of lawsuits without foundation,' 'to discourage frivolous suits,' and 'to diminish the likelihood of unjust suits being brought.' "

Obviously, legal compensation for successful defendants in Government-initiated suits is a concept whose time has come. We must provide all citizens equal access to the courts and legal compensation offers that direct route.

WHY THE HUMPHREY-HAWKINS BILL SHOULD NOT BE PASSED

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. SYMMS. Mr. Speaker, after the death of Hubert Humphrey, many people feel that the Humphrey-Hawkins bill should be passed as a tribute to the late Senator. I do not believe that this bill which would heighten inflation and create more costly jobs in the public sector is a fitting tribute to anyone. I submit the following article from Barron's Weekly, January 23, 1978, which highlights many of the problems with this bill:

UNWORTHY TRIBUTE—THE HUMPHREY-HAWKINS BILL IS A POOR MONUMENT TO ANYONE

De mortuis nil nisi bonum, adjured the Romans; of the dead, (speak) nought but good. Regarding the late Hubert Horatio Humphrey, we cheerfully respect the conventions. Like the rest of our colleagues in the press, we're pleased to note that for more than three decades—as Mayor of Minneapolis, Senator and Vice President—the late Minnesota lawmaker and perennial Presidential hopeful served his country long and honorably. When his career of public service drew to a close, his fellow citizens paid him a fitting tribute by having him join the score or so of distinguished Americans who have lain in state in the Capitol Rotunda. And together with all those who admire grace in adversity, we cannot help but salute the unflagging courage with which he met his end; of the late Senator Humphrey, indeed, it may truly be said that few things so became him in his life like the leaving it.

Let the dead past bury its dead. Unfortunately, however, the "great liberal" and "Happy Warrior" has left his countrymen, besides a wealth of memories, a political legacy which, with the best will in the world, we can only view as unwelcome: the Humphrey-Hawkins bill, currently pending in House and Senate. Thanks to the orgy of emotionalism which has swept the nation, prospects of its passage, as a kind of farewell gesture or final tribute to the departed, have sharply improved. Thus, to quote the resident Washington sob-sister of The New York Daily News: "So the basic question now, with Hubert's body buried in the snow-covered frozen ground of his beloved Minnesota, is, in the words of the country song, 'Will the circle be unbroken?' A definitive answer is not possible yet and probably won't emerge for several years, but the first important test may well come when Congress takes up the landmark Humphrey-Hawkins bill later this year."

If a camel is a horse designed by a committee, a legislative monument, so the record suggests, tends to be a monstrosity. On this score, let's not forget the disastrous spate of measures, including the first of many subsequent one-way grain deals with the Soviet Union, which a sorrowing Congress sped to passage after the assassination of JFK. Again, if one is to believe Nelson Rockefeller, the incredibly wasteful and inept Urban Development Corp. in New York State became a kind of monument to Martin Luther King.

More recently, as a tribute to the late Senator Philip A. Hart (D. Mich.), the legislators, with the cry "let's pass this one for Phil," whipped into law the Hart-Rodino-Scott Anti-Trust Amendments of 1976, an ill-conceived, misguided bill which, at the ultimate expense of business and the public, vastly enhances the authority of the trust-busters. Bad enough that for years, the purse strings in the House of Representatives were clutched by a payroll-padder, and that most of the nation's postwar tax enactments were the hnadiwork of a drunk. Far worse to have public policy, so to speak, held hostage to the survival of some good ol' boy on Capitol Hill.

All of which brings us to Humphrey-Hawkins, or the camel-like measure which still bears the name. Since its introduction several years ago as a not-so-tentative blueprint for national planning, the bill (also known euphemistically as the Full Employment and Balanced Growth Act—that talented bureaucratic phrase-maker at work again) a number of times has undergone drastic surgery. In the process, some of the more objectionable features, including provisions to turn the U.S. into a regimented economy, have been either softened or cut out altogether. However, what's left—as a spokesman for the U.S. Chamber of Commerce had the unenviable task of trying to explain last Thursday to a grieving Hill—is wrongheaded and mischievous enough.

Despite overwhelming evidence that the official statistics on unemployment are exaggerated, Humphrey-Hawkins would commit the country to a rigid and historically unrealistic numerical target for joblessness. To achieve it, the measure would put the Federal Reserve System not just partly but wholly in thrall to the White House, and, at unspecified but no doubt heavy cost to the taxpayer, make the federal government—at not less than the minimum wage, naturally—employer of last resort. At any time (as Congress, with its bouts of rewriting and recurrent qualms, and even the White House, by a belated endorsement, clearly underscore), Humphrey-Hawkins would give any sensible man pause. Today, with the threat of inflation mounting and confidence, at home and abroad, at low ebb, it's a folly the U.S. no longer can afford.

From the word go, the legislation, smacking as strongly of statism as it did, was thoroughly suspect. Back in early 1975, as the U.S. was struggling with the worst bout of stagflation (triggered largely by unsound monetary and fiscal policies, aggravated by price controls) in domestic history, an abortive wave of support for so-called national planning, backed by such prestigious figures as Wassily Leontieff, Nobel laureate, the UAW's Leonard Woodcock and Bendix Corp.'s Michael Blumenthal, abortively surfaced. Though cooler heads soon prevailed, the movement found an echo on Capitol Hill, where Senators Humphrey and Javits introduced the Balanced National Growth and Development Act, the main tenets of which swiftly found their way into Humphrey-Hawkins.

Though the measure was widely touted the following year as a sure bet for passage by a populist Congress with the bit in its teeth, a funny thing happened on the way to the forum. In particular, Charles L. Schultze, then of the Brookings Institution and currently chairman of the President's Council of Economic Advisers, criticized Humphrey-Hawkins as inflationary. "Almost overnight," said the National Journal, "a large group of freshmen Democrats in the House, with their eyes on the coming elections, pleaded with the leadership to keep the bill off the floor . . . the Humphrey-Hawkins bubble burst."

Not for long. In the past 18 months, the pending measure, as noted, has gone through repeated blue-penciling, a process which has stripped it of some of its worst and most unworkable provisions. Gone, for example, is the ponderous planning machinery through which the Chief Executive, in effect, would have become full-time (or perhaps overtime) economic dictator, while the timetable for lowering the rate of unemployment to the sought-after level has been stretched out. The measure also now at least pays lip service to the need for curbing inflation. Last fall, the latest version of Humphrey-Hawkins won a hesitant nod from the President, who, in the current mawkish climate of opinion, reiterated his stand in Thursday's State of the Union message. "A major step in the right direction," so Jimmy Carter told his fellow countrymen, "would be the early passage of a greatly improved Humphrey-Hawkins bill."

While Jimmy Carter would never lie to us, that last statement, hopefully will be a matter of debate. For even as endlessly amended, the pending measure contains far too much of its original inflationary bias. Thus, it would establish as a national goal the "right of all Americans able, willing and seeking work to full opportunities for useful paid employment at fair rates of compensation," regardless of the state of the job market or the ability of this country's employers to compete in the world, and, at incalculable cost, would if necessary vastly expand the ranks of public service jobholders. Again, to quote the Chamber of Commerce, "H.R. 50 reduces the independence of the Federal Reserve System . . . the bill makes the System a tail to fiscal policy, fully expected to swing in response to Administration recommendations. . . ." Now as our hardbitten Managing Editor likes to say, the Fed today may be as independent as Hungary, but things could be worse—would you buy Byelorussia, Lithuania or Latvia? As to mandating a 3 percent unemployment rate (for adults over 20) within a half decade of passage Humphrey-Hawkins would make the law of the land a will-o-the-wisp attained no more than a handful of times, at subsequent heavy economic cost, since World War II, and a goal which the shifting nature of the labor force, as well as built-in incentives for the lower-paid to stay at home, has rendered illusory. Times change, but liberal myths and shibboleths evidently live forever.

In the circumstances, the truth inevitably gets lost. For example, despite the hue and cry over unemployment, the private sector last year created more jobs—over four million—than ever before in history. By contrast, our elected representatives distinguished themselves solely by polluting the economic climate. According to projections made by the Chamber's Forecasting Center, a clutch of laws enacted at the last session, notably the hikes in the minimum wage and the Social Security tax, by 1980 will cost the U.S. over two million jobs. In the realm of unemployment, in sum, as in so many others, Congress is not the solution; it's the problem. Instead of monuments, what this country desperately needs is good government.—ROBERT M. BLEIBERG.

INTERNATIONAL SHIPPING

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. McCLOSKEY. Mr. Speaker, I invite my colleagues' attention to legislation I have introduced today that will alter the fundamental nature of our international shipping policy. It provides greater antitrust immunity for groups of carriers to limit entry so as to prevent overtonnaging in our trades, authority for the consumers of shipping services to organize to bargain with carrier conferences, and Federal Maritime Commission arbitration of rate disputes.

I had intended to offer this as an amendment to H.R. 9518, the antirebating bill, which was marked up in the Merchant Marine Subcommittee today. However, Chairman MURPHY has agreed to consider this subject in separate hearings beginning in March. Consequently, I have introduced this bill to begin the process. Hopefully, it can be refined in the next few days so that Chairman MURPHY and I can jointly sponsor a bill that will be the subject of the March hearings.

TIME TO REFORM THE PRESIDENTIAL PRIMARY SYSTEM

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. ASHBROOK. Mr. Speaker, I am jointly sponsoring a bill with my distinguished colleague from Arizona, MORRIS UDALL, that would reform the Presidential primary system. This bill is called the National Primary Act of 1977.

The need for reform in this area is great. For too long the votes of individuals in the Presidential primaries have not had the weight that they deserve, because of the nature of the primary process.

The Udall-Ashbrook proposal would make four basic changes in the election laws. First, it would establish four dates for Presidential primaries, these being the second Tuesdays of March, April, May, and June. Each State holding a primary would decide which date to select. This would correct the current chaotic situation where there are more than 100 separate filing dates, selection dates, and election days.

Second, the ballot in each State would contain the names of all generally recognized Presidential candidates as determined by the Federal Election Commission. Third, crossover voting would be prohibited. Fourth, allocation of delegates in each State holding a Presidential primary would be proportional with any candidate receiving more than 10 percent of the vote in any State receiving his share of the delegates.

Well-known columnist Charles Bartlett has urged passage of this proposal as a fitting tribute to former Senator and Presidential aspirant Hubert Humphrey. According to Mr. Bartlett, "the Udall-Ashbrook reform can be a perfect memorial to a great professional." It would "put the candidates to a severe test without reducing them to exhausted discomposure."

Following is the text of Mr. Bartlett's remarks which appeared in the January 20 Washington Star:

IN MEMORIAM: REFORM THE PRIMARY SYSTEM

(By Charles Bartlett)

Politics is a practical game, and moves have gotten quickly underway to recruit the emotion stirred by the death of Hubert Humphrey in behalf of one or another of his causes.

The spirit of "let's do this one for Hubert" will be compelling on the Hill for at least the first weeks of the new session. Humphrey was a lively flag-carrier for many causes, so old allies feel justified in hoping that green and sorrowing memories of his persuasive charm will ring up one last legislative triumph in his name.

The labor lobbyists are moving to insure that the Humphrey-Hawkins "full employment" bill will be an inside contender for a ride on the wave of sentiment. It is a likely candidate because even in its compromise condition, the bill remains a sparkling product of the politics of hope, an expression of Humphrey's eagerness to make life rosier for all.

"He worked for anything and everything that we were for," George Meany of the AFL–CIO declared in extolling Humphrey.

While the Humphrey-Hawkins bill is a message of hope to the unemployed, its wistful treatment of inflation and private-sector job creation may quickly sour the rejoicing that will come at its passage. As legislation, this is an uncertain leap into a murky pond and experts may still be debating its wisdom when we are all dead.

Better to do for Hubert what he and no other presidential contender has ever been able to do for themselves. This is to rationalize the presidential primary system into a procedure that will leave those who enter the lists in a better state than the one in which they emerge now.

The aim is to put the candidates to a severe test without reducing them to exhausted discomposure. A bill to accomplish this has already been proposed by Reps. Morris Udall, D-Ariz., and John Ashbrook, R-Ohio.

Under the Udall-Ashbrook proposal, all states bent on holding presidential primaries would be required to schedule them on the first Tuesdays of either March, April, May or June. To insure that all contenders face equal exposure to voter sentiment, all the ballots on each Tuesday will carry the same names. To prevent Republicans from swinging Democratic contests and vice versa, crossover voting will be uniformly prohibited in all states.

Some of those difficulties which Humphrey encountered in pursuing the presidency have been assuaged by federal help in meeting campaign expenses. But his lingering sense of injustice at the fact that one state, West Virginia, was make-or-break in his 1960 contest with John Kennedy, as well as his dismay over the debilitating character of the primary exertions, would find a remedy in the Udall-Ashbrook reform.

The Winograd commission of the Democratic National Committee, scheduled to propose changes in party rules soon, is reported ready to embrace a move that would compress all delegate selection activities into the period between the first Tuesday in March and the second Tuesday in June.

Held on a tight rein in the White House, key figures in the commission are sheepish at the fact that change will make it harder for rivals to challenge Jimmy Carter. It will not bring order out of the chaos.

The chaos is what damages and deters politicians whose ambitions soar like Humphrey's. It discourages voters who are straining to find a leader. This is why the Udall-Ashbrook reform can be a perfect memorial to a great professional.

TIMBER BIDDING PRACTICES ON THE NATIONAL FORESTS

HON. MAX BAUCUS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. BAUCUS. Mr. Speaker, this week the House will be considering H.R. 6362, a bill dealing with bidding practices on national forest timber sales:

The objective of this legislation is to protect communities dependent upon national forest timber in the West. The economic health of these communities is currently threatened by Forest Service use of sealed bidding.

For the most part, sealed bidding is not appropriate in the West, because this sale method denies mills in local communities the opportunity to respond to outside competition for nearby timber. In many parts of the West, the national forests are the only source of timber, and individual Forest Service timber sales tend to be large. Failure to successfully obtain one or two critical sales can create an economic hardship on a local mill and on the community which the mill supports. Oral bidding is often the best way to insure a full opportunity for local mill operators to compete for the timber.

It is my understanding Chairman FOLEY intends to offer S. 1360, which passed the Senate last year by a vote of 60 to 29, as a substitute for the House version, H.R. 6362.

Contrary to what the opponents of this legislation contend, all that S. 1360 would do is allow the Forest Service to return to historic bidding methods.

The substitute which will be offered by Chairman FOLEY contains clear direction to the Secretary on his obligation to combat collusion.

It would authorize continuation of the present Forest Service system of monitoring timber sale bidding patterns and require that the Forest Service notify the Justice Department if collusion is suspected. It eliminates the apparent mandate in section 14(e) of the National Forest Management Act to use sealed bidding in all situations and restores flexibility to use whatever bidding methods are determined will insure open and fair competition. Authority is provided to alter bidding methods or take whatever action is appropriate in situations in which collusion is suspected.

Other major provisions of Chairman FOLEY's substitute are that the Secretary must insure that the Federal Government receive not less than the appraised fair market value for the sale and that in his choice of bidding methods he must give consideration to the economic stability of communities dependent upon national forest timber.

I would like to clarify some of the arguments being advanced in opposition to this legislation:

First. Sealed bidding is used for most other Government contracts and should also be used for national forest timber sales.

There are several critical differences between national forest timber sales and other Government contracts which account for the desirability of oral bidding methods. One of the most significant ones is that the national forest hold virtually a monopoly position in many parts of the country with respect to timber supply.

Oral bidding is necessary to permit timber purchasers reliant on a single raw material source to respond to outside competition. Its use is necessary to protect the economic stability of local communities because: First, a sawmill involves a heavy fixed investment and, of course, is immobile; second, specific rather than random sales must often be obtained; third, individual sales are often very large in relation to total annual timber supply in an area; fourth, there usually are no alternate sources of timber supply to the national forests; and fifth, many communities depend almost entirely on one or two mills for their employment and economic stability.

Second. Sealed bidding is used to sell the national forest timber in the East and South. There is no reason it should not be used in the West.

In the South the use of oral bidding is unnecessary due to several factors:

First. Individual timber sales are comparatively small in size in relation to Western timber sales. Between 1964 and 1972, sales averaged only 800,000 board feet in the East and South as compared to over 11 million board feet in California during the same period. Thus, each individual timber sale is much more important to a local community in the West than it is in the South. If an individual firm loses a timber sale in the South, it does not create the economic hardship or the threat of bankruptcy that such a loss could create for an independent western mill.

Second. National forest timber, although important in the South, is not the only source of supply. It amounts to only about 6 percent of the timber supply in the South, whereas in the West many communities are totally reliant on national forest timber. In the southern Rocky Mountain areas as a whole, national forest timber accounts for over 80 percent of the total timber supply. If a Southern firm loses a national forest timber sale, there is usually timber available on adjacent private lands to fill the gap. In many parts of the West the national forests are essentially the "only store in town."

Third. The use of sealed bidding to combat collusion in sale of national forest timber has been supported by several authoritative studies, including one done by a professor from California.

Opponents of oral bidding have used as an authority to support the use of sealed bidding on Federal timber sales the earlier writings of Walter J. Mead, professor of economics at the University of California, who at one time favored the use of sealed bidding for national forest timber. However, after further review of the issue, in a paper published in 1967, Professor Mead discussed the characteristics of buyer industries which indicate the desirability of utilizing oral bidding methods:

> The basic characteristics of buyer industries may constrain the public policy choice of bidding method. Thus, an industry that has an existing heavy fixed investment, uses raw materials that are relatively immobile economically, must acquire several successive leases or sales in the life of its fixed plant, is dependent on a single raw material source, must plan its purchases subject to severely limited financing, and requires that specific rather than random sales be obtained, will probably insist on the oral bidding method. *Oral bidding is more suitable under these circumstances (or even a few of them) since it permits a buyer to react to challenges from other bidders and to protect his resource position.* (Emphasis added.)

Most of the above are characteristics of the forest products industry, particularly those heavily dependent upon national forest timber. The desirability of maintaining oral auction as the normal bidding method in these situations is clear.

Fourth. Oral bidding makes it easier to collude than does sealed bidding.

No evidence has ever been presented to support this conclusion. Forest Service Chief John McGuire has repeatedly testified to that fact before various committees of Congress.

The only case in which there has been a conviction for collusion in timber sale bidding (*U.S. v. Champion International Corp., et al.*) involved oral bidding in Oregon. In reaching its decision, the court found that those convicted had met and, relying on circumstantial evidence, concluded that they had reached understandings prior to the sales. This is directly contrary to the Justice Department's assertion that collusion at an oral bidding sale is harder to prove, because the participants need not make such prior agreements. It is also contrary to Justice's assertion that convictions cannot be obtained unless there is an informer or other direct evidence of a conspiracy.

In the face of all the evidence to the contrary, the Justice letter offers no evidence to support its assertion. The only conclusion that can be drawn from the existing evidence is that those inclined to collude will do so under any bidding mechanism, and that collusive activities under either mechanism will be essentially similar.

Fifth. The Justice Department has said that collusion is very difficult to prove, and so sealed bidding is necessary to reduce the risk of it occurring.

Justice has said (in an April 26 letter to the Secretary of Agriculture) that convictions for collusion are very difficult to obtain unless there is an informer or other direct evidence of an agreement.

This is not true. The Ninth Circuit Court of Appeals recently upheld the convictions rendered by a lower court for collusion in timber sale bidding in Oregon (under oral bidding methods). The appeals court confirmed that direct evidence of a collusive agreement is unnecessary and found that circumstantial evidence is sufficient to prove the existence of a "tacit agreement." This opinion, which was rendered after the Justice letter was written, provides the ease of prosecution that the Justice Department has said it needs. Therefore, there is no reason to threaten the economic stability of dependent communities by requiring the use of sealed bidding.

Sixth. Present Forest Service regulations should be given a chance to work. They adequately protect dependent communities so there is no reason to change the law.

The Forest Service performance in implementing the regulations under section 14(e) of the National Forest Management Act does not give one cause for optimism. In initial regulations after NFMA was passed, the Forest Service virtually eliminated the use of oral bidding on national forest timber, a result that was hardly anticipated by the Members of Congress who were involved in the development of 14(e).

On June 2, 1977, the Forest Service published final regulations for the sale of national forest timber. Although under these final regulations the requirements for sealed bidding originally contained in the Forest Service interim regulations are considerably relaxed, the final regulations would still be adverse to the economic stability of local dependent communities.

The final regulations provide that in areas determined by the Forest Service to be dependent, a mix of bidding methods will be used amounting to approximately 75-percent oral and 25-percent sealed bidding by volume. The proportion of volume sold by oral auction may be increased if very large sales are involved or if the volume purchased by firms outside of the tributary area increases above historic levels.

Although the Forest Service is to be commended for significantly improving the final regulations in comparison to those originally drafted, the final regulations still would be adverse to the economic stability of local dependent communities. Even in communities which the Forest Service determines to be substantially dependent upon national forest timber, the Forest Service will offer up to 25 percent of the volume on a sealed bid basis. The "safeguard" which the regulations provide for increasing the percentage of timber offered by oral auction if a substantial portion of the sales end up being purchased by outside firms has the obvious and critical flaw that nothing will be done unless substantial, and in all likelihood permanent and irreparable damage has been done to the local economy.

Many small operators in certain parts of the country specialize in specific types of sales that have particular species or grades of logs. These small operators must obtain every single sale which comes up having the kinds of products they specialize in. If, by chance, that sale is one of those offered under sealed bidding, it puts the operator in an untenable position due to uncertainty over what he must bid to obtain the sale.

Another difficulty is created by the fact that in the past few years the amount of timber offered from the national forests has been reduced significantly in some parts of the West. In these areas the Forest Service is selling hardly enough to maintain existing mills on a break-even point. Putting into jeopardy 25 percent of the volume in these areas would be enough to severely damage the local economy.

Seventh. Sealed bidding returns more revenue to the Government than does oral auction.

The data on this issue is inconclusive. The position of the Forest Service is that existing data is preliminary and no conclusion can be reliably drawn on the question.

Bid monitoring data gathered since the National Forest Management Act (NFMA) was passed show a slight edge in favor of sealed bidding in total returns to the Government. However, the data also show that in major regions (such as California) oral bidding holds the edge. It should be pointed out that experience with sealed bidding has been under highly unusual conditions not typical of what would occur over the long term. A new bidding system was imposed after no timber had been sold from the national forests for several months (until interim regulations for sale of timber were adopted after the NFMA was passed). Then, virtually 100 percent sealed bidding was used. Many purchasers expressed a high level of anxiety over the critical need to obtain adequate supplies of timber, compounded by the uncertainties of a new bidding method. Bid data gathered under such conditions is virtually meaningless.

In testimony before the Forests Subcommittee of the House Agriculture Committee on February 7, Forest Service Chief John McGuire stated that the data is inadequate to provide a statistical basis for coming to a firm conclusion on this issue. Chief McGuire stated:

> The data that we do have available . . . suggest:
>
> (1) In competitive areas (where bid prices are substantially above the apprised value), oral auction tends to give higher average bids than sealed bidding. This is typified by bidding found in areas tributary to the Willamette Valley in Oregon. . . .
>
> (2) In areas of moderate competition, it appears that the method of bidding has no significant impact on the price paid for timber.
>
> (3) In areas of relatively low competition, where a small number of large businesses dominate, oral auction gives lower average bids than sealed bidding. Parts of eastern Oregon and central California typify this situation.

It must be emphasized, and it was recognized by Chief McGuire, that these assumptions are based on sketchy data.

Eighth. Sealed bidding has caused no disruptions or timber dislocations in the West where it has occurred.

This is not true. Although data on this issue is admittedly sketchy, what is available indicates substantial dislocations in some areas. Between November 1976, when sealed bidding was initiated on the Klamath National Forest in California, and May 1977, 42 percent of the total volume was purchased by first-time buyers. In addition, in the area near Roseburg, Oreg., before sealed bidding was used, there was an outflow of about 20 percent of the volume to other communities. After sealed bidding was initiated the outflow jumped to over 41 percent.

For the consideration of my colleagues I include in the RECORD a summary statement concerning the effects of sealed bidding on industry concentration:

THE SEALED BIDDING REQUIREMENT HAS CAUSED SUBSTANTIAL ECONOMIC DISRUPTION AND WILL REDUCE COMPETITION

A survey of National Forest timber sales in Oregon since passage of Section 14(e) dramatically demonstrates that disruption of community stability is no academic, theoretical consequence of sealed bidding. Consider the following examples, which are by no means exhaustive.

SOME EXAMPLES OF ECONOMIC DISRUPTION AND COMMUNITY INSTABILITY

1. Roseburg, Oreg.

Roseburg is located in Douglas County whose population was 78,000 in 1973. Of the 10,810 persons employed that year in manufacturing, 9,160 or 85 percent were employed in the wood products industry. Roseburg is the headquarters of the Umpqua National Forest. Ease of access from surrounding areas has caused increasing pressure on local timber supplies.

In calendar 1976, when oral bidding was used, 80.2 percent of Umpqua National Forest timber remained in the Roseburg area. By February 8, 1977, 41.3 percent of the timber sold by sealed bid left the area—some of it purchased by mills that had never before bid on Umpqua timber. Fred Sohn, President of Sun Studis, Inc., a Roseburg mill, testified that "if this rate of outflow is sustained, in a coupe of years one or two major operating plants in our area will probably be eliminated." During the succeeding months the outflow continued, as the following table indicates:

Sample sales from the Umpqua National Forest to companies outside the Roseburg community

Date, company, location of nearest mill, million board feet purchased

March 9, 1977, Southwest Forest Industries, Medford, Oreg., 13.0.

March 16, 1977, Nordic Plywood, Eugene, Oreg., 3.2.

March 24, 1977, Cabax Mills, Eugene, Oreg., 7.1.

April 27, 1977, Robert Dollar Company, Glendale, Oreg., 7.1.

May 25, 1977, Boise Cascade, Medford, Oreg., 1.8.

June 9, 1977, Rosboro Lumber Company, Springfield Oreg., .24.

June 9, 1977, Golden State Building Products, Shingle Springs, Calif. .21.

To make matters worse, the U.S. Forest Service has announced that it intends to reduce the annual sales volume on the Upmqua.

2. The Klamath Basin, Oreg.

In 1973, the Klamath County population was 52,750. Of the 5,990 persons employed in manufacturing in the county, 3,650 or 61 percent were employed in the wood products industry. The city of Klamath Falls is the headquarters of the Winema National Forest. The entire Klamath Basin is a dependent community.

Before sealed bidding, about one-third of the volume of National Forest timber sold left the Basin. During the recent period of sealed bid sales, outside operators purchased 67 percent of the volume. These figures prompted the Forest Supervisor to take steps to change back to oral sales. "To do otherwise, in my judgment, would be contrary to the intent of the regulations and would be disadvantageous to the dependent community." He warned that "timber supply problems west of the Klamath Basin will be causing an increase in competition for Klamath Basin timber," and urged "maximum flexibility in making these kinds of decision at the Forest level."

3. The Bend-Prineville Bidding War

Bend and Prineville are both dependent communities, located about 35 miles apart. Bend is west of Prineville, and is tributary to the Deschutes National Forest located west of Bend. Prineville is tributary to the Ochoco National Forest, located east of Prineville. The Bend mills have always looked to the Deschutes for their supply, and the Prineville mills to the Ochoco. But the introduction of sealed bidding made "raiding" possible, and touched off a destructive bidding war.

Bend, Oreg. The 1973 Deschutes County population was 36,800. There were 2,150 persons employed in the wood products industry out of a total manufacturing payroll of 3,080 (over 70 percent). On May 31, 1977, Louisiana-Pacific of Prineville purchased 18.3 million feet at a sealed bid sale in Bend. The second high bidder was Boise-Cascade from

Medford. The third high bidder was a local company, Brooks-Scanlon. The community lost more than 18 million board feet of timber to an outside mill—nearly a year's supply for a small mill which would employ about 75 persons directly and another 75 in logging, transportation and related operations.

The State and local press understood the adverse consequences and dire implications of this raid. On June 1, the day after Louisiana-Pacific of Prineville purchased 18.3 gonian reported:

BEND.—The controversial sealed-bid system has cost Brooks-Scanlon Corp. a majority timber sale in Deschutes National Forest, company President Michael Hollern said Wednesday.

"In confirms what we've been saying since the Forest Service introduced sealed bidding. It offers a less than adequate means for a local mill to protect its tremendous investment in plant, equipment and people," Hollern said.

* * * * *

The sale would have provided about 10.5 months log supply for the Brooks-Wilamette sawmill at Redmond that employs 60 persons, the company reported.

"We submitted a sealed bid that was $400,000 more than the advertised price of the timber. Because of the inherent unfairness of sealed bidding, we were not allowed to exceed the bids of outside competitors as we have consistently done in the past through open oral auction," Hollern said.

On June 6, 1977, The Prineville Central Oregonian printed an editorial entitled "Black Marble Bingo," a reference to the Forest Service's practice of picking black and white marbles, to determine which sales should be sealed bids and which by oral. It expressed the vain hope that:

"Now that blood has been drawn on the Deschutes National Forest, let us hope that the Forest Service continues to "get its money" there without the game getting out of hand here.

"We might do alright if Brooks-Scanlon doesn't find out L–P is a Prineville mill. Because, if the white marble shows up in Prineville, Brooks-Scanlon might, also."

The white marble showed. On June 30, 1977, Brooks-Scanlon took nearly 20 million board feet out of the Ochoco.

Prineville, Oregon. In 1976, the Cook County population was approximately 11,500; about one-third of those employed were engaged with the wood products industry (1,700 of 5,000). Less than a month after the raid by Louisiana-Pacific of Prineville, Brooks-Scanlon struck back. At a sealed bid sale, Scanlon purchased 19.8 million board feet on the Ochoco, out-bidding all local Prineville firms. The sale equaled 17 percent of the entire annual cut from the Ochoco.

The loss of this timber to Prineville will have severe consequences. Prineville is a community in which mill capacity far exceeds supply. The loss of a sale of this magnitude, particularly to the local mill with the shortest supply, could be catastrophic. Ironically, L–P, the company that started the war, is least likely to suffer from it. A large company with mills throughout the West, L–P has the deep pocket to withstand a bidding war while smaller, independent mills may be driven out of business.

Following this classic example of retaliatory bidding, which sealed bid proponents said would never happen, an editorial in the Bend Bulletin lamented another aspect of the wasteful results of sealed bidding:

"The 18 million board feet of logs from the Pine Flat sale now will be hauled 50 miles to Prineville, on the average, rather tnan 31 miles to Bend. That's an extra 19 miles for each of 3,272 truckloads of logs, plus an extra 19 miles on the empty return trip, if we figure it correctly. That's about 125,000 miles of extra log-truck driving on the sale purchased by Louisiana-Pacific.

"The Sand Springs sale, bought by Brooks-Scanlon, is 86 miles from Bend, 54 from Prineville. The Toggle sale is 110 miles from Bend, and 78 from Prineville. About 3,600 truckloads of logs are involved. Each truck will have to cover an extra 64 miles on the round trip. That's about 230,000 extra miles of driving.

"Between the three sales Forest Service bidding regulations caused more than 350,000 extra miles of driving. (Log trucks get about 4.5 miles to the gallon of diesel fuel. That's 77,777 extra gallons of fuel.) That's saving energy with a vengence."

The Prineville Central Oregonian was even more concerned about the situation.

"Last week's unprecedented action by Brooks-Scanlon seemed to signal the beginning of an undeclared timber sale war that would see Prineville firms bidding consistently on the Deschutes National Forest and Brooks-Scanlon continuing their interest on the Ochoco National Forest.

"When Brooks-Scanlon came to the Ochoco National Forest last week they won the largest and generally considered the best timber sale by the controversial sealed bidding method of timber sale purchase.

"Others speculated that Prineville operators might move further east in an effort to replace lost timber from last week's action. An effort in that direction would create a confrontation between local operations and Hines Lumber Company, Burns, as well as Hudspeth Sawmill Company, John Day.

* * * * *

"Speculation will continue, but one thing is certain and that is the repercussions will be felt for years to come and some traditional operation areas are likely to become very confused."

The areas mentioned as possible targets for raids by Prineville operators are, of course, themselves dependent communities. Burns, Oregon had a population of 4,900 in 1973. The lumber industry accounts for 100 percent of the manufacturing payroll. John Day, Oregon had a 1975 population of 1,900. The wood products industry in that community is nearly 100 percent of the total manufacturing payroll.

Unfortunately, in March 1977, on the Umatilla National Forest, the Kinzua Corporation made an unexpected bid in an area outside their customary purchasing territory, buying 17.7 million feet in the Heppner District where L–P has never before bid. The message is clear: the bid wars are spreading.

4. The long-range buyers and the timber speculators

Tomco Lumber Company of Sweet Home and Albany. Oregon recently purchased 8.2 million feet on the Suisiaw National Forest. Tomco is located in the Willamette National Forest area between Salem and Eugene and has only recently begun purchasing timber in the Suislaw. Since the introduction of sealed bidding, Tomco has also made a sealed bid purchase in the La Grande area (nearly 300 miles from its closest mill) and has been attempting to purchase timber in the panhandle country of Northern Idaho, nearly 450 miles away.

Tomco does in fact process at least some of the timber it has been able to buy through long-range, "surprise" sealed bids. But some of the surprise bidders are speculators. Anyone can bid on federal timber who can post the necessary bond. Speculators purchase timber contracts which they never intend to process themselves. Rather, they treat the 3 to 6 years contract term as an opportunity to play the timber "futures" market. If the price goes up, they can resell later, perhaps at a handsome profit.

Even if the price does not increase, the speculator may be able to sell at a handsome profit to a local mill which must make a purchase to stay in business. For example, on January 26, 1977, a retired logger, who owns no mill, was the successful high bidder on a 13.9 million board foot sealed bid sale within the Federal sustained yield unit in the Fremont National Forest. Three local mills are dependent on the Fremont sustained yield unit for raw material. Their combined capacity exceeds the annual supply. Under regulations governing sustained yield units, the timber must be processed locally. Therefore the successful bidder must either build a new facility in an area which already has excess capacity or, much more likely, sell the timber to one of the three existing mills at a handsome profit.

Speculation poses a serious threat to operating mills, especially in view of the current shortage of supply. Sealed bidding has made it easier for speculators to move into the timber markets by removing the option of bidding further on a sale which a local operator needs to stay in business.

SEALED BIDDING WILL INCREASE CONCENTRATION IN THE TIMBER INDUSTRY

The final irony of the uneconomic and disruptive raiding caused by sealed bidding is that it will ultimately lessen competition. It will thereby defeat the very purpose of the sealed bid provision Daniel L. Goldy, Oregon's Economic Development Director, testified about the inevitable anticompetitive effect of sealed bidding.

If this continues, we will have mortality, particularly [among] the small independent operators. Only the giants in the industry will survive.

Right now we have in the forest products industry, in lumber and plywood, one of the most competitive industries in the United States. We have an industry where prices go up and down with supply and demand.

This is unlike many basic industries in this country where if demand falls off and overhead goes up prices go up to cover the costs.

We have here a case, in terms of end products, of perfect competition.

If [sealed bidding] persists and we undermine these communities and we undermine the small plants that are in them, we will wind up with an industry of giants where, again, prices will go up when demand falls off and you will eliminate any competitive bidding for Government timber.

Chief McGuire also testified as to the anticompetitive effects of sealed bidding during a colloquy with Congressman Johnson.

"Mr. JOHNSON. In the area, the scene where I am, it seems to me that sealed bidding could result in higher prices or in actually driving smaller timber operators out of business. Would you agree with that?

"Mr. MCGUIRE. It could do that.

"Mr. JOHNSON. It could, couldn't it, even if there were no collusion involved?

"Mr. MCGUIRE. That's right. Whether it could continue over a period of time is something about which I am uncertain. Certainly, it could take away from small business some vital sale that the business would have to have, and it might be the marginal sale that would drive that small business out of production."

It is indeed ironic that the sealed bidding provision, intended to stop supposed anticompetitive activity will lessen competition by concentrating the industry. The winners of the bid wars, the mills that survive the disruption caused by sealed bidding, will be the large, deep pocket companies. Independent mills will no longer have the capability to keep their supply of raw material up at competitive prices. Sealed bidding may cause the very evils it was supposed to eradicate.

WILMINGTON 10

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. EDWARDS of California. Mr. Speaker, there has been much comment made by Governor Hunt and others in North Carolina concerning outside interference in the Wilmington 10 case.

I thought my colleagues would like to know what the North Carolina press has to say about Governor Hunt's decision.

An editorial in the Raleigh News and Observer, January 24, 1978, states that Governor Hunt's decision will only prolong this matter unnecessarily. He could have laid this case to rest but unfortunately did not.

The Charlotte Observer, on the same day, was concerned that some questions are still unanswered and without these answers, justice may not have prevailed.

For the edification of my colleagues I insert in the CONGRESSIONAL RECORD, editorials from these two influential North Carolina newspapers:

[From the News and Observer, Jan. 24, 1978]

HUNT'S DECISION FALLS SHORT

Gov. James B. Hunt Jr. had a chance last night to defuse the lingering controversy over the conviction and imprisonment of the Wilmington 10. Unfortunately, the governor did not move far enough in the right direction. North Carolina this morning could have breathed a sigh of relief if the governor had mustered a few more ounces of compassion and political courage to commute the sentences of the nine remaining in jail to time already served.

It appears unwise, in particular, to keep Ben Chavis behind bars for two more years. As the key figure in this racial dispute that sticks in the craws of North Carolina and the nation, Chavis will remain in the public eye as a martyr in what has come to be widely believed, rightly or wrongly, as an act of injustice. This will prolong a contentious matter unnecessarily.

The governor, it seems, sought to please both sides and wound up pleasing neither. He may well have faced a "no win" situation politically in view of the sharply divided sentiment on the fate of the Wilmington 10. But it could hardly have cost him any more to offer a uniform commutation and be done with the matter.

Despite the serious questions that surrounded the credibility of three witnesses who said the defendants conspired and then burned a Wilmington grocery and fired at emergency personnel during racial disturbances in 1971, the record did not justify a a pardon of innocence for the defendants. Court appeals and reviews of the trial have found neither substantial errors justifying retrial nor violations of the defendants' constitutional rights.

However, there is no question about the severity of the sentences of up to 29 years, a total of 282 for 10 defendants in a state where there is no sentence review by the courts. Few North Carolinians would want their friends or relatives imprisoned on the word of convicted felon Allen Hall. It was Hall who recanted the testimony he had given at the trial and then recanted his recantation in a telephone call to the prosecutor. Even state officials have conceded the 10 could not be convicted on retrial if Hall's testimony were impeached.

There is much to regret about this case. There was the explosive racial atmosphere in Wilmington, which turned a civil rights protest by blacks into an armed confrontation with angry whites. There was the year's lapse before charges were brought in the grocery burning. There was the false start on the trial, when due to a prosecutor's illness a mistrial was declared before the jury of 10 blacks and two whites could hear the case. The next jury contained 10 whites and two blacks. And there was the surprisingly weak defense offered by the '10's' lawyers.

In short, it was a racial and judicial mess that simply got messier with time. It was high time someone in authority set the matter to rest. The governor could have done so. Unfortunately for all concerned, he did not.

HUNT TAKES THE MIDDLE ROUTE

Gov. Jim Hunt's action in the Wilmington 10 case seemed that of a man who had struggled long and hard with the facts and his sense of obligation as Governor to do what he considered right.

The text of his speech is printed in full on today's Viewpoint Page. The effect of his action—to make eight of the nine men eligible for release from prison this year—makes the sentences more merciful.

Not surprisingly, Gov. Hunt took the middle route between the extreme options of pardoning or doing nothing. After satisfying himself that the trial was fair, he directed his attention solely to the sentences. In doing so, he avoided challenging the findings of the courts or the jury.

He was correct in saying his action won't please everyone. We wish he had enabled all the men to be released from prison now. We think substantial questions remain about the case. To say that is not to accuse the judge or jury of wrongdoing. But some testimony given in the case was possibly perjured. And some witnesses were not available at the trial. It is possible that the verdict, while correct as based on the evidence presented, may have fallen short of justice.

Unless a federal appeal succeeds in reopening the case, that doubt will not be resolved. Gov. Hunt has done what he considered right. In doing it, he has made a bad situation better.

EQUAL RIGHTS AMENDMENT

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVI

Tuesday, January 31, 1978

Mrs. SCHROEDER. Mr. Speaker, in this morning's Washington Post, Ellen Goodman solves the ERA extension puzzle. I share her article with those who hope the ERA will vanish if the 1979 deadline is not met.

Ms. Goodman's article follows:

[From the Washington Post, Jan. 31, 1978]

THE NAME OF THE (ERA) GAME IS POLITICS

BOSTON.—As the movement to extend the deadline for ratification of the Equal Rights Amendment gains momentum, I keep hearing pro-ERA forces accused of "trying to change the rules in the middle of the game."

I am well aware that women are generally held up to the purest standards that can dance on the head of a pedestal. But this is ridiculous. The name of the ERA game is, after all, politics. These people are not trying to change the rules; they are trying to use them to win. Which is the point of the game.

The ERA was passed by Congress in 1972. There was nothing especially sacred about the seven-year limitation for state ratification. "Seven" was the number arrived at, not by tarot cards or the Constitution, but by custom and political compromise.

At the time, ERA supporters agreed to this figure despite the warnings of old hands like Alice Paul. They felt as hopeful as Martha Griffiths, who probably remembers every night before she goes to sleep that she once said, "Personally, I have no fears that this amendment will be ratified . . . as quickly as the 18-year-old vote."

Now, led by the National Organization of Women, they are trying the perfectly legal tactic of urging the Congress to extend the limit for seven more (and final) years. This extension is the prerogative of the Congress. It is well within the rule book known as the Constitution.

But what bothers me most about the whole "rules of the game" chatter is the sheer chutzpah of the chatterers. It is the ERA opponents who should be thrown into the penalty box.

While the pro-ERA forces have been playing chess, their opposite numbers have been playing rugby. It was the pros who behaved like good little Goo-Goos, targeting their candidates, signing nomination papers and getting the votes out—just like it says in government classes. If the fix hadn't been in, the ERA would have passed its last three states months ago.

In Nevada, 11 state legislators who were elected on pro-ERA platforms went sheepishly over to the other side at the first cry of "Red Rover." Eight of them (may their debts swell and block their gateway to paradise) accepted pro-ERA campaign contributions.

This charming athletic display was reenacted in Florida. There, the women voted out the anti-ERAs and voted in the pros, and then watched as the two pivotal "yes" votes turned into "no's."

The Illinois rematch, on the other hand, looked like something created by Dick Tuck from his bag of tricks. Twice the ERA gathered a majority vote in the state legislature. In any other state, that simple majority would have meant passage. But in Illinois, you need a three-fifths majority under the new state constitution although—excuse me while I break into hives—this rule is generally considered unconstitutional.

As Ellie Smeal, president of NOW, puts it: "We were ignored in the election process." Speak to me not of rule-rigging.

Only in the past year have the pro-ERA forces learned the effectiveness of end runs around politics. The "conventions boycott" in nonratified states has been deliciously successful. This vision of clout has done the amendment more good than all the "due process."

But we still are in a situation in which the "will of the majority" has been thwarted by a handful of legislators. A full two-thirds of the states have passed this amendment. A majority of people polled—including those in unratified states—are in favor of it. The younger population overwhelmingly supports it. Yet it is in great danger of failing.

Some crucial state legislatures won't even meet again to vote until after March 1979. Perhaps the most potent problem facing passage before the deadline is the deadline itself. During the Florida fight, buttons sprang up with the slogan "ERA Won't Go Away." The pro-ERA people were aware that the opposition tactic was to convince legislators that if they held firm one more time, the amendment would just disappear.

The ERA won't go away. But if it fails to meet the deadline, it could become part of the collective consciousness of women in this country. They would realize that they had experienced disappointment and betrayal precisely because they believed—not wisely but too well—in the game.

The pro-ERA people wouldn't be purists if they neglected to press for extension. They'd be pure fools.

MEDICARE

HON. ANDY IRELAND

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. IRELAND. Mr. Speaker, I have submitted the following remarks in written rather than oral form in order to avoid tying up the House's time for discussion.

Dr. Robert E. Windom, a distinguished physician from Sarasota, Fla., has sent the following letter to HEW Secretary Califano and has made a copy available to me.

I am impressed with Dr. Windom's letter and disturbed by the problems he enumerates. For, as he points out, these problems are not unique to him.

At a time when we are all concerned with rising health costs and the burden of overregulation, I wanted to take this opportunity to share Dr. Windom's concerns with my colleagues:

SARASOTA, FLA.,
January 11, 1978.

JOSEPH A. CALIFANO,
Secretary,
Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. SECRETARY: I am dictating this letter to you on a Saturday as I sit at my desk doing some of the unnecessary paperwork caused by rules and regulations from government channels. I feel compelled to call this matter to your attention because it may have a personal effect on me later.

Part of this paper work is the endorsing of eleven checks which were made payable to me through the Medicare intermediary in Florida. These checks are not due me, but because of the system they have been made out in my name. Therefore, I call to your attention that when you accumulate figures for physician's income you specifically look at my listing, and take into consideration that for the past eleven months erroneous allocations have been made in my name. The checks I endorse today are only eleven but come to $274.20. These are just a small number of the hundreds that I have had to endorse during the year, therefore, I am certain the amount will be quite significant. Also, I am not the only physician affected by this system.

The reason I have to do this is because of a requirement that was placed upon the intermediary in January of 1977 which changed a computer program. This in turn effected the computer billing done from the local area. I, personally, along with my office manager, have spent considerable time during these eleven months discussing this with representatives of Blue Shield on the state and local level and with the local computer billing service. As a result of this eleven month discussion, the situation remains the same. By no means am I an expert in computers. However, I understand that the experts yet have not been able to adapt a program procedure to meet the federal requirements, nor those of the Internal Revenue Service. For eleven previous years the billing program was working well for our group of physicians who interpret electrocardiograms. Because of certain new regulations, changes occurred which resulted in a system creating much extra work, time, and significant financial involvement for those concerned. For example, my office manager has spent many hours during the past year working on this. Her salary is paid entirely by me, yet I receive no compensation to pay her for this extra work. This has also consumed a considerable amount of my professional time which could have been well spent for patient care or, when possible, to enjoy some free time of my own. Would you think that it might be proper for the federal government to reimburse private citizens for the service they render as a result of government regulations? Is it proper to expect patients to pay for this service which adds unnecessary expense to their health costs?

Mr. Secretary, this is just one of the many glaring examples of problems created by government intervention into the field of health care. I read almost daily about comments about how "fat" the hospitals are in our country, how the great majority of physicians are overpaid, yet I do not see statistics justifying these quotations in any fair or equitable manner. Nowhere have I seen any remarks by you praising the great number of physicians, plus others in professional health fields, who are making efforts daily to provide the best care possible at the most reasonable cost. If a proper analysis were made, it is very possible that this group would be the great majority.

It is relatively easy for a general to direct a war many miles away from the battlefront. However, no one really knows what goes on until he is a part of the front line. This analogy is no different from that of your position as a leader for health. If you continue to direct this area as you have, I urge you to develop a cadre of front line physicians throughout this country who can tell you the story as it is—not to have you misled by those who never have been actively involved in direct patient-physician relationships, thus not knowing what is involved in the actual delivery of medical services.

I feel certain that I am only one of many physicians in this country who are adversely affected financially, as far as reporting is concerned, by the system that I have described. This letter is to clarify the issue in my own personal situation so that you will have advanced knowledge should the figures from my income meet your criteria for publication.

Very truly yours,

ROBERT E. WINDOM, M.D.

EXPLORER I LAUNCHED 20 YEARS TODAY

HON. RONNIE G. FLIPPO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. FLIPPO. Mr. Speaker, 20 years ago, January 31, 1958, America's space age dawned with the launching of the first U.S. satellite, Explorer I.

Today the community of Huntsville, Ala., is paying tribute to that major milestone in our Nation's scientific history.

It was Explorer I, launched atop a Jupiter B rocket developed by the late Dr. Wernher von Braun and his team of scientists at the Army's Redstone Arsenal in Huntsville, which led to the national commitment by President Kennedy in 1961 to "the goal, before this decade is out, of landing a man on the Moon and returning him safely to Earth."

The National Aeronautics and Space Act of 1958, which created NASA, assigned to the civilian space agency "the preservation of the role of the United States as a leader in aeronautical and space science and technology and in application thereof to the conduct of peaceful activities within and outside the atmosphere."

We as a nation have taken "giant steps forward for mankind" in the two decades following the launching of Explorer I, but we have only begun to satisfy our scientific curiosity and to enhance our store of knowledge about the cosmos in which we live.

Our space agency is an irreplaceable national asset. It was created, because our Nation had a very definite vision. That vision gave dramatic focus of America's need to realize its potential for greatness, for the betterment of mankind.

Now, however, instead of visions of continuing to take giant scientific steps forward for mankind, we find this national asset deteriorating. NASA was created in a spirit of boldness and innovation, but in recent years there has developed an image of holding back and status quo as far as important new programs are concerned.

The fiscal year 1979 NASA budget is, generally speaking, a status quo budget lacking in the kind of action, boldness, and innovation which should characterize scientific leadership.

We need to revitalize our national asset in aeronautics, space science, and technology through important new initiatives and examination of evolutionary steps to develop the technology base to determine the viability of having a space-to-Earth solution for our Earth energy problems.

In spite of all of the other demands on our national budget, I believe it would be tragic if America abandoned the vision which was launched with Explorer I.

History will take great note of President Kennedy's space commitment and America's accomplishments thereafter. I am truly hopeful that President Carter will not be willing to accept an ultimate verdict of history that his administration had an opportunity to give that vision new direction, but chose instead to continue the status quo.

It has been only 20 years since America vigorously reached out to explore. As we recall with pride that beginning, I would submit that the national space program decisions made in 1978 by this administration and this Congress will be just as important in our future as the Explorer beginning two decades ago today.

PANAMA CANAL

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of

my colleagues my views on the issue of the Panama Canal. My comments originally appeared in a report of a study mission to Panama in which I participated.

VIEWS OF HON. ROBERT J. LAGOMARSINO ON THE ISSUE OF THE PANAMA CANAL

The issue of Panama and the Canal Zone is important not only to the United States, but to South and Central America, and, for that matter, to all the rest of the world. To all parties involved, the canal is both an economic issue and emotional symbol. I personally am not opposed to some sort of negotiated settlement of Panama Canal questions. I am sympathetic to granting Panama a greater share in operating and maintaining the canal and to revenues therefrom. However, I do have serious opposition to the recently signed treaties.

My main concern is that of defense. Under these treaties, the right of the United States to intervene after the year 2000 to maintain the neutrality and accessibility of the canal is stated in article IV of the "neutrality treaty," according to the Carter administration. However, a close examination of this article reveals that the language is extremely vague and subject to numerous interpretations. While President Carter asserts that we have the right to intervene militarily to protect the canal and our interests, Dr. Romulo Escobar Bethancourt, head of the Panamanian negotiating team, and General Torrijos himself, have publicly stated that article IV does not give the United States such a right to intervene. Even Dr. Henry Kissinger, a strong supporter of the treaties, stated that he would favor a more clearly defined article IV. I believe that article IV does not offer the United States a satisfactory legal or moral base from which to maintain a neutral and accessible canal.

I have other points of opposition as well I am very disturbed about the large annual payment—some $70 million plus loans and military assistance—being offered to Panama at the same time we turn over valuable property and equipment to them, worth some $7 billion. The closing of all American bases in Panama particularly worries me. The United States has numerous security bases throughout the world. These bases benefit not only American interests, but those of the host countries. I strongly believe that the idea of a neutral canal, open to all nations, can best be achieved by a continued U.S. military presence, even after the year 2000. Why not have a base provision in the treaties or, at least a separate bilateral bases agreement, as we do with many other countries?

I object to the entire process by which these treaties were negotiated. The Congress, especially during the final weeks of negotiations, was not consulted and little informed. However, the Carter administration, apparently in return for the endorsement of the AFL–CIO, permitted a labor adviser to participate in the negotiations. Enclosed are copies of the testimony and statements on the subject of labor and the Panama Canal.

The testimony of the labor leaders also revealed that American workers, especially those critical of the Torrijos regime, are being subjected to harassment, abuse, and acts of violence. Both of the labor leaders claimed that their jobs and lives were in danger. One has had his car blown up. Article V of the treaty imposes restrictions on the political and civil rights of Americans in Panama.

During my visit to six South American nations August 9–22, I discussed with the Presidents of Colombia, Ecuador, Peru, Chile, and Argentina, and with government officials and private businessmen the impact the new treaties would have on their countries. There was nothing in their comments which influenced me to change my opposition to these proposed treaties. A number of the officials said that, although they publicly support the treaties, they privately have serious reservations about a number of the provisions, especially those which call for an increase in tolls.

At the last Organization of American States (OAS) meeting in July, a resolution was passed indicating that canal tolls should only reflect the cost of operating the canal and not be a source of monopoly revenue for whoever runs it. The proposed payments to Panama out of canal tolls would clearly violate this resolution and raise transportation costs for all countries that use the canal.

On the other hand, practically nobody has even quarreled with the way in which the United States has managed the canal. American administration has been the epitome of fairness and efficiency. Since it was opened in 1914, accidents have been extremely rare, and no ships have ever been sunk in the canal proper. On an average day 34 ships move through uneventfully. U.S. administration has also been amazingly beneficial in terms of cost to world shippers: tolls have been raised only twice, in 1974 (19.7%) and in 1976 (19%). These have been due to increased deficits which the Panama Canal Company has had, the latest being a $7.4 million deficit for fiscal year 1976 on tolls totalling $134.3 million.

Some supporters to the treaties claim that the canal is no longer important to American commerce and shipping. The fact is, however, that 42 percent of all cargo presently going through the canal originated in the United States. Twenty percent of our exports pass through the canal. The move toward smaller tankers and the need to transport Alaskan oil to the east through the canal—already in progress—further increases the importance of this waterway. It is often stated that the canal is not necessary to national defense and naval usage. The fact again is that the canal can be and is used by every U.S. naval vessel, except for the 13 largest carriers. The canal makes it possible for the United States to have a one ocean navy. Also, the United States has agreed, under the terms of these treaties, to build a future sea level canal only in Panama. The United States cannot negotiate a new canal site in any other country without Panama's permission, even if it would be in our best interests. An amazing abrogation of U.S. jurisdiction and responsibility, this provision, incidentally, also bothers Dr. Kissinger.

Finally, I address the question of human rights. A country-by-country survey conducted by the Freedom House organization reveals that civil rights, political rights, and freedom in Panama are on the same level as in Cuba and the Soviet Union and worse than any other country in the Western Hemisphere. The Torrijos government has suspended the legislature, suppressed the media, and has subordinated the judiciary to the National Guard—which serves as his personal vehicle for power. Given President Carter's strong attacks on human rights violations, the ratification of a treaty which will serve to bolster the domestic support of a dictatorship as ruthless as Panama's is nothing more than an act of hypocrisy. Private citizens in Panama with whom I discussed this issue told me that while most Panamanians favor a treaty, they do not wish the United States to negotiate with "Dictator Torrijos."

The question of Panama and the canal is indeed a complicated one. It cannot be solved overnight or by a set of inartfully drafted treaties. Although I favor some reasonable settlement of the Panama issue, I feel that ratification of these particular treaties would not be in the best interest of either the United States, Panama, or the rest of the world.

PRO-LIFE 1978 LEGISLATIVE PRIORITIES

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. MAZZOLI. Mr. Speaker, the thousands of citizens who marched for life in Washington on January 23 carried a list of 1978 legislative priorities for the Congress.

One of these priorities is defeat of a measure extending the time period for ratification of the equal rights amendment (ERA).

Another is defeat of an effort to prohibit legislative "riders" to money bills. It was just such a "rider"—called the Hyde amendment—which tightened the rules on the use of Federal funds for abortions.

I would like to briefly discuss these priorities.

First, my position on the equal rights amendment is clear. I support ERA when it was before Congress. It should be ratified.

However, though I support ERA, I do not believe the time period for ratifying this amendment should be extended.

Congress, in adopting the equal rights amendment, approved a 7-year period for ratification. Extensions of the time period were not contemplated.

Furthermore, the debate over ERA has become especially bitter and emotional in recent months. It has reached alarming levels of rancor and intensity. Little is to be gained by prolonging this volatile debate.

I believe that the Nation's decision on ERA should be made within the 7-year period established under current law.

As to the second legislative priority, I am strongly inclined to oppose any rules change relative to "riders" on money bills.

This parliamentary tactic provides about the only means Members of Congress, who are strongly opposed to a governmental spending priority such as medicaid abortions or the war in Vietnam, for example, can force a change in public policy.

No one wants a "repeat performance" of the 1977 House-Senate struggle over the Hyde amendment language. That struggle brought Government spending on many worthy labor, health, and education programs to a halt while the House and Senate remained in profound disagreement over medicaid-sponsored abortions—an issue which involves a relatively small portion of the total Labor/HEW budget.

No repeat performance of the 1977 deadlock would occur in all likelihood if leadership were to permit the House to take a direct vote on the medicaid-abortion issue (by voting to amend the medicaid section of the Social Security Act). I hope the House gets this kind of a vote this year.

EMPLOYMENT

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. BONKER. Mr. Speaker, today I am introducing legislation which is a promising approach to the illegal alien problem for it goes to the heart of the issue: Employment. The incentive behind the massive surge in illegal immigration is basically economic. Aliens come to the United States for jobs. Certain employers, free from the worry of Government sanctions, make a practice of tapping this reservoir of cheap labor and so encourage the border traffic as a matter of doing business. In short, as long as jobs are readily available to aliens, massive illegal immigration will continue unless draconian measures are taken to curb it.

Illegal immigration in recent years has increased to the point that it adds roughly 1 million people to our population annually. No one really knows how many are in the country today, but some estimates range up to 10 million. While there are some who view this sizable infusion as necessary for the economic viability of certain areas, the fact is that immigration of this scope is detrimental to the Nation's labor force, social services, and physical resources.

In any case, the immigration is illegal and well above the limits proscribed by our immigration policy. As such, it creates special problems not only for domestic planners, but also for the illegal aliens, who, because of their extraordinary presence in the United States, find themselves the victims of harassment, abuse, and the constant fear of deportations. Clearly, the present situation is intolerable and needs urgent reform.

There is no shortage of legislative proposals to stem the flow of aliens, but invariably the focus is on penalties on employers who hire illegals. Employer sanctions may be necessary to break the incentive structure producing this immigration, but, taken alone, they create additional problems. It is unreasonable to expect an employer to, with any degree of certainty, distinguish between an illegal alien and an American citizen eligible for employment. Even if the employer takes it upon himself to require identification, the range of possible documents (many of which are easily counterfeited) used for identification would make it very difficult for the employer to determine a person's legal employment status.

Therefore, any attempt to institute employer penalties by themselves would result in an unfair burden on the employer and would undoubtedly work to the detriment of Hispanic citizens and others of foreign origin who might be suspected of being illegal aliens. What must be added to employer penalties is a simple and reliable method of documenting employment eligibility. This is the proper responsibility of the Government, not the employer.

The Social Security Act now requires that all gainfully employed people have a social security number, and it recommends that they show their social security card to their employer. Thus, the basic system for controlling employment eligibility through a single document is already established. Still, there are some problems which must be addressed before the social security card could become an indicator of employment status. In spite of the 1972 social security amendments, which require proof of citizenship or legal entry before a person can be issued a social security number, the procedure for obtaining a number and card is still too lax. An alien can secure a valid card from the Social Security Administration by presenting an easily counterfeited and readily available work permit (the so-called green card) or Immigration and Naturalization Service Document I–151 or entry-departure certificate (I–94). Any person 17 years of age or under (or anyone who passes for that age) is not required to show any identification whatsoever to obtain a social security card. In addition, the present blue and white card is too easy to reproduce.

My bill would require HEW to issue counterfeit-proof social security cards. Proof of citizenship, or of legal entry confirmed by the Immigration and Naturalization Service, would be needed before a card could be issued. An employer would be required to check a new employee's social security card and would be permitted to ask for additional identification to assure that the bearer of the card is the valid holder. However, the major responsibility for assuring the legal employability of a person would be on the Government, not the employer.

The legislation provides penalties for employers who both fail to check a new employee's social security card and "knowingly" employ illegal aliens. Penalties are also provided for counterfeiting or fraudulently altering cards and for "knowingly" using such cards (surprisingly, there is presently no such legal ban). Expert witnesses have testified that enforcement of these provisions would be relatively easy and inexpensive since most chronic employers of illegal aliens are generally well known.

With the careful issuing of social security cards, we could have a simple and efficient means for controlling the employment of illegal aliens. Without the attraction of employment in the United States, the incentive for illegal immigration would be greatly reduced.

I believe this legislation is a sensible approach to the illegal alien problem. Apparently many others would agree, for a recent Roper poll indicated that fully 80 percent of those surveyed favor the use of a "forge-proof" social security card, which would be shown only to an employer, as a means of controlling illegal immigration.

FIRE BRIGADE SOCIETY

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. HOWARD. Mr. Speaker, today I would like to bring to the attention of my colleagues an event which brought distinction to a group of people in Howell, N.J., and is deserving of nationwide recognition.

On September 4, 1977, the Freewood Acres Fire Company No. 1, based in Howell, N.J., was installed as a corporate member in the Fire Brigade Society.

Since the society's creation in 1963 in England, the prized honor of corporate membership was extended solely to fire brigades in Great Britain.

Thus, the Freewood Acres Fire Company No. 1 has become the only fire department in the world outside of Great Britain to receive a corporate membership in the Fire Brigade Society.

This completely volunteer fire company typifies the spirit of community concern in America.

Since its incorporation in 1951, the Freewood Acres Fire Company No. 1 has been providing Howell with dedicated public service while protecting both life and property from destruction.

I greatly admire the efforts and the achievements of the Freewood Acres Fire Company No. 1, as, I am sure, do citizens of the United States of America.

MR. CALIFANO'S ILL-ADVISED CAMPAIGN AGAINST SMOKING

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. BRECKINRIDGE. Mr. Speaker, I arise at this time to express my deep concern and displeasure over the so-called public education campaign recently initiated by the Secretary of Health, Education, and Welfare Califano against the practice of cigarette smoking in this country. This campaign, which attacks the personal freedom of the millions of cigarette smokers and threatens the very livelihood of over 625,000 tobacco farm families carries more the connotation of a personal vendetta than the mild, benevolent-sounding tone the Secretary's words suggest. I think we need to take a careful look at what the Secretary is trying to force upon us.

As the representative of a great tobacco-producing State, I am, of course, concerned about the economic future, and perhaps the survival, of tens of thousands of my constituents, but I am even more concerned about the threat to the great American constitutional tradition of personal freedom that the Secretary's campaign endangers.

Early in this century in this country, we experienced a situation not unlike the one we are experiencing today. Then we had a group of people who were convinced, quite sincerely, that a personal habit quite popular among a large segment of the population was dangerous to the Nation and must be curtailed.

That personal habit was, of course, the consumption of alcoholic beverages and, as we well know, the prohibitionists worked their will on the country and forced the passage of a constitutional amendment which put the Federal Government in the untenable position of having to police the personal habits of its citizens.

Prohibition was, of course, a dismal failure and ushered in an era of lawlessness unprecedented in our history and a subculture of organized crime that is still present in our society. Otherwise law-abiding persons partook of illicit alcohol just for the glamorous thrill of defying the law. Prohibition was, in many ways, a sad joke, honored more in its breach than in its enforcement.

I am not, of course, approving alcoholism or drunkenness in any way. All I am saying is that our Government has no more right to tell us what we can or cannot drink than it has the right to tell us what we can or cannot smoke. I respect the right of any citizen to choose not to drink or not to smoke but, at the same time, I deplore his desire to tell others that they cannot do these things, and to enlist the power of the Federal Government in such a campaign.

The Washington Star, in a recent editorial, characterized the Secretary's antismoking program as "* * * illustrating further the tilted concept of the feds as parents and the citizenry as recalcitrant and contrary children, to be coerced if they will not heed. This corrosive thesis," as the Star describes it, "has become as ubiquitous within federaldom as it is dubious."

Someone else with no suggestion of self-interest in this matter has expressed similar misgivings about Mr. Califano's crusade. Carll Tucker, the president of Saturday Review magazine, a professed lifelong nonsmoker, wonders in a recent issue:

> . . . whether it is government's role to help citizens do something that they are not psychologically capable of doing themselves.

That is, quit smoking. By this logic, he suggests:

> . . . government should limit the calories allowed to each American per day.

His complete comments appear at the conclusion of my remarks.

Even the President's own special assistant for health issues has said that the Government should stop trying to get people to quit smoking cigarettes. It was stressed that Dr. Peter Bourne was speaking for himself and not for the administration; even so, his criticism last November of Secretary Califano's preliminary announcement of a "hard-hitting public education campaign" is significant.

The question we need to ask is why no other industry has been treated so harshly. As the North Carolina congressional delegation noted in a letter to the President last October, the tobacco industry already operates "* * * under the constraints which its critics have demanded in terms of warning labels on packages and in advertising, of being banned from broadcast advertising, and being taxed at the Federal, State, and local levels. Moreover, the letter goes on to say, this industry "* * * has in the past two decades cut the tar content of cigarettes by more than half."

The tobacco industry seems, by its actions, willing to meet its critics more than half way while, at the same time, trying to meet the real and legitimate needs and demands of its customers. The Government's role in this area is to restrain itself from becoming involved any more than it already is. The public has a right to smoke and I am certain the Congress will protect that right. There are plenty of things the Department of Health, Education, and Welfare can do. legitimately, to protect the Nation's health and I would support that Mr. Califano get his priorities and legal rights and responsibilities in order.

I should like, Mr. Speaker, to insert Carll Tucker's complete remarks from the January 7, 1978, Saturday Review, entitled, "Smoke Signals":

SMOKE SIGNALS

In recent weeks, the campaign against smoking has assumed new urgency and scored some impressive victories. A national No-Smoking Day evoked articles and editorials against the evil weed. The Civil Aeronautics Board has banned all cigar and pipe smoking on commercial airlines and has taken steps that could lead to the prohibition of cigarette smoking as well. Regulations against smoking in the Pentagon's dining halls and classrooms have been sent to the Army, Air Force, and Navy "for responses on how to implement them."

Now I am not, nor have I ever been, a smoker. At the age of eight, I stole one of my father's cigars to share experimentally with a friend; fearful that our crime was about to be discovered by an approaching adult, I swallowed the lit butt. In college, unwilling to be considered uncool by classmates, I inhaled marijuana, but never with enjoyment. (Even in that era of "do your own thing," there were pressures to conform.) Shortly after graduation, I adopted a pipe in the belief that the first step toward being a writer was looking like one; but I soon abandoned it after finding that most of my reading time was spent trying to keep my tobacco on fire.

I am neither allergic to cigarette smoke nor fond of it. If at a lunch counter a woman asks in the middle of my meal would I mind if she smokes, I consider saying yes. I sit gratefully in the nonsmoking section of airplanes and movie houses.

Nonetheless, I am troubled by the attitude and success of the campaigners against smoking. It is one thing to warn consumers that cigarette smoking may be hazardous to their health; living in a world of often invisible dangers, we should be grateful for the caution. It is even arguable that given the demonstrated ability of television and radio to reach below the intelligence and to sow subliminal "needs," cigarette advertising should be banished from the airwaves. But having alerted the consumer to the danger and having protected him from subliminal seduction, what arguments can be used to justify what the antismoking militants see as their eventual goal: the outlawing of cigarettes?

A recent editorial in The New York Times cited some reasons why the Carter administration ought not to be "resigned to a national addiction that will kill 300,000 Americans this year." Cost was one reason: According to Surgeon General Julius Richmond, ailments caused by smoking will cost the nation $20 billion this year. The will of the American smoker was another: Eight out of tens smokers would like to quit, said Richmond, adding, "We must help them, and they want us to."

Never having smoked, I do not comprehend the force or the invincibility of an addiction to tobacco, but I do know a number of less-than-Herculean Americans who have, albeit with some discomfort, managed to shake their addiction. I wonder what it is about the purported 80 percent of smokers who want to quit that prevents them from doing so. I also wonder whether the cost of treating a sickness should be used as an argument for removing the freedom to incur the sickness and whether it is government's role to help citizens do something that they are not psychologically capable of doing themselves. (By this logic, government should limit the calories allowed to each American per day.)

The advantage of a democracy over various more or less organized methods of government is that it allows a citizen the maximum freedom to do as he pleases up to the point at which his freedom infringes on someone else's. As the world becomes more complex and people become more interdependent, our freedoms necessarily become more restricted. Speed limits were not needed before automobile and highway manufacturers created the opportunities for serious accidents. It was not necessary to prohibit homeowners from burning leaves until everyone's air became smoky.

What we must guard against, though, is using the excuse of interdependence to enact restrictions that, however desirable, are unnecessary. I suspect that the creation of nonsmoking sections in public places answers the complaints of most nonsmokers. To ban cigarettes altogether would be to do something that, however healthful, is not strictly necessary and that would limit the freedom of those who like to smoke. Government should resist the temptation to treat its citizens like children—making us wear seat belts that buzz if we don't fasten them, forbidding us marijuana or Laetrile or tobacco simply because they haven't been proved as safe as mother's milk (which nowadays isn't safe, either). Advise us, yes; restrict us when we threaten the essential freedoms of others. But do not attempt to protect us from all the dangers of existence.

There are two sorts of freedom: freedom *from* and freedom *to*. Given the choice, democracy should favor the latter. Whether or not one likes smoking, the freedom to smoke is a more important right than freedom from smoking or its consequences. When usually thoughtful opinion shapers like *The New York Times* start advocating laws not because they are necessary for the preservation of our freedom but because they would be good for us, it is time to worry.—Carll Tucker.

OSHA POWER MUST BE CHECKED

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. ASHBROOK. Mr. Speaker, a very important case is now before the U.S. Supreme Court. Known as the Barlow case, it will be determined whether OSHA inspectors have the right to conduct warrantless searches.

OSHA currently exercises broad and far-reaching powers. One of the most disturbing of these powers is the claimed right of OSHA inspectors to make unannounced inspections of private commercial property without a warrant. This is a disturbing precedent.

I strongly believe that OSHA should be required to work through the normal warrant procedure. Inspectors should not be granted the extraordinary right to intrude into someone's premises without first obtaining a warrant.

The Government, of course, is arguing that such a requirement would impair its powers. This is true—and necesary. As nationally syndicated columnist, James J. Kilpatrick, has stated:

The government's powers, to be sure, would be impaired—but the powers are entirely too sweeping, and they ought to be impaired.

In any given year, 90-odd percent of OSHA's cited violations are deemed to be "nonserious" violations. These trivial, nitpicking, generally asinine incidents result in fines of perhaps $25—just large enough to be annoying, not large enough to take to court. If the government were prevented from making these bureaucratic fishing expeditions, nothing of real importance would be lost.

It is a time to put a check on OSHA's power. Inspections without a warrant should be prohibited.

Following is the full text of Mr. Kilpatrick's remarks:

A NECESSARY IMPAIRMENT

(By James J. Kilpatrick)

The Supreme Court last week heard argument in one of the most important cases of this term. It is known as the Barlow's case, and while the results will be of primary interest to businessmen, the principles ought to concern us all. The case touches the very heart of a free society.

On the surface, the matter involves only the power of the Occupational Safety and Health Administration to make unannounced inspections, without first obtaining a warrant. More broadly, the Court's decision will affect dozens of governmental agencies—state and local, as well as federal agencies—that are involved in regulatory activities.

The case arose in Idaho on Sept. 11, 1975, when an OSHA inspector, Daniel T. Sanger, presented himself at the shop of Barlow's Inc., a heating and plumbing contractor. Sanger demanded admittance in the name of the law. Ferrol G. "Bill" Barlow, the proprietor, refused to let him in. Barlow told the inspector to go get a warrant. The inspector and his superiors refused the invitation. Barlow beat them to the gun by plunging into court himself, with a petition for an injunction.

On Dec. 30, 1976, a three-judge federal court unanimously found in Barlow's favor. Judges M. Oliver Koelsch, J. Blaine Anderson and Ray McNichols ruled that the Fourth Amendment to the Constitution effectively prohibits the government from intruding upon private commercial property without observing the warrant rule. From their judgment the Labor Department appealed to the Supreme Court. There the matter rests.

In its argument last week, the government contended that its ability to enforce health and safety regulations will be seriously impaired if its inspectors are compelled to get warrants before they gain access to industrial premises. The government's powers, to be sure, would be impaired—but the powers are entirely too sweeping, and they ought to be impaired.

In any given year, 90-odd percent of OSHA's cited violations are deemed to be "nonserious" violations. These trivial, nitpicking, generally asinine incidents result in fines of perhaps $25—just large enough to be annoying, not large enough to take to court. If the government were prevented from making these bureaucratic fishing expeditions, nothing of real importance would be lost.

What about the truly serious health and safety hazards? In these areas, OSHA's inspectors should have no difficulty whatever in doing what other law enforcement officers do all the time: They have only to go before a federal judge, producing evidence under oath that probable cause exists to believe a violation is occurring, and the search warrant issues. If the inspectors do not have probable cause, they have no business gumshoeing around.

The Supreme Court cannot decide the Barlow's case in OSHA's favor without overturning two solid precedents of recent vintage. These are the Camara and See cases, decided in June 1967 by identical 6–3 judgments. Camara involved a housing inspection in San Francisco; the See case involved a warrantless inspection of a warehouse in Seattle.

Speaking through Mr. Justice White, the majority held flatly "that warrants are a necessary and tolerable limitation upon the right to enter upon and inspect commercial premises." A decision to enter and inspect cannot be "the product of the unreviewed discretion of the enforcement officer in the field." As a general proposition, government inspectors must work "within the framework of a warrant procedure."

The rule does not apply in a few special areas of particular public concern—the manufacture of arms, for example, or the warehousing of liquor—but the teaching of Camara and See clearly covers a plumbing and heating contractor in Pocatello, Idaho. It has cost Bill Barlow more than $100,000 to fight this case all the way to the high court, but if his determination results in a victory for the little fellow against the intrusions of Big Brother, Americans everywhere will be in his debt.

THE MYTH OF HUMAN RIGHTS IN NORTHERN IRELAND

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. BIAGGI. Mr. Speaker, this Nation has become the professed champion of human rights throughout the world. The administration has modeled our foreign policy on the principles of morality and respect for human dignity. Yet, our Government has consistently and painstakingly overlooked one area of the world where human rights' violations of the most sinister nature imaginable occur on an all too regular basis. The area is Northern Ireland.

The charges that Britain continues to violate the basic civil and human rights of citizens in Ireland are by no means unfounded. Early last year, The European Commission on Human Rights announced its verdict, finding Britain guilty of violating the rights of political prisoners under her control—charges to which Britain admitted her guilt. Most recently, The European Court of Human Rights condemned Britain for inhuman practices related to the interrogation and incarceration of political prisoners.

Yet, the breadth of her violations goes far deeper into Ireland. Enactment of such intolerable measures as the Special Powers Act, has sanctioned, among other acts, the widespread roundup of innocent men, women, and children, arrests without charges, trials without due process, and internment for lengthy periods of time under abhorrent conditions.

I have long asserted that full congressional hearings on Ireland must be convened. The human rights questions must be addressed. Support for hearings is firm in this Congress. One of the major objectives of the Ad Hoc Congressional Committee for Irish Affairs which is 87 members strong, is to work to bring about hearings on Ireland.

It is widely held that there can be no hope for peace in Ireland unless this practice of depriving citizens of their basic, human rights is halted. The administration has an obligation to speak out against all nations which engage in human rights' violations, whether they be friend or foe.

The Ad Hoc Congressional Committee for Irish Affairs will continue to monitor the activities of Britain concerning human rights. One of our Members, Hon. JOSHUA EILBERG, was instrumental in gaining the release of Pearse Kerr from an Irish prison. This 17-year-old Philadelphian was arrested without charge and tortured throughout his captivity. This shocking and brazen disregard for human rights by Britain did not go unnoticed by our Members and we will certainly continue to be attentive to any similar incidents which may occur in the future.

In addition, the committee was successful in gaining assurances that an American Army captain, James Montano, would not be accompanying a British regiment when it rotated for duty in Northern Ireland, as had been indicated by published reports. Following my demand for an explanation from the Department of the Army for the reasons why a U.S. military officer would be involved in such an action, I was assured that the story was untrue, and that the captain in question would be "reassigned."

During the weeks ahead, I will be submitting various articles documenting the extent of human rights' violations in Ireland. I do this to arouse the conscience of all my colleagues and the administration, with the fervent hope that actions of a constructive nature will be undertaken. Below, is a most important article written by Pete Hamill, entitled "A Yank in Belfast—Where Human Rights Don't Apply."

The article follows:

A YANK IN BELFAST—WHERE HUMAN RIGHTS DON'T APPLY

They assembled peacefully that day, five years ago now, in the city of Derry in the North of Ireland. The weather was cold and rainy; it always seems to be cold and rainy in the hard cities of the Irish North. But they showed up in their wrinkled woolen suits and cheap shoes, smoking Woodbines, their faces red from the coal stoves, to stand in protest against the actions of the British Army. None of them had guns.

And then the First Battalion of the Parachute Regiment of the British Army moved in on the meeting. They moved in shooting. They shot men and women and kids. When I got there from London, a day later, the blood had been washed away by the Irish rain, but there were 13 dead, and hundreds

wounded, and Bloody Sunday had become a part of Ireland's bitter history.

In the wake of the massacre, the hated Paras were removed from Ireland. Now comes the news, from William Tuohy of the Los Angeles Times, that the Paras are on their way back to Ireland. And A Company of the First Battalion might be under the command of an American. That's right. An American. According to Tuohy, he is Capt. James Montano, 31, of Montebello, Calif., "a U.S. officer serving in an exchange capacity with the British.' '

NO HUMAN RIGHTS FOR JACK DUDDY

If you have been to Northern Ireland, if you have spent time in the Bogside or Andersonstown or the Ardoyne, if you have seen the British Army in action, if you have spoken with the Irishmen who have been tortured by the Special Branch, the Army, or the Royal Ulster Constabulary, this is like reading that an American officer will be serving in an exchange capacity with the SS in Poland.

The greatest human rights campaign so loudly proclaimed by Jimmy Carter would become a total, instead of partial, travesty if this happens. But then human rights never seem to matter much when the subject is Ireland. They certainly didn't matter to Jack Duddy, on Jan. 30, 1972. Jack Duddy, who was 17, was shot to death that day. So was Kevin McElhinney, and Hugh Gilmour, and Michael Kelly, and Gerald Donaghey, and John Young; each one of them was 17, when the Paras shot them dead on Bloody Sunday. William Nash was 19. Michael McDaid was 21. William McKinney was 27. James Wray was 23. Patrick Doherty was 30. Gerald McKinney was 51. Bernard McGuigan was 41. Human Rights is mere rhetoric if a bullet blows your life away.

The human rights campaign didn't apply to Pearse Kerr, either. Kerr is an American citizen, born in Philadelphia, who had been living in Belfast for the last few years with his father. He was 17 when the Special Branch arrived at his home at 4:30 in the morning, last Aug. 18. He was arrested under Section 10 of the emergency powers act, and despite possession of an American passport, he was taken to Castlereagh Interrogation Center. Let Kerr tell what happened:

"After about two hours in a cell. I was taken across a kind of courtyard to a group of prefabricated huts. They politely call these 'interview rooms,' but there's nothing polite about what goes on in them . . .

'YOU MUST BE JOKING'

"Well, the first thing one of the three detectives said was, 'You're gonna sign a statement.' I said, 'I'm not gonna sign any statement. I want a solicitor. Can't I see a lawyer?' This hard-looking one said, 'You must be joking. You'll be asking to see a doctor if you don't sign.'

"They stalled for about 10 minutes, thinking, I guess, that it would work on me psychologically. Then the one asked me again if I was gonna sign. When I said no, he clouted me across the face and I flew across the room and hit one of the walls and slid down."

Kerr, a thin young man with a choirboy face, said that he wasn't allowed to read the statement the cops wanted him to sign. When he got up off the floor, "two of them grabbed me around the chest from the back and the other one grabbed me by the elbow and held my arm upright and started bending and twisting my wrist. He'd work on one wrist and then the other. I heard something crack in my left wrist and I knew it was broken."

'MY BREATH WOULD STOP'

Kerr was eventually taken into a separate room to see the U.S. vice consul, Wayne Allen Roy. A Special Branch man was with him during the interview, so Kerr was afraid to protest to Roy. His broken wrist was handcuffed behind his back. When Roy left, the interrogation resumed.

"One Special Branch man propped himself up against the wall behind me, with his arms clamped around my chest, Kerr told Jack McKinney of the Philadelphia Daily News, who was later instrumental in obtaining Kerr's release. "Another one stood directly in front of me and placed his fingers and thumbs up under each side of my jaws. He would push his fingers up until my breath would stop completely.

"I could feel myself losing consciousness and my vision got so burred I thought it was because the pressure was making my eyes pop out. Then I'd come around a bit after they'd stopped. So they would go at it again. During one of these strangling attacks, a Special Branch man, a different one, came in and said. 'You may as well give up on this one. We're going to have to hang him.' "

Eventually, the gentlemen from the Special Branch broke him.

"I was losing contact with what was going on," he remembered later. "I thought I was going to die. I fell down on the table again and was hanging with my elbows in the corner of the wall with one hand on the table. While I was in that state, they shoved the statement in front of me again. So I just signed it, because I thought if I didn't, I would have been a dead man."

Kerr was presumably innocent until proved guilty, but these brave gunsels didn't care for even the basic premises of English common law. One thing is certain: If he hadn't been an American citizen, and if McKinney and other Philadelphia reporters had not started writing about him, he'd still be rotting in Crumlin Road Jail or the Long Kesh concentration camp.

But Kerr was comparatively lucky. He could have suffered the fate of an 18-year-old named Colm McNutt. This boy lived in that section of Derry called the Creggan, and he was a republican. That is to say, he supported the objectives of the IRA. There was no evidence that he was an active member, but he made no secret of his sympathies; he wanted the British to leave Ireland, and he wanted a single 32-county republic. To some of the RUC, this is the equivalent of a crime.

All through the fall, McNutt was harassed by Special Branch agents, and British soldiers. According to his closest friends, the worst incident took place one night in early December when he was picked up by British soldiers, taken out to a lonely road, and beaten. A gun was placed in his mouth. and the trigger pulled. The gun was not loaded. One plainclothesman said to him, in mid-December: "You will not see Christmas."

SHOT 3 TIMES IN STOMACH

On Dec. 19, at 2:45 p.m., McNutt was walking across a parking lot at the bottom of William Street in Derry, when a man got out of a red Hillman Hunter, license plate CJ16826 and shot McNutt three times in the stomach. He went back to the car, witnesses said, drove up William Street, and kept going until he entered the RUC barracks at Rosemont.

McNutt died at Altnagevlin hospital, and despite the accounts of eyewitnesses, nobody has been arrested for his murder. But then nobody was arrested after Bloody Sunday either, and there were 13 corpses on the ground when the shooting stopped. Ireland is an eternal sadness, in many ways. But the American government should not be supporting the actions of the occupiers. We have already partially excused the British from their Nato duties, which is actually a way of subsidizing the occupation. If our government now allows an American officer to walk the streets of Belfast or Derry at the head of an infamous column, then Carter should tow the human rights campaign out to sea, and sink it without further notice.

TRIBUTE TO HYMAN H. HAVES

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. WAXMAN. Mr. Speaker, Hyman H. Haves is to be honored by the Anti-Defamation League of B'nai B'rith at a banquet called "An Evening of Happiness on February 19, 1978. It would be difficult for this national organization to find a more fitting recipient for recognition. Hyman Haves is now the west coast director of the ADL Appeal for the Anti-Defamation League of B'nai B'rith. Prior to his returning to ADL in 1969, he served as executive director of the Sixth Region of the Jewish War Veterans of the U.S.A. He joined the Anti-Defamation League in 1948 as its program and community consultant, and between 1951 and 1956 served as its Connecticut director. Hyman Haves began his career in social work in 1938 as the first New York City director of AZA, the B'nai B'rith Youth Organization. He also served the Los Angeles Jewish Federation Council as a field director for the United Jewish Welfare Fund and executive director for the San Gabriel Valley Jewish Community Center and the Bay Cities Jewish Community Council in Santa Monica.

In 1942 he enlisted in the Army Air Force and served with distinction as a navigator in the 380th Bomb Group, 5th Air Force in the South Pacific. In addition, Hy was special service information and education officer for his unit, and acting Jewish chaplain for the base. Serving on the American Speakers Bureau, Hy has lectured on human relations at Yale University, Connecticut State College, U.C.L.A., San Diego, and Los Angeles State Colleges, Arizona State University, and in 1959 served as assistant director of the human relations workshop at the University of New Mexico.

An audiovisual expert, while in New Haven, Hy produced and moderated the weekly TV show "This Is Judaism," which is still on the air at this time. His presentation of the "Rumor Clinic" as an educational tool for better human understanding won him the National Conference of Christians and Jews Mass Media TV Award. His manual on the "Rumor Clinic" has been widely used.

Born in New York on February 15, 1916, Hy Haves is now married to the former Ethel Linn. They have four children, Jerri and Laurie Linn and Kaeera Mowgin and Randy Haves. Hy Haves' life of service to so many communities throughout the country, his dedication and significant contributions to better understanding in human relationships entitle him to our admiration and congratulations on the occasion of his being honored by B'nai B'rith's Anti-Defamation League.

SUNSET FOR THE IMF AND THE WORLD BANK

HON. DAWSON MATHIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. MATHIS. Mr. Speaker, at the same time the United States is reeling from a $30 billion trade deficit in 1977, Congress is preparing to vote on legislation to increase the U.S. contribution to the International Monetary Fund by $1.7 billion to assist other bankrupt countries finance their own massive trade and budget deficits. The United States now contributes to about 100 different international organizations, many of which, like the IMF and the World Bank, serve as sieves for billions of tax dollars. It was only 4 months ago that Congress authorized $5 billion for the World Bank and other international lending institutions. It is widely known that these funds are being abused. World Bank and IMF officials enjoy salaries and expense accounts far in excess of those of any U.S. official except the President. While the United States is experiencing disastrously low farm income, the World Bank is busy subsidizing the American farmer's competition overseas. Contrary to popular belief, such assistance does not go to the malnourished so that they can adequately feed themselves, but in the case of palm oil production, to large plantations producing vegetable oil for export to the United States and Europe where there is no edible oil shortage. American farmers can produce more edible oils than this country can consume, but the United States continues to import large amounts of palm oil that was produced with assistance of U.S. tax dollars.

The Bank argues that by putting more countries in the farm export business, foreign exchange is earned to buy more U.S. agricultural products, thereby benefiting the farmer and the entire U.S. economy. No evidence has been presented to show this theory works in practice. The Bank's argument is based on an economic fallacy that the United States can become wealthier by giving money away.

It is doubtful whether the IMF will ever be repaid many of the loans it has made to certain Third World countries. One of the wealthier countries that has received massive assistance has not even repaid the United States a $9 billion debt now 60 years old, and without denying it is owed, has disavowed any intention of repaying it.

The Treasury Department has concluded:

> Continued economic pressures on the developing countries, especially the strains stemming from elevated oil prices combined with a worldwide contraction of demand for many goods produced by the LDC's has intensified international concern as to the ability of some of these countries to service rapidly increasing amounts of external debt.

It should go without saying that the U.S. taxpayer, as the Third World's largest creditor, will pick up the tab for the defaults which are bound to come. This raises a serious question as to whether the Congress should vote additional contribution to the IMF in a vain attempt to bail out these countries.

The IMF and its companion organization, the International Bank for Reconstruction and Development, the so-called World Bank, originated with the Bretton Woods, N.H., Conference in 1944, which was dominated by John Maynard Keynes and Assistant Treasury Secretary Harry D. White. Despite a lack of public comprehension of the implications of the agreements reached at Breton Woods, the Congress voted U.S. membership in these organizations in 1945 in the Bretton Woods Agreements Act. These institutions have little respect for their chief benefactor, the U.S. taxpayer, and are seldom heard from except when more money is needed. As a matter of policy, the World Bank never consults Congress on what directions or policies the Bank should take. This, it is believed, would "politicize" the Bank. Such a policy does not, however, preclude political armtwisting to win billions in additional U.S. contributions.

Many believe the IMF has played a useful role over the years in stabilizing world economic conditions and that the United States has benefited. However, I am skeptical as to whether a group of insolvent nations can solve their monetary problems by lending money to each other. Switzerland, which has never participated in the IMF, enjoys a higher standard of living than the United States and an almost zero rate of unemployment and inflation. Perhaps the United States should follow the Swiss example. In any event, the United States should engage in a thorough reexamination of its role on the IMF, the World Bank, and the myriad of other international organizations. To assist in bringing about such a periodic review, I think U.S. membershp in such bodies should be subject to sunset provisions similar to the sunset provisions Congress has attached to other pieces of legislation. Thus would not mean an end to U.S. participation in world organizations, which I do not advocate, but would simply assure the American taxpayer that Congress was carefully monitoring the use of U.S. tax dollars by independent world bodies.

TRENDS IN LABOR

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. RANGEL. Mr. Speaker, the article which follows appeared in the December 19, 1977, edition of the U.S. News & World Report about my colleague from Tennessee, HAROLD FORD. I want to share it with you:

TRENDS IN LABOR

ATTACK ON NITPICKING

The Occupational Safety and Health Administration is eliminating more than 1,100 job-safety rules that have "no direct or immediate effect" on worker safety or health. Among the first to go will be 10 of the 12 pages of rules relating to portable wooden ladders, standards relating to the shape of toilet seats, and rules on the exact number of inches that fire extinguishers must be mounted above floor level. Labor Secretary Marshall said the drive against nitpicking regulations will eliminate more than 10 percent of OSHA's rule book, ending "some unnecessary harassment of business."

UNION LABEL

Playing host to a convention of editors of labor-union newspapers, officials of the Los Angeles Hilton were startled to discover that most of their tablecloths were made by J. P. Stevens & Company, a nonunion firm that the AFL-CIO is boycotting. A luncheon held in early December was delayed about 45 minutes while hotel employees scurried to borrow tablecloths from other sources.

RETALIATION

The AFL-CIO's building-trades department will seek the defeat next year of "15 to 20" Democrats in the House of Representatives who voted against a bill that extends the picketing powers of construction unions after agreeing to vote for the bill. The measure was defeated in the House last year by a 13-vote margin. The "hit list" includes Joseph S. Ammerman, Robert W. Edgar and Allen E. Ertel, all of Pennsylvania and Marilyn Lloyd and Harold E. Ford, both of Tennessee.

MOVIE MADNESS

Actors in Hollywood are up in arms over a recent proposal by California Governor Jerry Brown that would prevent many of them from receiving unemployment compensation. Because many actors work only sporadically, they may exist much of the year on jobless benefits. Under the Governor's proposal, they would have to work at least 10 weeks each year in order to qualify for unemployment payments.

NEW JOB RULES

People seeking U.S. Government jobs will once more be required to answer questions about sex, race and ethnic background in their applications. The Federal Government had dropped these reqiurements at the height of the civil rights movement of the '60s.

FACING EUROCOMMUNISM

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following editorial by Messrs. Evans and Novak concerning the Carter administration's new attitude toward the Communist Party in Italy:

FACING EUROCOMMUNISM

(By Rowland Evans and Robert Novak)

President Carter's new warning against dangers of "Eurocommunism" in Italy reflects a confrontation with reality after one year in office—by the President in general and by Ambassador Richard Gardner in particular.

When plucked from his chair as professor of international law at Columbia University to be ambassador in Rome, Gardner joined other new Carter officials in viewing Henry Kissinger's hard line against Western European Communist parties as a cold-war throwback. Just before the first anniversary of the Carter inauguration, Gardner helped guide policy back to the Kissinger line: Communist power-sharing in NATO member nations must be resisted with maximum political pressure.

This shift is only the latest signal that Carter is reverting to more conventional

anti-Soviet policies, following the confusing rhetoric early in his administration. No longer is the Soviet-Cuban intervention in Angola rationalized as "stabilizing." A strong U.S. reaction to the Soviet role in Ethiopia is now given top priority.

The rhetorical shift on Eurocommunism, proclaimed in a Jan. 12 State Department statement, typifies the administration's new realism about military and political vacuums. Carter is now aware they will quickly be filled by Soviet penetrations if the United States fails to make the case for the Western democracies publicly and forcefully.

So the Jan. 12 statement was both public and forceful: "We do not believe that the Communists share" the "profound democratic values and interests" of Western political systems. The United States "would like to see Communist influence in any Western European country reduced."

Those assertions and the warning that recent Italian political developments "have increased the level of our concern" are far more pointed than last April's policy statement, which avoided direct attack on the Communists. The still-neophyte Ambassador Gardner helped draft the April 1977 statement; the more seasoned Ambassador Gardner was directly responsible for the January 1978 statement.

The administration's claim that the new policy is a restatement of the old is belied both in the words themselves and in Gardner's profound conviction—the product of one year's experience in Rome—that Soviet influence is pervasive at top levels of the Italian Communist Party. He is also convinced that the Soviet Union, helped by the Czechoslovak and East German Communist parties, is the major source of the terrorism that has brought Italy close to anarchy.

Gardner's quick flight to Washington two weeks ago to argue for the new hard-line policy was intended as a warning to the old guard of the Christian Democratic Party not to yield to Communist Party pressure without an all-out fight. Strong factions in the old guard, which has ruled Italy for 30 years, would accept alliance with the Communists to cling to power in a coalition government.

Younger, more progressive Christian Democrats seek another course: a top-to-bottom shakeup of their stratified party and its stale, rigid policies. That is also what Gardner wants, on the basis of his political education in Rome.

To cite one example, a luncheon was arranged for a Nov. 22 visit to Rome by Rep. Peter Rodino (D-N.J.) and Health, Education and Welfare Secretary Joseph Califano, with Gardner invited. The hosts were Christian Democratic members of Parliament. Shortly before the luncheon the U.S. Embassy discovered that two Communists would also attend the luncheon.

That smacked of political sabotage, alarming the embassy and increasing Gardner's concern that some Christian Democrats were intentionally promoting a coalition with the Communists. Without any publicity, the luncheon was canceled.

Such events stage-managed by Christian Democratic politicians are extremely useful to the Communists. Played up in the left-wing press, they are supposed to "signal" subtle changes in U.S. policy by showing Gardner consorting with Communists.

The result has been Gardner's insistence and Carter's agreement on eliminating the ambiguities of the April statement. Such realism is both overdue and welcome. Even if it fails to arrest Italy's political decay and the shattering effect on the Western alliance of Communists power-sharing in Rome, it reveals an awareness of reality by the administration sadly lacking when Jimmy Carter took office a year ago.

HUMAN RIGHTS IN CHINA

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. DERWINSKI. Mr. Speaker, I want to take this occasion to bring to the attention of the Members a very fine article written recently by the columnist, Victor Zorza. Mr. Zorza's is the most recent in a series of articles which have appeared in recent months on the subject of human rights in the People's Republic of China. This is a subject which has been long neglected, and which I am pleased to see is at last receiving some attention. Our Government has been extraordinarily free in the last year or so in its criticism of a number of essentially friendly governments on human rights grounds. But does it not seem strange that we seldom hear a word about the human rights situation in mainland China? We are often told almost one-fourth of mankind resides there. This fact is used as a justification by many for the sacrifice of Taiwan and the full recognition of Peking. But do those persons ever stop to ask what is the human condition in China today? What kinds of rights and freedoms do those nearly 1 billion people enjoy? On this point, the friends of the PRC are strangely silent.

This is the kind of double standard which we, as aspirants to the moral leadership of the world, can ill-afford. The administration today seems more than willing to attack any government on human rights grounds, so long as it is politically expedient to do so. Morality, it appears, is the pawn of politics. For this reason it is gratifying to at last see, if only in the press, some discussion of human rights conditions in the PRC.

The totalitarian nature of the PRC is scarcely disguised, if only we are willing to see it. Mr. Zorza's column admirably condenses the facts and issues involved. Though brief, it is to the point. I, therefore, recommend it to the attention of the Members:

QUASHING (WITH IMPUNITY) HUMAN RIGHTS IN CHINA

(By Victor Zorza)

There is something like a conspiracy of silence in the West about the absence of human rights in China. One reason we don't seem to care about human rights in China is that few of us know it is an issue. Peking is far better than Moscow at hiding the facts.

Most of the Western journalists who go to China have nothing to say on the problem because they report only what they see—and they are shown nothing detrimental to the regime. Most Western governments say nothing about human rights in China because they don't want to upset the Peking regime. China scholars from the West who are invited by Peking do know about the suppression of human rights, but most of them say nothing about it. They want to be invited again.

There are those who say that the Chinese people are naturally submissive, restrained, disciplined. The peasant rebellions that are such a marked feature of Chinese history are enough to refute the argument that the Chinese are naturally submissive. The Communist revolution is only the most widespread and the most recent of these rebellions. As for their "discipline," when Mao took the lid off during the Cultural Revolution in the '60s, the complaints and resentment at the party's iron rule often boiled over into sheer anarchy.

One of the most notable cases of Chinese "restraint" was reported after the death of Premier Chou En-lai, when the West accepted so readily the story that the people of China were showing no emotion because it was "not in their nature" to do so. In fact, every show of emotion was suppressed because the "Gang of Four," which was then in charge in Peking, regarded Chou as an enemy. Attempts by Peking's citizens to honor Chou's memory were cut short by the police. Only after the "Gang" was overthrown were the people allowed to show their grief—and they took full advantage of the change by mounting spontaneous public demonstrations in the center of Peking.

Given half a chance, the people of China are as keen to enjoy the human freedoms, which President Carter has made into an international issue, as any other people. In 1957, when Mao Tse-tung launched the Hundred Flowers campaign, which briefly allowed some freedom of expression, there was an upsurge of protests against those features of the regime that mark it as a police state. Many intellectuals demanded the freedom to criticize the Communist Party and to form opposition parties and called for free elections.

Just over three years ago a Canton poster that extended over 100 yards of wall space denounced the new ruling class for using its political power to grab a privileged position and to suppress the bulk of the nation. The people, it said, "demand democracy. They demand a socialist legal system. And they demand the revolutionary rights and the human rights that protect the masses of the people."

We will never know how prevalent such demands are, just as we do not know how many people have been executed for political crimes in recent months. All we know is that Western travelers in China have occasionally seen public notices announcing the execution of "criminals" whose transgressions were clearly political—and that Chinese officials have denied that any such executions have taken place. With so much of China closed to Western visitors, there is every reason to assume that the few dozen executions that have become known during the past year were only a small proportion of the total that were carried out.

But it is the less dramatic actions that cause the greatest suffering. Chinese officials still stick to Mao's formula that 5 percent of the people are "reactionaries" and that, as such, they are not entitled even to those rights that are supposed to be enjoyed by the rest. In a nation of 900 million, 5 percent would account for 45 million people. One of the few Western journalists who dared confront a Chinese official with a question about the 5 percent, William Safire of The New York Times, at least managed to extract an embarrassed acknowledgement that perhaps the figures might be somewhat less than the percentages suggest.

But Ross Munro of the Toronto Globe and Mail, the only Peking-based reporter to write a series of articles on human rights in China—and to be expelled for it—estimates that about 30 million Chinese are still classed as "rich peasants" because they owned a few acres of land and had a few hired laborers before the Communists came to power. The "rich peasants" are second-class citizens, receiving between 10 and 20 percent less pay than others doing the same work. The sins of the fathers are visited on the children, whose entry to schools is restricted. Their families are not entitled to the free medical care, such as it is, available to other Chinese. Several million "reactionaries" are still confined in "reform" prisons.

Yet Peking propaganda waxes indignant over the denial of human rights in Russia

and on Taiwan, whose regimes would appear to be much milder, by any standard, than that of China. Official Western criticism of those two regimes is not parallel by any such Western criticism of Communist China. The Carter administration, which would like to be seen as the standard bearer of the movement for human rights, claims that its officials have taken every opportunity to press the leaders of other nations on this issue. But they have put no pressure on the Chinese leaders, beyond asking that Chinese relatives should be allowed to join members of their families in the United States. Nor do other Western governments go further than Washington in this matter.

But the Carter administration has made human rights a worldwide issue. While Western governments may find it politically inconvenient to debate the subject with Peking, the moral issue cannot be shirked. The Chinese are as human as the rest of us. To shut our eyes to the suppression of human rights in China is to display the same timidity as many people in the West displayed when Hitler and Stalin suppressed human rights in their own countries. When moral issues are shirked, they have a way of turning into political issues.

"THE FUTURE OF SPACE"

HON. DALE MILFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. MILFORD. Mr. Speaker, I would like to share with my colleagues a speech made by Mr. Robert Kirk, president of Vought Corp., at a joint luncheon of the Aviation/Space Writers Association and the National Aviation Club here in Washington.

I admire his foresight and agree with him that as we enter the age of space industrialization, it becomes increasingly important to have international protection in space, similar to the "freedom of the seas" philosophy which has worked so well throughout the world for centuries.

I further share Bob's concern for tests of antisatellite weapons, and the possible need for an international treaty to control their use.

Mr. Speaker, I think Bob raises some vital questions concerning the future of space. I place his remarks in the RECORD:

THE FREEDOM OF SPACE—A NEED FOR BROADER INITIATIVES

Long before I joined Vought last year, I was well aware of its reputation as a high technology outfit that enjoyed taking on tough challenges in the aircraft, missiles and space fields.

In its 60 years, the company has turned out a lot of history-making systems: F-4U Corsairs, supersonic F-8 Crusaders, the tri-service XC-142, largest V/STOL transport ever flown, and the Regulus submarine-launched guided missiles, 20 years before cruise missiles came along.

Today, we are producing the A-7 attack airplane and the Lance battlefield missile; a Vought-developed material will protect the Space Shuttle Orbiter during its multiple re-entries at temperatures up to 3,000 degrees, and the Scout launch vehicle is nearing its 100th mission mark.

For the future, our leadership in low volume ramjets paves the way to a new generation of air-launched missiles; we have a very competive V/STOL design incorporating a unique tandem fan propulsion concept, and, under contract to the U.S. Army, are developing one of two competing approaches leading to the production of a major barrage rocket system.

I hope you will accept my invitation to visit us regarding any one or all of these activities.

Now, on to my subject for today . . .

During a press conference last October 27, Secretary of Defense Harold Brown referred to a troubling situation. To use his words—"Russia has an operational capability that could be used against some U.S. satellites."

From accounts I have read, the secretary's statement came in the wake of a Soviet test in which an anti-satellite vehicle was launched on October 26 and maneuvered within lethal range of Russia's Cosmos 959, launched five days earlier and traveling in an orbit of 91 by 526 miles.

A subsequent account told of another killer satellite exploding into about 30 pieces shortly after flying an intercept trajectory against the Cosmos 967 target vehicle on December 21. This time the interceptor was said to have performed a maneuver to a higher 588 by 712 mile orbit and to make its attack pass from this considerably increased altitude.

The fact Russia was testing such devices was not unknown to the media. The news lay in the secretary's acknowledgement that the Soviet intercept system could now be characterized as operational.

In all, the press has reported seven incidents in a new series of tests that began in 1976 after a lull of more than five years.

What prompted the lull? A need to improve the system?

What prompted test resumption? Prestige among nations? Political advantage? A new bargaining chip? The Russians have certainly been quick to exploit their considerable space achievements in the past.

Or are they adding a new dimension to their already awesome military structuring—a tactical capability in space?

Whatever the motive, as an American citizen and one with some knowledge and awe of aerospace potential, I too find this development troubling.

There is too much at stake—for too many nations.

From what started out as a region for cautious exploration, space has grown into a new frontier of vast opportunity and potential power. We are a mere two decades into the space age and already have eclipsed accomplishments that our most imaginative scientists could hardly have anticipated before the next century.

Transmissions via satellites already have revolutionized global communications, extending voice, code, television and data transmissions to all parts of the world.

There are now 99 nations linked by the International Telecommunications Satellite Organization's system alone. Capacity is being increased almost as dramatically as rates are being reduced.

Many nations, including Russia, the Peoples Republic of China, European and Arab countries and others are broadening or establishing their own communications or other satellite systems.

We can view nightly on TV space-derived weather information collected globally and applied routinely to the saving of lives and the reducing of property damage through timely disaster warnings.

Earth resource satellites such as Transat even at this early stage are benefiting agriculture, monitoring water supplies, helping reap harvests from the seas and providing new methods of locating all-important mineral and energy resources.

The Navy's Transit satellites make it possible for our military vessels and some 3,000 research and commercial ships to pinpoint their locations on any ocean in the world. The planned NavStar Global Positioning System could extend, even more precisely, this service to tactical and strategic aircraft, helicopters, ships, other satellites, surface vehicles and ground troops, allowing even an individual with a small receiver to pinpoint his position within a few feet anywhere on the globe.

Opened to commercial airliners, general aviation, pleasure boats and other vehicles, the system could be used for air and other traffic control, greatly enhancing safety for all manner of transport. A test system already has tricked an aircraft with a three-dimensional accuracy of tens-of-feet.

In the military arena, our forces are becoming critically reliant on space for surveillance, reconnaissance, early warning, navigation, meteorology, mapping, communications and command and control functions.

The Russians, of course, have many of the same capabilities as the United States. Plus their space interceptor.

During the Yom Kippur war, Russian satellites got a workout. About half a dozen were launched during and immediately following the conflict. What types of information they provided to Russia or whether these data were shared with any other country, I can only guess, but the Russians' usual satellite pattern was certainly altered.

With our growing dependence on satellites for these various operations it is easy to see what effect their loss, by whatever means, could have.

Another point: While the Russians tend to retain their equipment, remodel and update, it is the nature of the United States and its open society to throw the old away—from cars to weapons systems—as new things come along. Sometimes we do this even before a new system has been proven effective. Thus, unlike Russia, our increasing reliance on satellites leaves us vulnerable, without a backup system should certain satellites be lost.

This point was emphasized by General George S. Brown, chairman of the joint chiefs of staff, in his Fiscal Year '78 Posture Statement, when he said the loss of key space systems could materially influence the outcome of future conflicts, that the resurgence of Soviet anti-satellite test activity indicates the Soviets have undertaken a broad-based program to develop the capability to interfere with the operation of our satellites at all altitudes.

The point is, an anti-satellite system can be used to military advantage at a level far short of an all-out nuclear exchange. As a tactical device in a conventional conflict, it could severely limit our reconnaissance, communications, navigation, weather and command and control functions and provide a decided edge for the side with such a capability.

From what I've read in the open literature, there are three general methods the United States can use to protect satellites against attack: surveillance, making satellites survivable by a number of means, and space defense.

As many of you know, it is in this third area, space defense, that Vought has been most active. Foreseeing a potential need for such a system at the time of Sputnik, the company began investing its own funds in studies and over the years has come up with a variety of concepts. Last September we were awarded a $58.7 million contract for development and test of hardware in support of space defense technology.

Proud as I am of technology we've developed—and I must emphasize that our scope is confined to technology—I cannot amplify on our work for security reasons.

Now let me look to the future for a moment . . .

We are now entering the age of space industrialization, and new impetus will come with the advent of the Shuttle. As we begin to realize the incalculable benefits derived from this frontier, more and more nations are investing in space programs or are reaping benefits from the programs of other nations. Space is becoming big business.

Far fetched? Perhaps. But not in view of the strides made in only a score of years. The question is no longer "if"—only "when?"

Unfortunately, over such rosy scenes there fall some shadows. The Russian antisatellite is one, but in a short time there could be others. I have concentrated on the U.S. and Russia because they are preeminent in the space arena. However, many other nations are rapidly developing space capabilities and have the resources for a major thrust. And it soon may not require huge outlays to perform some missions.

A recent news article tells of a West German company reportedly paying Zaire for the use of a rocket range to test a cut-rate satellite-launching rocket. The firm's president says the objective is a cheap rocket so the Third World and industry can improve communications and exploit resources without depending on the U.S., Russia or European governments. No attack capability, he says. But he adds satellites could be used for spying.

Could some nation or dissident group intentionally create an incident or worse among the major powers? Or could a spacecraft be held hostage? Such prospects seem ridiculous to contemplate, but a very few years ago who would have thought anyone would hijack an airliner? Or threaten one with a ground-to-air missile?

How should our nation respond to an antisatellite threat?

Do nothing? This leads to asymmetry with the aggressor retaining his operational capability while we have none. An imbalance with all the problems inherent in any imbalance—especially when the score is something to nothing.

Respond in kind? This could lead to an arms race in space. We don't want that.

Arrive at a treaty? An agreement protects both sides . . . or does it?

Another question: With so many other nations developing space capabilities and virtually all nations sharing the bounty of space, why not have more signatories to space treaties? Why not a United Nations conference to work out international protection—not unlike the "Freedom of the Seas" philosophy which has worked so well throughout the world for centuries?

Let's look at the treaty possibilities. . . .

Progress has been made by treaty between the U.S. and USSR in the past. The Limited Nuclear Test Ban Treaty of 1963 barred all nuclear tests except those conducted underground. The United Nations Arms in Space Ban Treaty of 1967 banned nuclear weapons from space and using the moon and other celestial bodies as military bases. The SALT I ABM Treaty and Interim Agreement limited the use of anti-ballistic missiles. The Threshold Test Ban Treaty of 1974 limits the yield of underground nuclear weapons tests to 150 kilotons, and the Peaceful Nuclear Explosion Treaty of 1978 limits the size of blasts to 150 kilotons and provides for on-site observers.

I applaud the Defense Department's desire to avoid an anti-satellite race and the administration's intention to seek an agreement banning such weapons in space.

I am strongly in favor of a good, solid space treaty if we can get one. To achieve high quality and assure equity, necessary ingredients to any treaty, I feel we should approach the problem as one does a good contract.

In my experience the elements that separate a good contract from a bad one include: It should contain clear-cut requirements arrived at by both sides, be free of unknowns and ambiguities, encompass an established set of standards, contain valid checkpoints and provide for disclosures as to progress and intentions. Most important—and also most challenging—it should provide for adequate verification.

The treaty issue should be approached in its totality. Space defense is only one element of a freedom-of-space policy.

Since it is a certainty that in the years ahead other nations will be entering the space arena, treaty negotiators should consider all space systems on a broad international basis. As you know, Communist China and European Space Agency countries are already entering the picture, so issues are no longer confined to U.S. and Soviet interests. Therefore, in seeking an enduring treaty, a broad international forum is required

The United Nations is such a forum, one which already has demonstrated important results. The U.N. Non-Proliferation Treaty of 1968 represented a major step forward in curbing nuclear weapons development. Working within the U.N. framework, the U.S. and Soviet Union forged a treaty which banned nuclear weapons from space. Significantly, this treaty was signed by 62 countries at ceremonies held in Washington, Moscow and London. Also, in 1968, the U.N. Space Rescue Treaty was signed. It calls for the safe and expeditious return of astronauts forced down on the high seas or in alien territory. In view of these important prior successes, I recommend that we take the initiative and renew our efforts to achieve further space treaties via the U.N. forum.

In addition, there resides yet another international forum which should be considered: the International Court of Justice at The Hague. The attainment of resolution and widespread agreement on space-related legal issues can directly contribute to easing of international tensions. For example, when two satellites are in danger of collision, who has the right of way? From the legal standpoint, does the second satellite launched incur the responsibility for avoidance? What are the liability ramifications of one country's satellite accidentally showering debris in another's? I suspect we will get at least some clue as a result of the satellite reactor reentry over Canada last week. Suppose it had reentered over downtown Montreal?

If I could, I would place a short checklist in the front of each of our space treaty negotiators' working folios. It would read as follows:

One—Are the objectives and requirements unambiguous, spelled out clearly, fully understood and agreed to in the same context by all parties?

Two—Whatever limitations are imposed, is the technology base available to evaluate the impact of the limitations and are the limitations truly verifiable?

Three—If the treaty is violated later, would our fallback posture be sufficient to insure protection of our national interests?

Four—Are there remaining unknown or unexplored technical factors or effects which are likely to come into play downstream? Would those factors prevent the maintenance of an assured equitable position for the U.S.?

Five—Have the interrelationships of all space and ground-based systems been considered? What will be the impacts of the proposed agreement on those interrelationships—commercial, military or economic?

Six—How will the proposed agreement affect other nations in the long run? Will their bona fide aspirations or rights be respected? How do they judge the merits of the proposed treaty? Is it a treaty everyone will sign? And, finally—

Seven—Do you really think it's a good contract—that is with equity, with something to be gained for all signatories?

To summarize, I think we must continue to pay attention to the total picture of space where treaties are concerned. Furthermore, I feel we must work these issues on a broad international scale. Recognizing past successes, the existing U.N. disarmament channels can be successful.

Most important, any agreement must guarantee that we are free to operate—that any nation is free to operate—in space and to share its benefits. A good treaty, arrived at on a broad international basis, is an important step in this direction.

ON THE 60TH ANNIVERSARY OF UKRAINIAN INDEPENDENCE

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1978

Mr. GILMAN. Mr. Speaker, as residents of the free world, and as recipients of the most precious gift that can be bestowed upon any people—I am speaking of freedom—we, as Americans, must sensitize ourselves to the millions of individuals in the world, and the thousands of groups who have had their freedom denied to them. We are so very fortunate to be able to celebrate one day each year, July 4, commemorating our independence. Families gather, fireworks are ignited, and there is an air of general festivity. We are not concerned that our freedom may be taken away tomorrow, or that we will have to live under the domination of some feared and brutal dictatorship.

Our brothers and sisters who are residents of the Ukraine have recently celebrated the 60th anniversary of their freedom. Celebration is perhaps the wrong word—for there is no celebration in a place where human rights are denied, and where people live with the threat of suppression each and every day. In the Ukraine presently, there are collective farms, forced labor, and a conspicuous lack of individual expression. This is no reason to celebrate.

What we should celebrate, however, is the unrelenting spirit of independence and freedom which characterizes the Ukrainian people. Their history has been one of struggle: Against subordination, domination, and extinction, and for the chance to develop a separate and magnificent culture of their own.

Presently, citizens of the Ukraine are citizens of the vast fatherland called the U.S.S.R. They are citizens against their wills, and their allegiance is to a higher, more transcendant ideal: freedom and individuality.

As a Representative in the Congress, I can only pledge my wholehearted support for the aspirations of the Ukrainians. I cannot loose their bonds, or promise that Soviet domination will cease in 5 years, or 10. But all of us can pray that someday the residents of the Ukraine will enjoy the same freedoms that we are privileged to enjoy, and that someday they will be able to express

their culture, to practice their religions, and to live free.

The 60th anniversary of Ukrainian independence has come and gone. People are still suffering. Let us keep them in mind when we celebrate our independence, and strive in all of the actions we undertake, and all the ideals we espouse, to uphold the principles of human rights, and to educate ourselves to the special needs and aspirations of the world's oppressed.

IMPEACHMENT OF U.S. DISTRICT COURT JUDGE FRANK J. BATTISTI

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. ASHBROOK. Mr. Speaker, yesterday I introduced House Resolution 966, a resolution providing for the impeachment of U.S. District Judge Frank J. Battisti. You referred this to the Committee on the Judiciary, on which I serve as a minority member.

Let me say at the outset that I believe there are several basic pitfalls that lie ahead and threaten our system of self-government. One is our mushrooming national debt. The other is arbitrary power. Our constitutional system was devised in such a way as to provide checks and balances. There are few checks on Federal judges, however. One of them is impeachment. The other is amending the Constitution to limit their terms or bring them up for periodic vote of approval or disapproval. I favor using both routes and will discuss my constitutional amendment proposals at a later time. Now I will seek the constitutional remedy of impeachment against a Federal district judge who has so clearly transgressed the limits of power as to make him deserving of this extreme constitutional measure.

Having researched the history and procedure by which a Federal judge may be impeached, I should now like to submit for my colleagues certain information which may be informative as to the nature of such an impeachment proceeding.

THE U.S. IMPEACHMENT EXPERIENCE

The House of Representatives has adopted articles of impeachment against 12 Federal officers. The trials of 11 were conducted by the Senate. The first American ever impeached was William Blount, a Tennessee Senator. Following his impeachment by the House in 1797, the Senate voted to expel him, but concluded that it lacked jurisdiction to convict him. From this evolved the general principle that judges and certain executive officers, but not legislators, are subject to impeachment. Nine Federal judges have been impeached, four were convicted, four acquitted, and one allowed to resign to escape trial. Two executive officers have been impeached.[1] President Nixon resigned before the House voted on his impeachment.

WHAT IS AN IMPEACHABLE OFFENSE?

Congressman Gerald Ford, had, in 1970, said of his proposed impeachment of Supreme Court Justice Douglas:

The only honest answer is that an impeachment offense is whatever a majority of the House of Representatives considers to be at a given moment in history: conviction results from whatever offense or offenses two-thirds of the other body considers to be sufficiently serious to require removal of the accused from office. Again, the historical context and political climate are important; there are few fixed principles among the handful of precedents.[2]

The House Judiciary Committee, in its print on Presidential impeachment, said, in part:

. . . In *Federalist* No. 65, Alexander Hamilton described the subject of impeachment as those offences which proceed from the misconduct of public men, or in other words, from the abuse or violation of some public trust. They are of a nature which may with peculiar propriety be denominated POLITICAL, as they relate chiefly to injuries done immediately to the society itself.[3]

WHAT IS "GOOD BEHAVIOR"?

Each of the thirteen American impeachments involved charges of misconduct incompatible with the official position of the officeholder. This conduct falls into three broad categories: (1) exceeding the constitutional bounds of the powers of the office in derogation of the powers of another branch of government; (2) behaving in a manner grossly incompatible with the proper function and purpose of the office; and (3) employing the power of the office for an improper purpose or for personal gain.[4]

NEED IMPEACHMENT BE OF A CRIMINAL NATURE?

. . . Of the thirteen impeachments voted by the House since 1789, at least ten involved one or more allegations that did not charge a violation of criminal law.[5]

Impeachment and the criminal law serve fundamentally different purposes. Impeachment is the first step in a remedial process—removal from office and possible disqualification from holding future office. The purpose of impeachment is not personal punishment;[6] its function is primarily to maintain constitutional government. Furthermore, the Constitution itself provides that impeachment is no substitute for the ordinary process of criminal law since it specifies that impeachment does not immunize the officer from criminal liability for his wrongdoing.[7]

A requirement of criminality would be incompatible with the intent of the framers to provide a mechanism broad enough to maintain the integrity of constitutional government. Impeachment is a constitutional safety valve; to fulfill this function, it must be flexible enough to cope with exigencies not now foreseeable. Congress has never undertaken to define impeachable offenses in the criminal code. Even respecting bribery, which is specifically identified in the Constitution as grounds for impeachment, the federal statute establishing the criminal offense for civil officers generally was enacted over seventy-five years after the Constitutional Convention.[8]

In sum, to limit impeachable conduct to criminal offenses would be incompatible with the evidence concerning the constitutional meaning of the phrase "high Crimes and Misdemeanors" and would frustrate the purpose that the framers intended for impeachment.[9]

WHAT IS THE PROCEDURE FOR IMPEACHMENT?

The chairman of the Judiciary Committee must first schedule hearings on the impeachment resolution. Much as the committee did in 1974, for the Presidential impeachment hearings, any evidence will be introduced before the full committee. If the Judiciary Committee votes by a majority of those present that impeachable offenses have been committed, it will send a committee resolution accompanied by articles of impeachment which set forth specific charges to the floor of the House. If a majority of those present in the House believe that these grounds exist, it will vote for impeachment.

The Senate is required to conduct a trial of the official who has been impeached by a vote of the House. If two-thirds of the Members present in the Senate vote to convict, Judge Battisti will be removed from office and may be disqualified from holding any other office in the Government. Conviction by the Senate does not stop further trial if a criminal offense has been charged in a court of law. Impeachment itself, however, is not of a criminal nature, and may not involve actual criminal acts. It does not in the case of Judge Battisti.

UPON WHAT GROUNDS IS THE IMPEACHMENT OF JUDGE BATTISTI SOUGHT?

"Exceeding the constitutional bounds of the powers of the office in derogation of the powers of another branch of government." This is one of the three bases upon which U.S. impeachments have been founded. Justice Brandeis, in reciting the proper exercise of State's rights and responsibilities, said in a case that serves as the benchmark of the constitutional separation of powers doctrine:

The Constitution of the United States . . . recognizes and preserves the autonomy and independence of the States—independence in their legislative and independence in their judicial departments. Supervision over either the legislative or the judicial action of the States is in no case permissible except as to matters by the Constitution specifically authorized or delegated to the United States. Any interference with either, except as thus permitted, is an invasion of the authority of the States, and, to that extent, a denial of its independence.[10]

TEXT OF H. RES. 966, PROVIDING FOR THE IMPEACHMENT OF U.S. DISTRICT JUDGE FRANK J. BATTISTI

Whereas article II, section 4, of the Constitution of the United States provides: "The President, the Vice President, and all civil Officers of the United States shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors"; and

Whereas article I, section 2, paragraph 5, of the Constitution of the United States provides: "The House of Representatives shall have the sole Power of Impeachment"; and

Whereas United States District Judge Frank J. Battisti has committed the acts hereinafter set forth, which constitute high crimes and misdemeanors within the meaning of article II, section 4, of the Constitution of the United States in that:

His order requiring that the Cleveland School System must remain operational and repay certain financial obligations is a usurpation of the administrative prerogatives of the constitution of the State of Ohio which confers on the general assembly the power to organize the public school system, and the Cleveland School Board, a duly elected governing body which is locally vested with administrative responsibilities.

Further, said order was made after the auditor of the State of Ohio had issued a certified report stating that the Cleveland School System was without sufficient moneys to continue operation, pursuant to Ohio Revised Code 3313.483. Additionally, Judge Battisti ordered the use of otherwise dedicated funds for the purpose of implementing a busing plan which was ordered by Judge Battisti.

In an order issued by Judge Battisti on November 4, 1977, the payment by the Cleveland School Board of certain debts was ordered so as to cause the Cleveland School System to remain open and, therefore comply with the student busing order also issued by Judge Battisti. This order was in direct violation of the laws of the State of Ohio and was a willful and wanton disregard for the independence of the administrative and legislative powers of the State of Ohio.

In pursuit of this order of November 4, Judge Battisti specifically directed ". . . that realtors be temporarily restrained and enjoined from further prosecuting or seeking to enforce any orders or claims arising from the mandamus proceedings in this court," which served as a bar to the parties to the action to their proper constitutional redress to the Court of Ohio, and was an illegal usurpation of the jurisdictional prerogatives of the Ohio Supreme Court.

The order for the Ohio School System to remain open was in contravention with Ohio Constitution, and cited in The State, ex. rel. National City Bank against Board of Education (1977), 52 Ohio St. 2d (No. 77-1248) and the order by Judge Battisti was held to be beyond the scope of a Federal judge by the sixth United States Circuit Court of Appeals, when that court held that Judge Battisti's school order was an effort to implement "a receivership action giving the Federal court complete jurisdiction and power to seize, dispose of, and liquidate property belonging to public schools.": Now, therefore, be it

Resolved, That United States District Judge Frank J. Battisti of Ohio be impeached.

SECRETARY BROWN'S PLAN FOR MILITARY UNIONIZATION

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. YOUNG of Florida. Mr. Speaker, on October 6, 1977, a Department of Defense directive was signed by Defense Secretary Harold Brown relative to the relationships with organizations which seek to represent members of the Armed Forces in negotiations or collective bargaining. In reviewing this directive, I find most disturbing the Secretary's decision that military and civilian personnel of the Armed Forces may participate in such organizations as long as the Secretary determines there is no "clear danger" that such participation might adversely affect "discipline, loyalty, or obedience to lawful orders." In view of Secretary Brown's conditional endorsement of military unionization, I believe it is time to prohibit by law such unionization of America's armed services.

Mr. Speaker, ever since 1974 when the American Federation of Government Employees decided to explore the prospect of organizing the military, concern has been growing in both the public and private sectors over the possible ramifications of military unionization. To their credit, the members of the AFGE subsequently voiced opposition to such unionization.

Our national security rests upon the capability of our Armed Forces. When our military is called upon to defend us, there can be no room for bargaining or negotiating in the critical moments of battle. Just as those who assume the burden of command must know that their orders will be responded to directly and not after a process of negotiation, the individual soldier in combat must likewise be assured that his fellow comrades can be relied upon to perform their assigned functions without going off to caucus in the midst of battle. An effective military force is built upon discipline, patriotism, and quick response capability; as a consequence, the operation of unions within the military cannot be tolerated if we are to have an effective Defense Establishment.

Because I am seriously concerned over the harmful effect upon our military capability if unionization is allowed within the armed services, I introduced legislation during the 94th Congress and this Congress to prohibit such unionization. It is interesting to note that the vast majority of the residents of the Sixth Congressional District of Florida share my opinion that organized labor has no place in the military. Of more than 38,000 persons responding to my 1977 congressional questionnaire, 89.4 percent expressed support for my bill to prohibit the unionization of America's Armed Forces. Perhaps even more significant, despite the AFGE's March 7, 1977, executive council decision to actively undertake to organize the military, on September 7, 1977, it was announced that the AFGE membership had voted 4 to 1 against trying to organize members of the armed services.

Congressional activity against military unionization has likewise been stepped up in recent months. On September 16 of last year, the Senate overwhelmingly voted 72 to 3 for legislation (S. 372) to ban all labor union activity in the U.S. military. The House Armed Services Committee is nearing completion of its consideration of my bill and similar legislation to prohibit military unionization, and it is anticipated a bill will be brought before the full House for its consideration in the very near future.

Mr. Speaker, the bill I have sponsored is not a bill against unions. Rather, it is a bill designed to protect the strength and responsiveness of the defense capability of our Armed Forces. In my opinion, this legislation is the most effective and direct way to prevent unionization of the military and the resultant ill effects such union activity would have upon our defense capability. Hopefully, through enactment of legislation of this nature, we can lay to rest the potential threat of military unionization.

MRS. HENRIETTA ANTHONY FREEMAN ON HER 100TH BIRTHDAY

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. CONYERS. Mr. Speaker, last Wednesday, January 25, Mrs. Henrietta Anthony Freeman of Highland Park, Mich., celebrated her 100th birthday. Her life spans an extraordinary epoch in American history. That she survived so many difficult years of hardship, turmoil, sweeping change, and conflict is testimony enough to her courage and strength. But that she lived her life with such benevolence toward her fellow man and grace is truly remarkable.

Both in personal and public life Henrietta Anthony Freeman has had an immense impact on the individuals who have known her. One hundred years ago she was born in Madison County, Tenn., the first of two daughters to Philip and Cora Anthony. Her life was fully occupied with raising 16 children, farming alongside her husband, an intense religious life, and caring for the sick in her community. Her husband, the late Rev. P. L. Freeman, was for 40 years the pastor of Walnut Grove Baptist Church near Jackson, Tenn. Thirty grandchildern and a host of great grandchildren honor both of them today.

Her family obligations did not prevent Henrietta Freeman from serving her community. For many years she was the only person able to care for the sick. Her assistance was sought day and night. She was an active member of the Cerrogordo Baptist Church in Jackson and played an important role in raising support for

missionary activity in Africa. Later in her life she served as funeral director in Madison County.

Twelve years ago Henrietta Freeman took up residence in the city of Highland Park, in the First Congressional District of Michigan which I serve. The citizens of Highland Park are proud of her and, on behalf of them, I offer this tribute to a wonderful human being and the hope that she will continue to live among us a great many more years.

REVENUE SHARING REVISITED

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. ABDNOR. Mr. Speaker, shortly before the adjournment of Congress I had the opportunity to contact the Office of Revenue Sharing concerning the plight of some of the small communities in my district. One of them was so frustrated by the new regulations they were considering dropping revenue sharing altogether.

In response to my letter, I received the following:

THE DEPUTY SECRETARY
OF THE TREASURY,
Washington, D.C.

HON. JAMES ABDNOR,
House of Representatives,
Washington, D.C.

DEAR MR. ABDNOR: Thank you for your letter of September 23 and for sharing your correspondence from Mrs. Florence Sanftner, the Town Clerk in Belvidere, South Dakota.

The decision by the Town of Belvidere to withdraw from the General Revenue Sharing Program was disappointing to us and we are heartened to know that Belvidere has reconsidered. I understand that recent contacts with the Office of Revenue Sharing have allayed Mrs. Santfner's concerns and have renewed her confidence that administrative burdens will not preclude the Town of Belvidere from participating in the program.

As you know, the Revenue Sharing Act was amended in 1976 and, as a result, we have had to revise our rules and regulations substantially to conform to the legislative amendments. Unfortunately, the changes in the prior regulations with which Mrs. Sanftner and others had become familiar will require having to relearn revenue sharing regulations. The net effect of the legislative amendments and our revised regulations, however, has been to simplify the program.

Sincerely

ROBERT CARSWELL.

In view of the problems encountered by our towns, I wondered if the statement "The net effect of the legislative amendments and our revised regulations, however, has been to simplify the program" was true. Thus, I contacted the South Dakota Municipal League for their reaction and that of their membership.

I received this reply from Tony Merry of the league whose responsibilities include helping our small cities with their revenue-sharing problems:

SOUTH DAKOTA MUNICIPAL LEAGUE,
Pierre, S. Dak.

HON. JAMES ABDNOR,
U.S. Congress, Longworth House Office Building, Washington, D.C.

DEAR CONGRESSMAN ABDNOR: In response to your letter of October 26 to South Dakota Municipal Officials regarding the Revenue Sharing program, please be advised that the letter will be printed in full in the December issue of our monthly magazine, South Dakota Municipalities. In the meantime, may I offer some comments of my own?

Our office has dealt extensively with the Revenue Sharing program since it's inception, providing a great deal of technical assistance to our member municipalities (and to counties and townships, for that matter) regarding provisions of the program. Over the past couple of years it has been primarily my responsibility to deal with the Revenue Sharing program. Thus, I feel competent to comment on Mr. Carswell's statement as contained in your letter.

While it is fair to state that some provisions of the Revenue Sharing program have indeed been simplified, the statement that the net effect of legislative and administrative changes has been to simplify the program is certainly a gross misrepresentation of the situation that exists in the cities and towns in South Dakota. I would also hasten to add that a number of the changes working to the detriment of the program are administrative in nature, and not necessarily mandated by the legislative amendments of 1976. A comparison of the interim regulations in force for Entitlement Period Eight (January–September 1977) with the final regulations now in effect demonstrates that the rulemaking authorities within the Office of Revenue Sharing felt obligated to "tighten up" specifically the citizen participation provisions, perhaps at the urging, in my opinion, of varying "public interest" organizations.

As I have already pointed out, there have been improvements in the program. These include removal of the prohibition of matching other federal funds with Revenue Sharing funds, and the elimination of the priority expenditure categories. These benefits, however, are somewhat deceptive. The federal matching fund provision does, indeed, offer greater flexibility in the obligation and use of funds. Under the old program however, it was not what I would categorize as a "significant" problem. The opportunity to match federal funds occurred rarely, and when it did, other local funds could generally be diverted, although not without meeting some technical budgeting requirements under the state law. With respect to the expenditure priority categories, these were quite broad and served primarily as an indication of Congressional intent. Local governments remained free to obligate the funds in the manner they deemed appropriate (subject to applicable provisions of local law). Thus while Congress has certainly moved in the proper theoretical direction, the practical result has not been as beneficial as one might otherwise expect.

In contrast, public participation and public hearing requirements have increased significantly under the new program, while reporting requirements have been altered, but not simplified. The changes can be demonstrated most clearly as follows:

(a) Under the original program, each recipient government was required to follow its normal hearing procedures to assure public participation; that is, a municipality was to budget, appropriate and spend its Revenue Sharing funds under the same procedural safeguards as were applicable to regular local funds available to it. In addition, local governments were required to complete one planned-use report and one actual-use report for each entitlement period, file these with the Secretary of the Treasury, and publish each report.

(b) Under the Revenue Sharing amendments (P.L. 94–488), local governments are now required to hold two public hearings: a "planned-use" hearing and a "budget" hearing (where no hearings were mandated previously). Each of these hearing provisions is accompanied by technically specific publication requirements. Additionally, three reports are now required annually: a planned-use report (now including a summary of the entire proposed budget); a narrative summary of the adopted budget, and an actual-use report. The actual-use report alone must be filed with the Secretary of the Treasury and need not be published. The other two need not be filed, but must be published and otherwise made available for public inspection. The Act itself (sec. 121(b)(3)) provided for waivers of these requirements as provided for in general, by the Secretary of the Treasury. It is primarily in the area of waivers that the Office of Revenue Sharing has itself moved away from simplification of the program.

(c) Under the interim regulations, waiver of the proposed use hearing and notice requirements, for instance, were available where:

"(A) The entitlement of the recipient government for such fiscal year is less than $10,000; or (B) The unavoidable expenses associated with the costs of compliance with the provisions of paragraphs (a) and (b) of this section would exceed five percent of the recipient government's entitlement for such year. . . " (31 CFR Part 51, § 51–13(d)).

In addition, the interim regulations also provided for an exception to the proposed use hearing requirements for "any recipient government for which a budget is not presented or required to be presented by one governmental authority to another governmental body or official for enactment." (31 CFR Part 51, § 51.13(c)).

Under the present regulations (effective October 1, 1977), the waiver for those receiving $10,000 or less has been eliminated, the exception where a budget is not presented by one authority to another has been eliminated, and the waiver where the cost exceeds five percent has been increased to fifteen percent. Thus, where South Dakota's cities and towns were eligible for each of the three waivers or exempting provisions, two have been eliminated and the third raised to a prohibitive level. The Office of Revenue Sharing has moved in the same direction in conjunction with budget hearing requirements and others.

I enclose for your reference a copy of a Revenue Sharing Timetable provided by the National League of Cities which outlines the public participation and reporting requirements dictated by P.L. 94–488. Also enclosed are copies of interim public participation requirements and proposed final public participation requirements.

In conclusion, I believe it is quite clear that the "net effect" of the legislative amendments and revised regulations has not yet been to simplify the program, but rather to complicate it, and frustrate our local officials in the process. It is true that a significant number of changes are the responsibility of the Congress. I think it is clear, however, that the Office of Revenue Sharing is not without blame, as witnessed by the contrast between the interim and final regulations.

I apologize for the length of this letter, but I thank you for the opportunity to express my views on this matter of such importance to local governments. We have sincerely appreciated your past efforts to maintain a sim-

ple, flexible Revenue Sharing program, and we wish you well with your future efforts in this regard. Thanks again, and best wishes.

Sincerely,

TONY C. MERRY,
Director of Research.

WHAT CAN I DO?

HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. KETCHUM. Mr. Speaker, at this time I would like to share an editorial column from the Progress-Citizen and the Inyo Independent with my colleagues in the House. Mr. Todd Watkins, my friend and constituent, has set forth what I consider to be an excellent piece of advice to the voters: Give your encouragement and support as a citizen and as a voter to those who will bring more sense to government. Todd Watkins quotes newly elected Louisiana State legislator Dan Richey. I particularly like one of Mr. Richey's comments in describing the irresponsibility of some legislators: "They praise Thomas Jefferson, but vote like King George V." My tenure in both State and Federal Government has taught me that this is all too true, and I commend Mr. Watkins for printing this fine editorial. Hopefully, our citizens will take heed:

TABOOS

Frustrations concerned with government at all levels are overwhelming. The citizen complains . . . but asks "But what can one do?" The city and county office holder is swamped with an avalanche of mandated programs, cascading down from federal and state levels . . . many of which are engineered by bureaucrats trying to justify their jobs. There is no simple answer to the programs, except in the words of my good late friend, U.S. Senator Clair Engle who told Senator Everett Dirksen and other senators (as I listened one day in the U.S. Senate) " . . . just vote 'no' on the funding . . . and the problem and the folks involved will have to go elsewhere." Engle, a former Republican, was a conservative Democrat, much like the newly-elected Louisiana state legislator, Dan Richey, a Democrat, whose recent comments are so promising and accurate, we feel you should read them. They appeared as an editorial in the Natchez Democrat:

Richey wrote: "Prior to my election to the Louisiana Legislature two years ago, I thought elected officials in state and federal government carefully analyzed all sides of an issue before asserting their opinion or casting their vote. I have found, however, this applies to only a small percentage of these public officials. The majority, much to my chagrin, react in whatever manner is politically feasible.

The majority, in other words, think more of the next election than the next generation. To camouflage their political hypocrisy, this group works diligently to make the average layman think that every major issue is very, very complicated. They have popularized simplistic verbiage such as, 'politics is the art of compromise,' or 'I had to trade off with others to get what my people wanted'. That's a lot of hogwash!

"Elected officials can compromise on tactics and strategy without doing anyone harm. But when they compromise principle, people's rights are destroyed. This confiscatory power of government has reached alarming levels because so many elected officials have compromised people's rights to life, liberty and property. These profligate politicians try to counter by saying, 'look at all the things I got for my district.'

"You then look around and see what they have 'given' you. Outrageous taxes, and bureaucracy, double-digit inflation, giveaway programs which discourage recipients from seeking gainful employment, skyrocketing government payrolls, taxpayer-funded boondoggles of the worst dimensions (Superdome, IWY Conference, legislative retirement systems, etc.) ad nauseum.

"These political panderers parade around like they're the greatest thing since sliced bread. Their vocabulary centers around the personal pronouns 'I' and 'my'. Their press releases sound like a tape recording—'I have the pull to get things for my people,' or 'I know so and so who will do something for my district.'

"Another favorite ploy by many politicians is to inundate the public with a barrage of scatterbrain ideas at one time. Hence so much of the ridiculous legislation each year in our statehouse and Congress.

"The biggest drawback to these elected officials is the absence of any political philosophy. They act, instead, on the basis of political expediency. They have made ambivalence into a science. They praise Thomas Jefferson, but vote like King George V; they deplore big government but support every tax and regulatory bill that comes down the pike; they say we must get out of the dark ages, but oppose the development of nuclear energy; and they assert the need for relevant, responsible leadership, but propose ludicrous gimmicks such as annexing parts of neighboring states.

"Honest, hard-working citizens want their money's worth for the taxes paid to government—nothing more, nothing less.

"It is fortunate for America that the 'Silent Majority' is finally beginning to take notice of the abuse heaped upon them by political derelicts. When today's philosophical jellyfish are booted out of office and replaced by those of conviction and courage, we will see an end to this miscarriage of justice. Then, all of us will have an understanding and appreciation of what our elected officials are doing."

Well done, Richey. As a citizen and voter, give your encouragement and support to office holders to bring more sense into government . . . the costs of which contribute more to inflation than anything you can name. You as consumer, pay every damn dime of the cost of government . . . . at ALL LEVELS. Folks keep passing on the costs of government until those costs end up on retired and other folks who cannot pass them on to anyone else. The block of 30 million or so retired citizens better make "government at any cost" their No. 1 target at the polls, and not be concerned whether people are of a particular political party or faith.

DWIGHT D. EISENHOWER

HON. ROBERT E. BADHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1978

Mr. BADHAM. Mr. Speaker, I consider it a privilege to take part in this commemoration of the 25th anniversary of President Dwight D. Eisenhower's inauguration as the 34th President of the United States of America.

President Eisenhower's grandson, David, resides in the 40th Congressional District of California, which I have the honor of representing. I am sure David Eisenhower is pleased to see Members of this House remember his grandfather with pride and affection on this occasion.

I recently had the opportunity to witness the commissioning ceremonies for the latest addition to our naval forces, the U.S.S. *Dwight D. Eisenhower*. The ship has already been nicknamed "Ike," of course. This extraordinary ship is a fitting tribute to Mr. Eisenhower, who once stated, "Until war is eliminated from international relations, unpreparedness for it is well nigh as criminal as war itself."

Whether on the battlefield or in the Oval Office, Dwight D. Eisenhower will be remembered by the American people as one of this country's great leaders.

THE RETIREMENT OF ARTHUR M. WOOD

HON. DAN ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. ROSTENKOWSKI. Mr. Speaker, following 32 years of service with Sears, Roebuck & Co., the chairman of the board and chief executive officer, Arthur M. Wood, is resigning his post today, January 31, 1978.

The ninth chairman in Sears' 87-year history, Mr. Wood is stepping aside in accord with the company's retirement policy. He is capping a career that began in 1946, when he joined them to reorganize the company's law division. He assumed a number of staff and operating posts until 1968 when he became president.

Chicago is proud of her native son, Art Wood, not only because he is chairman of the world's largest retail organization, but also because he is a civic-minded and service-oriented individual. The successes he has achieved in the business community are equaled by the recognition he has gained by serving on the boards of numerous nonprofit and community organizations. Mr. Wood chaired the U.S. Savings Bond Drive for the Chicago area in 1974, and in 1970 served as chairman of the National Alliance of Businessmen—Chicago metropolitan division.

His civic board memberships include the Council for Financial Aid to Education, United Way of America, and the Community Fund of Chicago. He also serves as a trustee of the Tax Foundation, the Committee for Economic Development, the Art Institute of Chicago, and the Rush Presbyterian-St. Luke Medical Center.

Art Wood serves as an adviser to Presidents. He is a member of many business organizations, including the elite Business Roundtable. In addition to the demands placed on his time from business and civic associations, Art Wood makes his talents available to the boards of several major corporations.

Obviously, Art Wood has a successful professional and civic career. However, there is much more to this man than

merely listing his awards and honors. For in the area of minority hiring and training, Art Wood's leadership is obvious.

During his years as president and later as chief executive officer, Arthur Wood sought to give greater impetus to the company's minority development and employment programs. There has been a significant increase in the number of minority owned-and-operated businesses that supply the world's No. 1 retailer with goods and services. This has the additional benefit of promoting the hiring, training, and developing of minority employees within the company.

When Sears was in the process of selecting a new site for their national headquarters, it would have been very fashionable for the company to decide on relocating to a suburban location. However, an important consideration was to preserve jobs for inner-city personnel. Thus, the present location in downtown Chicago was selected.

In fact, during general contracting and subcontracting for the Sears Tower, the company asked for clear and stringent requirements regarding the use of minority labor. As a result, the number of minority workers on the Sears Tower job site averaged 25 percent.

Even though it appears that Art Wood is stepping aside, those of us who consider him to be our friend know that his presence will be felt in the Chicago business and civic community for sometime to come. His friends and associates decribe Art as a family man, business-oriented and civic-minded, patriotic and people-conscious. A man of decisiveness, programs that he implemented will impact not only Sears, but also the business, government, and civic communities well into the future.

His personal convictions can be best summarized in his own words. The following are excerpts from an address that Art delivered on November 19, 1976, when he received the Advertising Council Public Service Award. He then stated:

If every company will perform according to high ethical standards, the public's confidence will be re-won. Selling quality products, living up to warranties, making fair representations of what a product will do for the buyer, and competing fairly for the customer's favor, are a few precepts which will stand us all in good stead. And above and beyond these direct dealings with the public, the treatment of employees, respect for the environment and support of community causes must all have attention . . . I do not mean to imply that we are doing enough or that all is well in the land. The challenges are great. Inflation has exacerbated the plight of the poor and elderly. It has laid a heavy burden of cost on our cities, states, and the national government, all of which add to the load of the taxpayer. It has pushed upward the cost of our great educational and cultural institutions. Indeed, it has placed a difficult burden on business where progress in earnings is the key to new jobs, new products, and the combined welfare of the nation.

I believe that an enlightened and joint effort by labor, government and business, with the best advice from the academic world, is essential. It will not come from carping criticism directed against business or labor or government. It will only evolve from a heightened cooperative effort.

OATS COVERAGE NEEDED NOW

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. ABDNOR. Mr. Speaker, during his state of the Union message the President included these paragraphs which were not part of the advance text:

As I came to the Capitol tonight, I saw the farmers, my fellow farmers, standing out in the snow. I am familiar with their problem and I know from Congress action that you are, too. When I was running Carter's warehouse we had spread on our own farms 5–10–15 fertilizer for about $40 a ton. The last time I was home the price was about a hundred dollars a ton. The cost of nitrogen has gone up 150 percent and the price of products the farmers sell has either stayed the same or gone down a little.

Now this past year, 1977, you, the Congress, and I together passed a new Agricultural Act that went into effect October 1st. It will have its first impact on the 1978 crops. It will help a great deal. It will add 6½ billion dollars or more to help the farmers with their price supports and target prices. Last year we had the highest level of exports of foreign products in the history of our country—24 billion dollars. We expect to have more this year. We will be working on this together. But, I think it's incumbent on us to monitor very carefully the farm situation and continue to work harmoniously with the farmers of our country. What's best for the farmers—the farm families, in the long run—is also best for the consumers of our country.

While we may debate how much credit the President should claim for the farm bill, we cannot dispute two points he made: First, the farmers do have a very serious problem; and second, what is best for the farmers is also best for the consumers of our country.

As a Congressman from the most agricultural State in the Nation, and as a farmer with personal experience in coping with the 1976 drought and low market prices, helping agriculture with its dilemma has been a top priority of my office.

During our consideration of the 1977 farm bill I introduced the Abdnor oats amendment to give this feed grain the same status of our other principal crops and include it under farm program coverage. Both the 1977 and subsequent oats crops were included in the bill. Since this measure was signed into law, we have been waging an uphill battle to convince the administration they should exercise their authority with respect to oats.

Mr. Speaker, in South Dakota coverage of oats under the farm program will mean a major boost to our economy. We rank first in the number of acres planted to oats and consistently are in the top five in overall production in the United States. Program coverage could mean as much to our farmers as the entire wheat program.

Last summer when we debated the farm bill the administration agreed that oats coverage was long overdue. However, it is little comfort to farmers when authority provided in the law is ignored.

It is particularly distressing when the administration acknowledges that farmers have a problem, but at the same time refuses to take a small step to partially alleviate that problem.

On December 7, I renewed my plea to Secretary of Agriculture Bob Bergland for oats coverage. The farmers of America were again turned down with some of the flimsiest rationale I have seen.

Accordingly, I have again asked Secretary Bergland to reconsider the decision. If the administration is serious about helping farmers, here is a good place to start.

HOUSE OF REPRESENTATIVES,
Washington, D.C., January 26, 1978.

Hon. BOB BERGLAND,
Secretary of Agriculture, Department of Agriculture, Washington, D.C.

DEAR BOB: The rationale accompanying the rejection of my latest request that you reconsider your decision and include the 1977 and 1978 oats crops in feed grain coverage is inadequate and unconvincing.

Mr. Freeman made a brief allusion to costs in the statement: "This would result in heavier loan activity and increased acquisition by the Commodity Credit Corporation." If costs are the major, though unmentioned, criteria for rejection, there must exist documents containing these estimates. I would appreciate receiving information on the actual costs anticipated by the Department in the event the oats crops were included in the program.

Secondly, the fact that the 1977 crop had already been harvested did not preclude the Department from recently announcing it was releasing target payments on 1977 barley and grain sorghum. What type of information was available for these crops which could not be obtained for oats?

Further is the statement: "In the past CCC inventory of oats has been very difficult to dispose of . . ." If my memory serves me correctly, as recently as late 1976 the entire CCC oats inventory was depleted due to drought conditions in the Midwest and particularly in my home state of South Dakota. I would appreciate data on how much oats is currently under loan and how much oats has been acquired since the stocks were depleted in the fall of 1976.

At the time we discussed this last summer, Bob, you agreed that the oats amendment was long overdue. Just this past week we have heard the President recognize the plight of the farmers in his State of the Union address. Surely, implementing the oats amendment is one small step which could be taken to demonstrate that the Administration is serious about helping the farmer.

My thanks for my earliest possible receipt of the cost estimates requested above, as well as the other data.

Sincerely,

JAMES ABDNOR,
Member of Congress.

TRIBUTE ON 25TH ANNIVERSARY OF EISENHOWER'S INAUGURATION

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1978

Mr. WHALEN. Mr. Speaker, it is a pleasure to commemorate the 25th anniversary of Dwight Eisenhower's inauguration as President.

President Eisenhower was a great public servant who held the respect and ad-

miration of the American people throughout his public life. As the product of small-town America, Ike truly was a storybook hero. All that he achieved he did on his own. He was a model of the traditional American virtues of hard work and self-reliance.

Ike was an honest and uncomplicated man, and it was these qualities which enabled him to achieve his many successes both in war and peace. His tenure in office was an expression of these attributes, a period of tranquility and general consolidation. His administration provided the stability which we desired after World War II and the Korean war. As President, Eisenhower gave confidence to our people, and thereby made our institutions stronger, and our national outlook brighter.

Throughout his life, Eisenhower was known for his belief that every person should acquire something during his lifetime and leave that something in just a little better condition than he found it. Certainly, by striving for this goal, we would be doing that which he would want us to do in his memory.

THE 20TH ANNIVERSARY OF EXPLORER I

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. FUQUA. Mr. Speaker, today is the 20th anniversary of the launching of Explorer I, the satellite that ushered the United States into the space age on January 31, 1958.

Mr. Speaker, Explorer I is significant in that it was our Nation's first successful scientific response to the new frontier of space exploration that was brought into being by a rival nation on October 4, 1957. On that date, the U.S.S.R. astonished the world with its successful orbiting of the first artificial satellite, Sputnik I.

That single launching set the United States and the Soviet Union on a fiercely competitive race of science and technology. And, since the inception of the space age, this Nation has successfully met challenge after challenge and became, for all practical purposes, the undisputed world leader in space the day our astronauts landed on the Moon.

Sputnik I confirmed Russia's claim that it had an important intercontinental ballistic missile capability. Therefore, this important technical achievement proved the Soviet rocket technology was a much more immediate threat to the national security of the United States than had previously been thought.

Mr. Speaker, the period immediately following the orbiting of Sputnik I was one of widespread concern about this country's military preparedness and a possible missile gap. The public response was swift and widespread. The certainty that this Nation was No. 1 in technology had been rudely shattered. As a consequence, the status of this Nation's space related activities was closely examined and great pressure was exerted to get a U.S. satellite into orbit.

The Nation's only official satellite program in October 1957, was known as the Vanguard program and was the United States scientific contribution to the International Geophysical Year. Officially authorized on September 9, 1955, that program was called upon to launch its first test vehicle on December 5, 1957. Unfortunately, that launch was not successful as its first stage engine lost thrust only 2 seconds after ignition and the vehicle burned on the launching pad. It was not until March 17, 1958, that Vanguard I was successfully launched into orbit.

In the meantime, however, another satellite program was authorized to proceed in an attempt to place a satellite into orbit. In November, 1957, the Army Ballistic Missile Agency headquartered in Huntsville, Ala., was authorized to attempt a satellite launch with its proven Redstone missile.

It was that agency, in cooperation with the Jet Propulsion Laboratory, which was to be successful in the launching of the first U.S. satellite, Explorer I, on January 31, 1958. With it, America had proved within a very short time that it was scientifically able to respond to the threat of Sputnik I.

Mr. Speaker, the history of our Nation's space program since that time is well known everywhere. In the short span of 20 years since our first success in space exploration, we have seen many remarkable science and technology achievements. Today, therefore is an important anniversary for Americans to remember in the ongoing effort of our Nation's scientific community to achieve greater and greater benefits for mankind. It is a symbol of success for a "can-do" nation.

UKRAINIAN INDEPENDENCE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. EILBERG. Mr. Speaker, this year marks the 60th anniversary of the independence of Ukraine—an independence that lasted only 2 short years before the brutal U.S.S.R. takeover of this gallant new nation.

The Ukrainian National Resolution, which brought about this independence, was very much like the American Revolution of 1776, because its overall objective was a free and independent state of Ukrainian people, just as the American Revolution sought freedom for the Thirteen Colonies which refused to live under colonial subjugation.

Today the Ukrainian people, under Soviet Russian domination, are not free and cannot enjoy the blessings of freedom and independence. The Soviets have imposed their tyrannical power over Ukraine and other non-Russian nations which had adopted the principles of national self-determination and declared their independence.

Ukraine is the largest and, economically, most important of the non-Russian nations now held captive in the U.S.S.R. The fact that Ukraine is a captive and submerged nation was recognized by the U.S. Congress in its Captive Nations Week resolution, enacted on July 17, 1959, and which condemned the "imperialistic policies of Communist Russia" which have been involved in the ruthless subjugation of Ukraine's national independence.

In a recent speech, Vice President MONDALE declared that "human rights know no boundaries. We cannot protect our freedom as Americans if we ignore those parts of the world which are not free." It is in that spirit, Mr. Speaker, that I join my colleagues in speaking out on behalf of the 50 million Ukrainians held in captivity by the U.S.S.R. I join my voice with those Ukrainian Americans in calling for a foreign policy in our country that will, one day, restore freedom to these captive people.

FAMILY ENTERPRISE ACT

HON. ALVIN BALDUS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1978

Mr. BALDUS. Mr. Speaker, today I am introducing the Family Enterprise Act, H.R. 10651, a measure proposing a useful and working definition of very small businesses. The purpose of this act is to define very small businesses, so that at a later date we can consider exempting them from certain Federal Government regulations and paperwork.

There are over 600 definitions of small business in use today, mostly created by bureaucratic sophists at the Small Business Administration (SBA). There is a small business definition for every purpose: for Government procurement, sale of Government property, loan assistance, investment assistance, Government subcontracting, lease guarantees, uranium prospecting, mining rights, surety bond guarantee assistance.

But that is not the whole story. The definition for Government procurement changes like a chameleon, from product to product. There are different procurement definitions for construction, dredging, pneumatic tires, passenger cars, woolen goods, worsted goods, knitwear, petroleum products, research and development, janitorial services, cargo handling, naval architecture, diaper services, rug cleaning, computer programing services, tire recapping, helicopter services, crating and freighting, to name only a few.

For loan assistance, the definition depends on whether one is talking about construction, manufacturing or retail; there are different definitions for hotels and motels, power laundries, trailer courts, hospitals, dentists, motion pictures, cable television stations, shopping

centers, air transportation companies, grain elevators. Cattle, hog, sheep, and goat businesses are all treated the same, but differently than fish hatcheries, turkey raisers, and oyster operations.

As if these variations on the theme were not enough, the definitions above refer the reader to schedules A, B, C, D, E, F, G, H, and I, which contain about 375 more.

But there is a further problem with these SBA definitions of small business, one that renders them virtually useless as a means of exempting small business from Federal regulations. The SBA definitions are much too large.

For instance, the definition of "small" for purposes of Government procurement by stockpile purchasers is any business with $42 million or less in annual receipts. Petroleum, ammunition and aircraft manufacturers are considered small if they have 1,500 employees or less. The smallest definition mentioned is 250 employees or less among the manufacturers, and there are literally hundreds of business types defined as small if they employ 750 employees or less. Definitions such as these exclude all but the top few firms in a given industry from benefits intended for small business.

These large definitions discriminate against very small businesses in two different ways. First, the largest firms qualifying under the definition as small tend to run away with the lion's share of loan capital available from SBA. Second, no Federal agency contemplating a small business exemption in its regulations will consent to the use of these bloated definitions in existence now. In addition, the confusion resulting from so many different definitions discourages Federal agencies from contemplating small business exemptions from their regulations in the first place.

While the bill I am proposing today would not take care of the first problem—the suspected syphoning of SBA moneys by larger businesses within these oversized definitions—the bill would create a handy reference definition of very small businesses which could be used to exempt these struggling family enterprises from some Federal regulations.

I propose in the bill to define a "family enterprise" as any business of 50 employees or less and $1,000,000 in annual receipts per year, or less.
